The old dog deliberately trotted along the beach. About a hundred yards from the shore there was a large flock of ducks feeding off the wild celery, and for a time they took no notice of the dog, who trotted up the beach, and then at a low whistle from his master retraced his steps. He kept this up for fully ten minutes, and then we saw the scattered ducks slowly swimming toward us. Old Rex, at the command of his master, now cantered along the shore, and this quick motion evidently startled the mass of waterfowl, for they ceased feeding, and I could see them through my opera glass turning their heads first on one side and then on another. Then the dog was ordered to lie down, and he remained so for at least half an hour. The whole flock were now on the *qui vive* and were swimming and circling in every direction, but slowly advancing toward us.

Again Rex was ordered to rise and gambol along the beach, and the sudden movement set the ducks paddling away; but the bolder spirits faced about, and like a flock of sheep the mass followed them.

When the dog had nearly reached his master's blind, Mr. Menefee in a low tone ordered him to lie down and roll; and soon the astounded ducks beheld four paws sticking in the air. This caused an impelling movement shoreward, and the rising sun glinted and glistened on the emerald and opal-hued heads not over fifty yards away.

It was an artistic performance throughout, and we held our breath and fingered the hammers of our guns nervously.

Two or three times old Rex got tired and rose, and looked inquiringly at his master, but a rotary motion of his hand informed the dog, who was now nearly beside himself with excitement, to continue his rolling.

Nearer, and yet nearer the great raft of waterfowl advanced, closer and closer and closer they pressed on each other, drifting inch by inch, and foot by foot toward the fatal spot.

With straining eyes we gaze alternately at them and Mr. Menefee, with our nerves strung to the highest pitch. Would he never give the signal? Rex could act no longer. Nature gave out. He was crouched spread-eagle fashion, in the position that a setter sometimes takes when he runs upon a flock of partridges in a bare corn field. His eyeballs gleamed and every individual hair seemed to stand on an end.

At last the sign was given, we saw his master cock his piece, and we all three rose up, and taking a lightning aim at the fluttering flying mass, pulled both triggers. A volume of sound, a dense smoke, a noise like thunder, as the huge mass took wing, a shout of unrepressed excitement from us all, a frenzied barking from Rex as he bounded in the water and the deed was done.

Our spoils to the eight loads were eighteen killed and nine crippled ones, which we got after an exciting chase in a boat.

In five minutes there was not a duck to be seen on the bosom of the water, only long lines flying out in the sounds.

"No more toling to-day," said our host, "or not until evening at any rate; those ducks won't stop short of twenty miles."

We asked him why such a method of killing ducks was not more practiced.

"For various reasons," was his reply. "First, it requires a trained dog; and there are but few that are pre-eminently intelligent that they can be coached. It takes infinite pains and patience. I have spent more time in tutoring old Rex there than I have in bringing up any of my children. Then there is only one shot to be had after all, and the shooting over decoys is much more successful. It takes much time, too, and only young ducks in the beginning of the season can be toled. Later on when the wildfowl have more experience it is labor lost on them, they become wary and suspicious, and move away from shore as soon as they catch a glimpse of any object, no matter what it is. Then again it is so uncertain; at the most critical juncture the merest trifle will scare the flock off before they are in gunshot. The slightest movement of the hunter, any noise, even the click of a gun-lock, will send them hurrying away. It frequently happens, too, that the dog becomes excited; and either stands them, or whines, or, unable to control himself any longer, dashes in the water, and then the anxious watcher has his trouble for his pains. For this reason the sport of toling is too uncertain to be popular, especially since the advent of the breechloader."

"What is the greatest number you ever killed?" I asked.

"About eight or nine years ago, three of us fired in a solid rick at point-blank distance, guns loaded with No. 4 shot, and we got sixty-nine canvasbacks."

"Do all ducks tole, Mr. Menefee?"

"No. Canvasback, redhead, blackhead, spoonbill and shovellers tole readily, that is if they are young, but other species, such as the black duck, baldpate, bluewing, bullhead, spoonbill, spritgail, dipper, coot, loon and brant won't at all. There are but few canvasbacks now, and toling, except to an old fellow like me, who has plenty of time aud an old muzzleloader, don't pay. Still it suits me and old Rex there, don't it old dog?" And the toothless old setter rapped with his tail his assent vigorously on the floor.

It was with real regret our party took leave of this big-hearted, hospitable North Carolinian.

The account of the discovery of Hatteras is an interesting one. The first white man's foot that trod the cape was that of Captain Philip Amadas in 1584. He was accompanied by Arthur Barlowe, who quaintly describes the event: "But after we landed on the Cape we saw before us another mighty long sea, for there lying along the Coast a track of islands adjoining the Ocean, these islands being very narrow for the most part, then there appeareth another great sea, containing in bredth in some places forty, or in some places fifty miles over, before you come to the Continent, and in this enclosed sea there are a hundred islands of divers bigness," The "mighty long sea" was Pamlico Sound, and the writer undoubtedly took the sand shallows for islands.

The coast of North Carolina is over 400 miles in length and slopes like a crescent outwardly; its center runs in a sharp point which is called Cape Hatteras, and is by many miles the most extended point on the Atlantic coast. The cape is but a narrow sand bank that juts out into the ocean, and is separated from the sound by a strip of land several miles wide.

The reason of the sudden storms, gales, tempests, squalls and hurricanes off Cape Hatteras are simple.

The coast at the Cape trends so far into the ocean that the Gulf Stream flows within twenty miles of the Cape. The difference in temperature between the hot air of the Gulf Stream and the cold land breezes along the shore engenders frequent commotions in the atmosphere at the place, and sudden changes of the weather are the rule, not the exception. All weather signs fail at Hatteras. Neither glass nor barometer avails, and the sailor's heart is in his mouth as he nears the dreaded spot. The Secretary of the Treasury, in his report to Congress last year, said: "These shoals have well earned the title of Cemetery of American Coasters. Old sailors dread less to go around Cape Horn in the winter than to go around Cape Hatteras in that season."

The shoals alluded to are the most dangerous reefs on the Atlantic. They surround Cape Hatteras from seven

to eight miles outside, and are covered with about nine feet of water. They are called the Diamond Reefs, and hundreds of the argosies of commerce and thousands of lives have been lost on these fearful shoals. Imagination cannot conceive, nor can tongue tell the scenes of horror that have occurred on these accursed sands. Could the keeper in his far-off post but see the pictures of the desperate battles for life, the frenzied struggles for existence; could he catch the despairing appeals for help, the cries of utter hopelessness, the last shriek, as the doomed men sank, he would end his days raving in a mad house.

When once a vessel is driven by the stress of weather upon these shoals there is no hope. The shore is miles away and no human aid is near. No life-saving crew could make their way through the breakers. Death is as sure to the foundered barque as to a scuttled ship in mid-ocean. Many, many vessels, blown out of their course by the fateful northeast wind, in a driving snow storm, when the flashing light of Hatteras was veiled from view, have been carried on waves mountains high and dashed on these reefs, where the league-long rollers thundered; a frenzied cry, the noise of crackling timbers, the sound of solid oak riven and torn, and then Faith, Hope and Mercy veiled their eyes, as Death held high carnival. Well may the mariner exclaim as he neared this worse than the fabled Charybdis, "Blow wind, swell billow, and swim bark, the storm is up and all is on the hazard of the die;" and many a captain of a ship off Hatteras felt, no doubt, as Gonzola in the tempest, when he exclaimed in the fullness of his heart, "Now would I give a thousand furlongs of sea for one acre of barren ground."

It may well be asked why these dangerous shoals are not noted by a lighthouse. Such has been the intention of the Government for years, but great fears are entertained that no structure could stand the effects of the terrible storms. Then again the shifting sands afford but a poor foundation for the structure. Every board of trade and every chamber of commerce has petitioned Congress that a lighthouse should be erected at once on this spot, and last year the Senate appropriated $500,000 for the purpose, but the bill failed to pass the House. Another effort will be made this session to that effect.*

The chairman of the Lighthouse Board says, that "The proposed work off Cape Hatteras is one of great magnitude, and is the most difficult and dangerous of the kind ever attempted by the Government. To carry it to a successful issue, requires the highest skill, supported by the best appliances and by ample means."

Major O. E. Babcock, Chief of Engineers, was sent by the Government to make an examination of these shoals and report upon the feasibility of erecting a lighthouse. He says in his report:

Awating the calm weather of June, and a time when the tender Jessamine could be taken from other work, I proceeded on the 24th ultimo to Hatteras Inlet, via Albemarle and Chesapeake Canal, arriving at the inlet on the 28th. I procured the services of a pilot. The sea being too rough to venture with the tender, I waited until the morning of the 29th, when, the sea being quiet and but little wind blowing, we proceeded to sea at 5 A. M., reached the shoal at 7 A. M., and passed in between the Inner and Outer Diamond. We sounded up to within (not to exceed) 200yds. of the breaker on the N.W. side of the Outer Diamond. We found no sounding less than 17ft., and, to appearance, this depth was carried almost on to the reef itself.

I am satisfied from my own observation and the assurances of the pilot and all with whom I talked, that there are many days during the months of June, July, August, and September, when the winds are off the shore, when the sea is quiet about the shoal and when a vessel adapted to the work could go to the very edge of the breaker and work for many hours at a time.

I am of the opinion that the placing of a beacon or a lighthouse on the Outer Diamond itself is practicable, and, though its construction will be expensive and attended with danger, I think the importance to commerce so great that the work should be done. As the temporary work necessary to reach the shoal will be as expensive for a beacon as for a lighthouse, I think a lighthouse not less than 80 or 100ft. high should be built, to be attended and lit nights like other lighthouses.

In my opinion a pier built on the same principle as the ocean piers at Coney Island, Long Branch, and other places, can be constructed from a point on the inside of the shoal on to the very shoal itself.

The plan adopted for the proposed tower is a modification of the Rothersands Bank, Delaware Bay, Light-house. Certainly the task is greater than erecting the famous Eddystone.

Whomever fate has chosen as the keeper of the prospective lighthouse on Hatteras Shoals he will have a solitary existence, and in the winter months the spray from the breakers will hide sea and heaven from view.

The Cape Hatteras Lighthouse is built upon the beach and is a stately shaft 189ft. high. The outside is painted in spiral bands, alternately white and black. The lantern is also of the latter color. These contrasting colors, experience proves, can be seen further in the daytime than any other combination. The first tower was erected here in the year 1798, and the present one was built in 1870. About half a mile away is another lighthouse, or rather beacon. T. F. Smith, a staunch, level-headed man, is keeper, with three assistants, Miller, Austin and Riggs. Wesley Austin was the gunner of the place, and we found him an enthusiastic sportsman,

The scene oceanward from the top of the tower is one full of grandeur, but on the land side the picture is the very abomination of desolation. Dreary stretches of sand dunes and then swamps, such as only the weird pencil of Gustave Doré could have drawn. Immense pools of black stagnant water, great ponds of slimy liquid, dangerous, treacherous bogs, quivering quagmires, dark loathsome fens, impure sloughs, comprise most of the banks, with here and there an open glade upon which are built primitive log houses, occupied at certain seasons of the year by woodchoppers, fishermen, sheep herders and cattle men. The trees seem to have been struck by lightning, or blighted by some curse of nature, for most of them are prostrate on the ground, while those that remain standing are bare of foliage, and their skeleton branches wave sullenly in the gale. On the tops of many of these trees are huge nests of the great sea fishhawks and the black-headed eagle. The prone and fallen trees are covered with trailing vines and tangled briers and entwining creepers, and are so interwoven and twisted together that the mass forms an almost impassable *chevaux de frise.*

The only permanent inhabitants of Hatteras are the lighthouse keeper and his assistants, with their families. They have led for the past ten years such a solitary life as few men could endure. Yet, on the whole, the men are mildly content, if not radiantly happy, for their hearthstone is cheered by the presence of wives and families. They have good houses, pure water, abundance of fuel free—those three articles which cost so much in the city. A nice garden, all kinds of fish, quantities of oysters, clams, crabs and bay birds in summer, and flour, pork and beef furnished by the Government. The problem of "how to live" never addles their brains. It is true their existence is not brightened by any excitement, nor is it cheered by social intercourse; yet to compensate them in a measure, they are shielded from those things that the great master of human passions tells us is hardest to bear—"the proud man's contumely,"

> The insolence of office, and the spurns
> That patient merit of the unworthy takes.

After all, it is an open question whether one so isolated from the "madding crowd" is to be envied or pitied. Each position as lighthouse custodian is almost a sinecure, and is not affected by the mutations of politics.

There is probably no mariner, tourist or traveler, who passing Hatteras, when glancing shoreward catches sight of the beacon light gleaming from afar, who does not wonder who are the inmates of the lone light tower and how they live. The keeper, who spends his lonely life in lighting the lamp as regularly as the day ends, must possess one preëminent quality. He must be positively and absolutely trustworthy. Other men in different vocations may forget or neglect their duty sometimes, and no harm will come of it; but the vigilance of the lighthouse keeper must never relax. Upon him devolves a responsibility in human life and capital so vast that no words can accurately gauge it. Frequently, in the dead of night, a stiff northeast gale springs up, and scores of outgoing vessels, from the little brigantine to the stately barque sailing seaward, catching sight of the Hatteras light, turn their prows oceanward; and speeding from the treacherous sands, ride out the storm by running before the gale in reefed canvas or scud under bare poles.

Suppose the light should go out? No pen could describe nor imagination conceive the horror that would ensue. Death would ride the gale, and how many sailors instead of embarking to the strand, would pass across to the Stygian shore, and how many freighted vessels of commerce would be shattered wrecks upon the shoals.

Thus it is that when the right man for the right place is found, no political influence can oust him, for he has the whole maritime power of the country at his back.

During the day the keeper has little or nothing to do. He pays a visit to the foot of the tower every morning, where the oil cans and working tools are kept, and with his assistant in a few moments ascends to the top by a circular stairway of two hundred and odd steps, and fills the reservoir of the lantern with lard oil; this burns with a more steady flame, and gives less heat than any other except sperm oil. A few minutes is spent in polishing the lens, and then pulling a canvas shade over the reflector, the keeper descends, locks the door of the tower, and his day's work is done. Until sunset his time is his own, he can hunt, attend to household chores, lounge, smoke, sleep, or step across the way where the beacon keepers are stationed, and spend hours in gossiping.

As the day wanes, and the shadows creep from woodland and deep, the keeper with his lamp ascends to the light, inspects the machinery, uncovers the lens, gives them a finishing polish, and glancing at his watch, touches a match to the lantern just as the sun sets by the almanac time. Slowly the flame runs around the circular wicks, and in about five minutes the whole interior of the head of the tower is bathed in a refulgent glow.

The machinery is similar to that of a town clock; and the glass case with its costly reflecting lenses, smoothly and regularly revolves around the Argand light, and every ten seconds a dazzling white flash illumines any one point in the compass, and the eastern flash can be seen twenty-five miles out at sea.

There are two watches. The keeper goes on duty at sunset, and is relieved by his assistant at midnight, who in turn remains at his post until sunrise. The top of the tower is warmed by the great lamp, but in very cold weather a stove is fired in addition. Thus in the most biting weather the tower's loft is well heated, and the custodians keep their watch and ward in comfort. They may, and perhaps they do, doze the long hours away, but by long habit their senses have been so refined and sharpened, that any derangement of the machinery startles them into instant wakefulness, just as the miller arouses the moment the great wheel ceases to turn.

Several times during the present custodianship the delicate clock work that revolves the disk has become disarranged, and the keepers and their wives have had to turn by hand through the long night the glass globe with mathematical regularity. The necessity of this proceeding is patent, if a ship sighted a fixed light, that was marked on the chart as a ten second flash, it would cause the skipper to lose his bearing and possibly cause him to drive his craft on the reefs.

CHASSEUR.

[TO BE CONCLUDED.]

* WASHINGTON, July 3.—At last, after many years of waiting, there seems to be a fair prospect that a lighthouse will be built on the Diamond Shoal at Cape Hatteras. This cape is considered the most dangerous point anywhere on the United States coast line. More wrecks and injuries to shipping occur there than anywhere else. The winds, the currents, and the force of the waves cause it to be more dreaded by mariners at certain seasons of the year than Cape Horn itself, and any craft that runs aground there is liable to strike a treacherous quicksand and disappear for good. Shipmasters, pilots, carrying companies, boards of trade, and chambers of commerce innumerable have besought the Government to interfere and avert the vast loss of life and property which occurs in that neighborhood every year. Experiments have already been made in warning vessels off the shoal, but to little effect. A whistling buoy which was placed there was carried away by the sea, and passed out of sight forever—possibly being caught up by the Gulf Stream and landed somewhere on the coast of Ireland, as a number of American harbor buoys have been. A lighted buoy was tried also, but it soon became a toy of the waves and sank, doubtless swallowed up by a quicksand. Many memorials have reached the United States Lighthouse Board praying for a lightship, but that has not seemed feasible, because there is evidence that the ship would either drag her anchor or snap the chain, in either case ending her usefulness, or else she would be so surely wrecked by the strain brought upon her in this turbulent sea as virtually to seal the death-warrant of every man detailed to serve on her.

But a lighthouse—a permanent structure—has always been considered worth building there if the necessary appropriation could be obtained. Some five years ago, two firms of contractors made estimates and agreed that the building a first-class lighthouse, a hundred and fifty feet high, with foundations a hundred feet deep, ought not to cost over a half million of dollars, or consume more than a year's time. It was impossible to procure from one Congress so large an appropriation, and the necessity for quick work when the building was once started made this embarrassing, but Representative Randall of Pennsylvania devised a plan for reconciling Congressional frugality with commercial needs, and, accordingly, in the spring of last year an appropriation of $200 000 was passed, coupled with authority to contract for the rest of the work after expending this sum—a practice generally forbidden by law.

The bids for the work were opened this week. They were only four in number. One of them was thrown out for a technical informality, and another for exceeding the limit of the estimated expense. The third and fourth came from the two firms which had already figured on the cost. One, Sooysmith & Company, offered to build the light in three years for $488,000 in round numbers; the other, Anderson & Barr, agreed to do it in eighteen months for some $485,000.

The first step in building this house will be the construction, at Norfolk or some more remote point where there are facilities for doing such work, of a caisson about forty-five feet in diameter, made of boiler iron of plates, each two by six feet in size, the whole resembling an inverted pan. This will be fitted with a temporary wooden bottom and have one or more air-shafts running vertically down through it. It will be launched at the place where it is built, and towed to the Diamond Shoal, and there sunk by loading with concrete Its level will be maintained by adding more concrete to any side that tips upward. The excavation will then go on in the chambers at the bottom connected with the upper air by the shafts before mentioned, till a proper depth has been reached, and more plates will be added, course after course, at the top as the caisson sinks further into the sand. When at last this foundation is deemed complete, the superstructure will be built on it. When rust eventually wears away the plates which formed the sheath of the caisson, the great mass of solid artificial stone in ide will remain as a permanent pedestal.

The beginning of the work will be attended with very great risk. After towing the caisson to the Cape—an operation which would probably take between thirty and forty hours even from a point as near as Norfolk—two hours of thoroughly good weather will enable the contractors to make it fast. But storms spring up in that region almost at a moment's notice, and one might easily undo in a half hour the labor of weeks or months.—*Correspondence New York Evening Post.*

Natural History.

TRAPPING DAYS.—I.

THE watershed lying between the headwaters of the streams which flow into Hudson Bay on the north, Lakes Superior and Michigan on the east, and the Mississippi and Missouri rivers on the south and west, is dotted with small lakes; and these together with the country along the small streams which flow down from it, form what was probably the finest trapping ground for furred animals in the United States of America, if not in the world. Lying in Dakota, Minnesota, Wisconsin and Iowa, it formed a country which the Indian tribes relinquished with reluctance, and which cost thousands of precious lives before the strife was finally decided in favor of the all powerful pale face. To those, who, like the writer, were familiar with it in the days when the elk roamed by hundreds over the plain, when for leagues in extent the buffalo chips caused the western half of the great plateau to resemble the corral of the stockman, when the muskrat houses in the lakes and sloughs could be counted to the number of a thousand in a single day's journey, and when the flight of the wildfowl was sufficient to suggest Burdette's fanciful description of the wild geese on the Platte River, where they numbered a million geese in each flock, and where the flocks averaged one for each half mile—it was never a matter of wonderment why the Sioux fought hard and long before they finally relinquished to the white man this best of all their hunting grounds.

In the fall of 1864 the writer began trapping furred animals in this part of the great Northwest, when the line of furthest settlement on that part of the then frontier extended from Spirit Lake, Iowa, to Mankato, Minn., and beyond which the deserted cabins of the murdered settlers along the Des Moines River and the remote shores of peaceful Lake Shetek, were the only indications of the advancing civilization destined to blot out all trace of the savagery of the Indian race. The country swarmed with furred animals, and the only drawback to the enjoyment of the wild life of the trapper was the ever present consciousness of the necessity of sleepless vigilance against savages whose cunning and ferocity were proverbial, and against the vicissitudes of the most rigorous and treacherous winter climate which ever lay out of doors.

The inducement held out to an early settler to turn his attention to trapping during the fall and spring was very great. The trapping ground began at his own door, while traveling representatives of the great fur companies called at his cabin once or twice each year, eager to purchase for cash, at a good figure, each and every skin which he and his family could secure; and this, too, during the period of time when his new farm was as yet unproductive and when the naked heels of poverty-shod industry were in danger of being trodden upon by nimble-footed want.

When, during the great war of the rebellion, muskrat skins sold for 50 cents each, many a settler, although entirely unskilled in the art of the trapper, by the purchase of a few dozen muskrat traps easily secured enough skins to exchange for the winter's supply of clothing and groceries for his family; and an itinerant preacher, whose line of travel extended along the Spirit Lake frontier, was known to have purchased a much-needed horse, saddle and bridle, by the simple expedient of spearing muskrats, with a rat spear made of the rod of the end gate of a worn out wagon. This sport of rat-spearing beneath the ice was considered fully equal to wing-shooting prairie chickens, while being manifestly much more remunerative.

The rat spear was a round rod of steel, or of iron, steel-tipped, half an inch in diameter, with a single short barb 2in. from the point, and with a wooden handle 2in. in diameter and 18in. in length, the whole spear being about 5ft. long. Although it could be used for months each season, yet the very best time for its use in the whole year was when the young ice first coated the surface of the sloughs and lakes, and if the trapper was so fortunate as to find new ice an inch or two thick, entirely free from snow or other hindrance to its transparency, he quickly found that a week's spearing with such favoring conditions was worth all the rest of the season for the use of this implement. One trapper named Simpson speared 77 rats in one day, a most unusual catch.

Proceding quietly along on the smooth, thin and transparent ice, the trapper silently approached the strange mound of rushes, reeds and canes, which, anchored to the bottom of the slough, formed the abode of the muskrat, and drove his spear diagonally down through the house, and an instant's pause enabled him to tell by sound or feeling whether a wounded rat, impaled upon the cruel spear, was struggling to free itself from the deadly rod, or whether his thrust had proved a clean miss. If a rat had been speared, a hole was chopped into the house with

the hatchet, which until now had been carried in the left hand, and the little animal secured; but if not, the spear was withdrawn, and if no sign of escaping rats appeared under the ice near the house, another thrust was made; but commonly the first blow upon the house was immediately followed by the sound of one or more rats, plunging into the water through the bottom of the house; and often from one to a dozen of the panic-stricken vermin would be seen beneath the ice, swimming rapidly away from their invaded home.

And now followed the rapid and exciting work of spearing through the ice. If the water was shallow and comparatively free of vegetation near the rat house, a skillful trapper would often secure the last one of the fleeing rodents before they reached cover. Driving his spear down through both ice and rat with a quick stroke, a few rapid left-handed blows of the hatchet around the spear broke a hole through the thin ice, through which the withdrawn spear lifted the struggling rat, and if seen to be severely wounded he was shaken off the spear at a distance from the hole in order that he might not escape during the capture of the others; or if but slightly hurt, the finishing blow with the hatchet was given, and the eager trapper sprang in chase of another, and the quick, exciting work developed a degree of skill quite surprising to a new-comer.

And a double fascination was added to the sport by the knowledge that at this particular season of the year the otters left their homes in the banks of the lakes, and for reasons which will be given later invaded and for a short time held possession of their choice of the larger rat houses, driving out the rightful occupants, while they enlarged the interior opening (or dwelling place of the rats) to suit their convenience; and where they lived during a period of time each fall, the length of which varied with the season. The trapper, whose careful approach to a rat house was in silence, and whose aim and spear thrust were careful and strongly given, was sometimes rewarded by a tumult and struggle inside the house as welcome as it was unexpected. During my trapping career, while muskrat skins never sold for more than 20 cents each, a good otter skin was worth $12.

Our catch of furs consisted of the skins of beaver, otter, fox, coon, badger, skunk and muskrat; and, while all other animals on the list were reasonably plentiful, so amazing were the numbers of the muskrats on the best sloughs and lakes, that the catch of rat skins commonly equaled in value that of all other fur combined.

Each trapper was provided with a boat and a kit of traps numbering from 50 to 100, and of different sizes, from the No. 1 for rats to the No. 4 for beaver. Beaver were commonly caught in traps set in the water along the banks of streams, where they were at work felling trees, the bark of which they used for food. Foxes were caught in buried traps, baited with small bits of meat scattered around. Muskrats were caught in traps fastened to long slender stakes driven into the bottom of the lake or pond at the edge of their houses, where when caught they would commonly drown before cutting off a foot to release themselves, which they were quite apt to do when caught on shore.

The work was carried on with vigor during the fall months, for during the winter nothing moved above the snow but the foxes, and no one could endure the cold of the blizzard swept plains. The severity of the winter weather is hard to describe, and still more difficult to realize without actual experience of its rigor.

In all I have ever read concerning the blizzards of those treeless plains I have never heard them properly accounted for. There is a period of time, during each and every winter in that country, when no blizzard need be apprehended, for the simple reason that none is possible; and again there is another period during which he who ventures forth from shelter does so at the peril of his life. A blizzard is solely and simply a combination, formed by furious wind and flying snow, which moves almost invariably from northwest to southeast. A snowstorm in that country, as in others, is invariably accompanied by moderate temperature, while the furious northwest gales are apt to come during the seasons of very lowest temperature; and the time of peril to human life is not alone during the prevalence of a blizzard, but also during the period of time between a fall of snow and the next great windstorm, which, coming unheralded and with a speed which no flight can escape, catches the unwary or belated traveler, and envelops him in a cloud of flying snow raised from the ground by the action of the wind, as dense as the fall of ashes at Pompeii, where, in the stumbling flight for life, the blind Nydia was better qualified to act as guide than any of the whole seeing multitude. The storm is accompanied by a degree of cold which makes each hour of exposure a torturous struggle for existence, and leaves one at length only when, unable longer to battle against the deadly stupor of the benumbing frost, he has sunk to his final rest—

"With a bed and a shroud of the beautiful snow."

The result of this furious tossing and driving of the snow was seen in the formation of drifts in each ravine and behind every obstruction, of snow which had lost all semblance of its former beautiful form and velvety softness, and had been hammered by the wind into a compact mass nearly as hard as ice, and over which a loaded wagon could be driven as over a pavement. From the time when these drifts were formed until the next snowstorm a blizzard was impossible, for the reason that the wind could not again tear the snow loose from the drifts, and no matter how furiously it blew during this interval, and even though the belated trapper might be frozen to death, he was not bewildered by flying snow; but could, while he lived, see his way. I remember when in the days of my boyhood, and familiar only with the soft fluffy kind of snow common in timbered regions further south and east, what a puzzle it was to me when I read accounts of the snow houses of the Esquimaux; but after having wandered over the blizzard-formed drifts of Minnesota the riddle was solved when I saw snow which might have been used for fortifications with which to withstand an invading army.

During the short days of the fall and early winter each hour of daylight was utilized in the outdoor work of the trapper, while the long evenings were spent in the warm cabins, lighted by the blaze of the open fire, where the busy work of cleaning and stretching the skins gathered during the day went merrily on until long hours into the night.

The life was necessarily one of hardship and peril, yet possessed, nevertheless, of a wonderful fascination. The element of luck entered so largely into all our calculations, that the working of the most carefully laid plans seemed very like gambling The otter trap, cleaned, smoked and carefully set for a $12 otter, was found when next visited to be securely holding a vagrant 50 cent skunk which, before being killed, by his vilainous fragrance, not only destroyed the set or position for again setting a trap for the otter, but rendered the trap useless for a long time, as the stench seemed impossible to eradicate. On such an occasion the ejaculations of the disgusted trapper were "not loud but deep."

On the other hand, the rat trap carelessly set on the slope of a rat house and fastened to a stake standing in 3ft. of water, next morning was nowhere to be seen, and even the rat house itself had disappeared, but the standing stake surrounded by floating vegetation remained, and being withdrawn from the water brought up with it not only the missing trap, but also the sleek body of a drowned otter, which had carelessly placed his paw in the jaws of the waiting trap, and in his struggle for life and freedom had afterward torn the rat house to fragments.

Singular things, too, were observed, and among the most noteworthy of these was the fact that while the scent of the skunk is one of the most terribly repulsive ever known to man, the trapper who proceeded bravely to skin and stretch the hide of each and every one he caught, found after he had skinned a dozen of the repulsive creatures that his repugnance to the scent had for the most part mysteriously disappeared. I well remember, when at the beginning of my career, having, like others of the fraternity, formed the valorous resolution to skin and save the hide of every animal that wore hair and which fell to my traps; and finding shortly afterward a highly perfumed skunk fast in a trap, I essayed, with the help of another beginner, to remove the skin. The five-minute job consumed an almost interminable hour of suffering for us both, and nothing but the most fixed resolution, coupled with the mutual exhortation to "stay with him," held us to our lightly undertaken pledge. Before my trapping days were ended I had grown so indifferent to the olfactory terror that I have killed a trapped skunk with the ramrod of my shotgun, and, providing that the perfume was not brought into actual contact with my clothing or person, I would much rather skin a skunk than an old male badger. All trappers of my acquaintance agreed such results invariably followed the continued handling of the fur of this animal. I may add, however, that since my removal from such acquaintance with this odorous creature all of my oldtime repugnance to his perfume has returned.

Among the noteworty things which came under the trapper's observation, one of those most worthy of careful study, was the otter's change of residence with the change of season, which has already been alluded to. During the summer the otter sought the deep waters of the loneliest lakes, in the steep banks of which he made his den, which was entered by an under-water passage from the waters of the lake; and here was his home until the frost began to coat the bosom of the lake with the icy mail of winter.

The impulse which prompted him to change his residence at this particular season seemed an inherited one, peculiar to the otters of this region alone, which had evidently proved by bitter experience that to remain in the open lakes during the severity of winter was to court destruction.

The knowledge of this peculiarity of the otter was obtained by the writer during a fall, winter and spring campaign, when the site occupied by our party of three was a group of three lakes with their outlying sloughs, some three miles northeast of the great bend of the Des Moines River.

When the ground was occupied we agreed to divide it as equitably as possible, and each trapper was bound to occupy only his own ground and to own only the fur he caught; and, in consequence, his reward was proportionate to his skill and industry.

The oldest man in the party, who was also possessed of much more skill and experience than either of the others, was Jim Moorehead, the inimitable; one of the jolliest and most humorous of artists in the trapping guild who ever distanced his competitors in the friendly evening contest of fur-dressing, and then, to salve their lacerated feelings and restore good humor to the cabin, drew forth the old violin and lightened their final toil with the cheery notes of the "Seventeenth of Ireland," the "Arkansaw Traveler" or "Old Zip Coon." May he live a thousand years!

In the apportionment of the ground, Jim readily agreed to take the large open lake to the westward, as his experienced eye detected abundant sign of otters along its banks, which was almost entirely lacking along the other lakes. We were late arriving on the ground, and during what remained of the fall weather the work of rat-trapping went busily on, and considerably more than a thousand rats were taken withing a period of three weeks. Meanwhile Jim wisely forbore setting a trap for the otter, preferring to wait until the fur was perfectly matured by the approaching cold, or, in the vernacular of the trapper, was "prime."

Finally, just as he had concluded to set his traps, the first cold spell of winter, coming suddenly and quite severely, coated the open lake and nearly all of the surface of the rush lakes with ice strong enough to sustain a man's weight; and as we promptly set forth to flesh our maiden rat spears, which until now had stood unnoticed in the corner of the cabin, Jim was amazed to find that the whole family of otters had left his lake and taken up their abode in my own.

Proceeding carefully to my work I now had the rare good luck to spear and secure a magnificent otter, and as the snow had already fallen in considerable amount and the wind had begun its task of piling it in drifts on the ice, wherever a bed of canes or rushes projected above the surface, a short time afterward we were all completely nonplussed to find that during the darkness of a still night the otters had disappeared and all sign of them had vanished utterly, so that the most careful search, completely encircling the lake, aided too by the watchful eye and keen scent of Jim's dog Coaly, failed to show a trace of their line of flight in the new snow; while all could see at a glance that at no place around the lake did an abrupt shore meet deep water in a manner which would make a den in the bank possible.

In vain were all the large rat houses in the lake probed again and again with the spear; not a sign nor trace of the truants could be found; and even old Jim confessed his inability to solve the problem. It looked uncanny; and although afterward the theme of many a discussion around the camp-fire, where a score of theories were offered in solution of the strange enigma, the cunning otters, sphinx-like, kept their secret well; and not until the following spring were we enabled fully to understand their strange procedure, and to read from the book of nature this strangely opened page of the natural history of one of the most singular and cunning of all of America's furred animals.

We were indebted to old Coaly after all for the solution of the problem, and it was the instinct of one animal which revealed to us the shrewd plans of the others.

When the long cold winter had passed and the warmth of the sun's rays was daily lowering the snowdrifts, Jim and I were crossing the lake with Coaly at our heels, and as we were passing a drift of the largest size, formed amid and above a large bed of the tall slender cane, common to the northern sloughs, and which grew in a shallow place near the middle of the lake, the dog appeared interested in the drift; and running along on its top and pausing occasionally to smell its surface, suddenly disappeared from sight.

A moment later he reappeared, and with some difficulty regained the surface, when Jim and I, who had stopped as the dog vanished, now hastened to learn the cause of the sudden weakening of the drift, and walking up on its top approached and looked down into the hole which had engulfed the dog. The drift covered a space of one or two acres, and rose to the height of about 5ft. above the surrounding snow. A glance down into the hole told the story of the vanished otter, and a half hour's examination of their winter's residence formed the most interesting study in natural history which ever fell to my lot.

As soon as the drift had been formed of sufficient depth, the wary creatures had approached it from beneath, and breaking through the thin ice (which in the thick growth of the tall cane had merely coated the surface of the water), and burrowing upward into the drift, had formed their home free from the fear of the deadly spear, for where in all that wide expanse of drifted snow should the trapper essay a thrust?

As the drift deepened until nothing but the tips of the tallest canes appeared above, they were out of spear reach and dwelt securely. Here during the winter they had opened long galleries extending for a distance of 50ft. in length, where they could romp and play, and the fragments of the canes torn out in their excavations had been carefully gathered into beds, where each animal slept dry and warm, while a room similar in purpose to those marked "w. c." in the yacht specifications testified to the fact that the otter is a neat and cleanly creature.

As the drift had sunk until the arch above their residence had grown thin, the dog was enabled to scent them, and, in the laudable pursuit of knowledge, he for the moment lost his footing, to find it again several feet below. My profound admiration for the cunning of the little creatures was mingled with disgust at my own stupidity, which had hindered me so long from solving so simple a riddle.

While the open lakes were coated with solid ice from 1ft. to 3ft. thick, and while the ground along their shores was sometimes frozen to a great depth before the snow of winter had fallen to protect it, here was a house both secure and comfortable; and they had learned to make the change in the proper season of the year; and remained masters of the situation at last. Along the running streams were occasional springs of warm water near the shore and beneath the surface of the water, which prevented the formation of ice above them, and these spring-holes, together with the occasional breaking of the ice by the rise or fall of the water of the streams, gave the otters which dwelt in their banks a chance for life during the winter; but the big snow drifts on the surface of the lakes were the last resort of the lake otters, and the cunning creatures had long since learned their use.

ORIN BELKNAP.

MR. STRATTON'S MINKS.—Malvern, Ark.—I have just read C. L. Stratton's account of a minkery his father kept in western New York some twenty years ago. Twenty-three years ago this summer I spent several months among relatives in Cattaraugus county, N. Y., and among other things of interest in the neighborhood I visited Mr. Stratton's minkery, also his park where he kept two elk and a pair of fallow deer.—LEW WILLOW.

Travelers who have penetrated into the eastmost parts of southern Russia find some strange beliefs as to the power of fish charms. Many fish found in those countries have two small, hard, round bones on the side of the head. They are believed to have the power when worn by the owner to prevent colic, and they are termed colic stones. The more wealthy of the peasants have colic stones mounted in gold, and they are worn upon the neck as a valuable addition to a necklace. The bones of the common bullhead are much used among the Russian pheasants as a charm against fever. Among European nations in the middle ages doctors of medicine had faith that two bones found in the head of the tench have medical virtues. The bones were applied to the skin in cases of fever. The tench is a European fish, and the United States Fish Commission are endeavoring to introduce it to American waters.—*Jeweler's Review.*

A young man named Ferguson, living near Troy, Drew county, met with a peculiar but fatal accident Tuesday. He was in the woods hunting, and having remained out longer than was expected his family instituted search for him, and found him in an unconscious condition in an out-of-the way place. It appears that he had fired the gun at a squirrel, and the weapon being heavily loaded recoiled and hit him in the stomach, the blow being a serious one. He was taken home and medical aid summoned, but the physican was unable to restore him to consciousness, and last night he died. —*New Orleans Times-Democrat.*

GLORIOUS HUNTING AND FISHING.—The sportsman will find the luxuries of travel in the solid vestibule trains that run daily over the Great Rock Island Route between Chicago and Council Bluffs and St. Joseph, Kansas City, Denver, Colorado Springs and Pueblo, and also hundreds of resorts on its lines where game fish bite recklessly, and quail, grouse, partridge, ducks and geese hold camp meetings to invite the onslaughts of Nimrods. To the "Lake Park" region of Minnesota and the famous hunting and fishing grounds of the Northwest, the fast express trains of the Albert Lea Route run daily between Chicago and Watertown, Sioux Falls, Minneapolis and St. Paul. The lakes, streams, fields and forests directly reached by these lines are innumerable, and attract yearly the best shots and anglers in the country.—*Adv.*

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Game Bag and Gun.

SHOOTING GEESE IN NORTH DAKOTA.

IN the fall of 1888, in response to an urgent invitation from my old friend Major Singletree, I packed my trunk, cleaned up my guns, and stepped aboard a western bound train, settled myself for a long ride, with a small town in North Dakota as my objective point.

I had three reasons for taking this trip, any one of which was of sufficient importance to an idler like myself to prove satisfactory. It had been years since I had seen my old chum, the Major, I had never been to that part of the Northwest, I wanted to get a shot at those brant and gray geese that the Major said were so numerous there every fall. I had laughed softly to myself as I read that portion of his letter where he said: "Doc, you have the reputation of being something of a sportsman, but the fact is, you don't know what sport is until you come here when the geese are flying in. You think it glorious, down East, if you get a crack or two at a paltry score or so of straggling, bewildered geese. Come out here, and in one day I will give you a hundred shots at more geese than can crowd together in the public square of your city."

Now the public square of our city comprised some ten acres, and as many geese as could crowd in there, why—I laughed at the usual exaggeration of these Western people.

Well, I found the Major hale and hearty, and but little changed; a fact that he attributed to the "wonderful ozone" of that country. We were soon seated behind a fleet pair of bronchos and bowling along over the prairie. It was getting toward evening of a clear October day, such as you rarely see except on the great plains of the Northwest. To the north of us stretched the level prairies, with here and there a farmer's house or so-called "shack." South of us stretched the broad prairie, with the sluggish river Cheyenne, winding its way like a huge snake until lost from sight in the distance. A few scraggly trees line its banks, and here and there, like some huge monster from the bowels of the earth, rose in strong contrast with its surroundings a frowning bluff or butte.

To the east, that same grand yet monotonous prairie, with the little village lying in its bosom, resembling from our distant point of view a covey of birds clustered there. But the west! Ah, even as I write, that picture comes before my mind, full of the sublime grandeur of God's own work. The sun was setting slowly, it seemed, and the western horizon was a scene of golden glory. We were nearing a little lake now, which was only one of many tha dot the plains of North Dakota. A beautiful sheet of water it looks to be, though without a twig of foliage on its shores. The Major pointed over toward it with his whip and said: "There's where we'll come in the morning, and I'll think I'll keep my word in showing you some sport."

"A pretty little lake," I answered.

"Yes, but strongly alkali. There's my claim over yonder," he continued, pointing on beyond the lake, where a little collection of houses could be seen. "Does not look far, does it? but it's a good half hour's drive. When I came here that claim of mine was white with buffalo bones, where the Indians had slaughtered the buffaloes for their hides. I made a good thing in picking up those bones, too," he chuckled.

We had turned off from the road now, and we headed toward the lake. It made no difference, so far as I could see, whether we were on the road or not; there were no fences, and the wheeling seemed as good one place as another.

The Major wanted to show me a few geese, he said, and he did. The lake was full of brant and gray geese, while the air seemed alive with them, and the discordant *honk, honk* and *yip, yip, yip*, from a thousand feathered throats made me fairly gasp for breath. Instinctively I began unbuckling my gun case. The Major laughed. "Never mind, Doc, there will be just as many there to-morrow."

The Major's farm was not unlike many another large claim; one large rambling wooden dwelling house, with several smaller buildings, some for hired help, and a few good sized barns. A dozen reapers and binders stood about the barns, and the barnyard contained a good-sized drove of horses and mules. Some well-bred red Irish setters lay about the veranda. These dogs seem to stand the winters better than the other breeds.

That evening we spent on the veranda, enjoying our pipes and watching the prairie fires at different points. These fires, the Major informed me, he protected himself from by plowing several furrows around his collection of buildings.

We talked of old times and new that evening, and the Major was in his element with feet elevated and well-filled pipe, he spun yarn after yarn. "When I first came here," he said, "I had only one team and that was a yoke of oxen. I could only make two trips a day to the elevator with my wheat, and as you may imagine it was slow work. To amuse myself I used to take my gun along, and on the way home I would leave the oxen to plod along alone, and I would take another route, now and then bagging a few ducks by the sloughs, or perhaps getting a crack at a sandhill crane or a covey of chickens. I never came home empty handed, but would usually gain a point ahead of the oxen, and there wait until they came along, load in my game and ride home."

We were to be up before daylight, so before I retired I got out my hunting suit and boots, put in about thirty rounds of ammunition in my belt, and then turned in. A loud knocking on the door aroused me early in the morning. I sprang out of bed and admitted the Major. "Time to be off, old fellow," was the salutation. He was dressed in a light brown suit with top boots, looking fresh and anxious to be off. "All right. What sort of a morning is it?" I asked as I threw on my clothes. "Can't see very well yet," replied the Major, "but I think it's going to be all right; looks cloudy, any way."

"Good!" I exclaimed, as I buckled on my cartridge belt.

"Is that all the ammunition you are going to take along?" he asked.

"Why?" I answered in some surprise, "Is that not enough? I have thirty rounds!"

"Humph!" he chuckled, "you are not in the East now, young man. Fill your belt, and your pockets, too."

Hastily swallowing a lunch that had evidently been prepared the night before, we started for the lake. A few geese were flying here and there, dimly visible in the gray light, but the bulk of them, the Major said, were still on the lake. We were passing through one of his mammoth wheat fields, the grain had been cut, and piles of straw at different places indicated where the threshers had been at work. We were near the lake now. Suddenly I grasped the Major's arm. Just beyond us was a small bunch of straw, and just beyond that a flock of geese were standing in the stubble. Hastily I thrust a couple of cartridges in my gun, and crept forward, keeping the little stack of straw between me and the geese. It was too dark to determine whether it was a large or small flock. "Don't shoot until they rise!" said the Major, in what seemed to me an unnatural tone of voice. Carefully I worked along. I had almost gained the straw. Funny they don't see me, I thought. I was now in excellent range, and I suddenly rose up. They did not move. A low, mocking laugh came floating softly up behind me. I had been fooled. "Confound you and your decoys!" I said, half laughing and half vexed.

"Never mind, Doc," said the Major, half choked, "I won't tell. Here's your stopping place," pointing to the little bunch of straw, "and there's mine over yonder," nodding toward a similar bunch some hundred yards away. "And now let's get in, for it's growing light, and the geese will be thicker than fleas here in five minutes, and they won't be sheet iron ones either," he added with a laugh as he started off.

Advancing to the straw I saw what the Major meant by "getting in." A little pit had been dug two or three feet deep, and some straw heaped up about it. I lost no time in getting in, and we were none too soon, for with the advancing light the geese were stirring themselves.

The limpid lake seemed literally coated over with geese, the majority of them, however, being brant. From different parts of the lake they were rising, and gradually veering around, would start for the feeding ground with such trumpeting that, to use an old expression, "a man couldn't hear himself think." An hundred must have passed over my head before I could collect myself for business. Then the fun commenced. I raised my gun, and aiming at the leaders of a large flock not 50ft. above me, cut loose on them. A large gray goose came tumbling down. Away went the other barrel, and down came a brant, while a crippled goose gradually settled, steering as well as he could for the water. I hastily reloaded. The noise of the firing had made a commotion among the fowl on the water, and hundreds, yes, thousands were flying in every direction.

Bang! bang! went the Major's gun. Whang! whang! I answered. How they did tumble. It was glorious sport. The barrels of my gun had no time to cool. First they flew toward me; then dismayed by the reception I gave them they would turn toward the Major, only to be more confused. At last they began crossing the lake, and I thought our sport was ended; but a puff of smoke, followed by a report, showed that some one was over there as well.

How long we kept up our fusilade I cannot tell. We are not apt to notice the flight of time on such occasions. My belt was empty, but a glance around on the prairie showed that it had not been emptied in vain. The geese had most all gone now and we were lying quiet. I began to feel the effect of the cramped position of my legs, when *whir r-r* went a flock over my head and were about to settle among our decoys. Up came my gun, the cramp was forgotten. Bang! bang! with the usual answer from the Major, and three more were bagged.

"Had enough, old boy?" he called, rising from his hiding place and stretching himself. "Yes," I answered, doing likewise, "I'm no pig." "Thirty-eight," said the Major, musingly, after we had piled up our game. "How do you like it, Doc?" "Glorious!" I exclaimed.

G. G. H.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 18.—Mr. John Parker, deputy game warden for Wayne county and Detroit, Mich., writes me on the 16th as follows: "I arrested a Detroiter named Chas. F. Burkhart for illegal shooting of woodcock last Sunday and Judge Kurth fined him $50. How is that for summary justice? I am going up the river to-night to lay for unlawful duck shooters and expect to nail a couple. Will write soon and tell you." Johnnie is apt to get 'em if anybody can. He has had some exciting personal encounters with the toughs and lawbreakers of his country, invariably landing his man, and if the justices and juries would back him as he should be he would make illegal shooting still more unpopular in that region. As it is his name is a terror to the evil doers. I hope he will get his duck shooters.

Mr. W. C. Held and Mr. Louis Smith, both of Saginaw, Mich., the latter secretary of the American Beagle Club, have made a little visit in this city, stopping on their way home after an extended trip through the West. They were gone six weeks in all, and visited the National Park and parts of Idaho and Colorado. They report an elegant time, and both have Kodaks full of pictures. A bit of strange information they give is that scouts are now killing bears in the Park, the latter having become so destructive that it became necessary to thin them out, for which the scouts claim Government permission. All of which does not seem very clear. These gentlemen report that the country about Livingston is an angler's paradise, and they are indeed full of enthusiasm over the wonders of the great West which they have seen. They say that chickens are plentier in North Dakota than for years back. They saw a fine bunch of antelope in the Bad Lands of Dakota. Both gentlemen were looking brown and hearty, and are to be envied for their good fortune in making such a grand tour.

To-day Mr. Fred Kimble, known all through this country, and president of the Peoria Target Co., was in town, and it happened that we lunched together at Kinsley's. Nothing very remarkable about that, but now I think of it, I don't think we ought to have gone there. This gray-headed old stomach-killer, Kinsley, is not nearly so much a good restaurateur as he is a persistent violator of the Illinois game laws. I call to mind a late article in a Chicago daily (the *Herald*) in which a glowing account was given of a little midsummer dinner given by an insurance man to a few friends, at Kinsley's, this summer. The host left the *menu* quite to Mr. Kinsley's judgment. Oh, it was such a nice little dinner! The paper spilled over about a column's worth on it, as if the man who wrote it all had never had a square meal in his life. Part of this simple, elegant, newsworthy little repast consisted of baked prairie chicken! Bear in mind, this was in midsummer—I believe in June or July. Our season doesn't open till Sept. 15. If Mr. Kinsley got his birds out of a freezer he is no better off, and broke the law plainly and unmistakably. Now, as the paper above mentioned is still accessible, as the names of the host and guests are known or can be learned, as the *menus* were distributed among the guests as souvenirs, and as Mr. Kinsley got up and published the *menus*, I was just wondering if there wasn't enough to shake His Majesty Kinsley up on this a little. I should think about the best thing he could do would be to call in those souvenirs, if he can. After that, he might reflect that he has done an unlawful and disrespectable thing, and has violated not only law but decency. Still further, he might ponder that he is in danger of losing the trade of a class of sportsmen who respect decency. Further yet, he may query of himself whether he isn't in danger of serving illegal prairie chicken to the wrong man some day. All of which is submitted without a bit of respect for Mr. Kinsley, his methods or his dinners.

E. Hough.

WATER-KILLING DEER.

WASHINGTON, D. C., Aug. 20.—*Editor Forest and Stream*: When will men learn that brutality is not sport? that cutting off all avenues of escape for an animal and then deliberately destroying it is not in accordance with the ethics that govern or should govern those who pursue game for pleasure? Some professional hunters feel no doubt a certain degree of elation when they make a successful shot at game taken at a disadvantage, and the more shots they get of that kind the better are they pleased. With these persons gain and game are synonymous terms, and the manner of the taking off of the latter, no matter how unfair, is considered all right, so long as it is successful.

If then such market-hunter's methods are worthy only of condemnation, what must be thought of men of a different calling, who visit the Adirondacks for the purpose of killing deer in the lakes of that region?

What fun or excitement can there be in rowing up to a deer swimming in the water and clubbing it to death? No skill is required in order to compass its death under such circumstances. Any one with bloodthirsty tendencies can do the trick.

A recent issue of your paper, I think it was Aug. 7, contained quite a long narrative of the exploits of a party of hunters in the Adirondacks. The writer of the article was evidently a novice, and doubtless would have obtained more meat had he employed a guide to row him and then used a club instead of a shotgun. As we sometimes say of executioners, he bungled his work fearfully. His first lesson in the art of shooting deer in the water, as given by his older and consequently more hardened associates was as follows: "When the wind is blowing hard don't shoot over the side of the boat, but over the end; get the deer to windward, then push the boat instead of pulling it, coming up close behind the deer and shoot over the stern."

Just why the deer should be to windward, when the shooter gets ready to empty his gun into its head at close quarters, is not explained and will always remain a mystery. We may also be pardoned for failing to see the necessity of using firearms when a stick would accomplish the same results. That the deer of this country are gradually disappearing must be apparent to all those who have given the subject any thought. In a few years, if the present methods for their destruction prevail, they will be, like the buffalo, exterminated in their wild state and only found in parks and menageries.

The season for hounding deer in the Adirondacks is rapidly approaching, and it is sad to think that men, otherwise humane, should feel any degree of pleasure in taking the life of an animal whose legs are practically tied. Such men cannot be termed sportsmen, because the members of that fraternity are governed by the unwritten law that all game shall have a chance for its life. The true hunter loves the excitement as well as the difficulties attending the pursuit of an animal, and if all uncertainty in regard to its capture was eliminated, nothing would be left to afford him enjoyment; to him also the actual possession of the carcass is of little value outside of the fact that it serves as a voucher for his skill.

A. T.

BIRDS CROSSING THE CITY.

WHILE I was walking up Washington street, Brooklyn, last Tuesday morning about 3 o'clock, I heard the clear note of a reed bird overhead. I stopped to listen to the welcome and familiar music, and coming as it did from the darkness of a great city in the quiet hours of the morning, the little voice was all the sweeter. Then as I listened I heard not only one but many calls as the birds pursued their flight toward the south, and also, from what appeared the outer edge of the flock, I heard the calls of two long-billed and long-legged birds, known in the days of my youth as shypokes. These two were about 50yds. apart, and as the night was dark and somewhat foggy they were evidently calling each other that they might not go astray.

I often hear the whistle of plover crossing over the city at night, and a few weeks ago as I stood watching the moon from my window I saw a large bird outlined for an instant against the bright disc, and so vivid was the picture that the bird's wings seemed fairly to brush the face of the moon.

How such sights and sounds wake up old memories and create an intense longing for the dog and gun. Now, I had no desire to shoot the reed birds, but they brought to mind the rice beds of Chipoax Creek, and the fat woodducks that fed upon its marshes. As for the shypokes, why they came into my life with the first gun I ever shouldered. And though they are not choice of flavor or plentiful of flesh, yet with what keen delight did I creep upon them and pull the trigger of that old single gun. How I rejoiced over the first one I killed flying, and how very much powder I wasted before I succeeded in making another wing shot. But stop—I merely started in to tell you of the birds crossing the city, but the voices that spoke to me from out the night aroused a host of memories that could not be entirely suppressed.

Old Man.

MINNEAPOLIS CHICKEN SHOOTERS.—The Minneapolis *Journal* of Aug. 19 says: The trains that left the city last night and to-day carried numerous hunting parties. The baggage cars were transferred into dog menageries, and the owners of the canines either kept them company or lounged in the cars. There is but one real, genuine hunting season to the sportsman, and that will open to-morrow in Minnesota, and will allow him to crack away at ducks and prairie chickens to his heart's content. South Dakota is a pretty good chicken country, but they have a law out there that spoils the fun for Minnesota hunters. The season opened in South Dakota Aug. 15, but the law prohibits taking the game out of the State. Minnesota hunters like to "prove up" their claim with the raw material, and so they have waited patiently for the 20th. There is plenty of game all over the State. That is the report. Col. Bobleter, the State Treasurer, never misses his annual chicken hunt. He is going out to-night, and will be accompanied by M. A. Paulson, of Minneapolis; Prof. Herman, of St. Paul, and two or three other gentlemen. Col. Bobleter's old hunting ground is at Tracy, but last year his friends persuaded him to go "up north," with the result that he came back almost empty handed. To-night he will leave for Tracy, and will carry with him a copy of the Republican State platform for a mascot. Health Officer Kilvington was going, too, taking a bee line for the west, in company with his dog Grover, who can mark a chicken's location at fifty miles' range. But "Doc" was surprised and pained to find on going home last night that Grover had cut one of his paws badly and could not go. "He never had a better nose than this season," said the doctor sadly, "but it will be some time before he can hunt again." Joseph M. Regan, president of the Protective Association, and party have gone to Holly. W. E. Haskell went yesterday. M. F. Hanley, in company with his brother, J. A. Hanley, of the Santa Fé road, went out to-day by special car for Ward Lake, Minnesota. The members of the Lowry Meadow Gun Club left this afternoon for the Minnesota bottom, where the club has its 2,000-acre reserve. Among those who went out were J. C. Joslyn, J. D. C. Knapp, Will L. Wolford, Will Ankeny, F. C. Lawrence, Charles Bushnell, Lou Floyd, Harry Legg, James Griffin and Henry Elliott. The club has some rare sport in store in shooting teal and mallard ducks, which have bred in large numbers on their grounds during the year. P. B. Winston, the big Democratic politician, has gone with a party to the western part of the State. He packed up his traps and left the minute he got home from Pennsylvania. Capt. Foster, of the Fire Department, has a leave of absence to kill all the chickens he can in a week. John Nicholson and E. D. Brown have gone to Royalston. Emil Ferrant and George Goosman have gone to Dorner. A party that left last night for Redwood Falls was composed of Ed Terrill, James Ford, Charles Bryant, Dell Allen and Peter Thielen. Among others who will leave to-day are A. T. Rand, W. D. Washburn, Jr., H. C. Hanson, James B. Hanson, John B. Hanson, Thomas Laurie, John Denwick and E. E. Webster. The chicken season continues until Nov. 1. Hundreds of sportsmen leave the city every year for a few days' outing in the chicken fields. Times have been very lively for the gun stores, as the reports of plentiful game have made the nimrods anxious for the field. The hegira will continue for a day or two yet. Soon the friends of the nimrods at home will be dining on prairie chicken—if luck is with them.

ROCHESTER AGAIN.—Rochester, N. Y., Aug. 25.—In the last issue of the FOREST AND STREAM I noticed an article concerning Rochester. As a resident, and a "gun crank," I wish it were possible to induce Mr. Hough to accept an invitation to go duck shooting on one of Mr. Richmond's "25-cent" trips. If he longs for bass or pickerel we will take him to Irondequoit Bay—round trip 20 cents. If he were to walk to Windsor Beach, along the R. W. & O. tracks, he would be extremely liable to secure a fair bag of woodcock. In the Genesee River, south of the center of the city, catches of bass are frequent. Last season I killed three woodcock within the city line, and in less than three miles of the geographical center of the city. Pigeons are not any way plentiful. Mr. Hough does not state as to whether ammunition is included in his Chicago "five dollar trips," but from this city a sportsman may have a shooting or fishing trip, be gone one day, his expenses being less than $1,50, and have a pretty good time. He can hire a boat for 50 cents a day and his car fare would amount to probably 25 cents. We admit that Chicago is a pretty big city, and a lively and wide awake one at that; but for inexpensive and successful fishing or shooting trips I claim that we are in the lead.—GENESEE.

UPPER MAGALLOWAY RIVER, MAINE.—The several camping parties up river report a little improvement in the fishing. Game is abundant, and when the open season begins great sport is anticipated. Partridges are seen in "flocks" all through the woods. No less than a dozen camping parties are on the river, and several are stopping at Flint's Hotel, making short excursions out into the neighboring country. This way of sporting makes it very easy, and the party can spend the time to good advantage and have a comfortable bed at night, which a great many prefer to "roughing it." The river is lower than it has been before for years. A new dam is in process of construction at the head of Aziscohos Falls in place of the old one, which has outlived its days of usefulness.—SEWES.

MICHIGAN.—Argentine, Aug. 23.—Game in this part of Michigan is fairly plenty, such as ruffed grouse and rabbits. If we could shoot quail we would have lots of sport. More quail than for years, but one hard winter and they are gone. I expect the law on quail will not be observed very strictly; of course they will be shot on the sly; but it will not make much difference, for the game and fish warden law is a detriment to those who would like to have the game and fish protected. I believe the wardens in a great majority are no good, only to wink at violations and let the poacher get all the best of the sport.—OLD SUBSCRIBER.

WASHINGTON.—Sunshine, Pacific County, Aug. 14.—Four cow elk and three buck elk were killed within two miles of this town last week. No such thing as law in this country. Don't know what the term means.—McK.

GLOVES PROTECT FROM POISON IVY.—Kankakee, Ill.—*Editor Forest and Stream:* Recently much has been said by your contributors in relation to poison ivy, cure, etc., but nothing that I have observed in relation to a preventive. For many years it was a rare circumstance for me to hunt in timber without becoming poisoned by ivy or other poisonous vegetation. I have suffered much from that cause. About twenty years since I tried the experiment of wearing a pair of light close-fitting buckskin gloves, gloves with long wrists that would extend under the coat sleeves, and so pliable that I could readily handle my gun. The gloves proved a success, and since that time I would as soon forget my gun as the gloves when shooting on a hunt. Never since I adopted that practice have I been poisoned. I am satisfied the face, etc., becomes poisoned through the medium of the naked hands.—H. L.

THE GREEN MOUNTAIN BOYS.—Highgate, Vt., Aug. 23.—The woodcock season is now here in the Green Mountain State fairly open, with a good supply of birds. The writer and his son were out on the first and made a good bag. The young chip can handle his gun as well as his Greek and tied his sire on the score. The next day I went out with the "old gent." Dear old governor! the seventy-seven years that you carry dimmed your sight and feebled your step, but they have not cooled your ardor for an outing. When the white frosts arrive, if a hound should bring a fox unto Green's ledges, I am quite sure that you would be on your old stand, where the stone wall crosses the northern point of the ridge, and add another brush to your long score. Ruffed grouse are reported by the berry pickers to be numerous, which we will know all about after Sept. 1.—STANSTEAD.

ARKANSAS GAME NOTES.—Malvern, N. H.—Our open season for deer commenced on the first day of August, and the woods were full of hounds and hunters during the first few days of the season. I have heard of only two deer being killed yet in this vicinity, and only a few started. I think they are very scarce this year. Quail are very plentiful, and by the time the open season for them arrives they will be large enough to furnish good sport.—LEW WILLOW.

NETTLE ANTIDOTES.—*Editor Forest and Stream:* Your correspondent, "H. B.," in 21st inst., speaks of the tops of ferns as being an antidote for the poison of that pest, nettles. Another infallible remedy for that poison and of kindred vegetation is urine. A single application effects an immediate cure. This the writer knows from observation and experience since boyhood.—H. L.

CONNECTICUT FARMERS AND SPORTSMEN.

THE society, whose long name everybody knows, has issued a statement: *Members and Others:* We beg to call your careful attention and reading of this letter. This Association needs membership, not only for the money which will be added to the Association, but which is actually necessary for the expenses in employing detectives in working up cases and paying attorneys to fight doubtful cases in the courts. The Association deserves the vigorous support and hearty coöperation of every farmer, sportsman and angler in Connecticut. Since our organization in September, 1888, we have successfully prosecuted over fifty fish and game law violators. Some of the cases were for spearing black bass, using dynamite for killing fish, netting trout, shooting chicken partridges, callow woodcock and quail in close season, selling game in the close season, etc.

This organization leases no land for any purpose.

Already we hear of woodcock being killed, but our hands are tied for the want of funds. Our campaign began with work, progresses with work and must end in work—not talk or hesitation.

The Association appeals to its members and all those who pride themselves on obeying the game laws to use their efforts in our behalf. Earnestly appeal to your friends to join the Association; if they cannot unite with us let them make a donation. Remember that we receive no financial aid whatever from the State.

The officers of the Association work gratuitously, and they pledge themselves to a continuance of the diligent work in enforcing the game and fish laws, if furnished money—not sympathy (the latter is all right, but it don't pay bills.) A constant and untiring fight must be kept up to prevent the total extermination of our game birds and fishes. We must be on the alert for any violation of the game or fish laws. Do not delay in sending your dollar (or more if possible) now, to-day. It costs about $20 to convict a game or fish law violator.

The following editorial, from that wideawake paper *Cooley's Weekly* (Norwich, Conn.), "hits the nail on the head," it reads as follows:

"Without prompt, vigorous and adequate protection, the game and fish of Connecticut will soon be practically exterminated. It is a question of sport within legitimate bounds, or of no sport at all; a question of whether the game and fish of the State of Connecticut belongs to the people of the State or to half a dozen prowlers and poachers, pot hunters and law breakers in each town.

"This is precisely the way in which the matter stands: If the people of Connecticut want the game and fish of the State preserved they can accomplish that and easily enough; if they are indifferent, or if they love best the prevailing illegal poaching methods, if they prefer quail and partridges unfeathered, and to hunt trout with nets and lime, very well, then—that ends the whole business."

This Association is not the "Hartford Game Club" or "Hartford Club" or "Hartford Gun Club," but the "Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish," and our work is not confined to Hartford or Hartford county. We are ready and willing to act in any town in the State. Furnish us reliable evidence in any town and we will prosecute at our own expense, any party, rich or poor, that violates the game and fish laws of this State. Every one should see his duty clear to do his full share in helping our organization.

It has been clearly demonstrated that the game and fish laws are practically of no earthly use unless the law-abiding citizens combine and enforce them. The benefits of our association are one hundred fold over what individuals can attain. The membership fee is $1 (farmers are admitted free), but any one can take as many memberships as he pleases and have a vote for each membership. There is work for all who love legitimate sport with rod and gun.

We trust for your prompt, welcome and hearty response to our request, and that an early remittance be sent to Dr. N. W. Holcombe, Pratt Street House, Hartford, Conn. Let every member get at least one person to join us; by so doing much good can be done. We need something more than saying, "Go for the violators." Give us funds and we will "go for them." Annual dues for the current year would be very acceptable now. Very truly yours,

A. C. COLLINS, President.

A digest of the Connecticut fish and game laws has been prepared and is distributed gratuitously

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

ON CANADIAN RIVERS.

[The following chapter is taken from Mr. E. A. Samuels's new volume, "With Fly-Rod and Camera."]

[*Continued from Page 93.*]

FISHING for the present was useless, even if the pool had not been disturbed, and throwing ourselves among brakes and wild grass in the shade of the trees, we gave ourselves and the pool a short rest.

The black flies and mosquitoes were now putting in their best work, and we were obliged to anoint our exposed skin with our "fly pi'son," as William termed it.

I have seen various preparations for keeping off the insect pests of the northern wooods, but of all that I have tried I have found none more efficacious than a liberal proportion of pure Stockholm tar dissolved in sweet oil, one part of tar to two parts of sweet oil, and the flavor heightened with a little oil of pennyroyal or peppermint. Vaseline, thoroughly incorporated with this, gives it a consistency and "wear," and is therefore a valuable addition. The solution of tar cannot be too strong, but too much pennyroyal will cause irritation to the skin and eyes.

Ah! what a paradise would be the northern wilderness in summer if it were not for the voracious insects which abound in myriads and annoy us at every turn. In some localities they render life almost a burden to man and beast, and a favored spot it is, indeed, that is free from them. I have seen the black flies in the valley of the Magalloway River in Maine, in such numbers that the farmers could not work in the fields in the heat of the day unless they had a "smudge" burning near them all the time. Repeatedly have I seen cattle come tearing down the hills as if they were mad, and thrust their heads into the smoke of the "smudge pot" that was kept always burning at every door to drive away their tormentors. I have seen the window panes of a school house in a back settlement so covered with these insects that they appeared almost solid black.

Never shall I forget an experience that I had in the summer of 1860 on the upper waters of the Magalloway. It was a wild country then, and one would not meet a hunter or fisherman for weeks at a stretch. Now it is quite different, and fishermen are numerous, and on an island in Lake Parmachene there is a comfortable house for their accommodation kept by the popular guide John Danforth. On the occasion I refer to, I had with me as canoeman, a son of dear old Captain Wilson, one of the whitest men that God ever created. We were coming down the river on our return from a trip to its head waters, and had just reached "the Meadows," so-called, when young Wilson was taken ill. He seemed in great pain, almost as if dying, and was of course quite helpless. What his sickness was I could not understand, but I did the best I could for him. I laid him in the bottom of the boat on some blankets, and gave him a dose of Jamaica ginger, which I happened to have among my stores. I felt sure it could not hurt him anyway, and it did in a short time give him relief, for he soon fell asleep. But the black flies! Like a dense cloud they settled upon us, and I was literally streaming with blood. Wilson I had covered with the blanket, and his face was protected by his hat, with a handkerchief throwm over it. But I, while I was tending him, was completely at the mercy of the little pests, and no mercy did they show.

Not a breath was stirring, and the weather was very warm; the perspiration streamed at every pore, and consequently tar ointment would not adhere to my skin. It would have been useless, anyway, against such hordes as pounced upon me.

It took but a short time to convince me that unless I had a smudge in the canoe the situation would be critical, for I had heard of cases of terrible poisoning from black flies, which were followed by insanity and helplessness. Seizing the frying pan and iron pot, I started a fire in each, and when it was fairly burning, I covered it with damp moss, leaves and turf. I placed one in the bow close to Wilson, and the other at my feet, and began my long paddle of, I think, over thirty miles down to Aziscohos Falls.

The river was low, and once or twice I was obliged to get out of the boat and haul it over bars and windfalls, at which times I was at the mercy of my tormentors.

The load was also heavy for a single paddle, and tired enough I was at nightfall when I landed at an old logging camp on the river side, and got my patient out of the boat and into the camp. However, I started up a big smudge, for although the flies had finished their work for the day, the mosquitoes began to show up in clouds.

I then built a fire and got supper. I contented myself with hard tack, fried bacon and tea. For Wilson I made a dish of flour porridge; and through the evening I laid cloths steeped in hot water across his abdomen, changing them as fast as they cooled off to the temperature of the body.

This treatment seemed to do him good, and glad and thankful enough I was to see the poor chap coming around, for it was a pretty serious matter for me to have a sick man on my hands alone in the wilderness, particularly as I did not know what ailed him, and what the best treatment would be.

At length I smudged out the camp and turned in, leaving a big smoke going outside.

On the following morning Wilson was so far recovered that he could move about without my assistance, and we got an early start on the river, he, however, still too weak to paddle. The flies, however, soon put in an appearance, and I was obliged to kindle my smudge again. I sped the boat as rapidly as I could, but it was noon when I heard the oh, how welcome roar of the falls and knew that the end of my journey on the river was at hand.

Wilson, though still feeble, was able to walk the carry (portage) around the falls with me, although we had to travel slowly; and it was late in the night when we reached his home at Wilson's Mills, and I was relieved of my responsibility and anxiety.

We were both so badly poisoned by the virus from the insects that we were in high fever for a day or two, but good nursing brought us out all right.

My hands were in a terrible state, for in addition to the soreness from the bites of the flies, they were badly blistered by the hard bout I had had with the paddle.

Yes, that was an experience with black flies never to be forgotten. The region about the Magalloway is one of the favorite haunts of this pestiferous insect, and I do not remember ever seeing it in any other section in anything like the abundance in which it exists there. In old times we used to think that the Schoodic Lake country, particularly about Grand Lake Stream, was bad on account of these diabolical insects—and I have seen them so thick on the Miramichi that the air was black with them—but I have never anywhere seen anything like the prodigal plenty in which they are found on the Magalloway.

"Pass me the p'ison, please," exclaimed William; after Frere and I had anointed ourselves, "the flies are very cross* to-day."

I handed the tar to him, both of them had been well punctured, the insects having crawled into their hair and beards and left their scars freely.

Anointing being over we settled down for comfort.

"'Tis a pretty pool, entirely," said Hiram, who was carelessly tying various knots in a piece of string.

"It is that," assented William.

"I wish I had a dollar for every fish that was ever taken from it."

"You'd need a team to carry them if they were our American silver dollars," I added.

"Yes, and a double team at that," said Frere,

"Yes, 'tis a great pool, altogether," answered Hiram, unconsciously repeating his first statement.

"And one of the best to kill a fish in on the river."†

"True," replied Frere, laughingly, "if you can keep him away from the rocks."

"Oh, there's no trouble at all," replied William, deprecatingly, "you'll never have one run down there again. This was the first time I ever saw one, and many's the fish I've seen killed here."

"No, they never run there like that," said Hiram, "but you want to mind the head of the pool too, there's an old drift tree there," pointing to a spot just below the upper rapids, "and if you get 'hung up there,' good-by Mr. Salmon."

"Is there really any drift stuff here?" I asked, "if so now is the time to get it out. I don't want to lose any fish on it."

"All right," replied the guide. "Come, William, with the gaff, and we'll clear it out."

The two brothers proceeded to the beach, above the rapids where the canoe was hauled up, and shoving it out into the stream and embarking, they moved slowly down to the place that had been designated.

William held the canoe steadily in place while Hiram began reaching with the gaff down into the water for the drift wood.

"By Jove," I exclaimed, "there's more water there than I dreamed of; see! he has the whole length of the gaff under water, and his arms up to the elbows."

"Yes," replied Frere, "there is a sharp pitch there, and quite a deep hole."

In a short time Hiram shouted to William to "push in," and the canoe, impelled by the setting pole, soon touched the beach, Hiram dragging with the gaff what proved to be a large limb of a tree with the branches and twigs on, just as it had floated down the stream and sunk months before.

"That's a dangerous snag out of the way, at all events," said Frere. "What have you found, Hiram?" he exclaimed, as the guide, after hauling the limb up on the beach, proceeded to detach something that was evidently fastened to it.

"'Tis a bit of net that got torn on it," answered the guide, "that snag has done one good job anyway."

"Hallo, here is the rest of your cast, sir," exclaimed William, unwinding something that was also entangled in the twigs.

"What!" ejaculated Frere, "my casting line? Impossible."

"It is, sure enough, and the fly, too, all but the barb of the hook, that's gone."

It proved to be as they had stated; the salmon, after parting the casting line, had purposely entangled it afterward in the drift stuff and, breaking the hook, had freed itself of its unwelcome incumbrance.

"'Twas a crafty lad, altogether," said Hiram, handing the line to Frere, "how well he knew the way to get rid of it!"

"Yes," said Frere, "I knew he would not carry it around long."

"It was a poor length of gut," I exclaimed, as I examined it. "See, here is at least six inches of it thin and flat."

"Yes," said Frere, "I see it was weak there, although it would have made no difference if it had been perfect; it is almost impossible to obtain good casting lines nowadays except at fabulous prices, and even then they are likely to have weak places."

"That is true," said I, as we resumed our seats among the brakes, "there is sure to be a weak spot somewhere, and I have for years tied my own, and I use nothing but the best round gut of even and uniform thickness."

"I believe I will try it myself," replied Frere, "there is no great labor required in it, and it is worth something to have a cast on that one may feel absolute confidence in."

"Yes," said Hiram, "the best cast is none too good. I was once out with a man from Montreal. He had a big lot of new casting lines and they looked all right, but they went to pieces on every fish. He lost a big lot of saumon that trip, something like a dozen or fifteen, I am sure."

"He did so," added William, "he had hard luck, not a cast in the lot wuth tuppence."

"Do you mind, Doctor, how we lost the saumon last year in the White Rapids Pool on the Jacquet?" asked Hiram, addressing me, "Sure he was the wild divil, too."

"Yes, I shall not forget him for a while," I replied, "such a dance as he led us."

"How was it?" inquired Frere.

"Oh, it was only one of the cases of 'lost fish' that every one knows all about," I replied. "I was running down the river with Hiram in the canoe, fishing the pools on the way down. When we reached the White Rapids Hiram landed me on the shore above the pool and I walked down along the river, casting as I went. When I reached the boil immediately below the rapids I got a rise, and casting again was fast to a fine fish. He took down into the pool and from the way he cavorted around there one would think he had an electric battery in his tail. Zip! he'd dart up and down the pool like an arrow, and "cree-e-e' the old reel sung out in response to his movements."

"Yes, the lad was in the air more of the time than in the water," exclaimed Hiram, "it was jump, jump, jump all over the pool; sure he was a wild divil, altogether."

"Yes," I replied, "he was a lively customer; I never had a fish quite so full of energy. At length he ran down to the foot of the pool and criss-crossed over among some big boulders there and got the line wound around them. I yelled at the top of my lungs to Hiram to wade out with the gaff and cast off the line or the fish would part it."

"Sure I thought he was gone," said the guide. "I saw the line in the rocks and made sure it was broken."

"No," I continued, "he was still on when Hiram went out to him and cast off the line, and whir-r-r! how he made the water fly as he darted to the head of the pool again. Up and down did he continue to race, sometimes in the water, as often in the air, and apparently as fresh as at the start."

"No doubt a fresh-run fish," remarked Frere.

"Ah! yes, he was a bright one," said Hiram.

"At length he gave a big leap and then ran to the boil again, where he settled to the bottom, and stir him I could not. For at least fifteen minutes I tried every means that I knew of for starting a sulking salmon, but he would not budge. Finally I got impatient and told Hiram to take the canoe and stir him up with the setting pole.

"'Are you sure he's still on?' Hiram called out.

"'On! of course he is,' I replied, 'see the line vibrate as the rascal shakes his head!'

"'Yes, he's trying to shake out the hook,' answered the guide, and he immediately started for the canoe.

"I had a steady strain on the fish all the time for all the rod was worth, and I kept it up while Hiram was bringing down the canoe. Now and again I felt a spiteful jerk, as if the fish were shaking the line back and forth. Anon would come a strong steady tug as if he were about to start out again on his wild racings, and then the dead hard resistance would follow.

"Hiram soon had the canoe in the pool, and going up to the head poked down with the setting pole where the salmon was lying, but the fish did not stir. Finally the guide took hold of the line and began lifting it carefully with one hand, underrunning it with the gaff.

"'Sure, the fish is gone!' at last he shouted.

"'No!' I exclaimed, 'impossible!'

"'He is gone, altogether,' replied Hiram, 'and you are fast to a tree at the bottom of the pool.'

"As he said this he put the gaff down into the water, and hooking it into a branch of sunken drift wood like that just taken out of this pool, he came ashore at my side."

"Ha, ha," exclaimed Frere, "that's a pretty good joke; the idea of playing a piece of drift stuff so long is rich."

"Yes, it was pretty rough on me, I admit," said I, "but I'll be blessed if any one could have known it was not a salmon. The scamp no doubt freed himself as soon as he struck the drift stuff, and the line, fastened to the swaying limb, vibrated and pulled according to the strength of the water moving it back and forth. It felt all the time like a large strong fish."

"Tricky divils are salmon," sententiously observed William. "I never feel sure of one until he is high and dry on the shore."

"Yes, the salmon is a good fighter," said Frere, "and the uncertainty of bringing him to grass constitutes nine-tenths of the fascination there is in fishing for him."

"One cannot risk a single chance on him," I replied, "and it is often a little thing that brings the fisherman to grief even with the best of care."

*Hungry or savage.

†These dialogues are literally as jotted down by me on various occasions.—E. A. S.

BOSTON SPORTSMEN.

GRAND ARMY DAY in Boston last week was something of a holiday to the tired merchant who did not happen to care for the parade. Business was almost entirely suspended, and some of those who wish they were boys again did their best to be so for one day at least. Mr. Crane, of the leather house of Shedd & Crane, with Dr. Pratt, a well-known lover of the rod and reel, early on that day betook themselves to the Old Colony Railroad. They went down the line to Quinticus Lake, in North Rochester, Plymouth Co. By the way, it might be mentioned that this is the very same pond that ex-President Cleveland fished on his last trip to Marion, the little Buzzard's Bay town, so much beloved by Mrs. Cleveland. Our Boston boys had the same guide and boatman engaged that took Mr. Cleveland out, Mr. Levi Roundsville, and a very efficient and enthusiastic boatman he proved. They took a large number of pickerel with rod and reel at which the guide was very much delighted. They also succeeded in getting several bass, the playing of which gave the boatmen a great deal of pleasure. "Ooh! see him go it!" was a favorite expression when the fish took out the reel in good style. On one occasion they were all particularly delighted at the sport the fish gave them, and they set him at a 3lb. bass at the very least. But lo! when he was brought to the net it proved to be a good-sized hornpout. The guide was pleased. He knew where the hornpout were plenty, and he proposed that they go for them. So they left pickerel and bass fishing for a season, and Mr. Crane says he had no idea how well the ordinary hornpout will play the reel. Stubborn as a mule, he refuses to allow his head to come above water till he is thoroughly tired out, and then a few draughts of fresh air do not seem to take the "gimp" all out of him, as in the case of the trout. It rather works like a stimulant—a little oxygen does—it makes the pout pull the harder, and the second time his head is brought out of the water it must be done with sheer force of the rod.

Mr. W. H. Coggin, salesman and coffee expert, with the well known house of Dwinell, Hayward & Co., has just returned from his vacation at Hampden, Me., the former home of his wife, who was with him. Heron Pond, a few miles from Bangor, on the Maine Central, is the pond that Mr. Coggin intends to fish every opportunity. This time the party was made up of Mr. Coggin, Henry L. Mayo, the Republican candidate for the State Senate from his town; Dr. W. H. Nason, a flourishing young physician from the same town; Chas. Wales, the leading grocer of the village, with W. H. Doane, Mrs. Coggin's brother. They went up to the pond the night before the great day of their best success. They secured plenty of live bait—"shiners" is the local name—from the mouth of a stream that flows into the pond. Early the next morning the sport begun. They took several good-sized black bass, all of which they rejected when it came to the question of cooking. A number of pickerel also fell to their creel. But their best sport came from taking white perch, considered the king of fish in that pond, so far as real value is concerned. They had very remarkable success in still-fishing for white perch with live bait. They caught over forty fish of good size, perch and pickerel, and nearly every family in the neighborhood had fried fish for breakfast the following morning.

It is pleasing to learn that a candidate for the State Senate in Maine—sure to be elected, for the town is intensely Republican—is a sportsman and a progressive young man. Next winter the question of fish and game protection is again to come up in that State, and there is little doubt at least one Senator can be looked to for such wholesome change in the game laws as they require.

D. C. Ford, of Bridgewater, reports rather a peculiar discovery at Biddeford Pool, in Maine. An embankment has washed away just above the railroad, and there has come out of the bank an old dugout, or log canoe, that really should be in the possession of some society of history. The dugout is 38ft. long and very wide and deep, though somewhat gone to decay. The boys have run around on the rim or gunwale, and their feet have worn into the decayed wood till down to where it is 1¼in. in thickness. How long this relic of savage skill has lain there no man can tell, nor to what tribe she belonged.

Mr. Patrick Kelley, the patron in church building of the late Father O'Brien, of Cambridge, Mass., is to start for Richardson Lake is a few days. He will stop at the Upper Dam. Mr. Kelley is a great lover of the rod and reel. He visited the Upper Dam with Father O'Brien for several seasons, and though one of the gentlemen was a Catholic priest and the other a devoted friend and follower, yet no two men ever went to that region who enjoyed it better. Even the priest came off in trout fishing. It was once a remark of Father O'Brien that when he came to die he desired no other resting place than at the lakes. But when he departed this life, a year or two ago, his wishes, if they were really wishes in sober earnest, were not carried out. The loss of his friend rather staggered Mr. Kelley in his love for the lake and the swift waters of the Upper Dam, but he is to try it again this fall. By the way, Mr. Kelley is very desirous that we have a rod and reel association in Boston, and why can not his wishes be carried out?

The cool September is close at hand and with it the late fly-fishing. The reports are favorable. I hear that it was very cold at the Maine Lakes on Saturday, Sunday and Monday nights, and that the trout have already begun to rise, But there is no need of taking the jack-light, for the open season on deer does not begin in that State till Oct 1. A friend of mine was riding into Boston the other morning just behind the car seat where sat two other gentlemen, both Boston merchants. One was telling the other about the elegant jack-light he had just had built. He was going to start for Seven Ponds, in Maine, early enough to be on the spot on the first night of September, in order to try his jack-light on the deer. The open season began on that date he evidently thought. My friend, also a sportsman, who goes to Maine every year, politely told him that he did not like to dispute a stranger, but that he felt that it was nothing more than right to inform him that the open season on moose, deer and caribou in Maine did not commence till Oct. 1. The gentleman seemed surprised and remarked that my friend must be mistaken, for his guide had written him that he could "jack as much as he choose" after Sept. 1, and the gentleman felt very sure that the law was so amended at the last session of the Legislature of that State that Sept. 1 was the opening day. He was informed that he was absolutely mistaken and that attempt to change the open season on that class of game to Sept. 1 was killed at the very last hours of the session, two years ago this winter. SPECIAL.

CALIFORNIA FISHES.—Dr. Carl H. Eigenmann writes us from San Francisco that with the exception of the flounder and sole fisheries San Diego is far ahead of San Francisco. The various species of rock cod (*Sebastichthys*) are more abundant at San Diego and their average size is much larger than further north. Dr. Eigenmann noticed in San Diego that those species of fishes which rarely come into the markets are usually much above the average in size, a condition probably explained by the fact that these are stragglers from the north and probably only fish of unusual size stray from their accustomed haunts. If so, these rock cod will undoubtedly plant southern colonies, since many of them were gravid. Up to July 5 very few barracuda had come into San Francisco markets, the Monterey catch being merely nominal. The southern California catch seemed to be as large as usual. The young or medium sized quinnat salmon were running in the Sacramento in small numbers in June and early July. In the exploration of lakes Tahoe and Donner, recently undertaken by Dr. Eigenmann, two new species of minnows were found and one new form of miller's thumb (*Uranidea beldingi*). The last is abundant in Lake Donner and destroys immense numbers of young trout, especially those domesticated in the hatchery. One of the trout in the region may prove to be a distinct species, as the eggs and newly hatched young are very different from those of the common species (*Lenshawi*). The fish of Lake Donner were found to be essentially the same as in Lake Tahoe.

MAINE SALMON.—Caribou, Aug. 21.—There have been several salmon taken with the fly here this summer, one weighing 17lbs. The persons using spears have been most successful, however, and have secured nearly all there are. Fish Commissioners Stilwell and Stanley are here for the purpose of having a fishway placed over the Aroostook River dam, as the Aroostook River salmon would take a fly as readily as the Penobscot salmon with a fishway. Caribou would certainly have a superior salmon pool which would attract many people to this section.

THE CLUBS OF THE ST. CLAIR FLATS.

I.

THERE is no sporting locality in the Western country which has a wider reputation than the St. Clair Flats, and the sporting clubs of that locality have long been the name of everything denoting thoroughness, wealth and luxury in sportsmen's organizations. It is not every one, however, who has had the privilege of visiting this land of ducks and small-mouthed bass, and not every one knows definitely much about the forms of the sport there or of the great clubs which have made that their abiding place. The story of the St. Clair Flats may therefore be of interest. It is believed that the effort of FOREST AND STREAM to secure complete information for such a story is the first noticeable attempt of the kind made by any sportsmen's paper. Before proceeding to the actual clubs of the Flats, it will be well just to say a word or so about a couple of clubs which belong on the same chain of waters, but which lie below Detroit instead of above it.

THE POINT MOUILLE CLUB.

This is a very exclusive and wealthy organization, whose membership, confined to only about a dozen, covers several States in residence. Shares of stock in this club are not obtainable. If one were sold by a holder it might bring $3,500 to $5,000. The shooting at this club is perhaps the finest and pleasantest of which any knowledge can be obtained in this country, and it is peculiar in its way.

Point Mouillè Club lies about 30 miles below Detroit, on the American side of the Lake Erie shore. Here nature has formed a narrow beach, and back of this beach, on which the club buildings stand, lies the marsh, which is one of the finest wild rice beds in the land. The ducks work back and forward across the beach, between the marsh and the lake, and the pintail decoys are sometimes put out on the edge of the beach, it being one of the tricks of the club for a member to see how many ducks he can drop on the woodpile. The club has about three miles of marsh, the latter being much cut up by deep creeks. This peculiarity makes the sport of "jumping" mallards out of the rice a very popular and easy one. It is not an unusual thing for the dogs to point mallards in the thick rice that runs up close to the beach. Geese and swans frequent the marsh also. A boy lately caught two geese in steel traps, and two swans were killed with a .22 rifle. As to the size of the bags made, nobody knows just how many ducks could be killed by a boat in a day on Point Mouillè marsh, but bags of over 100 are not thought remarkable at all.

The boat used by this club is a type of itself, and is known as the "Point Mouillè boat." This is a sharp double-ender, a three-piece boat decked over about 3ft. at each end. It is made sometimes in iron. Its draft is about as light as that of any duck boat made, and it is intended solely for punting.

The buildings of the club comprise a dining hall, a "Rowdy Hall" and a number of cottages, besides boat houses, etc. The keeper, Bill Jardine, himself a very good marsh shooter, is paid $600 a year. Board is $3 per day, and the pusher's fee is $1 per day.

Mr. Wm. C. Colburn is president of the Point Mouillè Club. Mr. H. H. Warner, better known as "Kidney-Cure Warner," is one of the members, among whom are also Messrs. Harvey Brown, Sheffield and Barber, of Detroit. Mr. Fay, one of the members, lives so far east as Boston, and Mr. E. E. Flint, another member, lives in Chicago. Mr. Flint is a member of many clubs, and he goes where he likes for his shooting; but he always says that no duck shooting in the whole country surpasses that of Point Mouillè.

THE ISLAND SHOOTING AND FISHING CLUB.

FOREST AND STREAM was cordially invited to visit the quarters of this thriving young club, now only one year old, but the possessor of franchises very enviable indeed, since the grounds of the club lie only seven miles below the foot of Woodward avenue. The journey down was made one morning in the latter part of last May, in the tight and speedy little steam yacht Ida M., owned by Mr. Chas. H. Preston, the president of the club, the latter himself presiding at the wheel. There were on board that morning also Messrs. John Parker, Wm. Hunter, A. F. Roehm and Edward King, members of the club; Mr. Stenton, of the Peoria Gun Club; Mr. H. A. Penrose and a friend from Corry, Pa.; Mr. A. G. Courtney, of the Lefever Arms Co., and Mr. Rolla O. Heikes, of Dayton, O.

The first stop was made at the head of Fighting Island, a mile or two above the club grounds. Here is a beautiful point of land, occupied by a cottage, a spread of fine turf and a rare old orchard. Mr. Preston, in association with Messrs. E. H. and W. H. Gilman and Howard Barnes, all of Detroit, has secured a fifteen years' lease of this upper part of the island and will put up a fine summer resort provided with attractions to the public. A more inviting spot in the summer could hardly be found. There is marsh near at hand here, on which good bags are often made.

We now ran quickly down to the club house, passing in sight of some fine points of marsh, where we were told that heavy shooting is often had. The club house is merely an old farmhouse, one story, rather picturesquely located on the bank of one of the river channels. The marsh lies back of this, covering some 1,500 acres or more. The total territory of the club covers about 1½×5 miles. The marsh, which is nicely traversed by creeks and broken by good pond holes, is plainly visible from the observing tower. There were some birds working on it as we looked. The ducks breed there to some extent, chiefly mallards, woodducks and teal. The present Island Club is the successor in leasehold of another club, which forfeited its lease, and as was stated is only a year old. Records of the marsh are therefore not yet abundant; but four guns bagged 89 ducks in a half day, and it is said that in one day two guns have killed 193 here. There is a heavy flight up and down the Detroit River between Lake Erie and the Flats, and these side marshes catch more or less of it. There were five bevies of quail on the preserve last year, and it is thought that these birds can be kept, as they are sharp enough to take to the marsh when pressed too hard.

The dues at the Island Club are $30 and a monthly assessment which brings the total up to about $50. The steward, Mr. Roehm, familiarly known as "Pa," does the providing for the club and levies such assessments as are necessary therefor. The keeper, Keyser, has as perquisites all the fur and fish he can take in and around the marsh, and his wife is paid $10 per month. The membership of the Island Club is as follows: Chas. H. Preston, Pres.; Chas. Smith, Vice-Pres.; William Hunter, Sec'y; Wm. H. Gilman, Treas.; also Messrs. John Parker, A. F. Roehm, Edward King and Howard Barnes. Mr. Henry Bromly and Wm. Milner are members formerly in the old club also.

There is no bass fishing of consequence about the island itself, but there is good fishing for lake fishes. The party of our visit fell to catching perch and rock bass, and out of this grew a rivalry, which terminated that in a wager Messrs. Parker and Penrose could catch more fish than Rolla Heikes and the writer. The latter team was fortunate enough to strike a "hole" of rock bass and using two hooks to the line was snaking out the fish in great style until discovered by their rivals, whose faces fell when they learned how the count stood. An idea, however, seized them and hoisting sail they at once sped away to a point where John Parker, himself the game warden for Wayne county, knew there were some nets set, on the Canadian side. By dint of stealthy raising three or four of these they secured a fair miscellaneous lot of fish, including dogfish and sunfish, and this they endeavored to count in upon the returns. Objection to this was promptly filed on the ground that many of the fish did not show shot marks, and the challenge, after much argument and final admissions on the part of the guilty parties, was duly sustained by the referee, Mr. Andrew Gackson Courtney, the same a fisher of great accomplishments as proved that day. Thus felony was detected and punished and became a byword among the people. Mr. Parker and Mr. Penrose may be good fishers with nets, but when it comes to fishing with hook and line they are not in the competition at all.

We passed a very delightful day here on the island, and could well see how all there might be delightful. The voyage home, between the beautiful green shores of the beautifully blue Detroit River, was pleasant also. The Canada side of the river is especially charming, occupied as it is by drives, lawns and residences. Near the Fort we stopped, and here the writer made an acquisition, in the shape of a handbill announcing a shooting match, which is too good to withhold from shooting men in general. The inventor of this bill is a Frenchman, and his English is worthy of Mr. Robinson's Antoine Bissette. The announcement was as follows:

"Shooting match at Thomas Gignac's Hotel Petite Cote Friday May 30 th., 75 pigons blue rock glas balls as many, as wanted. To begand at 1 P. M. Come one come all Thomes Gigans Prip."

Soon after the island trip, preparations were made to go up among the club houses of the St. Clair Flats proper, about a week being devoted to that work. At the time it was announced that Mr. John Parker, warden for Wayne county, with Mr. Frank Wherry, acting as assistant State warden, were going up to look after some violations of the fish laws, complained of by some of the larger clubs. The writer, being invited to join them in this trip, did so with pleasure, since it afforded the best possible method of learning thoroughly the peculiarities of the country. We set sail of a Wednesday morning in the cabin boat owned by Mr. Gilman, which is much used by the Detroit boys on their shooting trips. This boat is called "No. 11," and she is a study in naval architecture. She is a flat-bottomed centerboard craft, with two masts, about twice as broad as she is long. The cabin, however, is very large and roomy and provided with every convenience for cooking, eating and sleeping. There is a good cook stove, a handy folding table along the centerboard well, plenty of lockers under deck, and a place where a false bottom is laid for the beds at night. Under the deck forward is a vast cavity, where are stowed the bedding, guns, valises, etc. The boat bore evidences of having been occupied by shooters who knew how to live and yet kept things neat and shipshape. A better abode for three men bound on such errands as ours could not be devised.

The Detroit River is a very swift stream, and as we met a hard head wind the first day, we were able to get up only as far as Belle Isle Park by evening of the first day. Numbers of the craft out on the river were tacking up stream, but No. 11 wasn't built that way, and we couldn't get up the hill, no matter which end of the boat we sailed first. A steamer just pulling out for Walkerville offered us a tow up, and we cast them a line, and went flying. In this way we came upon the point of sustaining what would have been at best a very serious accident, and learned that the simple operation of being towed, even in so large and steady a craft as ours, may in reality be a very dangerous one. Our boat when under tow ran very high forward, and we shipped a great amount of water astern, through the rudder hole. Wherry and myself, acting under the orders of Parker, who was in command of the vessel, went forward by the foremast to try to keep her nose down all we could. We were going a good gait, when Parker also came forward. His weight was enough to overcome the balance of the loose water ballast we were carrying. This rushed forward under decks, and the No. 11 began to go down by the head about as fast as any vessel ever did. The water surged up over the bows, wet us to the knees as we stood on deck, and even swashed across the top of the cabin. Parker called out for us to jump astern, and at the same instant the engineer of the steamer saw our plight and at once reversed his engines. Otherwise we should certainly have gone to the bottom; as it was, the tons of water that went over us were mostly turned from the cockpit by the build of the deck, and we slowly came up again, not much the worse for it except in the wetting of our cargo, and for a scare which never reached its height till two or three days later, when we got to figuring about it.

We were now fain to cast anchor off Belle Isle, but the park policemen, not liking the looks of our piratical craft, ordered us away. Laboriously we worked across the river, pulled through the bridge, and after finishing the pumping out of our vessel, closed the first day of our voyage toward the Flats within the city limits of Detroit, with a good supper on board and a damp bed after that; for our bedding had been well soaked during our towing escapade.

E. HOUGH.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

SHENANDOAH BASS GIGGING.

WASHINGTON, D. C., Aug. 20.—*Editor Forest and Stream:* I have just returned from Stra-burg, Shenandoah county, Va. Clever people up there—but clever to everything except fish. The aborigines of that section, for some reason known only to themselves and divine Providence, have a deadly enmity to that great fish, the black bass. The Fish Commission are rather disgusted with the slaughter of the bass that they have been trying to cultivate in the Shenandoah River and branches, and have concluded that if the slaughter is permitted by the State they will allow the river to go without the noble fish, and let the pot-hunters dirty their own nests and then seek other fields for murderous fame. They hunt fish up there with a long gig, as it is called, a pole from 12 to 15ft. in length, with 6 or 8 sharp prongs on end. They hunt at night and more especially in winter season, when the fish are more or less torpid.

These pot-hunters take their boats by night and fasten on a basket of pine knots at the stern or middle of the craft, and as they shove about the stream they see the unsuspecting fish, which are gigged without mercy as they lie at rest.

Now every sportsman must admit that this is all wrong and that this game fish should be protected as much as any other game. It is said that laws for the protection of fish would have been passed but for the opposition of the counties of Clark, Warren and Rockingham. Understand that these counties have agreed that whatever is found in the fields or the woods or the rivers is indictable for food. The natural inference is that if any poor little human being, whether in the form of a hunter or otherwise, could or should be caught in the fields or rivers or woods of any of these three counties he could be legitimately cannibalized.

It certainly will seem strange to the sportsmen of the country to realize the fact that Virginia gentlemen and sportsmen will countenance and permit this murderous slaughter of one of the gamiest fish that swims our waters, and that for the paltry gain of pot-hunters.

Well, they still have one satisfaction, and that is that the waters will soon be depleted and that no sportsman will spend a dollar where this murder is carried on.

It is the old fable of killing the goose that laid the golden egg. No more eggs, no more fish. ALIC.

VORACITY OF THE WALL-EYED PIKE.—One of the statements made in these columns by "Stehman," June 26, concerning a singular capture of a Susquehanna "salmon," otherwise known by the name of wall-eyed pike, pike-perch, etc., etc., was evidently looked upon by some of our contemporaries as a pleasing fable instead of a sober fact. Dr. DeKay, in his "Natural History of New York," Part IV., published in 1842, has the following to say about the species: "This is the common pike, pickerel, pickering, glass-eye and yellow pike of the Great Lakes, and of most of the streams and inland lakes in the western part of the State. . . . The pike-perch is exceedingly voracious, and is highly prized as food. It is caught readily with the hook, and appears to prefer as bait the common fresh-water crayfish (*Astacus bartoni*). The best time for fishing is in the dusk of the evening with a great length of line out, and keeping it gently in motion. The foot of rapids, or beneath mill dams, appears to be its favorite haunts. In the heat of summer it seeks the deepest parts of lakes, or in streams in the coolest parts concealed under weeds or grass. . . In Chautauqua Lake I was informed of one which was 30in. long. It had swallowed a duck, which had thrust its head through the gill openings of the fish, and having thus destroyed it, both were found dead on the shore."

SPANISH MACKEREL.—On Monday, Aug. 18, upward of 9,000 Spanish mackerel, some of them weighing over 8lbs., were caught at Virginia Beach, Virginia. A portion of these were sent to markets in Washington, D. C., and sold for 20 cents per pound. These are frequently called bay mackerel by the fishermen. We have not heard whether the anglers have paid any attention to the Spanish mackerel in Virginia; but if not they have missed one of the finest game fishes of the coast. It can readily be taken by trolling in the way pursued for bluefish, and will handsomely repay, by its game qualities and excellent flavor, any efforts bestowed upon its capture. Besides, it is one of the most beautiful fishes of the East Coast, and commands a high price in New York and other Northern cities.

MUSCALONGE IN INDIAN RIVER.—Lockport, N. Y., Aug. 20.—Mr. G. Pitt Evans, of Theresa, Jefferson county, N. Y., writes: "Dan Tyler went down after 6 o'clock one evening and caught one back of the island; it weighed 39lbs. 12oz. Not many muscalonge have been taken yet this season, but many pickerel and some very fine black bass." Although Indian River is a small stream compared with the St. Lawrence, 11 miles distant, I will venture to say that there are more muscalonge taken from it in the same number of miles in length. I was at Theresa in August, 1885, when the water was too high for good fishing, but in September there were a number caught, weighing from 30 to 37lbs. each.—J. L. DAVISON.

MR. HENRY GECK, representing Yawman & Erbe, of Rochester, is now in the city for a stay of a month or more, introducing some of the firm's specialties. One of the special articles manufactured by this well-known concern, is the equally well-known automatic reel. Various improvements have been made in its construction, until now it is as near complete as human skill can make it. Mr. Geck reports an exceedingly good trade during the present season, the firm being away behind their orders. An additional stock will be made ready for next year so that all orders can be filled as received.

PASQUE ISLAND AND NEWPORT.—Mr. E. Vom Hofe, of 95 Fulton street, has reports that the striped bass fishing at Pasque Island has been very good. Mr. John E. Stetlinius landed one weighing 46lbs. The heaviest so far taken was one of 49lbs., and the average of some fifty fish being 16lbs. and over. Mr. John G. Hecksher, Jr., at Newport, R. I., took two bass, one weighing 50lbs. and the other 57lbs. They are now mounted and on exhibition at Mr. Vom Hofe's store.

MAGALLOWAY RIVER REGION, Maine.—Sportsmen are coming into the woods at the present writing quite numerously, via Colebrook, although the travel seems to be about equally divided between that point and Bethel and Lakeside, and Lake Umbagog. By the former route, a very pleasant and interesting drive is taken through the famous Dixville Notch, and by the latter, a cool and enjoyable steamboat sail the entire length of Umbagog Lake and up the Magalloway River is a charming feature, and highly enjoyed after the stage ride from Bethel to Lakeside (foot of the lake). Teams from this place will meet parties either at Colebrook by appointment, or at the steamer every day, after which a good night's rest prepares one for a rougher experience in the camp. Deer are still plenty, and seen every day in going up and down the "Upper" River. Fishing is a little dull up river just now, being "between seasons." Good sport is looked for next month. Partridges are "thick."—SEWES.

DESERVED PRAISE was given by the Pittsburg (Pa.) *Dispatch* when it said the other day, "Fish Warden John W. Hague is just the sort of officer the State needs. If all the servants of this Commonwealth did their duty as intelligently and as faithfully as Mr. Hague does his, not nearly so many laws would be dead as there are to-day. The fishes and the fishermen have been greatly benefited by the enforcement of the act of 1889. Mr. Hague after making it very hot indeed for the law-breakers on the Allegheny, gave his attention to the Monongahela. He made the inspection in a canoe, and his report of the fishing on that river is encouraging. The fishermen are respecting the law. There is a general demand for an open season of two months for outlines. The fishing clubs camping out in the summer want to be relieved of the terrible anxiety of watching poles. The sufferers should be relieved."

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

Fisheulture.

RETURN OF SCHOODIC SALMON.

IN the report of the U. S. Commissioner of Fish and Fisheries for 1886, page 751, we find the following account by Mr. C. G. Atkins of the marking of Schoodic salmon at Grand Lake Stream, Maine, for the purpose of recognizing them in the event of their recapture in the same waters: "In 1885, at the close of the work of spawn-taking, the greater number of the salmon in hand were marked by cutting out a V-shaped piece from the outer margin of the anal fin. This year all the salmon that were handled were closely scrutinized for these marks, and fifty-six of them (five males and fifty-one females) were found to bear what appeared to be the mark sought for. In each of these cases there was a distinct, well defined triangular transparent spot in the requisite position. It appeared as though the rays and integuments had been reproduced, so as to completely fill the outline of the fin, but that the new growth had as yet assumed no color. So distinct were these marks that both Mr. Buck and Mr. Munson (managing the station) were fully convinced that they were the marks of 1885. Such a result was unexpected, and great interest will attach to a repetition of the experiment. These fifty-six marked fish average in weight 3.4lbs., and in length 20.5in., in both points less than the general average of 1885. For a more exact experiment Mr. Buck has devised a system of marks consisting of holes to be punched through the fins, by which numerals can be indicated and individual fishes identified on their return, and these marks were applied to a large part of the fishes handled in 1886."

The object of this marking was the identification of the fish in the event of their recapture and a comparison of their condition with the previous record concerning them. Two hundred salmon were treated in the way above described. As the season of 1886 advanced, fifty-six fish, which had been marked in 1885, were taken, and it was seen that the notch was filled up with tissue thinner than the rest of the fin and lighter in color. The mark was visible but indistinct. Where the rays had been cut off their position was outlined in the new tissue, but there was little or no bone or cartilage present. The salmon had not been numbered, and no comparison of their condition with that of 1885 could be made. Many of them, however, were fine gravid females, and the fact was established that these salmon visit the same spawning bed in successive years. It was expected that the holes punched in 1886 would not close entirely, or that a scar would be left by means of which the marked fish could be identified. In 1887, however, only one marked fish was seen, and it had the V shaped notch similar to the distinguishing mark of 1885. If any other were taken which had been handled in 1885 or 1886 the marks were too nearly obliterated to attract observation.

From the foregoing it will be observed that more than 25 per cent. of the Schoodic salmon under observation at the Grand Lake Stream station in 1885 returned to the stream and were identified in 1886. This would seem to indicate that the salmon belonging to the Grand Lake Stream school maintained their organization intact and did not wander far from the estuary of their native river. It is probable that the mystery of the winter habitat of our Maine salmon will some day be solved within the limits of the Gulf of Maine. Up to the present time no effort has been made to investigate the marine life of the Atlantic salmon in American seas. If we were to adopt the methods pursued in the winter salmon fishery of the Baltic doubtless the results of such studies would materially increase our knowledge of the subject.

THE YELLOWSTONE PARK AND DINING CAR ROUTE.—The Northern Pacific Railroad, stretching from the Great Lakes to the Pacific coast, with its elegant vestibuled service of dining cars and Pullman sleepers, not only affords business men, tourists and others a route of travel equal in every respect to any in the country, but renders accessible to sportsmen the only region in which can be found to-day the large game which was once so plentiful in all the West. In addition to the large game, the sportsman will find in the country along the line of the Northern Pacific Railroad such quantities of small game as is unknown in the East. This line, penetrating the Lake Park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green rivers, as well as lying in close proximity to the hunting grounds of the Big Horn, Snowy, Belt, Bitter Root, Rocky, Coeur D'Alene and Cascade Mountains, is unquestionably the sportsman's route of America. The pamphlet, "Game Preserves of North America," together with other interesting publication, descriptive of the Yellowstone Park and Alaska tours, will be mailed free on application to Chas. S. Fee, G. P. & T. A., N. P. R. R., St. Paul, Minn.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 1 to 5.—First Annual Dog Show of the Youngstown Kennel Club, at Youngstown, O. S. D. L. Jackson, Sec'y.

Sept. 2 to 5.—Dog Show of the Wilmington Fair Association, at Wilmington, Del. F. R. Carswell, Supt., 101 West Sixth street.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. C. H. Corbett, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Sept. 23 to 26.—Third Dog Show of the London Kennel Club, at London, Ont. S. F. Glass, Secretary.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.

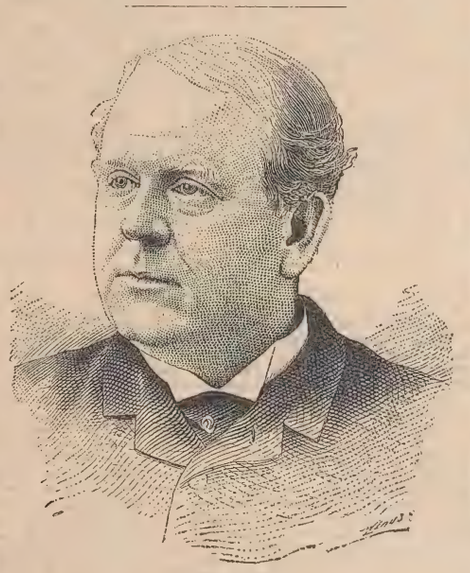
November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.



1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

"ASHMONT"

TO be widely known among the citizens of the "canine world" is a distinction which many have attained and still more will accomplish, but in such a community, riddled as it is by petty jealousies, to have every member of all the "schools," together with the vast army of independents, uniting with one accord in granting to any single individual their tribute of praise is a distinction attained by but very few. In this singularly unique position stands the friend of the dog, and every honest man's friend, Dr. J. Frank Perry, of Boston, Mass. To thousands of dog owners both here and abroad his *nom de plume* of "Ashmont" is better known than his name, and who is it that does not as soon as he sees "by Ashmont" at the head of an article leave all else unread until that is carefully perused and its salient features memorized.

"Ashmont," however, is but the safety valve whereby, by doing more work, he recuperates from the flagging duties of daily and doubtless at times irksome routine; for as he would doubtless say, with that merry twinkle of the eyes and pucker of the lips his friends know so well, "A doctor is never done working till he has followed his patients."

The medical side of Dr. Perry's life is, of course, but little known to the dog world, but in that direction he is a widely read writer. In that field he carries out the same ideas so well demonstrated in his recognized standard work on the diseases of dogs—plain talks to plain people. When once spoken to on this noticeable feature of a book he had published he replied: "I am glad to hear you say so. That is my aim in all I write. I wanted to have no ambiguity in that book so I gave it to a young girl to read, with instructions to mark every sentence she did not fully and clearly understand. I felt much flattered by having only some six or seven alterations to make." As "Dr. Frank" he has published several works on the care of children and what, for want of a better term, may be called domestic doctoring or household aids to the physician. He is also a weekly contributor on such subjects to one of the leading Boston papers, besides being medical director to an insurance association.

The two leading characteristics in Dr. Perry's genial make-up might be said to be curiosity and charity—a desire to get at the bottom of things to elucidate pertinent facts for the purpose of doing good to man or beast, together with that sharp grasp of a subject the result of a wide experience, and all shining through that noble "fellow feeling which makes us wondrous kind."

Dr. Perry first came prominently before the American dog owners when at New York show in 1884, he purchased the mastiff dog Hero II. at his catalogue price of $500. At that time he had got together a small kennel of what may be called native mastiff bitches and wanted a dog of national reputation to place at the head of the stud. Gradually the natives were replaced by direct importations, and with a view of not permitting his hobby to prejudice his profession he gave the name of "Ashmont" to his kennels, that being the railway station close to his residence in the suburbs of Boston. For several years the dogs from the Ashmont kennels played a prominent part in the show rings of this country, and it was not until the arrival of Minting that he really retired from exhibiting. At that time his unceasing literary work was taking up the hours he had formerly devoted to the mastiff hobby, and having to leave much to attendants, his interest necessarily became less. Although it is but fair to say that when Dr Perry finally decided to retire he had undoubtedly the best kennel of mastiffs he ever possessed. Still there wasn't a Minting among them, and with him as an exhibitor it was always first or nowhere.

On one occasion Dr. Perry officiated in the judging ring, at New York in 1886, and when he emerged from the to him trying ordeal he vowed it was his last attempt. It is no reflection at all upon Ashmont to say that he is not fitted for the ring. Not that he does not possess both the knowledge and ability to make good selections, but he has not the callous indifference of the ideal judge, who has no sensitiveness as to exhibitors' pride or feelings, and can think of nothing but the dogs in front of him.

After several years of practical retirement Dr. Perry came to the front again as the promoter of the National Dog Club, the necessity for which seemed to be thoroughly sustained by the hearty response received from all classes of exhibitors. Everything seemed to promise a brilliant future for the new club, and additional eclat was received by the support given to the Buffalo dog show, held under its rules, opposed as that show was by the concentrated efforts of the A. K. C. and its supporters. Another month or two demonstrated, however, that the energy of the members was but effervescent, and the club would soon die of inanition. Dr. Perry, its president, then concluded to propose amalgamation with the A. K. C., and his offers met with a willing response on the part of that body, the result being that the National Dog Club members were accepted as associate members and much enlarged privileges granted the latter. It was further agreed that the National Dog Club officers should be elected officers of the associate members for the ensuing year, with the president, Dr. Perry, a member of the advisory committee of the A. K. C. How well Dr. Perry performed the duties of his office was recognized by his re-election to the presidency of the associate members for the present year. His inflexible determination to have the election of officers of the associates carried out in strict conformity with the letter of the constitution was evinced when he declined to permit the counting of the votes when an imperfect voting list had been sent out. This was a great feather in "Ashmont's" cap, and the vote of thanks and confidence tendered him at the associate members' ensuing meeting was a well merited tribute to the position he had taken.

To those who only know Dr. Perry by his writings and his speeches at meetings there is one other side yet unrevealed. No one has a larger fund of apropos stories and apt illustrations to garnish his conversation. Told, as they are, in his dry, phlegmatic style, they are irresistible, and it is no wonder that those who know "the Doctor" best love to get him out of the hurly burly of the dog show to a quiet corner and start him on a story-provoking topic.

THE IRISH RED SETTER CLUB'S FIELD TRIALS.

THE annual field trials of the Irish Red Setter Club will be held Sept. 16 to 18, near Newtownstewart, County Tyrone, Ireland. The judges are Dr. J. H. Salter and E. T. Herdman, Esq. Six stakes are advertised as follows:

THE IRISH SETTER PUPPY STAKES.—For Irish setters born in 1889, with £5 cup and 45 per cent. of entry fees to first, £3 3s. cup and 20 per cent. of entry fees to second, 10 per cent. of entry fee to third, and 5 per cent. to fourth.

THE IRISH SETTER ALL-AGED STAKES.—For Irish setters only, with £5 cup and 45 per cent. of entry fees to first, £5 cup and 20 per cent. to second, 10 per cent. to third, and 5 per cent. to fourth.

THE ST. LEGER STAKES.—For pointers and setters of all breeds born in 1889. The pointers and setters will compete separately, with 45 per cent. of entry fees to first, 20 per cent. to second, 10 per cent. to third, and 5 per cent. to fourth in each division, and a £5 cup to the absolute winner.

THE GRAND ALL-AGED STAKES.—For all setters and pointers, with 45, 25, 10 and 5 per cent. to first, second, third and fourth.

THE GRAND BRACES STAKES.—For all setters and pointers, with prizes the same as the preceding.

THE INTERNATIONAL CHALLENGE STAKES.—For all setters and pointers, with 80 per cent. of entry fees to the winner, and a fifty guinea challenge cup if there are four entries. If there are five entries an additional prize of £20 will be given to second, and if there are six entries £25 will be given to second and £15 to third.

The trials will be on grouse and the dogs will be shot over.

HOW IS THIS, MR. PESHALL?—Mr. Peshall is a lawyer. Mr. Peshall knows how lawyers do. If they are non-suited in a case they immediately draw up a charge on different grounds. This appears to me to be the sort of plan old Jimmie's friend is adopting. The jury, however, in the case of the A. K. C. *vs*. Mr. Peshall is composed of a more intelligent body than the average twelve men drawn to try a case in our ordinary courts. What the neutral dog people want to know is this: If there is anything "crooked" about the A. K. C. affairs, why does not Mr. Peshall, who has been invited by Mr. Watson to inspect the books, accept the invitation? If he cannot point out the "faking," who can? Mr. Peshall has made a specific charge which he has not been able to prove by any printed testimony. The opportunity has been offered for him to do so, but as yet has not been accepted. The only conclusion clear-minded people can draw, is that the proofs he first asked for have materialized into unanswerable evidence for the defendants.—A. BARKIS (who once believed in Peshall, and is still willing to do so, if the facts "weren't agin 'im.").

TORONTO DOG SHOW.—Toronto, Aug. 22.—*Editor Forest and Stream:* At the coming international bench show of dogs of the Industrial Exhibition Association, to be held in the city of Toronto, Sept. 15 to 19, the following classes have been added to the list: Smooth-coated St. Bernards, challenge dogs, silver medal, value $20; bitches, the same; open class, bitches, $7, $3 and diploma. Greyhounds, challenge bitches, bronze medal, value $10. English setters, challenge bitches, bronze medals, value $10 and $5. Irish setters, challenge bitches (the Toronto Irish Setter Club donates), $10. Beagles, challenge dogs, $5; bitches, the same. Kennels of four each of beagles, black and tan terriers and Yorkshire terriers, $10; poodles, silver medal, value $20. Class 6, rough coated St. Bernards; Class 10, smooth-coated St. Bernards; Class 19, greyhounds; Class 28, English setters; Class 33, Irish setters, will be for dogs only. Entries close Wednesday, Sept. 3.—C. A. STONE, Sec. and Supt.

HAYFEVER sufferers use Peshall's Remedy. Certain relief. All druggists or by mail. Price 75c. GEO. L. WILMS, Jersey City, N. J.

THE ENGLISH SETTER.

[*Concluded from Page 94.*]

IN THE FIELD.

YOUR youngster being perfect in the foregoing lessons, he may be taken to the field for work. You must, however, be very careful not to subject him to extreme exertion because of the danger of stunting his growth or otherwise injuring him. Give him only a little work at beginning, gradually increasing the time as he advances in age and strength. By all means begin his field-training upon the birds you expect to shoot over him in the future. The best dog for general shooting I ever owned, I broke on woodcock. Quail are good birds upon which to commence work, as they lie well and have a strong scent. Pinnated grouse for the same reason are excellent birds upon which to exercise him. Ruffed grouse are so wary and difficult to approach, their haunts being in places where the sportsman cannot observe the motions of his dog—a most desirable, even necessary condition to success—that they cannot be considered available in the section of country in which the writer lives. Sufficient woodcock may be found for the purpose of the first season's training in nearly every section of the country. After being thoroughly broken upon woodcock, quail, pinnated grouse, snipe and ruffed grouse, in the order named, may properly come in for a share of attention. The manner of breaking upon all these birds is precisely the same. Your dog should instinctively point rigidly the instant he catches the scent of a game bird; should he not do this and you are so situated that you cannot afford to "dispose" of him and try again you can teach him to point if his olfactory organs are all right, by proper management. Quail will answer for this purpose better than almost any bird, as they give out strong scent and will not flush at the sound of the human voice nearly so quickly as do most of the others. Having ascertained where a bevy feeds, take your dog in the morning to the stubble and start him to work, carefully watching him, and when you observe from his motions that game is in the vicinity, speak kindly to him, cautioning him by calling out "steady," "careful," being mindful not to alarm or excite him by speaking too loudly or harshly. If he presently discovers that he is within a few feet of the birds—a fact you can easily discern after a little observation and experience—utter the command "to-ho." If thereupon he flush the bevy or bird, and you afterward, as you should do, punish him by a light tap or a threatening display of the whip, which should always accompany you in the field, he will in time come to understand that he is punished for disobeying the command "to-ho," which he will soon learn is only uttered by yourself at such times as he should point, and he will soon be pointing whether ordered to do so or not. In some cases he will point the first game bird he scents, and will continue to do so even when very young. But because he may fail to do this during his first or even his second season, do not conclude he is worthless. If his breeding is irreproachable and disease has not destroyed his olfactory powers, be assured he will ultimately point as staunchly as desired. There is a vast difference in dogs in this respect. The best dog the author ever owned did not point until her third season. Yet in that single season she proved to possess staunchness, sagacity, and a first-class nose.

Very probably, however, as I have said, he will point the first bevy of quail he scents, especially if his sire and dam were field-broken, and if he is of a strain of unquestioned purity. In this event your labors will be greatly lightened. But if he does not do this, and if he flush bevy after bevy, still continue as above, resorting to extreme severity only in case he persists in his disobedience. As I have said, the pointing instinct is not always developed in dogs of a year or greater age. A knowledge of this fact should tend to dissipate your anger and moderate the severity of the castigation. You must not expect to break him in a single day or week, or month, or even with certainty, so that he shall be faultless, in a year. Most probably he will be several years old, although carefully taught, his faults punished and his obedience rewarded, ere he can truly be said to be broken. Do not delude yourself with the belief that you or your professional breaker can turn out to order a perfectly broken dog in a single season. Experience, with constant watching and exercise in the foregoing lessons, can alone make him perfect. Professionals will hardly admit this, but the fact remains, confirmed by the experience of every old sportsman. However, be not discouraged, your work is not in vain. The worst is passed, and, even during the first season you will have fine sport over him, more the second and still more each succeeding year, amply repaying your care, labor and vexation. Of course I state the above as a general and not the invariable rule. Instances have not been wanting in which a single season sufficed for breaking; indeed, this has occurred in my own experience, but it is the exception and not the rule.

When the birds are flushed by yourself or your dog, or from whatever cause, he must be taught to sit down instantly whether the bird be shot at or not. To do this, invariably call out "sit" the instant you see the bird or hear the whir of wings—invariably doing so before discharging your gun. This is a somewhat difficult thing for an impetuous young sportsman to do; but if neglected you will fail of accomplishing your object. More sportsmen, in the excitement of the moment, fail here than at any other step. Enforce the command above all others. Never permit a single infraction to pass without a reprimand, and in case of persistent disobedience, with due punishment—severe if he still prove refractory. Before resorting to the check-cord, when he runs in, go to him, seize him by the loose skin of the neck and drag him back to the spot whence he started, crying "sit," "sit," and compelling him to remain at a close charge for several moments. Repeat this until convinced it is useless. When so convinced use the whip while dragging him back. In time you may, if you prefer it, permit him to remain standing instead of sitting down. At first, however, compel him to sit down until ordered to hold up, as in this position he is not so liable to run in to chase crippled or live birds. Remember always that you are not out for the purpose of bagging game but to train your dog. Subvert all things to this end. Better lose scores of birds than permit an error in this or any other respect to go unpunished. Keep cool. It does not matter if you do not kill the bird. You will find it again. Should you fail to do as suggested he will repeat the offense at the first opportunity and evidently become wholly unmanageable. When a dog, despite punishment, persists in running in or breaking shot, *i. e.*, running in to catch dead, wounded or live birds, or upon the discharge of the gun, I use a check-cord made in the following way: Procure a cotton twine, about twice the size of that made use of by carpenters as a chalk-line and about fifty or sixty feet in length; make a slip-noose in one end and sew the other through and through to prevent its fraying against the bushes and herbage—a knot is apt to catch on obstructions and to be very annoying. Slip the noose over his head and set him to work. When he finds game you will have no difficulty in placing yourself near the line, and, upon flushing the birds, call out "sit," after which you may discharge your gun. By this time he will be twenty-five or more feet in front of you in full chase. Step upon the string, lay down your gun, and drag him back hand over hand to the place whence he broke, all the time crying "sit," "sit." You will choke him a little. So much the better. Compel him to remain at a charge until you have reloaded or even a little longer, occasionally reapproaching him for his misconduct. He will understand you. Then order him up and on. Repeat this as often as he shall break, and a few such lessons will effectually and forever cure him. I have known the most stubborn and well-nigh incorrigible brutes broken of this fault in this way in a single day.

When the birds are flushed and you kill, after a proper time, order him to "hold up," "seek dead." When he has found it, command him to "fetch," which, with a little persuasion, he will do at once if properly yard-broken. When he brings it to you cause him to sit, and take the bird from him in that position only—the benefit of this I have already pointed out—praising and caressing him if he readily deliver it to hand, chiding him if he bites or retains it. It now becomes necessary to decide whether you will follow the scattered bevy or seek a new one. All sportsmen will agree with me that, where the nature of the ground or the direction of the day's beat will permit, the latter is the best plan, especially with young dogs, as quail only feed from two to three hours in the morning, after which they lie in huddles in dense cover where it is difficult for even experienced dogs with fine noses to locate them; but in the early morning, while still feeding, their trails can be more easily found and followed. You had therefore better seek another bevy or wait at least a half hour until the birds have begun to move and collect. At such times you will often hear them calling and thus be aided in finding them. When a bevy is flushed much of your success in again finding them and in working your dog will depend upon the accuracy with which you have marked them, so that for his sake great pains should be taken to locate them to a yard if possible.

You should also teach him to "drop to shot" whether game is on the wing or not, if your gun be discharged in his hearing. This is done precisely as you teach him to "drop to wing."

These simple rules having been thoroughly learned, nothing further is needed to perfect your dog in field wisdom save experience, which, as I before stated, is the great finisher, and without which no dog can be called perfect.

With the exception of a word as to backing all has been written hereinbefore necessary for the information of the young sportsmen. No dog can be considered broken which does not back his fellow the instant he observes him pointing. Many dogs do this naturally. Those who do not, are taught to do so precisely as they are taught to point game, and no extended observations are needed upon the subject.

MISCELLANEOUS RULES.

With timid and gun-shy puppies I procure a small-bore rifle and kill a bird or two in his presence. When he comes to understand that the report is connected with the killing, all shyness is at an end. I have no difficulty afterward in using the shotgun over him.

There are many useful accomplishments which may easily be taught, some of which are not mentioned in any work on dog-breaking with which I am familiar. Fancy tricks should not be taught a setter for many reasons, chief among which is the fact that they have quite enough to acquire in becoming perfect in field work.

Never permit your dog to rear up against yourself or other person. If he does so, and is of a timid disposition, step smartly upon his hind toes and at the same time mildly rebuke him. A few such lessons will put an end to the practice. If not timid, gentle punishment will prevent it if accompanied with a command "down" in a threatening tone.

Never permit your dog to run upon the streets unaccompanied by yourself. If unbroken the labor of breaking will be quadrupled—if broken it injures his usefulness. Having acquired the "street tricks," as before stated, he may generally be set down as worthless. Punish him whenever you find him away from home. A setter or pointer which has been allowed to habitually run upon the streets can usually be recognized by the currish manner he has acquired of carrying his tail curled over his back. Never purchase one of this kind no matter what the inducements held out.

Never loan your dog under any circumstances. This practice has ruined many valuable animals.

Do not permit him to play with or obey commands from any other than yourself.

Never hunt your dog with another until thoroughly broken unless with his brace-mate; even this latter is of doubtful utility.

Under no circumstances permit another sportsman to accompany you to the field until your dog or brace of dogs is thoroughly obedient and staunch.

Never repeat a command. If the sportsman orders the dog a half dozen times to "charge," "fetch," etc., he only obeys when he sees fit to do so. Enforce instant obedience when satisfied he hears and understands you.

Remember that shouting and intemperate flogging may cause your dog to blink his game.

When in or out of the field never permit him to cross a fence in advance of yourself. The reason for the rule is that he will never leave the field in which you set him to work unless by your order. In shooting in standing corn, high grasss or weeds, and in dense covert, nothing is more common than to lose your dog while he is pointing game. If he has been taught as I suggest, instead of shouting yourself hoarse or blowing your whistle until your face resembles a toy balloon, go to work quietly and seek him; you will surely find him in the field with yourself, perhaps within a dozen paces of the spot where you last saw him, pointing probably, and you will thereby avoid the necessity, and the evils resulting therefrom, of calling him off his points or inducing him to flush the birds. I invariably break my dogs thus, and strongly urge young sportsmen to do so. If you observe him approach a fence wall or other means of inclosure, evincing a disposition to cross it, call out distinctly beware fence, or 'ware fence, and enforce strict obedience.

While out exercising my young dogs I occasionally drop my handkerchief or glove and encourage them to restore it to me. They soon learn what is wanted, and instances are recorded where this has been the means of finding lost property without which sportsmen would have been seriously embarrassed. Such discipline as last suggested cannot injure a dog, but will rather have the effect to increase his efficiency as a retriever.

Should you decide to teach other accomplishments, let them be such as will have a tendency to strengthen the qualities which make him a valuable companion and servant in the field, and not such as are merely showy and amusing, or such as may result in engaging his abilities to the neglect of and endangering his field qualities.

In conclusion I wish briefly to mention a remedy I have tested and know to be of value. Many localities where game abounds are infested with rattlesnakes. My own dogs have been bitten as have many others within my knowledge; yet I have never nor have any of my friends lost one in consequence since the discovery that Perry Davis's Pain Killer is a certain antidote.

For my own part, I never go to the field in spring, summer or early autumn shooting without it. The method of administering it is as follows: Rub the bitten parts thoroughly with the preparation, and give a teaspoonful diluted with water—warm water is preferable—every half hour until three or four doses have been administered, and continue rubbing it in at intervals of fifteen minutes for an hour, when your patient will be out of danger.

The swelling will probably remain for several days, but need excite no alarm. He may be lame, if bitten in one of his feet or legs, for a week or more, but will rapidly recover and experience no serious after results. If he be bitten about the head or forlegs, sacks filled with a jelly-like liquid will form upon and just under the skin of the neck. Rub these thoroughly with the preparation and they will disappear in a day or two. I might mention many instances where dogs have been bitten, in the neighborhood of the writer's residence, some of which did not receive the benefit of treatment for several hours after the accident, not one of which died. It is, indeed, a specific in these cases.

DOGS OF THE DAY.

MR. CARSWELL told me on Friday last that Wilmington entries would total about 200, which is about what could be expected, considering the opposition at Detroit, Youngstown and Kingston. This state of affairs cannot, of course, be avoided; but it is unfortunate that the seven September shows cannot be spread a little thinner than four in one week. Toronto is lucky to get a clear week on Sept. 15 to 19, and then Ottawa and London are competitors the week following.

Danbury is to the front again this year with an unopposed show on Oct. 7 to 10. Secretary Lynes undoubtedly did not consult the "gentleman" who confidentially informed me after I had pegged his pointer back last year that the decision was "rank" or I would not have been asked to go there for the fourth year in succession. The Danbury pointer judging was not without its amusing side. There could be no question but that my judgment was at fault, the two gentlemen who were beaten fully agreed on that point; so let us take their claim as correct. The question then is, what dog should have won? But here they dissolved partnership, each claiming that his entry should have been in first place. As near as I could make it out the laugh was on my side after all.

Danbury last year was held under the auspices of the Connecticut State Kennel Club, but that association is on the obituary list at the A. K. C. headquarters with the label "Owes $10." Danbury will therefore go it alone, as it did before. Entries close on Sept. 26, and there is no entrance fee, while the prizes are $5 and $3 in the open classes, and $3 and $2 in the puppy classes. Year by year the quality of the exhibits has improved at the Danbury show, and I hope to see that this holds good in 1890.

Mr. Mitchell Harrison has relinquished all idea of bringing the collie Christopher over from England, has removed the announcement of his speedy departure from the "ad," in the English papers and reduced his stud fee to seven guineas. Dublin Scot has again changed owners and is owned by a Mr. W. P. Kidd, of Manchester.

Our collie judges by the way, wouldn't have Charleroi II. at any price, neither would the breeders. I think Marsden seriously contemplated sending for the police when I told him that I would sooner breed to Charleroi II. than Scotilla or Dublin Scot. I notice, however, that Mr. Stretch has not been offering to sell Charleroi II. and still keeps him at stud. That dog was a collie, some prize-winning collies we have had here were only dogs.

Having amply demonstrated to their own satisfaction that the American beagle breeders and their standard are all wrong the small-hound men of England are proving that they don't know what the true type of harrier is. Englishmen are the clowns of the human circus, affording more amusement to those who watch than any other people. Every foreign breed of dogs that they take hold of they proceed to draw up a standard for, to suit their views. They did it with St. Bernards, with dachshunde, basset hounds, great Danes, and now they have decreed that the Belgian fanciers do not know what is the correct thing for those little black mongrels called schipperkes. It is all perfectly correct to do that, according to their notions, but when Americans practically adopt the only English standard in existence, and which had never been challenged, as correct, then there is a howl of indignation at the absurdity of Americans knowing anything of an English breed, while all the howlers disagree with one another as to what the beagle really is. No Englishman can understand that it is legitimate for any one to do to them as they would to somebody else, and the funny thing is that they never see the absurdity of their position.

A person who styles himself a special commissioner for one of your contemporaries has stated in print that he "resigned" as sub-editor of the English *Kennel Gazette*. The fact is he had "to get" and for the past two months has been trying to live by mortgaging his chance of getting reappointed. I regret having to bring anything of such a personal nature into this column, but FOREST AND STREAM readers will remember how he tried to squirm out of a well-proved charge of plagiarism of the rankest kind and his conduct in the Salisbury case, in which Millais supported him. Now we have another phase of his character. Millais sought to excuse his plagiarism to me by saying he had eight children—guess there must have been triplets since then. A negro down South acknowledges to the parentage of seventy-two children. On the Millais theory he might commit murder with impunity.

A week ago I had occasion to advertise for a foster mother and Mr. Fred Kirby kindly allowed me to use his address for application. The man who was running the advertising department on the paper selected thought he knew what I wanted better than I did, so he changed my advertisement from the dog classification to "Help Wanted—Females." Fred had lots of applications, but he only asked the first one "How old are the puppies, mam?" J. W.

SAN ANGELO DOG SHOW.—There will be a dog show at San Angelo, Tex., Nov. 6 to 12, in connection with the second annual exhibition of the Concho Valley Fair Association. Twelve classes are provided for, two each for English setters, Irish setters, Gordon setters, collies, pointers and foxhounds, with one prize of $3 in each class.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Little Roscoe. By J. W. Flynn, Bristol, R. I., for white, black and tan beagle dog, whelped April 13, 1890, by Royal Krueger (Bannerman—Cora) out of Baby W. (Cameron's Racket—Pussie).

Tampa. By J. W. Flynn, Bristol, R. I., for white, black and tan beagle dog, whelped May 3, 1890, by Storm (Lee—Countess) out of Belle of Wood Brook (Blue Boy—Mischief).

May Be. By A. S. Aborn, Wakefield, Mass., for liver and ticked pointer bitch, whelped June 20, 1890, by Spot Dash (Sir Philip Sidney—Topsy) out of Gypsy Bang Bang (Bang Bang—Bosk).

Don of Ossian. By W. E. Sharpe, Indianapolis, Ind., for liver and white pointer dog, whelped June 22, 1890, by Ossian (Croxteth—Amine) out of Cherrystone (Trinket's Bang—Pearlstone).

Lalla Rookh. By L. N. Hilsendegen, Detroit, Mich., for red Irish setter bitch, whelped July 18, 1889, by champion Elcho, Jr., out of Bessie Glencho (Glencho—Flame).

BRED.

☞ **Prepared Blanks sent free on application.**

Henrietta—Balkis. G. Prozesky's (Brooklyn, N. Y.) greyhound bitch Henrietta (Chief—Babe) to H. W. Huntington's champion Balkis (Clyto—Primrose). Aug. 18.

Vera Bang—King of Kent. R. L. Hooper's (Athens, O.) pointer bitch Vera Bang (Bang Bang—Christmas Vie) to E. Dexter's King of Kent (Priam—Kent Baby), Aug. 4.

Lavinia Belle—Bradford Ruby II. Henry Eichler's (Covington, Ky.) pug bitch Lavinia Belle (champion Treasure—Viola) to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Aug. 17.

Nellie Belton—Jerry. Forest Kennels' (Groton, N. Y.) English setter bitch Nellie Belton (Warwick Albert—Princess Belton) to D. Francis's Jerry (Rex Gladstone—Mina), Aug. 19.

Kate IX.—Red Rover Glencho. G. H. Covert's (Chicago, Ill.) Irish setter bitch Kate IX. to his Red Rover Glencho, Aug. 9.

Claremont Heather—Red Rover Glencho. M. C. Furst's (Chicago, Ill.) Irish setter bitch Claremont Heather to G. H. Covert's Red Rover Glencho, Aug. 18.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Loisette. L. C. Whiton's (New York) greyhound bitch Loisette, Aug. 5, six (two dogs), by H. W. Huntington's champion Balkis (Clyto—Primrose).

Brunette. Prof. L. P. Braive's (New York) Newfoundland bitch Brunette (Bruno II.—Mirza), Aug. 11, ten (eight dogs), by J. Boss's Leo (Lucifer—Diablesse).

Nellie II. Prof. L. P. Braive's (New York) pointer bitch Nellie II. (Sensation—Nellie), July 4, eight (five dogs), by his Roscoe (Don—Gipsey).

Chequasset Tara. Mrs. E. Tyler's (St. Paul, Minn.) pug bitch Chequasset Tara (champion Dude—Almah), Aug. 5, seven (two dogs), by Eberhart Pug Kennels' Boycott (Duke—Bonnie).

Lulu. Geo. J. Crandall's (Pawtuxet, R. I.) English setter bitch Lulu (Green's Sam—Mamy Belle), July 30, ten (five dogs), by T. M. Aldrich's Gene (Druid—Ruby).

Daisy Foreman. Geo. W. Neal's (Westville, Conn.) English setter bitch Daisy Foreman (champion Foreman—Jolly Nell), Aug. 18, seven (five dogs), by F. Windholz's Count Howard (Sir Alister—Mena).

Jennie. Prof. L. P. Braive's (New York) Gordon setter bitch Jennie (Dash—Fannie), Aug. 12, eight (five dogs), by his Buck (Old Glen—Belle).

Little Nell. G. H. Covert's (Chicago, Ill.) Irish setter bitch Little Nell, Aug. 19, thirteen (nine dogs), by his Dick Swiveller.

Forest Corinne. Forest Kennels' (Groton, N. Y.) Irish setter bitch Forest Corinne (champion Bruce—Little Nell), Aug. 22, five (three dogs), by F. Mackey's Garry IV. (Sarsfield—Nora).

Twinkie. Central Kennels' (Jersey City, N. J.) King Charles spaniel bitch Twinkle (Don II.—Duchess), Aug. 16, six (five dogs), by Wm. Philips's Roscious.

White Nellie. Forest Kennels' (Groton, N. Y.) bull-terrier bitch White Nellie (California Terror—Rose), July 31, six (three dogs), by V. J. Nye's Spiven (Baron—Nellie).

Tickle. Jas. E. Unks's (Muncie, Ind.) fox-terrier bitch Tickle (Warren Discord—Daze), Aug. 12, four dogs), by his Beverwyck Trap (Dusky Trap—Daze).

Marie. F. O. McGuire's (Bangor, Me.) Yorkshire terrier bitch Marie, July 8, two dogs, by P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Prepared Blanks sent free on application.**

Highland Abbe. Black and white greyhound bitch, whelped April 23, 1890, by champion Balkis out of champion Cassandra, by H. W. Huntington, Brooklyn, N. Y., to Mrs. N. Q. Pope, Poland Corner, Me.

Highland Fairie. Black, white markings, greyhound bitch, whelped April 23, 1890, by champion Balkis out of champion Cassandra, by H. W. Huntington, Brooklyn, N. Y., to Mrs. N. Q. Pope, Poland Corner, Me.

Highland Donald. Red brindle and white greyhound dog, whelped April 23, 1890, by champion Balkis out of champion Cassandra, by H. W. Huntington, Brooklyn, N. Y., to Mrs. N. Q. Pope, Poland Corner, Me.

Higland Clan. Black brindle and white greyhound dog, whelped April 23, 1890, by champion Balkis out of champion Cassandra, by H. W. Huntington, Brooklyn, N. Y., to Mrs. N. Q. Pope, Poland Corner, Me.

Highland Yorks. Black and white greyhound dog, whelped April 23, 1890, by champion Balkis out of champion Cassandra, by H. W. Huntington, Brooklyn, N. Y., to R. H. McLusky, New York.

Don of Ossian. Liver and white pointer dog, whelped June 22, 1890, by Ossian out of Cherrystone, by P. T. Madison, Indianapolis, Ind., to W. E. Sharpe, same place.

Sir Loris II. Silver fawn pug dog, whelped April 3, 1890, by Sir Loris out of East Lake Virgie, by Eberhart Pug Kennels, Cincinnati, O., to Jules B. Kampe, same place.

Lalla Rookh. Red Irish setter bitch, whelped July 18, 1889, by champion Elcho, Jr., out of Bessie Glencho, by St. Cloud Kennels, Mott Haven, N. Y., to Louis N. Hilsendegen, Detroit, Mich.

Bonnie Oho. Black cocker spaniel bitch, whelped February, 1889, by Pete Obo out of Floss B., by H. S. Symonds, Wakefield, Mass., to A. S. Aborn, same place.

PRESENTATION.

Highland Helen. Black and white greyhound bitch, whelped April 23, 1890, by champion Balkis out of champion Cassandra, by H. W. Huntington, Brooklyn, N. Y., to C. S. Wixom, Covert, N.Y.

Rifle and Trap Shooting.

RANGE AND GALLERY.

NEWARK.

NEWARK, Aug. 18—The shoot of the United Amateur Rifle Association to-day was not a success, but 48 men took part in the shooting, and of this number but 40 were members. The shoot was announced to begin at 9 A. M., but it was 11 before the carpenters got through with their work on the short range. The committee refused to open the ring target match on the 100yd. ranges, but no notice of this change for economy was given until 2 o'clock. The team match was a financial failure, the prizes aggregating $65, while there were but six entries. The contest of the individual targets at 25yds. was very hot during the afternoon and the scores were high. A. R. Pierson put up 74 out of 75; Coppersmith, Snellen, Boyken, Swing and Hanson made each 73, while no less than nine seventy-twos were recorded. The results of the various contests were as appended. Individual contest, best three tickets; winners in order: J. Coppersmith 217, S. Snellen 217, J. A. Boyken 214, L. P. Hanson 214, A. R. Pierson 213, A. Graef 212, Gus. Widman 211, C. Bischoff 210, G. D. Weigman 210, J. Speicher 210, F. Swing 209, W. R. Raah 207, F. Horstman 207, F. Hall 207, W. Hollowell 205, J. Herter 205, W. H. Watts 203, W. Cheening 203, F. C. Dietz 202, C. H. Townsend 202, J. Stadelhofer 202, D. Mahoney 199, G. Oberst 198, J. Huegel 198.

Honor target, 3 shots only for each member, first prize and association medal: Geo. Chapman 72, W. R. Raah 70, J. K. Walsh 67, G. D. Weigman 67, D. Erskine 65, F. Horstman 64, J. Coppersmith 63, F. Hall 63, G. Snellen 62, W. H. Alexander 59, J. L. Burger 57, John Berger 57, H. Schroeder 55, E. Flocke 48, C. H. Townsend 47, S. Targett, Sr. 47, G. Oberst 42, J. Herter 40, J. Henning 31.

Team shoot: First prize, gold medal to each member: Excelsior Rifle, of Jersey City—L. P. Hanson 53, J. Speicher 47, J. W. Hennessy 54, J. W. Cheening 57, W. Hollowell 50; total 275. Second prize, $15; Lakeside Rifle Club—Gus. Widman 52, C. Hoerl 55, B. Limpert 52, J. Stadelhofer 53, G. Snellen 57; total 269. Third prize, $10; Howard Rifle Club—S. W. Chapman 53, J. L. Burger 54, Fred Fetting 50, A. Graef 57, J. Herter 51; total 265. Fourth prize, $5; Essex Amateur Rifle Club—J. Coppersmith 56, C. Cooper 48, W. H. Watts 54, G. D. Weigman 54, J. K. Walsh 52; total 264. Essex Indians—G. Oberst 50, F. Heims 54, W. H. Alexander 54, E. McCraith 50, J. McCallum 51; total 353. Monroe Rifle Club—D. Erskine 56, W. Wilkins 52, C. Koker 43, W. Armstrong 53, G. Targett, Sr., 43; total 242.

Twenty-eight tickets were sold on the point target. John Coppersmith got 3 red flags, J. A. Boyken 6, J. Speicher 3, C. H. Townsend 3, C. A. Rowly 1, G. D. Weigman 1.

THE GERMAN SHOOTERS.

PHILO JACOBY is now on his way from New York to his San Francisco home. He arrived on the Normannia with his comrade, John Utschig, also of San Francisco, and left New York for the West on Aug. 24. The pair shot with success in the shoots at Berlin and Frauenfeld (Switzerland), winning 12 goblets, 31 medals, and 13 valuable honorary prizes. They carried the American and California flags, the latter with its golden grizzly, in all their travels, and speak in high praise of their reception everywhere. Barney Waltner, Gebhardt, Krauss, R. Busse, A. Jordan and several lesser lights have returned from Germany with loads of prizes. Mr. Walther says that when the "Deutsche Schuetzenbund" thinks of getting up another festival it should send representatives to this country for instructions. He declares the Berlin shoot to be the worst managed affair he ever saw. So great was the crowd on some of the days that a shooter was unable to get to the target to fire more than a dozen shots. On one day Miller had to wait five hours for a chance to finish a ticket. Walther says the meager success of the Americans at the field targets (300 metres) was due to their small caliber weapons, and he is convinced that nothing less than .40-60 will do good work at that distance. He says the majority of the German shots have lubricant on their bullets when they go to the firing point, but that they keep a box of pure vaseline beside them and dip each bullet into this before loading. Walther is confident that Zimmermann would have won the first honor goblet for rapid firing had not his target broken down, thus losing him three minutes. At one time Walther held his rifle to his shoulder for nearly forty-five seconds before his target came up. All these delays were counted against the shooters. August Begerow was handicapped in not having regulation German sights, and consequently his showing is poorer than it would have been had he had a proper outfit.

David Miller, of Hoboken, from whom the Miller Rifle Club derives its name, has returned laden with prizes and glory. Two valuable candelabra, given by the city of Berlin, and the handsome cup offered by the North German Lloyd to the American marksman who made the highest score on the field target, are among Miller's trophies. His score in two shoots was 28 and 30 out of a possible 60. Miller ascribes his success to two reasons—first, that he while in Berlin led a regular life; and secondly, to the fact that he received some valuable information and three days' active practice at Hamburg.

Fred P. Laute, captain of the Howard Rifle Club, of Newark, is expected home from Germany by the middle of September.

ST. LOUIS, Mo., Aug. 23.—The last series of the St. Louis Pistol Club came to an end with the shoot held last Wednesday. The shoots were well attended throughout the sixteen weeks it was on and was withal a most successful affair. For the highest general straight average Mr. E. Mohrstadt was awarded the medal, a very handsome bauble of gold by the way. Sam Dorman and G. Alexander tied on 91 at the last shoot, but on the shoot-off the former came off victorious. The medal will be held by Dorman for one week and then turned over to Mohrstadt to keep company with two others which he won in previous shoots held by the club. For all shooting the club uses a 12½yds. standard American target. The score:

S G Dorman	8	10	8	10	9	9	8	10	10	9—91
G W Alexander	10	9	9	8	9	10	9	8	9	10—91
A McBean	9	10	10	8	10	8	9	7	10	8—89
W Bauer	9	9	9	8	10	9	10	8	10	7—89
E O Mohrstadt	9	9	9	8	8	10	10	8	8	9—88
M Billmeyer	6	8	8	10	10	10	6	9	9	7—83
A E Bengel	8	8	6	10	10	10	7	8	5	9—81
M Summerfield	5	8	7	10	10	8	8	9	5	6—76
W Mackwitz	6	10	8	6	6	7	8	9	8	8—76
H Stussell	7	7	8	10	8	7	9	7	7	5—75

UNSER FRITZ.

NEW JERSEY AT CREEDMOOR.—General Spencer has received definite orders from Governor Abbett to proceed with the selection of a team to represent New Jersey at Creedmoor in September. The General will select his team this week. In regard to the newspaper reports that the team would be comprised of the 24 men who made the highest score in class practice, he said that it had not the slightest foundation; in fact such a team might well be left at home. He intends to choose men whom he knows can be depended upon for good work. Ex-Gov. R. S. Green spends a good deal of his leisure time at the State range, as does Comptroller Anderson and Gen. Donnelly. They are all enthusiastic riflemen, though the ex-Governor is the strongest shot of the three. It is expected that an interesting match will take place in the near future with Gov. Abbett, Comptroller Anderson and ex-Gov. Green as the principals. Gov. Abbett is improving rapidly under the care of Gen. Spencer, and has taken a great liking to range work since he made his qualifying score.

NEW YORK, Aug. 23.—New York Rifle Club held one of its series of matches at Creedmoor. The weather conditions were very unfavorable for good scores. A very strong and puffy 10 o'clock wind was blowing when the match opened. After a time the wind got around to 9 o'clock and it blew a perfect gale from that quarter until the match closed. The light on the targets varied from bright sunlight to deep shadow, consequently the marksmen had to keep constantly moving sights for wind and elevation. The following scores were made at 200yds. on the standard American target—possible 100: T. J. Dolan 84, M. Herrington 84, James Duane 79, J. S. Case 74, Mr. Loyd 73, Dr. E. R. Chadbourne 72, Mr. Gensch 72.

A GALLERY LEAGUE.—A scheme for an Inter-State Gallery League is being worked up by Fred A. Freiensehner, of Newark, and bids fair to come to a successful issue. The idea is to form a league of the strongest clubs of New Jersey and New York, for the purpose of shooting a series of tournament matches during the winter season. So far the following clubs have signed their willingness to join: Our Own, Howards and Lakesides, of this city; Excelsiors, of Jersey City; Millers, of Hoboken; G. A. R.'s (formerly the Barrys), Harlem; and the Albigs, of New York. In the near future a meeting of delegates will be called and details arranged.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Aug. 26-29.—Twelfth Annual Convention and Tournament of the Central Illinois Sportsmen's Association, at Jerseyville, Ill. Com. R. Hutchinson, Sec'y.

Aug. 26-30.—Grand Inanimate Target Shooting Tournament of the West End Gun Club of Harrisburg, Pa., to be held at Williams Grove, Cumberland county, Pa. For programmes address H. B. Shoop, Secretary, Box 321, Harrisburg, Pa.

Sept. 1-2.—Hackettstown, N. J., Gun Club Shoot, Labor Day.

Sept. 1, at targets; Sept. 2 at live birds. For programme address E. Richter, Sec'y.

Sept. 3-4.—Beeville, Tex., Gun Club Tournament. T. J. Skaggs, Secretary.

Sept. 3-4.—Tournament of the Springfield Shooting Club, Springfield, Mass. J. T. Herrick, Sec'y.

Sept. 4-5.—White Plains, N. Y., Gun Club Tournament at Bluerocks. C. P. Rowley, Sec'y, 241 Broadway, N. Y.

Sept. 9.—Tolley's Tournament, Catskill, N. Y. Geo. F. Tolley, Secretary.

Sept. 9-10.—Harvey Hurd's and F. R. Huminger's Peoria Black Bird and Bluerock Tournament, at Petersburg, Illinois.

Sept. 9-11.—St. Paul Gun Club Tournament, Hamline, Minn. Professionals barred. F. D. Pononsby, Pres., St. Paul.

Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse, Wm. E. Limberg, Sec'y.

Sept. 30, Oct. 1-3.—Sixth Annual Tournament of the Middlesex Gun Club, at Plainfield, N. J. Two days targets, two days live birds. $1,000 guaranteed. Programmes ready for distribution Sept. 1.

KEYSTONE THIRD ANNUAL.

CORRY, Pa., Aug. 18.—The third yearly shoot given at Corry by the Keystone Manufacturing Co., began to-day, or began to begin, for although the fixtures announced this as the first day of the shoot, the programme proper does not begin until to-morrow, to-day being occupied by sweeps, which have served to limber things up and take the stitches out of the boys who have just come off the long sea voyage from Toronto shoot. The weather to-day was pleasant.

The Keystone grounds, well-known to all the tournament shooters as models of convenience and system, never were so well equipped as they are this year. To the right and left of the main battery of ten traps are two batteries of five traps each, intended mainly for tie shooting. Each of these is provided with scoring and cashier accommodations, also with a large tent for sheltering the shooters and spectators. Every provision has been made by the management to make the shoot successful and pleasant, to save time and trouble for the shooter and to keep the shooting humming all the time. The rapid-firing system, as worked by Mr. Penrose, is now known and understood all over the country, but it has never been put in better practice than it will be here this week. A big shoot is a big business enterprise, and needs both push and system. It may surprise some readers to know that, besides the trappers, over a dozen men are employed by the management in scoring, keeping cash and general hustling, and that, so far as can be seen, all are kept busy every minute.

It was a good idea of the Keystone people to put up tents for all visiting manufacturers or agents wishing to display goods. There are in all ten tents upon the grounds, some of them very large ones. The result is a spirited and picturesque effect, novel and very pleasing. What with the cashiers' buildings, the tasty two-story club house, the dining hall, shooters' shelter, etc., the whole circle back of the traps is now pretty well filled up, so that the grounds look very lively, and convey the impression, which is a correct one, that something is happening here this week. The arrangement of the tents is as follows: Beginning at the right hand of the semi-circle, close to No. 10 trap, is a spacious Sibley, over which floats the ensign of the Heikes' Hand Protector Co., next to which is a similar tent devoted to the celebrated Baker gun. There is a big shelter tent over toward the right hand set of traps, but the next in line is the tasty little lawn tent of the Jenney & Graham Gun Co., of Chicago. It is hoped that this tent will by next Wednesday have in it for host Mr. Jenney himself, who is announced to be on hand then. Following this in order is an ornate tepee bearing the charcoal heraldry of one Long Feather, chief of the Piutes. Hatchets, bows, arrows, etc., adorn the walls of this wigwam. Long Feather himself is displayed in the act of making an attack upon a sandwich. He looks a good deal like Harvey McMurchy, and this might further be inferred from the fact that the device above this tent announces "The Celebrated L. C. Smith guns."

A neat little "A" tent, with a canvas verandah, is the Corry branch of "W. Fred Quimby & Co., of N. Y. City." Fred is expected on to-morrow. The most striking outfit of the whole, however, and one calculated to make the blood of the tenderfoot observer run cold with dread, such is the display of hatchets, knives, scalp locks and sanguinary scenes of battle upon its walls, is the Kickapoo tepee occupied by one Oregon Nick, representing the "American Wood Powder Co., of N. Y. City." Nobody knows where Milt Lindsley got his ideas of the shields, spears, hatchets, pappooses, etc., which so copiously ornament his tepee. To the left of the gate is a clean little wall tent, belonging to the "Crack Shot Powder, of Pittsburgh, Pa." On beyond the club house is a big wall tent, suited to the expansive brains of those who occupy it, and devoted altogether to the press. To the right of this tent is the standard of FOREST AND STREAM, with a seductive allusion to a luscious lot of scores next week, and to the left is the banner of its hated rival. The two representatives of the hated rivals sit within and have a pretty good time. Uncle Jake Pentz is good company. The row of tents gets better at every house, and this is the last house in the row—unless we except the big shelter tent at the left hand battery, whose roof is inscribed to "Hazard's Trap Powder."

It was hard work getting a flat place big enough for trap grounds in the hilly burg of Corry. The Keystone grounds are directly on top of a big hill, and from the club house it looks as though one was seeing right off over the edge of the world. The spot is pleasant, and it never looked more like pleasure and business both than it does to-day.

A good many of the "regulars" are in town this evening, among others Heikes and Scott McDonald, of Dayton; the two Wolstencrofts, Whitney, Enoch Miller, Harvey McMurchy, Milt Lindsley, Dickey, of Boston; Clover, Mr. Bristol, of New Haven; Uncle Billy Sigler, "Dayton," Benscotten, "A. James," and a lot of others. In Mr. Gastright, of Newport, Ky., readers may recognize an old shooter who used to travel with Ben Teipel and others of that day. Billy O'Fallon Crosby is also here. Ruble is here, too, and will use the shooting name of Windsor for a change. Ruble has been trying a 20-gauge over at Toronto, but says he can't do any good with it. By the way, Ruble is not stopping at the Phœnix Hotel, where most of the boys are. He stopped there last year, and in the course of the week made an arrangement with one of the table girls to take her out to the circus. They went, but when the poor girl refused to buy her own ticket at the door, Johnnie declared the entertainment off and took her back home. He said he never took a lady anywhere unless she bought her own ticket, anyhow. From this arose a coldness which this year has caused the gentleman to seek out lodgings and board separate. Nothing of this sort has happened this year except a little game started by Rolla Heikes, who steered a blind man against the crowd and then struck him for a divide after he had passed the hat. At least that's what the boys say, and Roll don't deny it. He just smiles his blonde smile. High jinks, as usual, when the boys get together.

Following are the conditions announced to be followed during the week governing holding of trophies, division of moneys, etc., as published in the programme book, and to be adhered to more or less strictly as occasion may demand;

"All trophies won by individuals at this tournament are to be held by them for one year, and bond given for their safe return at expiration of said time. If winners prefer, donors will hold trophy and no bond will be required. For best averages in guaranteed matches and trophy shoots, the surplus moneys will be divided: 30 per cent. to 1st, 25 to 2d, 18 to 3d, 12 to 4th, 10 to 5th, 5 to 6th. Shooters must compete in all guaranteed matches to establish an average for above prizes. In the trophy contests, winners of trophies get the trophy only this year, and the money is divided: 2d, 40 per cent.; 3d, 30; 4th, 20; 5th, 10. Next year the winners of this year's trophies get 40 per cent. of the entrance money.

"We have divided all our purses into five equal moneys, so as to protect the weaker shooters, but add $50 each day for averages, and balance of surplus money is divided into six averages, and will give the better shooters who shoot through a chance to win nice purses."

Keystone rules of course to govern. Following are to-day's sweeps:

Sweep No. 1, $1 entrance:

W Wolstencroft	1111111110— 9	Cady	1111101011— 8
McMurchy	1110111111— 9	Stephens	0011101111— 7
J White	1111111111—10	Lewis	1111111111—10
Dickey	1111111111—10	Miller	1111010011— 7
Willey	0011111111— 8	Bristol	1110111101— 8
Heikes	1011111111— 9	Burbridge	1011111001— 7
Thurman	1011111011— 8	McFarland	1101101111— 8
Folsom	1101110001— 6		

White, Dickey and Lewis div. first; Wolstencroft, Heikes and McMurchy tied on 5 and div. second; Willey shot out and won third; Stephens, Miller and Burbridge tied on 5 and div. fourth.

Sweep No. 2, $2 entrance:

Dickey	1111111011— 9	Stevens	1111111111—10
McFarland	1110101110— 7	W Wolstencroft	1001111101— 7
Lewis	1111101111— 9	Willey	1110111111— 9
Bristol	1111011101— 8	Cady	0111111111— 9
McMurchy	1111111111—10	Burbridge	1111111111—10
J White	1111111111—10	Miller	1111111111—10
Heikes	1111001111— 8	Folsom	0111111111— 9

All ties div. but second, which was shot down to Cady and Folsom, who divided.

Sweep No 3, $2 entrance:

W Wolstencroft	1111111111111—15	Folsom	1011110001110 11—10
J White	1111101101111—13	Burbridge	1100111111111—13
Bristol	1011111111011—13	Lewis	0111111110111—13
Stevens	1110111101111—13	Dickey	1110111111111—14
Willey	0110101111111—12	Miller	1111111111100—13

Clover	11111111111111—15	Willey	11101111101111 13

First shot out and div. by Benscotten, Miller and Babcock on 5 straight, second div., third won by Osborne.

First Day, Tuesday, Aug. 19.

The prospect was bad this morning, and it grew worse and worse all day. Heavy rain fell steadily from a cheerless sky and tried the spirits of the hardiest. This made Pen look down his nose, and he publicly expressed his fears that a rainy week was on hand to spoil the shoot. So it seemed all day, but in the evening, just as the last backload had conveyed its dripping load down the hill, a bright spot appeared in the west, a bright bow of promise spanned the heavens and a red glow suffused at least a portion of the sky, giving promise of better things to-morrow. The programme was shot through to-day, all but the last event, the rain only serving to prevent the shooting down of the ties, which would otherwise have been shot out. The ladies served a very good dinner to cheer the wet but plucky shooters. The scores began to present a better appearance. Mr. Quimby arrived as per contract. Skinner, of the Whitney Gun Co., appeared and shot all day, and so did Pope, of Olean. Kelsey got in during the evening, and word was had from several others who were belated but on the way.

A glance at the names on the score will show that the talent is here in force. It is a hard crowd to shoot in. Nobody made any money to-day. Benscotten was bemoaning his fate. "I have only lost 5 birds out of 65," said he, "and have broken 150 out of 160, and I am behind the game." "You ought to have gotten the other 10," said somebody. "Well, if I had," said Ben, disconsolately, "somebody else'd get more. It aint no use shooting nowadays." It does take good shooting here for a fact. Heikes, Whitney and Wolstencroft only missed one bird apiece in the 55 counted on average to-day, thus tying on div. average. Cady won second average on 53; Benscotten and McMurchy had tied on third average with 52 out of 55. Taking the day through Whitney missed two birds out of 160. Heikes only missed three. Wolstencroft only missed five. Whitney won the elegant Keystone trophy with 50 straight. That boy is a rooker. He must have about a carload of silverware that he has won. Wolstencroft has materially and noticeably changed the style of his shooting since last winter. He is shooting much slower. Heikes is shooting them, if anything, a trifle quicker. A study of the above totals will give an idea of what a shooter has to do in order to win here. The scores below will show how near some of the others came to getting there.

Shoot No. 1, 10 single Keystones, entrance $1:

Keller	1011110111— 7	Bristol	1111010101— 7
Stevens	1101101111— 8	Folsom	0110011111— 7

Whitney won the Keystone trophy with the admirable score of 50 straight. Ties below were divided.

Shoot No. 9, 10 single Keystones, entrance $2.50, $50 guaranteed:

Benscotten	1111110111— 9	Gastright	1101101100— 6
Heikes	1111111111—10	Stevens	1010110011— 6
Lindsey	1111110 1— 8	Dayton	1011110111— 7
Kellar	1111111101— 9	P pe	1101101100— 6
Wolsey	1111111111—10	Mc Murchy	1111111101— 9
Osborne	1101111110— 8	Bristol	1111111111—10
Whitney	1111111111—10	Windsor	1111111111—10
Cady	0111111111— 9	McDonald	0111111111— 9
White	1111111110—10	Willey	0011111110— 6
Tippy	1111111111—10	Seth	1111111000— 7
McFarlin	0111111110— 8	Miller	1111110111— 9
Babcock	0110111111— 8	Dickey	1010111111— 8
Davis	1111111111—10	Crosby	1111110111— 9

All ties divided.

This closed the shooting for the day, shoot No. 10 being announced for the first on the following morning. It had on the whole been a very good day, although the division of the ties instead of shooting off made the winnings very light, whereof the experts kicked the hardest. The highest number of entries during the day was 32.

Wednesday, Second Day, Aug. 20.

The promise of the evening before was fulfilled, and the morning broke bright and clear. The day was warm, cheerful and pleasant throughout, and things wore an aspect very different from that of the day before. By afternoon there was a good crowd upon the grounds, and the club house verandas were filled with lady spectators. The entries reached 38 at top notch to-day. Everything moved off well, and the occasion was pleasant to the extreme in each detail. Mr. Janney, of the Janney and Graham Gun Co., and Mr Robbins, of the *Sporting Review*, arrived from Chicago this morning, and will stay through the week. The lists will show several new names. The first event of the day was the postponed event, No. 10, from yesterday. Following are the scores:

Shoot No. 10, 10 single Keystones, entrance $1:

Sigler	1111111111—10	Crosby	1110 10111— 8
Lindsley	1110111110— 8	McMurchy	1101111111— 9
Bristol	1111111110— 9	Dickey	1111011101— 8
Kelsey	1111110111— 9	Cady	1111111111—10
"Wolsey"	1111111111—10	Dr Miller	0111110111— 8
Kellar	1111100111— 8	Windsor	0111111011— 7
"Whit"	0011111111— 9	McFarland	0110101111— 7
Edwards	1101111111— 9	Heikes	1111111 1—10
Benscotten	1110111011— 8	McDonald	1011111111— 9
"White"	0111111111— 9	E Miller	1111111110— 9
Folsom	0111111111— 9	Osborne	1111111111—10

Shoot No. 8, the L. C. Smith Trophy.—Great interest was evinced in this shoot, which on the whole is regarded as the most important of the tournament. The magnificent trophy itself, nearly 3ft. high, and admirably ornamented in devices of the field, is one of the most considerable trophies now in competition at the trap. It has been shown in illustration in these columns. It was won last year by H. B. Whitney, the very well named "boy wonder" of Phelps, N. Y., who has returned in perfect condition this year. It was displayed this afternoon upon a stand in front of the club house, and certainly impressed both shooters and spectators with a sense that there is something to this shooting business, and nerved the boys with a determination to do their best or better. How they succeeded may be seen by a look at the scores. The blackboard was watched anxiously. At the end of the first 25 birds it presented a bristling face nearly all "15," with hardly an "0" to break the monotony. It was remarked by the old shooters that such a score had rarely ever been seen before, if ever at all. The best target shots of the United States were among those who stepped to the score. There was no 50 straight made. Billy Wolstencroft had the cup in his hands at the last shot, but missed his fiftieth bird. This let in three others, Heikes, Osborne and Benscotten. Wolstencroft, as is well known, shoots a Greener, Heikes and Benscotten, Lefevers, Osborne a Smith. It will be remembered that last year Harvey McMurchy, the representative of the Smith gun, who has done so much for it among the shooting people of the country, won the Smith trophy here, making 50 straight, but gracefully resigned in favor of Mr. Whitney. This year Mr. McMurchy did another courteous act by throwing open the competition to guns of all makes, and not confining it solely to shooters of the L. C. Smith gun, as heretofore has been done. No restraint was therefore put upon the shooters, and not a murmur was heard throughout the whole closely contested event. The shoot-off in the ties was exciting. It was decided to shoot off at 25 birds. In the first tie Osborne missed his third bird. Benscotten fell out on his twentieth, and the expression of grief on his face would have caused a hitching post to weep. Wolstencroft and Heikes shook hands and went on with 25 apiece. They then agreed to divide the money, which by the conditions of this year is to be 40 per cent. of next year's entry, and continued the shoot. Wolstencroft wore a blue

jersey and Heikes a black, and black and blue moved up and down the long line of traps until the blue jacket let his ninth bird, a left quarterer, get away. Heikes not to be outdone, let his tenth, a right quarterer, get off. Wolstencroft dropped his fourteenth, and it is probable he then had too great a respect for the sawed-off blonde in the black jersey, for he dropped the twenty-second and twenty-third, the latter at least in pure carelessness. Had he held up on these birds he would still have been in it, for Roll missed his twenty-fourth and walked out with 23 in the last tie, a winner in one of the prettiest shoots it has been the fortune of the public to see.

Comment should be made here on the remarkable shooting which is of late being done by Rolla Heikes. He has been winning about everything in sight, and in the Smith trophy shoot he not only won his race, but broke the record, which was thought to be unbreakable. Two years ago J. E. Miller, of Cincinnati, made a run of 158 single targets, and this was the record till today. When Heikes fired at his twenty-seventh bird in this race to-day everybody on the grounds noticed that the report was light and muffled, a mere squib. Rolla thought the powder and shot must have run together. It was a machine-loaded shell. However that may be, this was his 181st bird, bringing over his last 38 straight from yesterday. Mr. Heikes, therefore, made a run of 180 straight, with 22 to the good over the record. Giving him the bird he lost through the defective shell, which he was certainly due to break, and his total run would have reached 240. There is in this shoot a whole commentary on modern trap shooting. It can be reduced reply to a science, or to a mechanical art at least, it would seem. The conditions were 50 single Keystones, $5 entrance, winner to take the cup and 40 per cent. of next year's entrance, balance to be divided 40, 30, 20 and 10 per cent. Score:

J White.....1111111110111111111110111101111111111111111001111—45

Dickey.....1111111110101111111111011111111111111111111111—46

First tie, 25 singles, 18yds.:

Wolstencroft.....1111111111111111111111111111111111111111111111—25
Heikes.....1111111111111111111111111111111111111111111111—25
Osborne.....1110101
Benscotten.....1111111111111111110

Second tie, 25 singles, 20yds.:

Wolstencroft.....1111111101111011111110011—21
Heikes.....1111111101111111111111101—23

Heikes won. All other ties div. McMurchy won third alone on 47. This closed the shooting of the day. The places for daily average were: Heikes and Benscotten first, Wolstencroft second, Kelsey third; the number of birds missed in the average shoots being respectively 2, 3 and 4.

Thursday, Third Day, Aug. 21.

Grief and woe overspread the landscape this morning and pretty little Corrv Valley was bathed in tears. The rain was fitful all the morning, and at 11 o'clock drove the boys away from the scores and set in to drown everybody in sight. Tough luck for Penrose, who has done too much good hard work to deserve to see his tournament spoiled this way. The delays seemed so many and so probable that it was determined to drop a number of the minor programme sweeps, and to go on with the guarantee, championship contests and team races first.

The wind this morning had blown down the tepees of Long Feather and Oregon Nick, and these gentlemen were forced to divide their time between Fred Quimby and Mr. Jenney, who sat in their door like Chatham street merchants and invited everybody in out of the wet. This would be a pretty good time, since everybody has stopped shooting and gone to telling stories, to tell how Fred Quimby got his title of "Blue Island Champion," but it is nearly dinner time and it may be better to wait. The following scores were shot out before the deluge:

Postponed shoot No. 9, 10 single Keystones, entrance $2.50:

Welsey.....1111111111—10 Dickey.....1111111110— 9

First shot out and div. by Wolstencroft, F. E. Mallory, McDonald, Kelsey and Windsor. Second shot out and div. by Whitney, Stevens, McMurchy and Dr. Miller, third and fourth div.

Shoot No. 8, Peters Cartridge Co. Trophy.—This was another interesting shoot, this well known and handsome trophy having never yet failed to bring out a full entry of the shooters on hand. Out of the 50 there were two 49s, Wolstencroft and Clover, the rest scattering. Heikes fell in the lucky hole of 46. An amusing incident happened here, which will serve to show the ceaseless scheming and pulling for place which has marked this tournament almost beyond precedent. A certain young shooter, who has figured well in the scores right along, had observed that Heikes was alone in the 46 hole, and thought that a good place to be. He therefore concluded to drop his last bird, and held about 20ft. behind it purposely. To his intense surprise and disgust a stray pellet wandered out and broke the bird, and thus he was in the 47 hole, where there are several others and much less "divvy." Served him right! The conditions of this shoot were 50 singles, entrance $5, winner to take cun and 40 per cent. of next year's entry, this year's money to be divided 40, 30, 20 and 10 per cent. O. R. Dickey, of Boston, won this trophy last year, the conditions then being that the winner took his money with the cup. Score:

Heikes .....1111111111111111111111111111111111111111111111—46
Osborne.....1111111111011111111111111111111111111111101111—46

Sigler.....1010111100— 6 Skinner.....1111110010— 7
Dickey.....1111111111—10

All ties div.

This closed the day. Rain was again drizzling down, and the outlook was cheerless. The day had, however, been a pretty good one, all things considered; 33 entries in such weather being about as much as could expect. The boys are breaking in the neighborhood of 8,000 or 10,000 targets a day, counting ties and all. The oldest of the oldtime kickers are kicking because everything is divided and not shot out; but if all the ties were shot down it would take about five aces to win anything in this gang. There is the usual wail from the rounders who have won it all, all over the country, and want more, that "nobody is making anything." At the sport of trap-shooting to-day, it seems, one must "make something" or the sport is no good. A few more years of this, and one of two things will happen, the sport of trap-shooting will be reorganized, or there won't be enough of it left to reorganize. There are no young shooters here at this shoot to amount to anything. The geese of the golden eggs are being killed. Target shooting is getting to be a mechanical art, and the element of skill or chance is not in it. They will have it or they will quit. The experts can then take what there is left.

In the above there is nothing of reflection upon this tournament, which has certainly been gotten up upon as broad, as general and as liberal a basis as could be, and which has certainly been conducted with a method and a carefulness in detail so admirable as to compel even the most unwilling praise. But it is the fault of the late drift in trap-shooting matters in general that things are as they are, and now happens to be a good time to sit down and look at these things fairly and think about them.

But, the day's work over, these hearty and careless boys don't think of anything. Clover put in $3.50 yesterday, broke 25 straight and took out $1.97, less $1 for shells; but he isn't thinking about that now. He is explaining to old Mr. Kellar, who is a little deaf, a patent multiple trap which he claims to have invented before the old man dreamed of his. Benscotten missed only 7 birds out of 210, and was still $8 in the hole, but he has forgotten that and the two birds he claims were scored against him, and is happy as the rest. Skinner and Enoch Miller didn't win the $10.0 they wanted, but to-night they will probably play another one of their wonderful games of pool, which lasts four hours, and at the end of which they have less to their credit than when they started, by reason of the red ball getting "in the hole" all the time too. And then the boys will get together in Roll's room, and he and his running mate, Scott McDonald, who isn't as handsome as he is big, but pretty near it, will play banjo duets until every heart forgets its sorrows, and no one can dream of less than 100 straight.

Fourth Day, Friday, Aug. 22.

More rain, and more of it. Things looked dismal. The crowd, however, hung together pretty well, twenty-six entries being made in one shoot. The weather being such that it was impossible to do regular shooting, it was announced at noon that the programme would be abandoned, and the team race and the individual championship contest for the Keystone diamond ring shot out first, the remainder of the time being devoted to sweeps or guarantees.

Prior to this time, however, two sweeps were shot to-day, and the student of trap matters may find in these two little sweeps more to interest him than in pages of the others. They came at a time most opportune, after all that has been said and written at this tournament about the hard shooting and the light winning, and the generally unsatisfactory state of affairs which makes such a combination possible. Mr. Penrose said:

"You men have all been objecting because you don't win anything. We have given $1 400 to you in this shoot, and yet nobody has won anything. Now I am going to give you a harder game, and put you into the 'professional rules,' and I don't think you'll get so many straights then."

There have been many schemes by many men to invent some method by which an element of irregularity, variety and uncertainty could be introduced into target shooting, which would do away with the dead monotony and mechanic-like automatonism of the "rapid-firing system" as usually seen. Harvey McMurchy's idea is that 5 traps, set in a straight line away from the shooter, each trap 2yds. further than the one next behind, and the furthest 24yds. from the score, would make shooting more interesting. Each shot could then be determined by the indicator, and the angle could be changed if desired. Milt Lindsley's idea is that of two batteries, one of 5 traps and one of 3, the 5 traps to be set in a semicircle at 18yds., the other 3 at 60yds. The 3 outside traps are all to throw incomers, the middle one a straight incomer and the 2 end traps right and left quartering incomers. A shooter steps to the score with five shells, and he gets five shots out of the 8 traps, the traps being determined by the indicator.

Either of these ideas would be good. The chief trouble is that not so many birds can be broken in a given time in that way.

The "professional rules" of the Keystone Company are an attempt to solve the same problem and yet retain rapidity of firing, which is of course the idea first in mind to the target manufacturers. In many ways these are a very fair solution, and the interest shown in these two shoots proves it.

The rapid firing system as seen at tournaments is under the "amateur rules." In it, both traps and angles are known, and each taken in rotation. In the "semi-professional rules" the same full battery of traps is retained, and the same system of rotation, but while the traps are known the angles are changed. In the "professional rules" the full battery of traps and the rotation in position is retained, but the trap is determined by lot, out of that half of the battery, or out of those traps, which lie to the right or left of the middle line. If the shooter is to the left of the line, he knows that he will get some trap out of Nos. 1, 2, 3, 4 or 5, etc.; if to the right, it will be out of Nos. 6, 7, 8, 9, 10, etc. Which of those traps it will be he does not know, and that is determined by the indicator. He may stand behind No. 1 trap, call "pull," and get No. 5 trap. He may then move up to No. 2, and get No. 1 bird. And so. His birds are thus offered to him at distances constantly changing. Deprived of the knowledge of the exact whereabouts of the bird, he is obliged to shoot quick, and to use skill, judgment and calculation. In other words, he has got to be a shooter and not a machine. Such conditions as these put the field shooter and the young shooter much more nearly on an equality with the professional than the so-called "amateur" rules, which have been abused and ridden to death by the professionals until they certainly have no charms to invite the amateur to a tournament. It is a further and very great merit to the "professional rules" that under their system of rotation a match can be shot off at them almost as rapidly as under the common system. They are, indeed, the rapid firing system followed with unknown traps and unknown distances.

So much for these rules. It was positively funny to see the cracks go to pieces under them. Shooters who had broken 98 out of 100 here this week came out of the 10-bird sweep with 2 or 3 birds scored against them. Farmer Heikes, who broke 180, or more likely 240 straight, only got 5 out of his 10, and was received with applause as he retired from the score. Not a straight was scored by anybody. Look back over the scores through the week before to-day, and dozens of straights of all lengths will stare one in the face on every page. Rolla Heikes broke the record on straights here this week. Let us hope that he broke also the old regime of target shooting. His little record of 5 out of 10 is more interesting news than his record of 180 straight, and in the end may mean more money to him and to the target manufacturers. It has got so that the publication of these long scores of straights is frightening away the younger shooters from tournaments. We have got to have more variety and fewer straights at our big tournaments, or the day of big tournaments will fade.

To the credit of the Keystone Company it must be said that they seem to be the first managers to recognize this and to attempt to make improvement. Let us hope that they will succeed, and that in their next tournament they will insist upon at least an equal division of time between the "machines" and the shooters. There is nothing like looking on ahead a little, and it is coming to be a conviction in the minds of many most interested in shooting that there will be a good deal more money for shooters, dealers and manufacturers in looking up some new systems which let in the shooting public, than in clinging too closely to the old, which simply forms a close communion of a clique who can't win any money themselves and won't let anybody else win any. Following are the scores. They disclose the little known fact that our machine shooters can't shoot. There has been a good deal of laughing and joking about this to-day:

Dickey first. All ties div.

There was considerable kicking among the old-timers at the above style of shooting. Benscotten remarked with tears in his eyes that one feller might get easier birds than the other feller, and then what was the other feller going to do? It wasn't pinch enough for Ben. Too bad. Ruble was different. He bent his great brain to devising some way to beat this game. Ruble shoots a Lefever. You can break a Lefever, put in a shell, keep your finger on the trigger, close the gun, and have your shell in the gun with the gun not cocked. Then you can step up to the trap, call "pull," fail to discharge your gun, show it to the referee uncocked, and get another bird out of the same trap. By this way you get a known angle in a race of unknown angles. It is a good deal of trouble, and not a very pretty thing to do; but this did not deter Mr. Ruble, who worked the racket very nicely. The rules should be rearranged to balk the games of gentlemen like Mr. Ruble, who always have time and brains for purposes of this sort.

Another very interesting event was now called up, in the East and West team race. Mr. O. R. Dickey captained the Eastern team and Rolla Heikes the Western. The conditions were 100 singles, $5 a man, six men to the team, birds donated by the Keystone Mfg. Co. Score:

1111111111110111011110110— 93—560

The East won.

This was a close race, especially at the close. "Edwards" was the last man to shoot, and had he broken his last bird he would have tied the race. He missed, and the East scored the win by that one bird. No race could be closer and be decided.

Heikes in this race ran another 100 straight. Rolla seemed to be unable to miss anything this week. He has not missed a bird in the shoots for average for the past three days.

Wolstencroft dropped three birds in the 100. He was probably all right for 100 straight, but had a defective shell three different times, the report making no more noise than a squib. Wolstencroft, as is well known, shoots a nitro powder and loads his own shells. The squibbing of these shells is set down to one of the unaccountable freaks of the explosive, it not having fed down right in the shell.

The day closed in an execrable rain.

The averages for to-day will be awarded, as is at this writing understood. The averages for yesterday are: First, Wolstencroft, Heikes and "Windsor", no bird missed during the day in average shoots (guarantees); second, Whitney; third, Benscotten, Dr. Miller, Stevens, F. E. Mallory.

Scott McDonald made a run of 75 straight to-day, which he says is his best record. This is a week of records.

PENNSYLVANIA STATE ORGANIZATION.

There is no State organization of the clubs of Pennsylvania, and for some time there has been talk of formulating and completing such an organization. This came to a decisive point to-night, and a meeting was called at Corry Hose rooms about 9:30, which was well attended by the Pennsylvania sportsmen now in town. There were present Messrs. H. A. Penrose, A. M. Howard, Jas. and W. H. Wolstencroft, Jos. Thurman, Jr., Elmer Shaner, Wm. Wasson, F. E. Mallory, J. McClure, R. W. Blydenburg, Clyde Wilcox, F. E. Ward, J. E. Austin, F. Berry, A. J. Russ and others. Clubs were represented from Corry, Erie, Oil City, Frankford, Philadelphia and Germantown. After informal discussion, Mr. Jos. Thurman, Jr., of Germantown, was called to the chair, E. Hough, of Chicago, being asked to keep the minutes of the meeting.

It was moved by F. E. Mallory, seconded and carried unanimously that Mr. H. A. Penrose, of Corry, be chosen president of the new organization. Mr. Penrose then took the chair.

It was moved by Mr. James Wolstencroft and seconded by Mr. Austin, that Mr. Jos. Thurman, Jr., of Germantown, be chosen vice-president. Carried.

It was moved by Mr. Jas. Wolstencroft and seconded by Mr. W. H. Wolstencroft that Mr. Elmer Shaner, of Pittsburgh, be chosen secretary. Carried.

It was moved by Mr. Austin and duly seconded that Mr. Jas. Wolstencroft, of Frankford, Philadelphia, be chosen treasurer. Carried.

Upon motion of Mr. Jas. Wolstencroft the president appointed the Board of Directors, who were named as follows: Messrs. F. E. Mallory, of Oil City; W. H. Wolstencroft, of Frankford, Philadelphia; F. F. Davidson, of Allegheny City; Brelsford, of Harrisburg; and W. H. Starbird, of Corry.

Upon motion of Mr. F. E. Mallory the president and two associates, to be chosen by himself, were constituted the committee on By-Laws. Upon further motion of Mr. Austin the same committee was constituted one of arrangements, to select time and place for the first State meeting and tournament.

Upon motion of Mr. Blydenburg it was decided to call the new organization "The Pennsylvania State Sportsmen's Association." Upon motion of Mr. W. H. Wolstencroft the Keystone target was adopted as the State bird to be used in the tournaments. The meeting then adjourned.

Thus was completed a very good evening's work, which should have been done long ago. There are numbers of good clubs all over Pennsylvania, and the State organization should prove a strong one. It is probable that the first fall meeting will be held this fall at Pittsburgh. It is contrary to the State laws to shoot live birds at the trap, but it is certain that two or three days of the meet will be put in at live birds. Pittsburgh is the best point for the first State meet.

Tom. Peacock got in to-night, late, but better than never.

Saturday, Fifth Day, Aug. 23.

The day was raw, cold and exceedingly disagreeable. The number of shooters will be seen to have fallen off materially. Penrose, Dickey and Cady shot at 20 birds each to warm up the traps, Penrose getting only 7, Cady 16, Dickey 16. Sweeps were then shot through the morning. Score:

Sweep No. 1, 10 single Keystones, $1:

"James"	1111111101— 9	F E Mallory	1111111111—10

First, second and third div., fourth shot off and Wolstencroft won.

The last contest of the day and the closing event of the tournament was the much anticipated individual championship match for the target championship of America and the valuable diamond ring offered in token thereof by the Keystone Mfg. Co. The ring has been exhibited on the grounds during the week, and is one of the most beautiful diamond rings ever offered in the country as a shooter's prize. The total cost of the ring was $135. The stone, a very fine one, is set in the middle of a miniature gold "Keystone" bird, the latter being gypsey-set on a heavy circlet of rough and polished gold. Tho whole ring is at once unique and elegant, and makes a trophy seldom equalled.

There was much discussion before this shoot as to the rules under which the contest should be shot. Under the usual rules it seemed like offering the trophy either to Heikes or Wolstencroft, whose long runs this week have been almost unprecedented. Heikes to-day closed another run of 170 straight and again in the same week broke the record. Earlier in this report I have said that Heikes had not missed a bird in the average shoots. This is slightly incorrect. He missed one bird in doubles, but not a bird in the singles. At the end of three and a half days, in this shoot, barring two shoots at unknown angles, Heikes had not missed one single bird he had shot at, at 16yds. That is to say, at regular distance and rules, he had shown that he could shoot day after day and not miss a bird. Wolstencroft was but little behind him. It was considered, then, that when the question was put to a vote of the contestants, the choice was for the unknown angles, or "professional rules."

Full enough description has already been made in this report of these rules. Their application in this shoot is something that every trap-shooter ought to study carefully. This was the most noteworthy and interesting shoot of any recent day in target shooting. It is the first important effort to introduce variety and to break the dead level. It proved to be the refuge of the experts against each other—a little tough on "Roll" and "Woolsen," apparently, but better, as a last resort, for the majority.

Before the race began it was announced that if for any cause, such as the failure of a gun to cock, etc., the indicator would be whirled again, and the shooter not have the same trap without change. This was for the benefit of Honest John Ruble and his little non-cocking invention, which was explained earlier in this report. It was also announced that a bird broken in trapping would also cause another whirl of the indicator.

There was a great deal of complaint about these rules to the effect that it was "all in the way a fellow's luck run." It was even tried to be shown after the shoot that Wolstencroft's success was due to his "luck" in getting easier birds. That is of course all nonsense. No man on earth could watch a race of 20 shooters, at 100 birds and all sorts of angles and tell at the end of it how many birds of each trap each shooter had had. As a matter of fact the element of luck would in all probability be pretty evenly divided. Until this feature of luck does take some place in our target shoots they will continue to grow more and more monotonous and uninteresting, until finally the answer will be forced upon the people who ask the question, Why does trap-shooting interest wane?

And yet there should this be said: The "professional rules" do not offer really unknown angles. Of the five men who stand behind the five traps governed by each roll of the indicator, the last one, and the last two really, know the traps which they are to have. This is obvious. It ought to be remedied. To be sure, No. 5 man may get No. 1 trap, a left quarterer, and have to shoot at it 50yds. or over. Rolla Heikes thought that this was not a test of skill, as the gun would not do the feat regularly. Yet he and Wolstencroft and plenty of others did break that bird time and again. Suppose they didn't. It was more fun to see them miss it than it was to see them break 20 at 16yds.

Such, then, were the conditions. Under them it is very probable that Mr. Wolstencroft's score of 94 out of 100 is the greatest feat of target shooting ever seen at any target, and it is yet to be seen that Garver or any professional could equal it. It is probable that Mr. Heikes's record of 180 straight at the "amateur rules" will be beaten before Mr. Wolstencroft's 94 out of 100 at the "professional rules."

Of Mr. Wolstencroft's shooting it must be said that he appeared in admirable form and showed himself beyond question an expert in art of shooting on the wing. Abandoning altogether his old snappy style, far more brilliant and far more risky, he showed evident effort at calculation and judgment of distances, which made his work admirable in the extreme. For Rolla Heikes, old quail shooter as he is, this race had no unqualified terrors. Rolla is a shooter, and about the safest man in the country to back at this very race, unless we must bar the winner of to-day. We will wait a while before we see his 94 out of 100 beaten. The nearest to it to-day was Mr. Pope, of Olean, with 83. Thus the new rules brought into close company with a record breaker a man whose average does not place him anywhere near there under the old rules. This is just exactly what is wanted. Q. E. D.

Wolstencroft shot under the name of "Wolsey." The following is the score:

Individual championship contest, 100 single Keystones, "professional rules," entrance $5:

W. H. Wolstencroft, of Frankford, Philadelphia, won first, the diamond ring and the individual championship; Rolla O. Heikes, of Dayton, Ohio, won second alone; A. P. Pope, of Olean, N. Y., won third alone; O. R. Dickey, of Boston, G. Cady, of New London, Conn., div. fourth; "A. James," of Philadelphia, won fifth alone.

The matches closed at 7:05 P. M., nearly in the dark.

Thus ended the Corry third annual tournament, which for stated reasons has seemed of unusual interest and significance. Rated quite aside from these reasons, the tournament has, on the whole, been a successful one, in spite of the abominable weather, which has been everything it could to discourage both the shooters and the management. About 30,000 birds have been broken. Mr. Penrose thought he would have broken 100,000 at the three batteries had the week been what he wished. However, he is not feeling in the least bad over the result of his shoot, and no one of the attendants, amusingly light as has been the "earnings" of this gang of crack shots, has the least word of dissatisfaction to-night. The L. C. Smith cup, the Peters trophy, the Keystone trophy, the championship ring and $1,200 in guarantees, make a good list of attractions for even such experienced hands as those who made the main attendance here.

The boys separate to-night and to-morrow. Next week will see most of them at the "Three J.'s" shoot of Jack, John and J. W. at Detroit. E. Hough.

A DAY AT DUNELLEN.

In response to the circular sent out by Charley Smith, announcing an open to-all shoot for Aug. 22, a pleasant party of sportsmen gathered on the grounds of the Middlesex Club upon that date. The programme called for a few events at bluerocks, but Jersey shots never take kindly to the artificials and consequently the entries were light. As soon as the live birds were produced the entry list began to fatten, and the real sport began. The birds furnished were a good lot, only a few could really be called duffers, consequently the scores are highly commendable. The shooting of Kleinz was of the highest order; of the 39 birds he shot at he lost only one, and that fell dead out of bounds. His skill is the more creditable as he was using a new Parker gun that was a stranger to him. The feature of the day's sport was the miss-and-out, and those that left before it was concluded missed a treat. The race was a hot one. The three leaders killed 50 of the 51 birds shot at; and if Smith had not slipped up on a hard black bird that towered to the right, they would certainly have had to draw the money, as it was getting too dark to continue. His miss, under the circumstances, was nothing to his discredit.

Event No. 1, 10 bluerocks, $1 entry, 3 moneys:

Van Riper	9	Wallace	6 C Smith 5
Tee Kay	8	Lawrence	6 Post 3
Ayers	7		

No. 2, same conditions:

Van Riper	8	Post	7 Lawrence 5
Wallace	8	C Smith	6 Squires 5
Tee Kay	8	Ayers	5

Ties for first shot out and div. by Wallace and Tee Kay.

No. 3, same conditions:

Rupel	8	C Smith	6 Kleinz 6
Post	7	Wallace	6 Van Riper 4
Tee Kay	7		

Ties for third shot out and won by Kleinz.

No. 4, same conditions:

Post	8	Ayers	8 Wallace 6
C Smith	8	Tee Kay	8 Loeble 4
Rupel	8	Van Riper	7 Clark 4
Kleinz	8	Hunt	7

Ties for first shot out and won by C. Smith.

No. 5, 4 live birds, $3 entry, 3 moneys:

Hunt	4	R Welsh	4 Van Riper 3
C Smith	4	Loeble	4 Capt Cordts 3
Dr Ziglio	4	R Irwin	4 D Darby 3
J F Kleinz	4	Dan Terry	4 Lawrence 2
Post	4	Wallace	3 Rupel 1

Hunt, Ziglio, Loeble and Terry drew their pro rata of first money, the others shooting out the tie in next event.

No. 6, same conditions as No. 5:

Kleinz	4	Ziglio	4 J D Voorhees 3
Irwin	4	Post	4 Ayers 3
Welsh	4	Hunt	3 Ruple 3
D Terry	4	Van Riper	3 C Smith 2
D Darby	4	Wallace	3 Loeble 1
Lawrence	4	"Forrest"	3 Cordts 1

Tie on 3 for second money shot out in next sweep and won by Wallace.

No. 7, 7 live birds, $5 entry, 3 moneys:

Wallace	7	Welsh	6 Darby 5
Dr Ziglio	7	Voorhees	6 Post 5
Hunt	6	Ruple	5 Loeble 5
Kleinz	6	C Smith	5 Van Riper 4
Irwin	6	Forrest	5 Cordts 4

No. 8, 7 live birds, $5 entry, winner to take all:

Kleinz	7	Irwin	6 Van Riper 5
Welsh	7	C Smith	6

Kleinz and Welsh divided.

No. 9, miss and out, $2 entry: Kleinz 17, Irwin 17, C. Smith 16, Welsh w, Van Riper w. Kleinz and Irwin divided. Tee Kay.

CHICAGO SHOOTING EXPERTS.

Burnside, Ill., Aug. 21.—The following is the score made here to-day by members of the Illinois State Sportsmen's Association for the *Herald* medal and Jenny & Graham Gun Co.'s trophy, 20 live pigeons, entrance $20, Illinois State rules, four moneys, 40, 30, 20 and 10 per cent., winner in last contest to receive $50 from this purse:

R B Wadsworth, *a* (29yds)	11122112200211212221—18
M J Eich, *a* (29)	11121011112111112021—18

Ravelrigg.

SPRINGFIELD SHOOTING CLUB.—Springfield, Mass.—On Gunn's Lot, near Winchester Park, Sept. 3 and 4, Keystone rules, 4 moneys in all events; 5 Keystone, 3 Ligowsky and 2 bluerock traps will be used, Keystone system for Keystone and Bandle birds. Any shooter may draw out his share when tied irrespective of the amount.

ST. LOUIS.

ST. LOUIS, Mo., Aug. 23.—The first of a series of three friendly team matches between the Compton and Riverside Gun Clubs took place on the grounds of the latter to-day, and resulted in favor of the Riversides by 27 birds. The members of the winning team shot remarkably strong, whereas several of ehe Compton's best men "stubbed their toes" in grand style, which is responsible for the "Waterloo" they sustained at the hands of the victors. The second match of the series will be shot next Saturday on the grounds of the Comptons, when the latter expect to be in better form, and promise to give their opponents a warm reception. At the conclusion of the match several sweepstakes were shot, all of them being well filled. Bluerock targets, A. S. A. rules:

Comptons.

CLAREMONT SHOOTING GROUNDS, Aug. 23.—Ten bluerocks, 50 cents entrance. ties divided:

	1	2	3	4	5	6
Collins	10	7	8	8	7	8
Hathaway	6	7	6	4	10	10
Simpson	10	9	8	7	9	7
Rose	9	6	5	10	..	..
Osterhout	8	3	2	4	7	6
Barry	7	4	5	8	5	3
Whit	8	10	10	8	9	10
Howard	9	9	6	8	8	9
Money		9	8	6	10	8

Sweeps at live birds, 4 birds, $2 entrance:

Collins	1121—4	Howard	2210—3
Hathaway	2212—4	Osterhout	0010—1
Simpson	1122—4	Rose	2212—4
Money	1111—4		

First money shot off in next sweep, same conditions:

Collins	2211—4	Howard	2020—2
Hathaway	0111—3	Osterhout	1101—3
Simpson	1122—4	Rose	1212—4
Money	1111—4		

Rose drew his share of first, rest shot off in following sweep, same conditions:

Collins	0222—3	Money	1211—4
Hathaway	0112—3	Howard	2011—3
Simpson	1011—3	Osterhout	1020—2

Capt. Money toook first in all three sweeps.

WALNUT HILL, Aug. 20.—Contrary to the decidedly unfavorable weather indications which prevailed in the morning the day developed into one most favorable for shooting and out-door enjoyment generally. A fairly good number of trap shots were in attendance at the range of the Massachusetts Rifle Association to-day, the main attraction being the eighth competition in the diamond pin match, in which there were ten contestants, several of whom succeeded in putting up in this, likewise in other events, some very creditable scores. Diamond pin match, at 20 single Keystone targets, Keystone system of firing, and 5 pairs of standard targets:

	Keystones.	Standards.
Hosmer	1111111111101111111—19	01 10 00 11 11—6—25

UTAH VS. COLORADO.—Salt Lake City, Aug. 21.—*Editor Forest and Stream:* Scores are inclosed of an alleged match between Colorado and Utah marksmen on Aug. 11. The five Ogden men could not leave home unfortunately that day and shot their score in Ogden. Colorado claims it is not a match. Utah concedes this and hopes a real telegraph match can be arranged with Colorado to take place in the near future. The match was at bluerocks, A. S. A. rules, 30 singles and 5 pairs doubles:

Utah Team.	S.	D.	Colorado Team.	S.	D.
M B Brown	26	10—36	Kibler	27	7—34
S Browning	28	9—37	Craig	25	10—35

WASHINGTON HEIGHTS VS. EMERALD.—About eight hundred persons, including representative shooters from the Long Branch, Bronxdale, Jersey City Heights, Jeanette, Algonquin and other gun clubs, were present at Burbank's Club Grounds, New Dorp, Staten Island, Wednesday, Aug. 20, to witness the return match at live birds between the Washington Heights Gun Club and the Emerald Gun Club, both of New York. It was the second match of a series of three to decide which club had the better men. The previous contest was won by the Washington Heights Club. Each club presented a team of 10 men, each man to shoot at 10 birds, 25yds. rise, 80yds. boundary, gun below the elbow until bird is on the wing, both barrels to count. The birds, as a whole, were an elegant lot:

Washington Heights G. C.		Emerald G. C.

DETROIT SHOOT.—Chicago, Ill., Aug. 18.—Shooters who have been pleased as well as puzzled by the great success of the different shoots held at Detroit during the last year will be interested in the tournament to be given by the old management, Messrs. John Parks, John Brooks and J. W. Garrison, commencing a week from to-morrow and running three days, Aug. 26, 27 and 28. It is to be hoped this shoot will fill as well as the others so highly successful. Mr. Parker writes, under date of the 16th: "We are going to entertain the shooters after the tournament and give them a ride down the river to Fighting Island, where we will have dinner and then indulge in a live-bird shoot. We hope to have a pleasant time." The executive ability and liberality of the former shoots assure the success and extended patronage of this one, and the boys will doubtless turn out in numbers.—E. HOUGH.

NEWARK, Aug. 20.—On John Erb's grounds to-day Frank Class, of Pine Brook, and Fred Lumbreyer, of Larchmont, L. I., met in a live bird match. This was the first match for money ever shot by Lumbreyer, who is about twenty-two years of age. His work with his first barrel was done with lightning quickness, and he handled his second when necessary very cleverly. Class shot out of all form. Lumbreyer lost his 9, 16, 20, 26, 31, 45 and 50th killing 93 out of his 100, his 9 and 16th birds dropping dead out of bounds. Class lost his 5, 14, 18, 33, 36, 49, 53, 55, 56, 63, 83 and 91st birds, killing 88 out of 100, his 35, 36, 53 and 56th birds falling dead out of bounds. The match was for $250 a side, under Hurlingham rules. Al Heritage was referee and C. H. Townsend official scorer. During the first half of the race the birds were of a fair quality, considering the sultry day, but during the last half the majority of them were slow flyers. Both men used 12-bore guns, Lumbreyer a Francotte, V. L. & D. special match shells, 45 grains Schultze powder, No. 7 and 6 shot for first and second barrels respectively, Ph. Lumbreyer handled the gun for his son; Frank Class shot without a handler with a Lefever, using Schultze in the first and black powder in the second barrel.

RUTHERFORD, N. J., Aug. 23.—Boiling Springs Gun Club, for gold medal and prizes, match at 25 bluerocks. American Ass. rules:

L Lane	0111010101001111111111111—19
R H Peck	1111100010101111110000110—15
T Meyer	1011101011000111110011101—16
C Collins	0001000010111010110001010—10
E Jeanneret	1100001110010001001100011—10
J C Blauvelt	1100111010101110001011101—15
P Jeanneret	1000010010001001010101111—11

Jeanneret won fourth on shoot-off.

Sweepstakes at 10 bluerocks: Meyer 9, Peck 7, Blauvelt 9, Lane 9. Same conditions: Blauvelt 7, Lane 6, Meyer 7, Peck 6, P. Jeanneret 5. Blauvelt won first on shoot-off. Same conditions: Meyer 7, Peck 7, Lane 6.

LONG BRANCH, Aug. 25.—The long talked of live bird matchs between Philip Daly, Jr., of the Central Gun Club, and Charles Wingert, of the Fountain Gun Club, of Long Island, was shot thit afternoon on the grounds of the Central Gun Club. On the firs6 25 Daly only killed 15, while Wingert killed 21. In the next 2 birds Daly killed 15 and Wingert 19. Daly made a brave fight, but Wingert shot him out on the eighty-ninth bird, having killed 70 birds to Daly's 56. The wind blew strongly from the southeast and carried most of the birds over to the left side of the field. A number of Daly's birds fell dead out of bounds.

STANDARD FACTORY EXPLOSION.—Blue Island, Ill., Aug. 22.—Fifty pounds of powder exploded in the packing room of the Standard Cartridge Factory yesterday, killing two workmen and injuring eighteen others. The machinery was badly injured, but the building was little damaged. Supt. E. C. Willard came off uninjured, as his many friends in shooting circles will be glad to learn. The company will go ahead at once with its work.—SOMERS.

KANSAS CITY, Aug. 25.—J. A. R. Elliott, of this city, to-day made his first defence of the cup which he won from Dr. Beck, of Indianapolis. He defended it against Samuel Gay, of Glenhall, Ind. The score was a tie, each scoring 47 out of a possible 50. In the shoot-off on 10 birds Elliott scored 10 to Gay's 3, thus making a successful defence of the cup.

JERSEYVILLE, Ill., Aug. 26.—The four-day shoot started here to-day with an attractive programme, having an abundance of matches. The event for Friday, Aug. 29, is the match at 100 live birds between J. A. R. Elliott, of Kansas City, and Ed Spencer, of Carrollton, Ill. At the Kansas City meeting of these two experts the score stood 97 to 96 in favor of Elliott.

PITTSBURGH.—The Wilkinsburg Gun Club will hold their first annual tournament at their grounds, near McKee's grove, on Monday, Sept. 1. A great deal of interest is being manifested in this shoot, and the entries for the various prizes are numerous. The matches commence at 10 A. M., and some of the best shots of the country will enter the lists.

WHITE HOUSE, N. J., Aug. 25.—The White House Gun Club will hold an all-day shoot at artificial targets on Sept. 5, on their grounds at White House. In the afternoon they will shoot a team race with the famous Union Gun Club, of Springfield, N. J. Everybody is invited.—H. BISHOP, General Manager.

WELLINGTON, Mass., Aug. 23.—At the regular weekly shoot of the Wellington Gun Club to-day the following scores were made in the merchandise match for August: Melcher, Bennett, Barrett and Perry 17, Sanborn 14, Gore 13, Cowee 10, George 9, Porter 7.

CLEVELAND, Aug. 2.—The weekly shoot of the East End Gun Club occured at their range to-day. The following scores were made in the club shoot: Sweetman 21, Held 13, Night 22, Bloom 21, Wherry 15, King 20, Barnes 15. Tie: Bloom 3, Sweetman 2.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

AUGUST.

30. Orange, Annual. 30, 31, Sept. 1, South Boston, Harbor Meet.

SEPTEMBER.

1. Ianthe, Annual. 20. New Jersey Athletic, Bergen
1. Arlington, Ann., Arlington. Point, Fall.

THE A. C. A. MEET.

RACE WEEK.

THIS year the location of the camp was such as to permit the races to be sailed with the least possible trouble to the sailors and the regatta committee, and in addition the many spectators were exceptionally well pleased, so that the races were not only well worth seeing, but could be very easily seen. The principal starting and finishing line was directly off the large dock, the paddling course, 1 mile and ½ mile straightaway, lying to the south, the high bluff in front of Squaw Point commanding a view from start to finish. The sailing triangle, with one flag opposite the dock, was within easy view from both camps. While many gathered on the bluff or on the end of the dock to obtain the best possible view, others contented themselves with watching the whole of each race from under the awnings in front of the tents of the main camp, where they gathered in pleasant little groups. From any of the tents in the forward rows a man might lie on his cot or sit quietly at work, and yet keep the whole race in view. There was no necessity of leaving the camp entirely, or of going afloat in a canoe and waiting by the hour to see a race, while all other work and occupation stopped, as has been the case at times in past years; and consequently the interest in the races was greatly increased. This matter of a camp which shall command from its front a full view of the courses is a very important one in selecting a site, a point to be noted by future committees.

The paddling races were started at the far end of the course, finishing off the dock. The sailing races were started off the dock, the wind in each case permitting a windward start against the sun, or leaving all buoys on port. The starting signals for the sailing races were given from a gun in front of headquarters, with the lowering of the big A. C. A. flag at the same point. Some little trouble ensued from this, the gun being so frequently used for saluting that its sound was confusing.

The fleet of races was a large and specially fine one, including nearly all the crack sailors and paddlers of the United States and Canada. The new paddling trophy brought out some fast and lightly built racing canoes, while nearly all the famous sailing craft were present. The first week was marked by strong winds without a break until the signal flags for the first race were set on Saturday, when the wind dropped. During the race week several calms interrupted the programme, but there was wind enough at one time or another to get off all the sailing events.

The signal code was most useful; in fact it is hard to see how it could be dispensed with in the future. Its use, however, depends on the selection of an open camp, where the signals can be seen from every point; at such camps as Bow Arrow, Long Island, or Stave Island, in the woods, it would be practically useless.

The entries for the races were as follows, the canoes being practically of 16ft. length and 30in. beam, except the 28in. boats allowed in the paddling races. The odd sizes have very nearly disappeared from the racing, and all sailing craft are built to the limits of 16×30:

Canoe.	Owner.	Club.
Surprise	J. O. Shiras	Longworth.
Mac No. 4	W. G. MacKendrick	Ubique.

——	J. R. Robertson	Puritan.

One detail of the meets has been brought to a high degree of perfection by means of constant control for ten years, the regatta programme. It is now in very satisfactory shape, the events being as few in number as possible, and yet covering all the varieties of canoe racing. It was as follows: Record Events.—1. Paddling. One-half mile straightaway. 2. Paddling and sailing combined. One-half mile alternately—three miles. 3. Sailing. Four and one-half miles. No limit to rig or ballast.

Other Events.—4. Trophy paddling. One mile straightaway. Exempt from "one man one canoe" rule. See Sailing Regulations, Rule V. 3. Trophy sailing. No limit to rig or ballast. Time limit, three hours. Seven and one-half miles. See Sailing Regulations, Rule V. 4. Tandem paddling. One-half mile straightaway. 7. Sailing. Pecowsic cup. Four and one-half miles. No limit to rig or ballast. Winners of sailing trophy barred. 8. Sailing. Club. To windward and return. Two miles. Time limit, two hours. First three members of any one club to count. To be first sailing race called on. 10. Paddling. Upset. No special appliances allowed. At signal every canoe must be turned completely over, righted, and, with crew inside paddled across the finish line, 200yds. 11. Sailing. Upset and maneuvering. No special appliances allowed. Canoe to carry two sails. No limit to ballast. One-half mile. At signal, throw over and recover paddle. Second signal, canoe to be tipped over until top of foremast touches the water; canoe to be righted, and cross finishing line under sail. 12. Hurry scurry race. Run, swim, paddle. 13. Gymnastics, etc. 14. Paddling. Club fours. One-half mile straightaway. Any canoe. All sailing races will be started to windward and finished at regular home buoy irrespective of distance. The novice race, open only to members who never sailed a canoe before Sept. 1, 1889, will be sailed on the result of the first round of race No. 3.

The first race called was on Saturday afternoon, event No. 8, club sailing, course 2 miles to leeward and return. There were 48 starters at the line when the signal was given at 4 P. M., the wind being moderate from S. W. The course was not logged, so the actual times are of no value. The fleet spread out as soon as the line was crossed, some swinging out and standing for the markboat, while others sailed wide and came out to the west of the mark. There were a number of mishaps from broken deck seats and similar causes. Mr. Butler pulled out his mizen traveler, delaying him considerably. The fleet turned in a bunch, but spread out on the beat home. The leaders were:

1....Uno	H. L. Quick....Yonkers.
2....Canuck	Ford Jones....Brockville.
3....Owl	J. A. Gage....Vesper.
4....Bonnie	C. B. Vaux....Yonkers.
5....Wasp	Paul Butler....Vesper.
6....Blanche	D. L. Goddard....Vesper.
7....Beta	T. S. Oxholm....Yonkers.

The Yonkers C. C. wins, with Vesper second.

Messrs. J. N. MacKendrick and D. Goddard, of the regatta committee, were in camp early, but the chairman, E. L. French, only drove into camp late on Sunday night from Sag Harbor, Mr. Meade, of Dayton, O., being with him.

On Monday morning there was no wind, so the first race called at 10:30 was No. 1, paddling record, ½ mile, with 35 starters. A number of men entered light Canadian canoes, looking for first prize in this race, while others, working for the record, started in decked sailing canoes. The race belonged to the light boats from the start, Mr. Carnegie being first and Tilley second, but Mr. Knappe made a very fine race, finishing fourth in a heavy decked canoe, his Spider. The wind was moderate by the time the race started, blowing against the course. Carnegie led almost from the start, being pushed by Tilley. The order was:

Coboconk, J. H. Carnegie, Coboconk	1
Sprite, H. R. Tilley, Toronto	2
Ole Joe, J. W. Cartwright, Jr., Puritan	3
Spider, E. C. Knappe, Springfield	4
Mac, H. F. MacKendrick, Ubique	5
Kismet, W. L. Perry, Talasit	6
Zerlina, E. D. Anderson, Trenton	7
Uno, H. L. Quick, Yonkers	8
Passaic, G. P. Douglas, Ianthe	9
——, W. A. Leys, R. Can. Y. C	10
Seabright, H. C. Ward, Brooklyn	11
Mac, W. G. MacKendrick, Ubique	12
Wraith, D. D. Gessler, Knickerbocker	13
Ellida, R. F. Brazer, Vesper	14
Olive, J. N. MacKendrick, Ubique	15
Valesca, H. M. Kramer, Red Dragon	16
Bat, L. B. Palmer, Ianthe	17
Kitt, E. M. Sinclair, Brooklyn	18
Bonnie, C. B. Vaux, Yonkers	19

Gwin, Roy Sweeney, Toronto Eurylda, H. H. Smythe, Brooklyn	20
Eclipse, F. L. Dunnell, Brooklyn Toltec, W. W. Howard, New York	
Wraith, T. A. Gessler, Knickerbocker Idlemere, J. L. Douglas, Ianthe	21
Blanche, D. S. Goddard, Vesper	22
Eros, F. C. Moore, Knickerbocker	23
Wonenda, J. W. Simpson, Yonkers	24
Kie Loe, F. W. Wayes	25
——, Pitt Baker, ——	26
Ell, J. W. Sparrow, Toronto	27
Fly, H. S. Gray, Vesper	28
Guenn, Wm. Whitlock, Brooklyn	29
Lasata, G. L. Metze, Ianthe	30
Dimple No. 4, G. C. Forrest, Hartford	31
Waif, D. B. Jacques, Toronto	32

The unlimited sailing race was called for 2:30, there being a moderate breeze from N.W. in the morning, and the canoes were assembled at the south buoy in season, but the wind was so light that the race was postponed, and event No. 6, tandem paddling, was called in its place at 3:30. There were 9 starters, and after a good race Messrs. J. N. and H. F. MacKendrick won, with L. B. Palmer and George Douglas second:

Olive	H. F. MacKendrick, J. N. MacKendrick,	Ubique	1
Passaic	G. P. Douglas, L. B. Palmer,	Ianthe	2
Valasca	H. M. Kreamer, W. L. Perry,	Red Dragon, Shuh Shuh Gah	3
Waterwitch	J. L. Collins, F. B. Collins,	Bayonne	4
Ole Joe	J. W. Cartwright, Jr., J. R. Robertson,	Puritan	5

Coboconk	J. H. Carnegie, R. B. Wilkinson,	Coboconk Ubique	7

Tuesday being visitors' day, the waters in all directions were covered with sails before colors, and people crowded into camp from all directions; on foot, in carriages and wagons, in steam launches, sloops, catboats, and yachts. Ninety craft of all sizes landed passengers on the east side, and 60 yachts and boats were anchored under the lee on the west side. It was estimated that 2,000 people visited the camp, giving it the appearance of a county fair. The wind was quite strong from S.E., with a canoe sea, when the unlimited sailing race No. 3 was started at 9:17 A. M., being nearly an hour late. The entries were 48 in number, but there was some confusion over the starting guns, only 35 getting away, and many of these badly handicapped. The course was 4½ miles, or 3 rounds of the triangle. Beta very soon took the lead and held it, with Canuck and Toltec following close. Blanche capsized near the second mark of second round, being then second boat but righted and sailed on. Beta came reaching over the last leg very fast with Canuck on her weather quarter, and as the mark was neared Canuck, aided by a favoring puff, cut in ahead and won by 5s., her time being 52m. 55s. Toltec sailed a good race and took third place. The order was:

Canuck, Ford Jones, Brockville	1
Beta, T. S. Oxholm, Yonkers	2
Toltec, W. W. Howard, New York	3
Blanche, D. S. Goddard, Vesper	4
Wasp, Paul Butler, Vesper	5
Passaic, G. P. Douglas, Passaic	6
Bonnie, C. B. Vaux, Yonkers	7
Wraith, D. D. Gessler, Knickerbocker	8
Owl, J. A. Gage, Vesper	9
Kitt, F. M. Sinclair, Brooklyn	10
Truant, W. S. Elliott, Field and Marine	11
Spider, E. C. Knappe, Springfield	12
Lieda, S. Schieffelin, New York	13
Mac, W. G. MacKendrick, Ubique	14
Kismet, H. D. Murphy, Shuh Shuh Gah	15
Drift, F. W. Taylor, Vesper	16
Eros, F. C. Moore, Knickerbocker	17
Chum, H. F. MacKendrick, Ubique	18
Nesta, D. Goodsell, Yonkers	19
Lasata, G. L. Metze, Ianthe	20
Ellida, R. F. Brazer, Vesper	21
Idlemere, J. L. Douglas, Ianthe	22
Seabright, H. C. Ward, Brooklyn	23
Gwin, Roy Sweeny, Toronto	24
Dimple No. 2, E. R. Kellogg, Hartford	25
Eurylda, H. H. Smythe, Brooklyn	26
Sylph, T. A. Gessler, Knickerbocker	27
Bat, L. B. Palmer, Ianthe	28

The novice race, No. 11, sailing, upset and maneuvering, was called at 3:15 P. M., the course being from a point on the last leg of the sailing triangle to a finish off the main dock. The order was:

Mac, W. G. MacKendrick, Ubique	1
Canuck, Ford Jones, Brockville	2
Lieda, S. Schieffelin, Vesper	3
Wraith, D. D. Gessler, Knickerbocker	4
Pterodactyl, B. H. Nadal, New York	5
Kipinisti, D. F. Jones, Royal Mil. Col	6
Kismet, H. D. Murphy, Shuh Shuh Gah	7
Xmas, W. Sweeney, Toronto	8
Gwin, Roy Sweeney, Toronto	9
Passaic, G. P. Douglas, Passaic	10
Ell, J. W. Sparrow, Toronto	11
Eros, F. C. Moore, Knickerbocker	12
Surprise, J. O. Shiras, Longworth	13

The paddling upset race, No. 10, was called at 4 P. M. with 7 starters. The race was started from the first buoy of the sailing course, but there was a serious misunderstanding among the contestants. No notice of the course was posted on the bulletin board, but verbal instructions were given to each individually. While some were told to finish off the small landing in front of headquarters, others understood the instructions to mean a finish off the main dock, where the other races were started or finished, thus making a course at right angles to the starting and finishing lines instead of an oblique one, as a finish at headquarters necessitated. As soon as the fleet started one-half the men headed one way and the remainder the other. Bat and Passaic were quickly upset and righted, and were first and second at the main dock, Wraith and Chum finished first and second at the other dock and were declared winners, the order, as posted by the committee, being:

Sylph, T. A. Gessler, Knickerbocker	1
Chum, H. F. MacKendrick, Ubique	2
Kismet, H. D. Murphy, Shuh Shuh Gah	3
Surprise, J. O. Shiras, Longworth	4
Passaic, Geo. P. Douglas, Ianthe	5
Bat, L. B. Palmer, Ianthe	6
Sprite, H. R. Tilley, Toronto	7

As soon as the list was posted a protest was made by Bat and Passaic, and in the evening a meeting of the Ianthe C. C. was held and a formal protest made by the club on the ground that Messrs. Palmer and Douglas had paddled the course given them by the committee and had finished first and second. The committee refused to sustain the protest on the ground that it had not been made before leaving the boat, nor a written copy served within an hour after. The club thereupon made a second protest on the ground that the directions for this race, over a special course and with an unusual finish line, had not been posted by the committee, as prescribed by Rule VI. This protest the committee declined to accept, and Gessler and MacKendrick were declared the winners.

The final race of the day was the hurry scurry, No. 12, with 9 starters. The course was a very poor one, though perhaps the best possible; a run down the narrow dock, with a turn at right angles at the end before diving. The result was:

Bat, L. B. Palmer, Ianthe	1
Wraith, D. D. Gessler, Knickerbocker	2
Xmas, W. Sweeny, Toronto	3
Olive, J. N. MacKendrick, Ubique	4
Sprite, H. R. Tilley, Toronto	5
Passaic, G. P. Douglas, Ianthe	6
Kismet, H. D. Murphy, Shuh Shuh Gah	7
Lasata, G. L. Metze, Ianthe	8
Ell, J. W. Sparrow, Toronto	9

This finished the racing for the day and the visitors left the camp. During the morning a meeting of the Central Division was held, at which the following officers were elected: Vice-Com., C. F. Wiuné, Mohican C. C.; Rear-Com., T. P. Gaddis, Ruckawa C. C., Dayton, Ohio; Purser, W. Howard Brown, Montcan C. C. Executive Committee, H. M. Stewart, Rochester, and J. K. Bakewell, Pittsburgh.

In the evening a grand minstrel show was held in the big tent.

On Wednesday morning there was little wind, so the paddling trophy was called, with 8 starters, the course being one mile straightaway, finishing off the dock. The bluffs afforded a fine view of the race from the start, which was made at 12:18 P. M.

Several of the racers stood up in paddling, but Mr. MacKendrick knelt on one knee and swung his double blade with an exceedingly graceful and powerful motion, which at once put him to the front and finally brought him in a winner by a handsome lead. The record was:

——, H. F. MacKendrick, Ubique	1
——, H. R. Tilley, Toronto	2
Coboconk, J. H. Camegie, Coboconk	3
*Spider, E. C. Knappe, Springfield	4
*Zerlina, E. D. Anderson, Trenton	5
——, W. L. Perry, Shuh Shuh Gah	6
*Waterwitch, F. B Collins, Bayonne	7
——, W. A. Leys, Toronto	8

*Full decked sailing canoes.

Mr. Leys upset, but regained his canoe and completed the course.

After dinner a light S.W. breeze sprung up and Event No. 2 was started, the course being 4½ miles, or 9 separate legs of the triangle, sailing and paddling over each in alternation, the sails being set or lowered at each mark. Uno led over most of the course, the final leg being a beat, and won easily. The full record of this and the Pecowsic cup was not posted, but the leaders in the combined were:

Uno, H. L. Quick, Yonkers	1
Mac, W. G. MacKendrick, Ubique	2
Passaic, G. L. Douglas, Ianthe	3
Chum, H. F. MacKendrick, Ubique	4
Bonnie, B. Vaux, Yonkers	5
Kitt, F. M. Sinclair, Brooklyn	6
Seabright, H. C. Ward, Brooklyn	7
Ell, J. W. Sparrow, Toronto	8
Kismet, H. D. Murphy, Shuh Shuh Gah	9
Wraith, D. D. Gessler, Knickerbocker	10
Ellida, R. F. Brazer, Vesper	11
Eros, F. C. Moore, Knickerbocker	12
Blanche, D. S. Goddard, Vesper	13
Sylph, T. A. Gessler, Knickerbocker	14
Gwin, Roy Sweeny, Toronto	15
Owl, J. A. Gage, Vesper	16
Toltec, W. W. Howard, New York	17

By 4:30 P. M. there was a fresh S.W. breeze, and the Pecowsic cup race, No. 7, was called, the course being three rounds, 4½ miles. The start was to windward, the fleet being bunched out by the buoy at the leeward end of the line, most on port tack. Wasp made a fine start, coming by the dock at the weather end of the line on starboard tack just at the gun. Wasp led, with Canuck second and Beta third; but at the first mark on the second round Beta took second place and held it, the order at the finish being:

Wasp, Paul Butler, Vesper	1
Beta, T. S. Oxholm, Yonkers	2
Canuck, Ford Jones, Brockville	3
Mac, W. G. MacKendrick, Ubique	4
Uno, H. L. Quick, Yonkers	5

There were 35 starters, but the official record of finish was not posted.

This ended the racing for the day. In the evening a dance was given in the mess tent.

On Thursday morning the wind was blowing strong from S.E., but by the time that the trophy race, the great event of the meet, was called at 10 A. M., it had fallen a little, though there was still a fresh breeze that lasted during the race. The start was very pretty, all but one of the 15 starters going over close together on port tack. The last canoe, Lieda, was not only late, but at the line her mainmast gave way, throwing her out of the race. The course was 5 rounds of the 1½-mile triangle, 7½ miles; the first leg being to windward, the second free, and the third a reach. At the start last year's winner, Canuck, took the lead and was never headed, gaining steadily on the fleet. Mr. Jones sailed his boat admirably, cutting out the buoys with precision and throwing away nothing. He soon had the race safely, bar accidents, and the chief excitement lay in watching the fleet chase Mr. Butler, who was second man. Uno was sailing very fast, but as the following table shows lost a great deal through the breaking of a rudder chain, making up a part of it after Mr. Quick had crawled aft and replaced the chain on the rudder head. Mac partly filled and gave up, having no bailer. Wasp sprung a mast, but sailed a fine race, being passed just at the finish by Owl. Blanche capsized on the first jibe, but righted and continued. The complete summary of the five rounds is as follows:

	First.		Second.		Third.		Fourth.		Fifth.	
	Order.	Time.	Order.	Time.	Order.	Time.	Order.	Time.	Order.	Time.
Canuck..	1	10 28 50	1	10 46 35	1	11 03 45	1	11 20 43	1	11 38 20

Mac.....	8	10 30 45	Filled on second round.							
Lieda....	Dismasted at start.									

At noon the record was posted, standing as follows:

			Points.
1.	Geo. P. Douglas	Ianthe	40
2.	W. G. MacKendrick	Uoique	34
3.	H. F. MacKendrick	Ubique	32
4.	C. B. Vaux	Yonkers	30
5.	F. M. Sinclair D. D. Gessler H. C. Ward	Brooklyn Knickerbocker Brooklyn	28
6.	E. C. Knappe H. D. Murphy	Springfield Shuh Shuh Gah	25
7.	D. S. Goddard	Vesper	21
8.	R. F. Brazer W. W. Howard	Vesper New York	20
9.	F. C. Moore	Knickerbocker	13
10.	Roy Sweeny	Toronto	10
11.	T. A. Gessler	Knickerbocker	9

During the day a number of tents came down, and camp began to thin out perceptibly. In the afternoon a damp S.E. wind threatened a storm and kicked up a heavy sea, but at 4 P. M. the special races for the Jabberwock cup, postponed from the Central Division meet, and the cruisers' race were started together, the conditions being as follows:

The Jabberwock Trophy.—Presented by Vice-Commodore Geo. A. Warder to be contested for by members of Central Division, to be the property of the man winning it twice, distance 3 miles, 2 times around the triangle. At least 5 canoes must start in this race.

Sailing cruising race, 3 miles on the triangle, 2 times around. Start to be made with sails down and hoisted at signal. At end of first round sails must be lowered and then proceed. Canoes for this race must have 6ft. sleeping room, of which 5ft. must be clear. Centerboards must not project when housed.

The cruisers' race was won by Idlemere, J. L. Douglas; a number of competitors capsizing. The Jabberwock Cup was won by Mr. F. F. Andrews, Rochester C. C. The Shimmecock Cup was also paddled for, being won by Mr. Emil C. Knappe of Springfield.

In the evening a campfire was lighted in the Ladies' Camp, at which the many prizes were presented. During the night rain fell heavily, but the following morning was clear and the two final races were called, a swimming race, won by Mr. Moffat, of the Yonkers C. C., and the club fours. The MacKendrick crew, the winners of last year's race, were on the dock to start for home when three crews were made up for this race. As soon as they learned that the race was really to take place, Mr. Jas. MacKendrick and his three sons got their canoe ready and started, coming in winners.

All day Friday men were packing up and leaving, and though some few remained to camp for a week or so in comparative solitude, by Friday night the great Salt-Water Meet of 1890 was "all over."

CANUCK.—Mr. Ford Jones, the winner of the A. C. A. trophy at the late canoe camp, has decided to sell his canoe Canuck rather than take her back to Canada. She can be seen at the New York Canoe Club house until Sept. 2.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. The Canoe Aurora. By C. A. Nedé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By I. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FIXTURES.

AUGUST.

28. Miramichi, Black Brook to Oak Point and return.
29. Savin Hill, Moonlight Sail, Savin Hill.
30. Beverly, 3d Cup, Marblehead
30. Sippican, Sweep. Marion.
30. Savin Hill, Cruise.
30. Queen City, 2d Class, Tor.
30. Monatiquot, Sail-off Cham., Weymouth.

SEPTEMBER.

1. So. Boston Mus. Fleet, Open.
1. N. Y. Y. R. A., New York.
1. Lynn, Open, Nahant.
1. Beverly, Open, Marblehead.
1. Corinthian, Marblehead, Second Champ.
1. Yorkville, Open, Oak Point.
3. Beverly, 2d Open, Mon. Be'ch
5. Queen City, 1st Class, Tor.
5. Monatiquot, Sail-off Pen., Weymouth.
6. Larchmont, Fall Regatta, Larchmont.
6. American, 3d Cham., Newburyport.
6. Great Head, Annual Club, Great Head.
6. Beverly, 3d Cham., Mon. Beach.
6. Massachusetts, Club, Dorchester.
6. Savin Hill, Sail-off, Savin Hill
6. Hamilton, Marguerite Cup, 25 and 30ft.
6. Royal Can., Skiff Class, Tor.
6. Quaker City, Pen., Del. River
10. Pleon, Sail off, Marblehead.
10. Eastern, Special, 40 and 46ft. Marblehead.
10. Cedar Pt., Saugatuck, Conn.
13. Long Island Sound Squadron Regatta of the Cor. Navy, Greenwich, Conn. Event postponed from Aug. 23.
13. Corinthian, Marblehead, Champ. Sail-off.
13. Hamilton, Monck Cup, 35 and 40ft., Lake Course.
13. Queen City, Skiff Class, Tor.
13. Royal Can., Cruising Class, Toronto.
13. Buffalo, Club Cruise, Stone Dock.
20. Beverly, Sail-off, Mon. Beach
20. West Lynn, Sweep, Lynn.
20. Hamilton, 30ft.
20. Queen City, 2d Class, Tor.
20. Royal Can., 25ft. Class, Tor.
20. Riverside, Pen., Riverside, Conn.
25. Miramichi, Chatham to Newcastle and return.
27. Hamilton, 35 and 40ft.
27. Queen City, 1st Class, Tor.
27. Royal Can., 30ft. Class, Tor.
27. Quaker City, Closing Cruise and Review.
30. Lynn, Lynn.

OCTOBER.

4. Hamilton, Sweepstakes.

THE LAKE Y. R. A. CIRCUIT, 1890.

It is too early yet, with only the partial results of one season to work on, to form any opinion from the racing as to the merits of the classification by corrected length, now on trial by the Lake Yacht Racing Association of Lake Ontario. At the same time, there is a marked contrast between the depressed condition of yacht racing on the coast under the old method and the lively boom in racing on the Lake under the new rule, which has made the circuit of this year such a success. The starting lists at the western end of the Lake have been specially large, and while many of the smaller craft have not been able to make the entire round, the fleet has been of satisfactory size, and the racing very keen at the more distant ports. The first class on Lake Ontario is necessarily a poor class for racing, as it includes the few larger boats of mixed rigs and odd sizes, from the cutter Vreda of 45ft. to the schooner Oriole of 70ft.; so that close racing is impossible. In the smaller classes, however, which range from 21 to 46ft. corrected length, there are enough yachts of nearly the same size to make some very good racing, as the tables will show. This year a great deal of interest was felt in a number of new craft, the steel 30-ater Vreda, lately brought out, the new Fife boat Yama, the new Samoa and several others, all built for the new rule. The programme, which was published some time since, has been changed somewhat, as the weather necessitated, but the same number of races were sailed as at first announced, an extra race at Cobourg taking the place of one at Toronto, which was omitted.

The rendezvous this year was at the extreme western end of the Lake, at Hamilton, where the fleet assembled on Aug. 12, sailing the first race next day, Wednesday. One of the features of the race was the new Yama, who not only beat her own class easily in this, her maiden race, but made the best time on these rounds when she sailed with Oriole and Vreda. The summary is as follows:

FIRST CLASS, YACHTS OVER 46FT.

	Start.	Finish.	Corrected.
Vreda	11 30 00	2 46 18	3 08 29
Oriole	11 30 00	2 41 15	3 11 15
Aileen	11 30 00	2 49 43	3 17 55
46FT. CLASS.			
White Wings	11 30 00	2 36 28	3 06 23
Condor	11 30 00	2 57 35	3 25 21
Verve (R. C. Y. C.)	11 30 00	3 08 10	3 33 45
Madge	11 30 00	3 19 16	3 47 59
Verve (H. Y. C.)	11 30 00	3 24 00	3 52 58
40FT. CLASS.			
Yama	11 40 00	1 39 20	1 59 20
Merle	11 40 00	1 47 20	2 06 24
Psyche	11 40 00	1 48 40	2 07 04
Vision	11 40 00	1 57 36	2 14 33
35FT. CLASS.			
Coquette	11 50 00	2 05 41	2 15 41
Alert	11 50 00	2 18 25	2 21 56
Cypress	11 50 00	2 18 31	2 26 46
Edith	11 50 00	2 26 07	2 35 00
30FT. CLASS.			
Nancy	12 00 00	2 20 20	2 19 12
Nadia	12 00 00	2 24 12	2 23 26
Samoa	12 00 00	2 30 27	2 30 10
Echo	12 00 00	2 30 25	2 30 25
Wona	12 00 00	2 59 04	2 36 42
Volante	12 00 00	2 40 00	2 39 46

Amelia	12 00 00	2 49 55	2 49 47
Kelpie	12 00 00	2 53 23	2 49 00
Naiac	Withdrew.		
Lotus	Withdrew.		
25FT. CLASS.			
Mischief	3 00 00	2 30 28	2 29 19
Maud B	3 00 00	2 30 07	2 30 07
No. 11	3 00 00	Did not finish.	
Schemer	3 00 00	2 52 00	2 51 03
Nadjy	3 00 00	2 54 56	2 54 51
Heathen Belle	3 00 00	Not timed.	
Oneyeda	3 00 00	Not timed.	
Katie Hall	3 00 00	Not timed.	
Mystery	3 00 00	Not timed.	
21FT. CLASS.			
Widgeon	3 00 00	5 36 15	2 36 15
Rambler	3 00 00	5 48 07	2 47 34
Caprice	3 00 00	5 53 26	2 53 24
Clytie	3 00 00	Not timed.	
Antho	3 00 00	5 59 32	2 59 30
Eclipse	3 00 00	Not timed.	
Amelia	3 00 00	Not timed.	
Rustler	3 00 00	Not timed.	

Coquette was disqualified for not carrying out the association rule of being sailed by a member of a club belonging to the Association.

In the evening a dinner was given in honor of the yachtsmen, with an illumination of the fleet. Next day the fleet sailed to Toronto, where, on Aug. 15, the regatta of the Royal Canadian Y. C. was sailed. The course was from a line between the Exhibition wharf and a buoy to the southward; thence to the bell buoy; thence to buoy No. 3, moored five miles east by north from the bell buoy; thence to buoy No. 4, five miles south by west, by half west; thence northwest, half north to the bell buoy. The first class, 46 and 40ft. classes sailed around this triangle twice and the other classes once, 30 and 15 miles respectively. The 25ft. class sailed from opposite the town club house to a buoy opposite the island club house; thence through western channel and return via the island club house buoy and Gooderham & Worts's elevator, 9½ miles.

The wind was light from south, shifting later to S.W. Again Yama led the fleet, making the best time over the course, while her class competitors were beaten by an hour. The official times were:

FIRST CLASS, OVER 46FT.

	Start.	Finish.	Elapsed.	Corrected.
Oriole	11 00	6 17 50	7 17 50	7 17 50
Vreda	11 00	7 07 57	8 07 57	7 54 55
Aileen	11 00	7 12 40	8 12 40	8 09 40

	Start.	Finish.	Elapsed.	Corrected.
46FT. CLASS.				
White Wings	11 10	6 41 47	7 31 47	7 31 47

In the evening a dinner was given at the handsome club house of the Royal Canadian Y. C., on the island, with Com. Boswell in the chair. Speeches were made and toasts drunk until a late hour. The proposed regatta of the Queen City Y. C. was abandoned, and on Saturday the fleet sailed for Cobourg, where an extra regatta had been arranged for Monday.

The course was from a starting buoy moored a quarter of a mile south of the harbor, to a buoy five miles southeast by south, thence to a buoy about five miles west of the south buoy in a line with Gull Island lighthouse, and thence back to the starting buoy. The first class yachts sailed twice over the course. The second class went once around, and thence to the southeast buoy and back to the starting buoy. The third class boats went once around the course.

A temporary classification was adopted to allow all the yachts to enter, White Wings being classed with the larger boats and Cyprus with Yama. In the second class was a new comer, Goldspur, by a local builder, Donclaus, of Brighton, sailing her first race. She beat Merle badly and made a very good showing. The wind was moderate from S. E. The full times were:

	Start.	Finish.	Elapsed.	Corrected
FIRST CLASS.

The prizes were presented at the Dunham House in the evening, after which a ball was given in the Opera House in honor of the yachtsmen. On Tuesday the fleet sailed for Kingston.

MONATIQUOT Y. C.—Third championship, 37th regatta, Aug. 19, off Fort Point, Weymouth. Distance 9 miles first class, 7 miles second class; weather good; wind S.E., strong:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
White Fawn, H. A. Jones	25.00¾	1 27 59	0 59 11
Erin, John Cavanagh	26.11	1 25 32	1 00 27
Posy, E. S. Hunt	22.03	1 32 16	1 00 28
Moondyne, H. J. Shaw	24.10	Did not finish.	
SECOND CLASS.			
Eureka, E. B. Rogers	20.08½	1 24 16	0 58 06
Diadem, L. A. Hayward	18.02	1 29 37	1 00 42
THIRD CLASS.			
Rocket, H. M. Faxon	16.02	1 42 28	1 11 01

The White Fawn having won a leg in a previous race, wins the championship and cup for first class. The Eureka and Diadem each have a leg for the championship in the first class and will sail off Aug. 30. The Rocket had a walkover and won championship and cup in the third class. Judges: Chas. G. Sheppard, T. D. Bagley, E. T. Jordan.

GREENWICH, Conn., Aug. 28.—Special carnival race for 20ft. catboats. Course, triangular around Captain's Islands. Weather clear. Wind, heavy, northwest. Tide, flood:

	Length.	Start.	Finish.
Phyllis, W. J. Jones	19.11	3 21 30	4 22 00
Zelica, H. A. Sherman	19.05	3 22 13	Did not fin.

Race was sailed under rules of the Indian Harbor Y. C. Prize was a handsome silver set presented by Mr. B. H. Yard, of the Indian Harbor Hotel.

CORINTHIAN MATCHES, AUG. 18, 19 AND 20.

AGAIN the Corinthian Y. C. of Marblehead was successful in its midsummer series for forty and thirty footers, a repetition of the race originated last year. Three days in succession of very good racing served to place Minerva at the top of the forties and Saladin ahead of the thirties. The prizes were two, a $300 cup for the larger, presented by Augustus Hemmenway and Bayard Thayer; and a cup costing $125, presented by the club, for the smaller boats. The starters in the 40ft. class were Minerva, Gossoon, Mariquita and Ventura, Tomahawk entering but not starting. In the 30ft. class there started Saladin, Shark, Hawk and Almira, the latter a new Cape cat by the builder of Harbinger. The series was arranged some time since, all the forties and thirties being invited to enter, but only the above boats started. The first race was sailed on Aug. 18, the course being over a 4-knot triangle including Marblehead Rock as the starting point, the Graves Whistling-Buoy, and a sea mark 8 knots E½N from the Graves. The wind was fresh from N. W. at the start, the forties carrying club and the thirties working topsails and all reached off very fast. The start was a very close one, being timed:

Mariquita	11 00 17	Saladin	11 05 49
Gossoon	11 00 38	Almira	11 06 10
Minerva	11 00 40	Hawk	11 06 20
Ventura	11 00 44	Shark	11 06 29

Minerva held the others, Ventura dropping astern. Shark led her class for a time, but Saladin passed her, while Almira dropped astern of the fleet. The first mark was timed:

Mariquita	11 58 12	Saladin	12 12 52
Minerva	11 58 23	Shark	12 13 17
Gossoon	11 58 51	Hawk	12 13 48
Ventura	12 00 23	Almira	12 18 37

The next leg was also a reach, and after jibing Minerva and Mariquita fell into a luffing match, Gossoon meanwhile running by both, while Ventura was so far astern that she had nothing to do but to steer a straight course for the next mark, leaving the fighting to the others. The wind had now drawn so far to the westward that spinakers would draw, while it lightened rapidly, giving every chance for flukes. Saladin drew ahead of her class, while Gossoon and Ventura gained on the other two, who had lost much time by luffing. The second mark was timed:

Gossoon	1 20 23	Saladin	1 23 14
Ventura	1 21 38	Hawk	1 35 33
Mariquita	1 23 54	Shark	1 35 38
Minerva	1 24 18		

Almira was not timed, as the wind fell entirely before she reached the mark. There was a deal of fluking on the last leg, Minerva and Gossoon standing to the south in the very light air, and finally being caught when the breeze did come by Ventura and Mariquita, the latter pair getting an easterly breeze that took them home under spinakers, while Gossoon and Minerva were beating slowly up against a light N. W. air. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
FORTY FT. CLASS.				
Ventura	11 00 44	3 01 15	4 01 15	3 59 59
Mariquita	11 00 17	3 02 01	4 02 01	4 02 01
Gossoon	11 00 38	3 17 16	4 17 16	4 17 16
Minerva	11 00 40	3 24 42	4 24 42	4 22 47
THIRTY FT. CLASS.				
Saladin	11 05 49	3 28 32	4 23 32	4 18 51
Shark	11 06 29	3 35 39	4 30 39	4 25 39
Hawk	11 06 20	3 49 17	4 44 17	4 38 55
Almira	11 06 10	4 07 08	Not taken.	

The race was a pure fluke, as all her previous sailing has shown that Ventura has no business with Gossoon. Saladin beat Minerva on elapsed time.

The second day brought a strong S. E. wind, with a sea and a head tide, so the same triangle was sailed, but in the reverse direction, making the first leg a beat. The forties had a good start, the four going over within 15sec., while the thirties, with the addition of the Gloucester boat Mignon, also started promptly. For the first 8 miles Gossoon and Minerva fought hard for the lead, Gossoon gaining a little all the time; the other two were practically beaten on this leg. The times at the first mark were:

Gossoon	12 48 20	Mariquita	12 48 23
Minerva	12 45 58	Ventura	12 50 17

The thirties were not timed, but the order was Shark, Almira, Saladin and Hawk, Mignon withdrawing. Almira was sailing excellently and gave Shark and Saladin all they wanted to beat her. Reaching off on the second leg, in a good sea and a strengthening breeze, balloon jibtopsails were set on the forties. Gossoon gained a few seconds while Minerva and Mariquita sailed very evenly, Ventura losing a couple of minutes. The times at the Graves were:

Gossoon	1 47 32	Mariquita	1 51 12
Minerva	1 48 47	Ventura	1 54 42

The order of the thirties was only changed by Saladin passing Almira near the Graves. Minerva was hurt by her big balloon jibtopsail, which lost her some time in jibing at the mark and finally sprung her topmast so badly when about 6 miles from home that the spar was saved with difficulty from a total wreck, and no jibtopsail could be carried after the balloon was taken in. The finish was very close, the corrected times show that Minerva won by only two seconds. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
FORTY FT. CLASS.				
Minerva	11 10	2 43 17	3 33 17	3 31 22
Gossoon	11 10	2 41 24	3 31 24	3 31 24
Mariquita	11 10	2 44 31	3 34 31	3 34 31
Ventura	11 10	2 49 43	3 39 43	3 33 27
THIRTY FT. CLASS.				
Shark	11 15	3 18 24	4 03 24	4 03 03
Almira	11 15	3 25 04	4 10 04	4 03 09
Saladin	11 15	3 24 33	4 09 33	3 09 33
Hawk	11 15	3 31 37	4 16 37	4 15 56

On board of Minerva was Mr. Will Fife, Jr., who arrived in New York on Sunday for a short visit to America. He also sailed in the race of the following day, having with him Mr. G. o. Adams, of Gossoon. After the races Mr. Fife returned to New York, leaving on Sunday night for Oswego to sail a race or two in Yama. Shark was very well sailed by Mr. Waterhouse, who as usual was handicapped as compared with Saladin by a scratch crew hastily got together.

This race made a sail off necessary between Minerva and Ventura in one class and Saladin and Shark in the other, which race was sailed on the following day, Wednesday. The wind was N.N.W., so a course 10 knots S.S.E. was determined on, but the yachts were not notified of the exact direction until they were crossing the line, so that it was impossible to tell on which side spinakers should be carried. After some delay in setting spinakers when the course was known, they settled down to work with clubtopsails set, booms to starboard and spinakers to port.

Minerva got well away, as did Saladin, but Ventura had a bad start, and Shark was handicapped. Minerva held her lead for a time but the wind lightened and shifted to north, so that balloon jibtopsails were set instead of spinakers, when Ventura ran ahead to leeward of Minerva, Saladin also dropping Shark, there being too much sea for the wide boat. The wind continued to lighten and draw ahead, until when half the leg was covered it was right ahead, and the boats were beating for the outer mark. Minerva began at once to beat Ventura and was soon in the lead, showing a great gain at the turn, while Saladin had caught Ventura on elapsed time. The turn was timed:

Minerva	3 39 50	Saladin	4 01 13
Ventura	3 58 42	Shark	4 18 42

The run home was in a light breeze that made it doubtful whether the race could be finished in time, but this was done easily, the full times being:

	Start.	Finish.	Elapsed.	Corrected.
40-FT. CLASS.				
Minerva	11 15	5 32 06	6 17 06	6 16 33
Ventura	11 15	5 55 57	6 40 57	6 40 57
30-FT. CLASS.				
Saladin	11 20	5 54 37	6 34 37	6 34 37
Shark	11 20	6 09 38	6 49 38	6 49 04

Thus Minerva wins the $300 cup and Saladin the $125 cup. The races were very well managed by the judges, Messrs. Daniel Appleton, W. S. Eaton, Jr., and F. L. Rhodes.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50 Steam Machinery. By Donaldson. Price $1.50

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

H. F.—North Bend is in Clinton county, Pa. We regret that we cannot give you the address.

J. E. S., Oskaloosa, Ia.—Will you please tell whether the inclosed spray is of wild rice or the common lake reed. Ans. It is not wild rice.

F. L. R., New York.—The open season for partridges in New York State begins Sept. 1, for squirrels Aug. 1. This applies to Orange county.

WANTS FOXES.—Jersey City.—Will you permit me to ask brother sportsmen and others, through the columns of your paper, to inform me by letter of localities where red foxes are numerous. I intend to spend a few weeks in trapping them during the coming season, and shall feel under obligation to those who give me this knowledge.—F. G. KITTREDGE (Jersey City, N. J.).

H. E. H., Plymouth, N. Y.—Kindly inform me if any law has been passed forbiding the shipping of partridge and woodcock in this State, aside from Courtland county and the Forest Preserve? Is there any law in Pennsylvania in regard to shipping partridges? Ans. Such laws hold in Niagara, Rockland, Columbia, Dutchess, and perhaps some other counties. 2. Not that we know of.

R. T. F., New York.—Can you tell me where I can obtain the game laws of the Eastern States. I want to find out whether the laws for quail and partridge shooting are different in Long Island from the rest of the State of New York. Ans. See our issue of July 31. Quail and ruffed grouse season on Long Island begins Nov. 1; other parts of the State ruffed grouse Sept. 1. There is no reliable compendium of the game laws of the Eastern States in print. We shall issue a compendium of the laws of all the States about Oct. 1.

LANCEWOOD, New York.—Starting on Sept. 8, I propose taking a two weeks' paddle down the Delaware in a portable canvas boat, drawing with my luggage aboard about 4½ in. of water. My intention is to commence at Deposit and work down as far as the Water Gap, fishing along the river in the good places. If either yourself or any of your readers can give me a few points as to the river, fishing places, and amount of water and current I may expect to find on the route—a new one to me—the information will be greatly appreciated. Ans. The Delaware, from the New York line to Trenton, N. J., is mainly a series of long pools of varying depths, sometimes scarcely sufficient to float a skiff containing two men, and in many places exceeding 25 or 30ft. At Lackawaxen, Pa., there is a formidable dam, but the riffles connecting this great series of pools usually present no difficulty in going down stream, and they furnish the dobsons or helgramites so freely used now in bass fishing on the upper Delaware, as well as lurking places for the fish. The maximum current in the riffles of the portion of the river known to us is about three miles per hour. The best fishing is usually to be found at or near the foot of the pools and in the edge between swift water and the eddy near the head. Off rocky points, where ledges run off into the river, the fishing is good; also near sunken logs in deep water. A beautiful stretch of water for fly-fishing begins about 1½ miles below Dingman's Ferry and extends 1½ miles down the river. Mr. Epting took eighteen fine bass from this piece of water last year, and it promises equally well this season. You can find good fishing almost anywhere, beginning at Deposit. Stockport, Lordville, Hankins, Callicoon, Cochecton, and Port Jervis, in New York, are all noted places. Lackawaxen, Shohola, Milford, Dingman's Ferry, Delaware, Egypt Mills, and Bushkill, in Pennsylvania, are probably better known at present. Hotels and boarding houses range from $1 to $3 per day. The prevailing rate from Dingman's Ferry to Bushkill is from $7 to $10 per week. Catfish, helgramites, lampreys and crickets are the usual live baits, and artificial flies are frequently successful. Catfish cost $2.50, helgramites $2 and lampreys $1.50 per hundred, and all except the first, which is now the best, are readily obtained.

AGENTS WANTED.—I WANT AN AGENT in every town and county in the United States and Canada to canvass for my book "The Big Game of North America." For full particulars, terms, etc., address G. O. SHIELDS, No. 143 Monroe street, Chicago, Ill. aug28,2t

To Lease.

Island For Lease.

For lease to a sporting club, an island in the Great Peconic Bay, Long Island, suitable for a fishing, yachting or gunning club. Five miles of water front. Good snipe and duck shooting in the season. Large deep harbor, 9ft. over the bar. Good buildings. For further particulars apply to owner, ANTHONY BARRETT,

1t 16 Court st., Brooklyn, N. Y.

To Lease—QUAIL SHOOTING near Quogue, L. I.

About 800 acres, posted, well protected, good quail shooting, also rabbits and a few partridges. Three years with privilege of renewal. Convenient driving distance of most desirable accommodations. Price $100 per year. Lessee of 1,200 acres adjoining is willing to form club with five or six desirable parties. For full particulars address QUAIL, P. O. Box 3515, N. Y. City. 1t

FOR A SUMMER RESIDENCE, ST. LAWrence county, N. Y. Large stone mansion built in 1838, but in perfect repair. Fire places and brick ovens, etc. Grounds over ten acres on bank of large river, with oaks, maples and beeches. Fine boating, drives and walks. Within three hours' drive of Adirondack Mountains. Fine spring water; absolutely healthful location; within two minutes walk of post office; daily mails. Bought by us on account of quarries on the premises. The house and grounds will be leased on low terms to satisfactory party and for any length of time desired. Address The Potsdam Red Sandstone Co., Potsdam, N. Y., or 100 Bible House, N. Y. City. 1t

For Sale.

Valuable Game Preserve FOR SALE.

The proprietor of the celebrated Seal Island (Batture aux Loups Marins) below Quebec, is disposed to sell this property. It is renowned for the immense number of wild geese, including the snow goose, brant, black duck, teal, plover, snipe, and great variety of beach birds, which frequent it. A club or other parties intending to purchase, the owner will give an opportunity of proving that it is historically true the greatest game preserve of its kind in America. Over 250 black ducks by one gun were bagged during the rise of one tide. For further information and references apply to A. TOUSSAINT & CO.,

Proprietors, Quebec.

N.B.—Hunting opens on 10th September next. Parties intending to purchase should write before this date, to try their luck in due time.

WILD RICE SEED.—ORDER NOW FOR new crop seed. R. VALENTINE, Janesville, Wis.

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Bluejay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

DAVIES & CO., 1 Finch Lane, Cornhill.

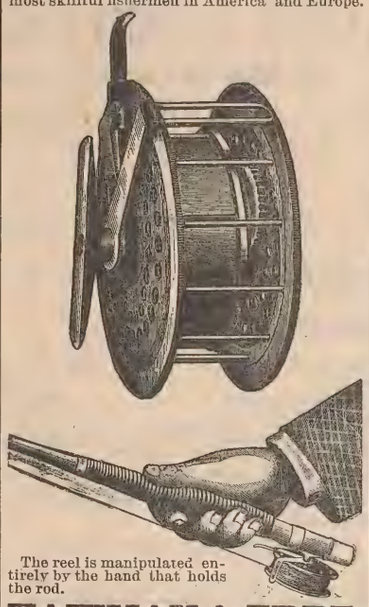
When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.



THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH. It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

Canoe and Camp Cookery.
By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.

WILD INDIAN LIFE.
PAWNEE
HERO STORIES AND FOLK-TALES,
With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

The New York Herald.

IF there are any sportsmen so wise that they cannot learn something from this little book, their modesty prevents their fellow men knowing it. The compiler seems to have thought of everything from managing fine guns to snelling hooks, tying knots and skinning eels. He has chapters on rifles and shotguns, hunting and trapping, fishing, camping, dogs, boating, yachting, camp making, cooking, surgery and medicine, and one headed "miscellaneous" seems to include everything which the others have omitted. His paragraphs number more than six hundred. Newly fledged sportsmen who go out for more than a few hours will find it to their advantage to put this book in their pockets, or, better still, commit it to memory before they start.—*New York Herald, Oct.* 20.

This note refers to "Hints and Points, compiled by Seneca." Published and sent on receipt of price ($1.50) by the Forest and Stream Publishing Company.

DAVIES & CO., 1 Finch Lane, Cornhill.

ANSWERS TO CORRESPONDENTS.

NEW YORK'S OPPORTUNITIES.

IF it were not for local jealousies, local selfishness and legislative apathy, New York State might become a real paradise for sportsmen. There lie within her borders hunting, shooting and fishing grounds which might be made equal to any on this continent, providing they were properly protected by law, and were so policed that the law should be enforced.

The wonderful system of lakes and streams of the Adirondack region contain already superb fish, and might by stocking and protection be made to produce vast quantities more than they now do, and in much greater variety. The same is true, though in less degree, of many other sections of the State. Sullivan county has its trout brooks; the central part of the State abounds in lakes which might be made to teem with fishes which are now unknown to their waters. Our salt-water line fisheries might, and no doubt will be, greatly improved as the good work of the U. S. Fish Commission goes on.

Turning to feathered game the opportunities are not less ample. Perhaps nowhere on all our coasts is there a finer natural winter resort for wildfowl than that afforded by the wide and shallow bays of the south shores of Long Island. Here in the olden time—a time still within the memory of living men—the waterfowl collected in noisy millions, coming in the early autumn and departing for the south only when these bays were closed by frost, returning again as soon as the ice broke up, and not leaving for their northern home until the last days of May or the first of June. Geese, brant and all the best varieties of ducks made the Great South Bay and Shinnecock Bay their stopping places, and in old times not even Currituck, Albemarle and Core sounds were more populous with the clanging multitudes. Then, several varieties of ducks bred commonly on Long Island, and feeding in the early autumn in these productive waters were the decoys which called down the first arrivals of the migrating hordes.

How is it to-day? A few men still go shooting to Long Island, but their reward is small. They get but few ducks, and those only of the poorer sort, and for one man that gets a duck ten return with empty hands. The continual shooting, the battery and the net have so depleted the stock of fowl that it is no longer worth any man's while to go shooting on the south shore. Although less populous, and, from their situation, occupied for a much shorter time in spring and fall, the lakes of Central New York, by planting with food suited to the birds, and by prevention of shooting at improper seasons, might be made to afford splendid shooting, where now there is little or none.

It is needless to speak of the possibilities for quail, ruffed grouse and woodcock shooting, were the seasons observed and a decent respect paid to the law, but if this were regarded, English pheasants and partridges might be turned out and in many places would thrive, and in the course of a few years so increase as to become firmly established. Prairie chickens might be introduced on Long Island, and black game in the Adirondacks; and wild turkeys might be established in their former homes.

It is in the North Woods, however, that the greatest opportunities are to be found. Here, in this wide region, if it were under proper State care, could be carried on a work similar to that now being undertaken by a private citizen in New Hampshire. The deer could be protected and permitted to increase; the elk, the moose and the caribou might be restored to the gloomy forests which they once inhabited, protected there until they had increased in numbers, and could then be treated as the circumstances might demand.

If a wise and liberal policy were to be agreed on by sportsmen and State officials, New York could be made to furnish such magnificent sport with rod, with shotgun and with rifle, that her citzens need never pass beyond her borders in search of sport.

Nor is New York the only State in which such opportunities present themselves. Several of the New England States are as favorably situated, and so are many of the Western and all of the Southern States. It is not too late to take action, but before cencerted action can be taken there must be agreement, and to-day agreement seems as far off as ever.

The trouble seems to be that we are all selfish, are all human; each one of us believes that the laws were made for others, but not for him. So there is a continual struggle to see who shall get the most game, and the game suffers.

THE CREEDMOOR MEETING.

DURING next week Creedmoor will be the scene of the 18th annual fall prize meeting of the National Rifle Association. The arrangement by which the State of New York became the owner of the property while yet reserving to the organizing association the right to carry on its annual and other meetings, seems to be working in most satisfactory fashion. The directors are striving in the direction of popularity in the match where the old rule about light rifles and heavy trigger pulls has been in a measure abolished so far as certain matches are concerned. We have in the past expressed our opinion upon this point, and we reiterate that at the very start the Association did a wise thing in putting a prohibition upon the shooting devices which had been so common at all the old-fashioned shoots in this country for years and years back.

Creedmoor was intended to foster the use of a practicable arm. Military shooting was very properly set before anything else, and the influence of this mother range on this style of marksmanship is seen in the orders now issued on this branch in the militia guard of every State, and in the regular army as well. Heavy bits of ordnance mounted on a stand, such as are still to be found among the string shooters, and the near kin of these arms found in the palm-rested weighty tubes which do such remarkably close shooting at the ring targets and other measures of our German friends, were ruled off the Creedmoor range for years, and the call given to the comparatively rough and crude arm of the service. Some attention was paid, indeed, to small-bore work of a sort calculated to encourage the use of a weapon where skill counted more than anything else, and the international matches were fought out on these lines. Had Creedmoor started out on any other plan, it is, we think, doubtful whether we should have seen the valuable advance in the science and art of shooting which can now be traced so fairly and clearly to this range.

Now, in its years of prestige and of honorable record, it is perfectly proper that the old range should be thrown open to the shooters of every kith and kin, and that the invitation be made to every one with a shooting contrivance to come up and show what he can do with it. We have not the least idea but that the light-arm riflemen can hold their own, so far as skill goes, with those who use and advocate the more cumbersome style of arm.

The meeting promises to be a notable one. Canada has given no small attention to military shooting. She has an enthusiastic and alert body of civilian shots who burn a great deal of powder. They promise to send a picked team down to give our military shooters a hard battle and a taste of defeat. Several of the States will be on hand with representative teams, and in the Barney Walther team match all the crack off-hand clubs may meet on fair neutral ground and settle for the season a long line of talked-of matches and many disputed points of superiority.

THE MAINE DEER SUPPLY.

FOR several years past, in fact ever since the anti-marketing and anti-hounding laws have been in force in Maine, the deer supply of those woods has been on the increase. This year reports come, not from one favored locality alone, but from all the hunting districts of the Pine Tree State, that the deer are more numerous than ever before; and abundant reward is promised to the resident and visiting sportsmen when the season opens in another month.

There are numerous theories to account for this pleasing condition of affairs; but we think it most reasonable to assume that the cause of Maine's present wealth of game is to be found in the laws forbidding marketing and hounding. When the Commissioners once made it clear to the market venison hunters that the meat could not and would not be shipped out of the State to the Boston market, it was recognized that the occupation of these people was gone; and the deer supply has been free from their industrious pursuit. The non-hounding law has not been so stringently enforced. In some districts hounds are employed covertly and in the sneaking way of law-breakers the world over, to drive deer into water for the delectation of sportsmen from other States, but the great incentive to hounding, which was market-hunting, having been removed, it is improbable that the practice as now conducted materially affects the aggregate supply.

From her large game, under existing conditions, Maine is reaping a larger income than was possible under the old ways. Deer "on the hoof" are more valuable, ten times over, than deer packed for the Boston market. While it might be practicable, as it certainly is desirable, to make certain modifications in the law, so that sportsmen may carry home with them the venison and antlers secured by them, there is little probability that the Legislature will seriously listen to the notions of those interested parties who seek to restore the traffic in venison.

DESTRUCTIVE FISHING.

A CASUAL inspection of the east coast markets at this time will show the presence of the young of several valuable kinds of fishes. Spanish mackerel measuring only 10 to 12in. and weighing about 8oz., and channel bass (*Sciæna ocellata*) of about 1lb. are among the number. Such immature fishes have almost no value to the fishermen, but the full-grown individuals are very choice and high-priced. The worst feature of this practice is the probable extermination of the species. No special argument is necessary to show that if the young are taken the fishing will soon be destroyed. In addition to the numbers brought to the market, thousands upon thousands of little fish are killed and wasted on the fishing grounds. Striped bass suffer the same kind of decimation, and it is a wonder that the species has not already been exterminated. The ruthless and senseless destruction of young fish by nets and seines has long been a grievous drain upon our food and game fishes and cannot be defended on any ground of advantage or necessity. We must stop it or lose many of the best fish in our waters. This might be done by regulating the size of the mesh of nets and seines, and enforcing compliance with the legal requirements.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

A NIGHT IN THE FOREST.

So far, our search for sheep had been unsuccessful. We had seen plenty to be sure, but all of them had been ewes and all had been in such situations that it was useless to attempt to approach them. We were camped on the mountain side, a thousand feet above the stream bottom, a spot which had only been reached by great effort on the part of the panting pack-horses, and, so far as we then knew, at the highest point on the mountain where there was water.

Our bad luck in the matter of game had affected the spirits of all the party; some were merely disgusted, while the older hunters were ashamed to have been out for four or five days without having killed anything larger than a blue grouse. The Rhymer had given vent to his feelings of discouragement and dissatisfaction in a scrap of verse, which I give below:

A weary lot is thine, my friend,
A weary lot is thine;
To climb up hills that never end,
To hunt in vain for "sign."
A shadow of elusive trail,
A spot where game once stepped,
Rouse hopes whose basis is as frail
As to find where a bear has slept.
To miss a sheep before he leap,
To miss him after, too,
To stumble on the hillside steep,
And curse your failing shoe.
All this, I wis, is hardly bliss,
So let us hope some day
Our trusty guns no shot shall miss,
Our legs no tricks shall play,
But lightly down from mountain crown
Will carry off our prey.

On the day following our arrival at this camp, the Rhymer, Dick and Yo had started out to climb higher on the mountain to see whether the camp could not be moved up to timber line, to the base of the high rocky peaks, among which it was suspected that the big rams lived. They started on horseback, but when they had tugged up 3,000ft. more of the steep ascent, the animals were tied up to some great pines on a level grassy spot, the men changed their heavy shoes for their moccasins, placing the former, soles up, under a tree where they would be protected in case of rain. Then they proceeded on foot, following a game trail which led along a narrow ridge. On the right, this ridge dropped off almost vertically toward a deep ravine, the steep rock slope being thickly clad with slender pines standing so close together that a horse could not force his way among them; to the left, a grassy slope ran down to thickets of quaking aspen which grew near the summit of a series of rock ledges that dropped down to the valley of the stream above which we were camped.

The men walked on briskly, noticing as they passed along abundant old deer and sheep sign, a few fresh tracks showing that sheep had been here within a day or two, and, in the edge of the timber, many young pines partly stripped of their bark, where the buck deer, as their horns were hardening, had rubbed them against the tree trunks to get rid of the velvet. Beyond the narrow ridge the trail led over a rock slide, and, always ascending, at length reached a nearly level plateau. Here the green trees stood thick in some places, in others far apart, but there was no undergrowth, and but few fallen trees; the ground was softly green, covered with dwarf huckleberries which stood three or four inches high. One could see on all sides through the trees for 50 or 100yds., and altogether the place was an ideal ground for deer. A hunter could go along as noiselessly as a ghost. Here and there were little open marshy spots with coarse grass and peavine, and sometimes a little water.

For a mile or two the men went on through this timber. Now and then they started some grouse, which were feeding on the last of the huckleberries, but they were looking for larger game and paid no attention to the birds. No fresh deer tracks were seen, and at length the Rhymer determined to go back and hunt among the aspens and along the rough ledges on the creek where the camp was, while the others decided to push on and see if a way could be found to the bare snow-covered rocks ahead of them, of which glimpses could now and then be had through the openings in the timber.

After they had parted, the Rhymer hunted all day and at night came to camp without having seen anything. The others after a little ceased their hunting, and traveled at a good rate through the timber toward the snow-clad peaks which seemed constantly to draw nearer. At first they had intended to go only a little way toward these peaks, just far enough to get some notion of their accessibility, but they were constantly lured further and further on by the nearness of their goal, and at length, about three o'clock, they emerged from the timber in a little open valley traversed by a tiny brook, and found themselves within 500yds. of the foot of the rocks. Their first glance into this valley showed that it was a good camping place, their second that some one had camped there before. In the meadow there was standing a picket pin, beyond, a dead tree had been chopped in two, and a little further on, behind a clump of pines, were the ashes of a fire, and a place where three men had slept. A little investigation showed that there was abundant feed for the animals with the other needed accessories of a camp, wood and water in plenty.

It was now three o'clock, and it seemed very doubtful if, in the remaining two hours of daylight, they could return to the camp which they had left at 8 o'clock that morning. Hurrying toward camp they passed swiftly through the living forest. Soon after they had started back the sky became obscured by clouds and it began to snow. The high rocks which they had just left were at their backs, and for a short time the occasional glimpses that they had of these peaks served to thow them their direction. As the forest grew dense and the snow fell more thickly even these landmarks were hidden, and they traveled merely by their sense of direction. At length night began to approach. They saw in the dim forest which they were traversing nothing that was familiar; the falling snow had destroyed landmarks; even the sense of direction became vague, and each of the men had a different notion of the points of the compass and the position of the camp. Just before dusk they came out on a ridge whence could be had a clear view of some mountains across a deep but narrow valley. They were totally unrecognized, and the conclusion forced itself on the unwilling minds of both men that they were lost—in other words, that they had mistaken the ridge on their way to camp and did now know where they were.

There was no difficulty about reaching the camp. That could be done readily enough by following the water down to the main stream, and then following that until they should come to the trail, made a few days before by their own pack train. This they could of course follow to camp. It was rather mortifying to the two men, each of whom had spent more than twenty years in the mountains, to find that they had missed their way; and yet it was not unnatural. There were neither tracks nor trail to follow, and with neither landmarks nor sun to guide them, they had gone off too much either to the right or to the left and had lost the track. Let any man have his eyes bandaged and try to walk straight across a room and see how near he comes to doing it; and then let him imagine how far he would diverge from his course if the room were six or eight miles across.

Turning back into the forest, the men tried to retrace their steps so as to get back on to the ridge from which they had wandered, but it was too late in the day to do this. The snow still fell, it was cold and growing dark. A halt was now called, a level spot, sheltered by a clump of great spruces, was chosen as a camp ground, and a short time was devoted to gathering a great pile of wood for the night. Then a fire was built, and the men lit their pipes in lieu of supper, and prepared to make the best of an uncomfortable night. For two or three hours they smoked and talked by the fire, and then as they grew sleepy they stretched themselves on the ground, partly dried by the warmth of the fire, and dropped off to sleep. The wind still howled through the trees, and the gusts occasionally sent thick clouds of snow whirling under the low branches of the spruces. Sometimes it whitened for a moment the prostrate forms of the sleepers, and then quickly melted off in the heat of the fire. Neither howling wind nor drifting snow disturbed the tired sleepers, so long as the fire burned brightly, and the bed of pine needles, with which the ground was thickly strewn, seemed as soft to them as the most luxurious couch. It was only when the fire burned down and the air grew chilly that their sleep became troubled.

But little real rest can be had by one who depends for warmth solely on the fire by which he lies. Hardly has he fairly begun to slumber when the fire begins to burn itself out, and as soon as it has died down the sleeper becomes cold. At first he shivers in his sleep, and gradually as he grows colder consciousness returns, and he feels that he ought to rise and make up the fire. If he has a comrade, he suffers for a while in silence, pretending that he is asleep, in the hope that the cold will oblige his partner to get up and perform this disagreeable duty; but at length in desperation, being no longer able to endure the cold, he springs to his feet, builds the fire, fills his pipe and smokes for a few moments, and then, thoroughly warmed, lies down again to catch another nap of an hour.

In this way the night was spent by Dick and Yo. About 4 o'clock the latter rose, and, lighting his pipe, sat by the fire waiting for dawn in order to assure himself of the points of the compass. The sky was still overcast and the snow still fell, but it was almost certain that for a few moments, just as the sun rose, the east would be noticeably brighter than any other part of the heavens. And so it was. Gradually as day approached a faint gray light seemed to fill the forest; objects which a little while before had been swallowed up in the blackness which enveloped everything away from the fire became visible, at first dimly, then more clearly. Yo rose and walking some distance away from the fire watched the sky, and presently the brighter light he looked for was seen, and he knew where the east was.

The campers were not delayed that morning by any preparations for breakfast. They took a draught of water from a little spring hole near their camp, washed their hands and faces, and again set out for camp. They were not very hopeful of getting to it by the mountain path, for, unless the sky should clear and the sun come out, it was entirely probable that as soon as they got into the thick timber again they would lose their way. Still they determined to try it again. Just after they had started they came upon a brood of grouse which scattered and flew into the trees. After a little looking Dick saw one and Yo passed him the rifle, so that he might kill it and they might have breakfast. Dick fired, but the gun was strange to him and he missed, and then breakfast flew away.

They pushed on. By 9 o'clock the snow had changed to rain, which fell with ever-increasing violence; by 10 the men were drenched and cold, and disposed to be cross. As they were going along through some thick down timber near the edge of a ravine, there came to them, apparently out of the hollow at their feet and seemingly quite close to them, a rifle shot. It was evident that the Rhymer was out looking for them. They fired an answering shot, heard another and fainter one, which they answered, and then another sounded a long way off. After that they got no reply to their signals. It was now proposed by Yo that they should go to camp. "It is no use, Dick," said he, "for us to go wandering about in this timber any longer. No doubt we would get to camp finally, but it may take us a day or two. Let us go down now to the creek and follow that till we strike the trail leading to camp. I am getting mighty hungry."

No sooner said than done. The men pitched down into the ravine, and, taking the deer trails which led along the hillsides, found an easy way down to the main stream. Following this down for a couple of miles they came upon the trail made by a pack train, and then climbing a thousand feet up the mountain side they walked into camp, to the great astonishment of Batiste and Johnnie.

After a hearty meal they stretched themselves out by the fire, and there Rhymer found them, when an hour or two later he came into camp, and told them the story of his search for them.

The next day was spent in blazing a trail toward the peaks already visited by the "Babes in the Woods," and in making a cache of a lot of superfluous things with which it was unnecessary to burden themselves during the climb. The day after the whole camp started for the heights. On the way the Rhymer made great havoc in a flock of Franklin grouse, which were met with along the trail, and Yo managed to clip the heads off two or three of these and of some dusky grouse.

It was perhaps four o'clock, and the sun had fallen behind the peaks, when camp was made close under the foot of a great moraine, and just above the old camp discovered on the previous visit. After the loads were off and the tents up, the Rhymer, Dick, and Yo took their rifles and walked up to look at the rocks. The first named turned off just above camp to the right, while Dick and Yo went to the left. They had gone perhaps some yards from camp, when, just as they were approaching the crest of a little tamarack-crowned ridge, Yo saw in the sag beyond him a sheep, walking away. He at once dropped to the ground, and in a suppressed voice implored Dick to do the same. The latter, who had not seen the sheep, did so, and they watched the animal. It was only 50yds. distant, but as it was walking directly from them, Yo did not fire because he feared to spoil a ham of meat by shooting through it. Presently the animal disappeared over the next crest, and they hurried after it. As they rose up over the hill the sheep saw them, and stopping stood broadside on looking at them. Yo raised his rifle, took a quiet aim and fired, and the fat ewe fell. In a moment more Dick's knife was in her throat. Yo.

AROUND CAPE HATTERAS.—II.

[*Concluded from Page 107.*]

THE first day of our arrival at the island our party spent in unpacking our traps and loading shells, which in wildfowl shooting should by all means be nickel or brass, as they shoot stronger than paper shells. That evening I accompanied the keeper to the tower's summit, and we swept the horizon with a powerful field glass. The view was sublime. The cape lay like a map below, and the coast could be traced for miles. There was evidently going to be a squall, and the white cap billows came dashing over each other on the beach like a squadron of a thousand horses on a mad steeple chase. The storm king was marshalling his forces for the onset, and had dispatched Triton to summon Æolus from the Cavern of the Winds and allure Neptune from the side of Amphitrite. The sea-gulls, inhabited by the soul of Halcyone, scented the tempest from afar and flew screaming across the waters. The sky was of a dull-leaden color and hurrying masses of clouds hid the setting sun.

"It is going to be a bad night," said the keeper, coming to my side, "I have just taken a glance at the barometer, and it is falling rapidly. Look, yonder is a sure sign."

Gazing oceanward I could see the various crafts reefing their sails and showing their sterns to the coast, intent on placing as many miles as possible between them and the dangerous shoals.

That night is one that will ever be remembered by me, for I had what the greatest of the Bourbon kings craved for—a new sensation. A fearful storm swept the Atlantic Coast, and I sat alone with the keeper in the top of the tower, my two companions preferring to remain in the house by the glowing crackling fire.

It needed but little imagination to fancy that a besieging force was storming the tower. The sleet struck the glass reflector like bullets, making it ring again, the howling of the wind and the tumbling of the surf against the shore sounded like the booming of cannon and the stroke of the ball, while the scream of the frightened gulls seemed as the yell of the escalading forlorn hope.

Then, again, it appeared as if a legion of fiends were trying to uproot or stave in the lighthouse. How they shrieked, snorted, yelled and clamored with their stentorian voices. How they fly all around the tower seeking some weak point to burst in. Ye gods! what a pandemonium! Are all the foul spirits of the earth, the air, the sea, set free to-night? Listen to their yells, their roars, their whoops, their squeals, their hoots and their derisive groans. Merlin getting in his enchanted cave and invoking witch, worlock and helling, never listened to a more cursed discord than this. Faust shutting his eyes upon the hideous orgies of the Walpurgis night, never heard a more infernal tumult made by monsters, vampires, ghouls and demons.

All at once there came several unmistakable and distinct strokes and knocks against the reflector, that caused me to bound from my seat. "What in the name of Heaven is that?"

"It is the wild ducks attracted by the lights, and you will find plenty of them in the yard in the morning dead or crippled. One fearful night the wildfowl came so thick and fast and with such tremendous velocity and force that I was really afraid they would shiver the glass, though it is an inch and a quarter thick. Had they done so, the light would have been blown out, and God knows what would have happened then. I picked up nineteen ducks and eight wild geese in the morning."

"Are they the only birds that are lured by the light?"

"No, all kinds of birds are attracted by the flash, especially on a dark night. I have gathered during my stay here every kind of migratory bird. I only wish I understood the art of taxidermy, I should have had by this time a superb collection."

Further conversation became impossible; the storm had only sunk to gain strength, and recommenced with redoubled fury. The gale had changed to a whirlwind, and now a new horror was added to the scene; the tower began to rock to and fro. It could not be imagination, for the keeper's hand-lantern, which hung suspended from a girder overhead, was swinging like a pendulum.

I was getting nervous, the keeper smiled, and finding the human voice could not be heard above the din outside, he produced his pencil and wrote: "I can sympathize with you. When I first came here and felt the tower sway backward and forth, I could not stand it, and several times I made a break for the open air; and then I would shut one eye and walking back some distance would measure the profile of the tower against the house, and thus became convinced that the structure was stationary, on the outside at least."

"But it does move on the inside," I wrote back, "can't you feel it?"

The keeper only smiled and shrugged his shoulders.

The tornado now stormed the tower with a ravening ferocity impossible to describe, the tall shaft seemed to bend beneath the blast; I became demoralized. "I can't stand this any longer," I shouted in the keeper's ear, and slipping through the manhole I reached the iron stair-

way, caught hold of the railing and speeding down two steps at a time reached the door and darted into the open air; and such was the violence of the wind that I could hardly fight my way to the house some 50ft. distant. As I listened to the shrill tenor of the wild winds, mingled with the hoarse bass of the breakers, and thought of the sailors out in that raging sea that night, the old refrain of the cherup aloft rang through my ears.

The storm continued all the next day with a northeaster blowing with the velocity of 50 miles an hour. One could hardly put their face out of doors, for the frozen snowflakes were driven like miniature arrows almost horizontally through the air. Mr. Fos said something about going out to shoot.

"It would be suicide," answered the assistant keeper, and keener sportsman never handled gun. "No craft save a lifeboat could live in such a sea. You gentlemen have a little patience, there will be first-class hunting the coming week, for the storm has scattered the flocks and they will shoot finely, that is, if the weather continues cold."

Indoors everything was tidy and cosy; the wide fireplaces were filled to their utmost limit with great oak logs, that warmed one's heart as well as body. Certainly the Government takes good care of its faithful keepers. The house of the chief and his assistants fronted each other; both were of brick two feet thick and contained six rooms each, a wide porch ran along the front, the windows were substantial and both dwellings had storm doors. In the kitchen was a large cooking stove and in the pantry attached a cistern with an unfailing supply of pure water.

At dinner we sat down to a menu worthy of a Washington lobbyist, one that would have cheered the soul of a gourmand and made the eye of an alderman light up with anticipation. Roast wild duck, that had committed suicide the night of the storm; diamond-back terrapin stew, snipe, oysters in different styles, roast possum served cold with vegetables, not to speak of the country cured ham and home-made pickles and preserves, with native scuppernong wine. This grape seems to be at home and thrives its best only in North Carolina. It does not grow in clusters like all other grapes, but singly, and is the size of a boy's marble, and deep purple in color. It is wonderfully prolific; and a single vine planted on a sunny side of a house will in a few years cover a wide arbor and yield a score of bushels of grapes. The natives make wine of it and there is much rivalry among the neighbors as to who can turn out the best brand. The wine is sweet and as strong as the muscatel.

We talked shop all that evening, and the keeper gave us a clear idea of the great quantity of every kind of game.

"The most plentiful of all," said Mr. Smith, "are the snipe; the yellow legs and graybacks fairly swarm along these shores at certain seasons of the year. Waterfowl are plentiful on the sound, and also on the ponds in the banks."

"Are there any deer on the mainland?" asked one of us.

"The greatest abundance," was the reply, "but unless they are shot before they reach the swamps there is no chance of getting any venison."

"I suppose you stalk them down here?"

"What?"

"I have read in the magazines that the way to kill deer is to crawl up and shoot them."

The keeper laughed aloud. "They may kill your Northern game that way, but I'll defy any man, woman or child in these parts to creep on a North Carolina deer unseen or unheard. Why, they always feed with their eyes and ears wide open, and they have as quick glances as a hawk or eagle. Even when they lie down they face with the wind, so that they can see any way and smell another, and it is impossible to surprise them. If the keenest hunter in North Carolina was to rely upon getting meat in hunting deer in that way, he would have to live on a fish diet the balance of his days. No, the only way is to jump them with hounds, and then the gunners on the stand plug them as they run by, as deer always strike for the water when chased, and it is easy to guess the route they travel."

We next inquired about the fishing. It was first rate in the summer and fall, and that gamest fish that swims, the drum, was very abundant in the late spring. The hogfish, sheepshead and sea trout were most plentiful. Indeed nature had blessed this section with a great variety of fish flesh and fowl, and it required but little labor to keep a full stomach. This spot would be a paradise for a lazy man, for he could keep stuffed, and with luxuries, too, for the smallest amount of exertion.

One evening Wesley proposed a coon hunt. The "banks" around Hatteras are a raccoon paradise, there are more of these animals to the acre here than in any other place on earth. There are regular paths through the brushwood and sea grass leading to the ocean's edge made by these nocturnal prowlers. The beach was their market place; here they would get their crabs, oysters, young sea birds, wounded waterfowl, frogs, shellfish and carrion. There never had been any organized attempt to thin the coons out, and they had multiplied to an enormous extent. They roved and wandered at will all over the island, and the keeper could not retain a cat upon the premises, for just as certain as Mrs. Puss or Mr. Tom remained out of doors at night, just so sure would its mangled form be found in the morning, for anywhere a cat can climb its foe can follow. A coon is as fond of a scrimmage as a grizzly bear, and he can whip anything his own weight that goes on four legs, for his hide is so tough and his pluck so great that he never gives up. A coon fights on its back, and its feet are armed with curved, keen claws, which are used with fatal effect; while as a reserve, he has sharp teeth and a jaw like a bulldog's. On many a Virginia plantation where a pack of hounds is kept, the largest and most savage dog has generally his ears torn to ribbons and his dewlaps cut in two. This is the mark of his battle with the coons. Young hounds will attack the varmints on sight, but rarely a second time; and it is only the leader of the pack, noted for his size and strength and ferocity, that will undertake to "put a head" on a coon.

In an evil moment we consented to Wesley's proposal, and urged the keeper to go with us, but he declined. "I don't want to spoil your pleasure, gentlemen," he remarked; "but coon hunting isn't the thing it is cracked up to be, at least I have not found it so."

An indignant remonstrance arose from the listeners. It was glorious sport we all agreed; and it was pure laziness in him, nothing else. "Well, have it your own way," he said; "but I would not go in the swamp in the night, not if every coon that was treed would come down as he did to Captain Scott."

Probably all of the readers of the FOREST AND STREAM have heard of the story of Captain Scott and the coon, but I will venture to add that not one of them who lives north of Mason and Dixon's line could repeat the tradition correctly. Anyway, I will tell it as Keeper Smith narrated it.

Captain Martin Scott was a Virginian and an officer in the regular army. The coon episode happened some time in the year 1830. Captain, then Lieutenant, Scott, was stationed at Fort Smith, a frontier post on the Arkansas River, which was commanded by Captain Bradford, who was the author of the famous story. It was a very common recreation for Scott to shoot the darting chimney swallow on their darting erratic flight with a bullet from his long Kentucky rifle. This is a degree of skill almost incredible, for there are few shots of the present day who can kill three out of five with the improved breechloader. Lieutenant Scott's boon companion was Quartermaster Van Swearingen, who, like many other amateurs, imagined that the rifle was bound to kill something when he was at the big end of it. He was a great admirer of the Lieutenant's sporting gifts, and loved to bask under the luster of his companion's great skill.

One day a dog treed a coon in a tall cottonwood down in the lowlands, a short distance from the fort, and the dog not being able to climb the tree commenced barking to attract some one's attention. The story goes that the coon sitting in a crack of a limb looking down in supreme contempt at his four-footed foe, at last growing tired of the monotonous yelping, he hailed the dog and told him to shut his jaws, that he had no intention of coming down. This made the dog more angry, and he continued his yelping. Again the coon called to him ironically and advised him not to break a blood vessel, and the coon was so pleased with his joke that he wrapped his tail around a limb, swung himself in the air, and laughed until he showed every tooth in his head. "You will laugh on the wrong side of your mouth soon," howled the dog; "and here comes one who will make you do it, you thieving, chicken-stealing, carrion-eating, loud-smelling old varmint, you."

"Who is he, you bandy-legged, stump tailed, egg-sucking reptile?" cried the coon as he repaired to the shelter of the tree.

"It's Lieutenant Van Swearingen," growled the canine.

The coon grinned until his eyes disappeared in his face.

"Little Van," he grunted derisively, "why he may shoot and be blanked. I'll bet my valuable hide against your mangy pelt, that he don't get me out of this tree."

Van Swearingen appeared and blazed away at the coon who did not even condescend to hide behind a branch. Having shot all of his ammunition away the quartermaster retired in high dudgeon. Shortly after another figure appeared on the scene, and pouring some fresh powder in the pan prepared to fire.

"What's his name?" inquired the coon.

"Scott," yelled the dog.

"Who?" inquired the coon, fearfully agitated.

"Lieutenant Scott," bayed the dog.

"Martin Scott," squealed the animal. "I'm a gone coon. Cap'n Scott, Cap'n Scott, don't fire, I'm coming down." So saying, he folded himself in a ball and dropped to ground, and yielded his life to the dog without a struggle.

There was a nondescript mongrel on the Hatteras Cape who was worthless for anything under the sun; but he would hunt coons. Leaving our guns behind us, we started about an hour after sunset, Wesley leading the way with a lantern in one hand and an ax in the other. We kept up the causeway and in about ten minutes heard Jeff give tongue.

"He's treed," cried Wesley, "come on," and waving his lantern as a signal he disappeared in the chapperal, which was so dense, so thorny, so full of holes, hog wallows and quick sands as to be nearly impassable in the day time; and as for making our way through it in the dark, it was an undertaking we soon found out too much for any civilized being. We had begun to taste the delights of coon hunting.

We followed Wesley's light, that shone as weirdly as the deceptive "Jack o' lantern" itself, and worked our way carefully among the hanging vines, and charged by main force through the tangled briers. Jeff all the time barking frantically some two hundred yards away. After we had picked, screwed and crawled about half the distance, a slimy, sluggish creek stopped our further progress. "There used to be," said Wesley, "an old tree that had fallen across the stream. If it is there now we can cross on that."

After a scuffle and scramble over prostrate timber, and fallen rotten trunks, we reached the natural bridge. It must have been there for a long time, the outer wood being soft and the whole body covered moss. Holding tight to each other, we slowly wabbled our way across. All went well until we reached the middle of the tree, when Wesley, who was leading, suddenly uttered a profane ejaculation and attempted to jump back, but too late. The combined weight was too much for the bridge. It gave way, and all three went down together in freezing black water, up to the arm-pits. The lamp went out, of course, and we scrambled out as best we could in the profound darkness, each one making his own remarks on the situation.

As soon as we stood on the shaky ground, I told Wesley to lead us out of the cursed wilderness, that I for one had enough sport. My comrade said as he had had all the fun he wanted, he was ready for home. Wesley, whose fault was swearing, ripped out an oath, that he was a blanked fool for bringing us on such a trip. We promptly agreed with him.

Our file leader started with his followers close at his heels, but he had evidently lost his bearings. He led us over fallen trees, whose dead branches were festooned by trailing vines as tough as iron wires; then we got into a brier thicket armed with thorns as long and sharp as a shoemaker's awl. Worrying through this trap, leaving scraps of torn clothing behind, we wandered in a jumble of mixed bamboo and fox-grape shoots as strong as whip cord, in which snarl we got completely tied up; and Wesley's profanity at this stage was appalling. We actually had to use our knives to get out of this place, and finally, after a hard fight we emerged panting from exhaustion. After getting our breaths, we made another essay, and steered right into a mixture of brambles and prickly pear with the ooze underneath reaching to our hips. Wesley got to fighting the tangled vines and clinging creepers like a very fiend, for while we could not see him, the whole neighborhood could hear him thrashing and wrestling about like mad; and then he ran right into a thicket of the matted spined branches and spiked stems. Surely the uproar must have frightened many a skulking coon back to his lair. Out of this slough we wriggled somehow almost desperate, for things were getting serious. The perspiration was running down body and face alike, though it was so cold that even the sheltered pools were freezing.

We could hear, with many an ejaculation of thankfulness, the welcome sound of the turf beating upon the shore, and we knew that we were nearly out of the worse than Cretan labyrinth. So we plunged onward and walked from "the frying pan into the fire," for all hands got involved in an abatis that seemed composed of every kind of vine that would trip, every creeper that would embrace, every thorn that would pierce, every curved spike that would tear, every jagged branch that would bar our way. A veritable *chevaux de frise*, so dense, so impenetrable, that the cunning hand of man could never have intermingled such a tangle. It was like a huge spider web, whose threads were composed of elastic vines strong as manilla hemp, as elastic as India rubber. Underneath was the yielding sand that sucked the feet down and held on like the clinging fingers of a drowning man; overhead, and all around us was the thick darkness. The struggle to extricate ourselves from this noisome, infernal spot was one that none of us will ever forget. With hands torn and bleeding, and clothes gaping wide with many a rent, we wormed along inch by inch, breathing heavily and breaking out ever and anon into an ecphonesis of maledictions that even the best of men frequently use when they wear tight shoes or mash their fingers with a hammer.

"This beats the devil," roared Wesley, as the tough and stout wooden cobwebs envelop him and tie him as fast as the Lilliputians did Gulliver. "Come here, some of you," he shouted, "and help me out. I'm worse off than a turtle on his back." We reached him and by using our knives carefully got him clear of the vines and creepers that had circled him around and around, and warned him that it was safer and surer for him to coon it than to charge through the jungle like a rhinoceros.

I suppose we were fully two hours getting out of this place, and it was only by husbanding our strength and breath, and being guided by the sound of the sea, that we got out at all that night. We were completely exhausted when we broke through the brake and reached the beach, and we lay down on the sandy shore at full length gasping for breath and feeling as if every muscle of our bodies were wrung and stretched and every bone broken.

It was long after midnight when a melancholy procession of torn and bedraggled men, so different from the joyous crowd of but a few hours before, pulled themselves into the house, each one too mad and miserable to utter a word.

All the coon hunters lay up for repairs next day, and even Wesley, who certainly ought to be more tough than we city men, was so used up that he literally crawled in the evening up the spiral steps to his post in the top of the tower.

For several days we tried our luck behind the decoys, but the weather, though in the midst of winter, became as mild as if it were in the balmy month of May, and the ducks were scattered everywhere, but there was no gathering at any one place. They spread themselves over the Sound and rarely came to the marshes. It was hard fortune alike to the professional and the amateur. It was a strange sight to see gunners in their blinds stripped to their shirt sleeves. A hard, severe winter means abundance of wildfowl and splendid shooting; an open winter, such as this was, means a scarcity of ducks and geese, and a very poor showing up indeed. Getting tired of this sport we bundled up our traps and struck for home.

I would strongly advise the Northern and Western sportsmen who contemplate a trip to Southern waters to wait the advent of the season, and if January and February seem to have changed places with May and October, to remain at home and save the blastings of high and sanguine hopes.

A parting word of advice and I am done. If you decide upon going on a hunting trip to eastern North Carolina, go in a party of four, if possible, for the cost will be lessened fully a third, and then four is the right number for a trip; two to a blind require only one guide, and his fee comes exactly to what one shooter would have to pay alone. Then, again, four men can entertain each other better and form partners at cards, etc. Never make the trip unless you know when and where to stop. A happy-go-lucky voyage is almost sure to end disastrously. For all routes to North Carolina waters, write to Messrs. Culpeper & Turner, agents for North Carolina transportation lines, Norfolk, Va., and they will give you full and reliable data and most valuable advice. They are courteous and accomplished gentlemen, and ardent sportsmen themselves, and have a fellow feeling for the disciples of the gun.

When you reach the land of the swan, the brant and the snipe, the region of the chills, the shakes and the ubiquitous guide, make all your bargains and contracts beforehand; be strictly business for once in your life, and remember that there are plenty of gulls along the North Carolina coast without you adding to the number.

CHASSEUR.

THE YELLOWSTONE PARK AND DINING CAR ROUTE.—The Northern Pacific Railroad, stretching from the Great Lakes to the Pacific coast, with its elegant vestibuled service of dining cars and Pullman sleepers, not only affords business men, tourists and others a route of travel equal in every respect to any in the country, but renders accessible to sportsmen the only region in which can be found to-day the large game which was once so plentiful in all the West. In addition to the large game, the sportsman will find in the country along the line of the Northern Pacific Railroad such quantities of small game as is unknown in the East. This line, penetrating the Lake Park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green rivers, as well as lying in close proximity to the hunting grounds of the Big Horn, Snowy, Belt, Bitter Root, Rocky, Coeur D'Alene and Cascade Mountains, is unquestionably the sportsman's route of America. The pamphlet, "Game Preserves of North America," together with other interesting publication, descriptive of the Yellowstone Park and Alaska tours, will be mailed free on application to Chas. S. Fee, G. P. & T. A., N. P. R. R., St. Paul, Minn.—*Adv.*

Natural History.

AN IOWA NOCTURNAL MONSTER.

AN article has been going the rounds of our Western press describing a strange monster which has been wandering around and disturbing the good people in the vicinity of Independence, Iowa. The substance of the article as near as I can give it is this: The Kress neighborhood, near Independence, is wild with excitement over the appearance of a strange animal that makes the night hideous with its roaring. The animal is supposed to be of an amphibious nature, and to have drifted in with the late high waters. As near as it can be located it has taken up its quarters in a creek which passes through the farm of George Powles. It is generally supposed that the animal lies secreted in the stream during the day, and wanders forth in search of food at night, for it is then that it raises its terror-inspiring voice, which is described by those who have heard it as a cross between the roar of a lion and the screech of an enraged panther. Several persons who were walking or driving along the adjacent road have been so frightened by hearing the appalling sound, that they could not be induced to pass over the route again.

People are becoming panic-stricken, and it has become such a matter of vital importance that something must be done. The farmers of the locality have organized a hunt, and invited the Independence Gun Club and militia to join them.

Now, as I am something of a natural history crank and a lover of the chase, it can be imagined how my curiosity was excited by reading an article like the above. I felt like packing my hunting outfit and boarding the first train for the south. But upon further consideration, I thought best not to go as the article was a "clip," and there might be some doubt as to how fresh it was. However, I could not drop the matter from my mind, so I wrote to one of the local editors of Independence, and have just received the following reply:

WILLIAM H. STEELE.—Dear Sir: Yours of recent date to hand. The article to which you allude was published in the ——, and was a hoax. "The strange animal" proved to be a blind mule which had got lost, and made night hideous with its ceaseless braying. This is all of it. Very respectfully.—S. T.

There are undoubtedly many Western readers of FOREST AND STREAM who saw this article, and will be just as anxious to know the outcome of the hunt as your humble servant. I think many of the articles we read describing monster land and water animals, if properly followed up, would terminate just as this did. I remember seeing an article in FOREST AND STREAM about a year ago describing a strange monster that had been seen in a pond or inland lake in Mexico, and I have wondered a great many times if it had been discovered what the animal was.

WILLIAM H. STEELE.

FOREST CITY, Iowa.

THE CAPE CHARLES TIGER.

WE have received from Mr. Joseph Ragan, of Washington, many interesting fish notes from time to time, based upon his experience in the market. Just now he has brought to our notice a fish which he believes he saw for the first time about ten years ago at Cape Charles, where it has again made its appearance in large numbers, and now forms a notable portion of the supply of fresh fish in some of the Southern markets, and particularly in Washington. To the fishermen, according to Mr. Ragan, the species is known as the tiger, probably on account of the black half bands on the sides of the body. We have previously referred to this fish in writing of the fishes of the Gulf of Mexico as the amber jack (*Seriola stearnsi* of Goode and Bean). Dr. Jourdan has considered this species to be identical with the *Seriola dumerili* of the Mediterranean, a species which it resembles, but from which it may easily be distinguished. The Mediterranean amber jack has a shorter snout, larger eye, deeper body and a shorter soft dorsal fin; its upper jaw is much more expanded posteriorly than in the species named in honor of Mr. Stearns. Both forms occur on our coast and are to be found in the National Museum at Washington. The difference between them may be readily perceived even upon a casual examination. The amber jack or Cape Charles tiger is a beautiful fish, belonging to the family which includes the pilot fish, the pompano and the crevalles. It reaches a length of 30in., is shaped like a mackerel, is a swift and powerful swimmer and has excellent qualities as a pan fish. The young have five or six dark cross-bands on the sides and a golden streak along the middle of the body; a similar streak extends from the eye backward to the beginning of the soft dorsal. The upper parts are greenish and the belly light. The tail is deeply forked and beautifully variegated with yellow and dusky with white tips at the ends of the lobes. The specimens now so abundant in the markets are about a foot or less in length and very plump and inviting in appearance. So far as we know the species rarely occurs as far north as Cape Charles. It was discovered by the late Mr. Silas Stearns at Pensacola, Fla., in 1878. The young specimens have not previously been secured. According to Mr. B. A. Bean, who has tested the edible qualities of the tiger, the flavor resembles that of the Spanish mackerel, and there is no trace of the strong taste of the common mackerel.

ORANGE FILE-FISH IN COW BAY.—New York, Aug. 21.—*Editor Forest and Stream:* One morning a short time ago I was coming out of Cow Bay (L. I.) on a sloop and noticed a fish (looking like a sheepshead) swimming slowly about a foot under water. The wind was very light. I jumped into the small boat, rowed up to the fish and hit him with the boat kook and brought him aboard. I laid him on the paper inclosed, and have an accurate diagram, with what I trust is a sufficiently clear description. I showed the fish to a number of local fishermen, none of whom recognized it. A friend was to have taken it to Blackford, but failed to do so; fortunately I preserved the diagram. I have been around the Sound for twenty-five years and never saw such a fish. What is it? Its pouch was empty, and I think it must have been sick or tired.—G. C. B. [The best known name of this species is the one given above. It is also called fool-fish, barnacle-eater, unicorn fish, unicorn file-fish and sharp tailed file-fish. By some of the early ichthyologists, among them DeKay and Mitchell, the young of this species was considered as a species distinct from the adult because of its long tail, slenderer body and much darker coloration. The orange file-fish occurs on our coast from New England to the Gulf of Mexico, and is found, also, in the West Indies. The adults are rather uncommon about Long Island and northward, but the young are abundant every summer.]

SOME AQUATIC GIANTS.—The Gloucester (Mass.) *Daily Times* of recent dates announces the capture of some marine curiosities. A mackerel was taken off St. Peter's Harbor, Prince Edward's Island, measuring 2ft. in length—the largest ever known in that locality. It reports, also, the capture of a large codfish, near Shelburne, Nova Scotia, having in its stomach a lady's purse containing a considerable sum of money. A turtle weighing 640lbs. was caught in a fish-trap near Sandwich, Mass., Aug. 25. There are several species of marine turtles which attain to a weight of 1,000lbs. and upward; the green turtle occasionally weighs this amount. The loggerhead has been known to reach 1,600 lbs., and the leather turtle exceeds even this enormous weight.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLABROUGH 12, May 1, '90.
COLT 12, July 25, '89.
COLT 10 and 12, Oct. 24, '89.
FOLSOM 10 and 12, Sept. 26, '89.
FRANCOTTE 12, Dec. 12, '89.
GREENER 12, Aug. 1, '89.
GREENER 10, Sept. 12-19, '89.
HOLLIS 10, Nov. 7, '89.
LEFEVER 12, March 13, '90.
PARKER 10, hammer, June 6, '89.
PARKER 12, hammerless, June 6, '89.
REMINGTON 16, May 30, '89.
REMINGTON 12, Dec 5, '89, Feb 6, '90
REMINGTON 10, Dec. 26, '89.
SCOTT 10, Sept. 5, '89.
L. C. SMITH 12, Oct. 10, '89.
WHITNEY SAFETY 12, M'ch 6, '90.
WINCHESTER 10 & 12, Oct. 3, '89.

THE PLOVER.

WHEN autumn skies are flash'd with blaze
And autumn groves with glory shine,
When maples wear their scarlet robes,
O'er which the grapevine wreaths entwine,
Then far resounds the plovers' cry,
As swift o'er upland space they fly.

O'er old Montauk's ravines and slopes,
Full oft I've mark'd their legions pass,
Now circling, plunging high in air,
Now fluttering, hovering o'er the grass.
The birds migrating urge their flight
In crowded ranks, in serried files,
Wheeling, and pausing to alight,
Seeking the insect swarms that fill
The grasses of the plain and hill.
Those plover tribes, the blackbreast flocks,
Ne'er cease their flight o'er pastures wide,
Their haunts are by the meadow lands,
Where flows and ebbs the salty tide;
And there, in ambush, bid away
The fatal fowler seeks his prey.

The golden plover! none more fair
Of all the wings that beat the air;
Birds are they of the bright, warm fields,
Darlings of breeze and azure skies,
Glad harbingers of early spring,
And coming autumn with its dyes.
Now swift athwart the grass they flit,
How rapid, sweeping on the wing,
Now swooping low above the grass,
Now brightly glancing as they pass—
Arriving when the grass sprouts green,
Departing when the airs blow keen.

The upland plover! Sweet its trill,
Its operatic, liquid note,
Like the soft breathing of a flute
Its symphony in air doth float;
So low, so sweet, one scarce may see
This winged minstrel of the air,
Till sudden a gray wing floats by,
And drops the feather'd lyrist there;
Then o'er the grass lands, far and free
Swells out the bubbling harmony!

ISAAC MCLELLAN.

TRAPPING DAYS.

II.—IN THE BLIZZARD.

THE first "cold snap" of the winter lasted but a short time and was succeeded by beautiful weather, so very mild and pleasant, indeed, that the prospect for an open winter appeared bright, and as the best of the crop of fur had already been secured from the old trapping ground a party of three, consisting of two brothers named Dan and George Bellows, and the writer, quickly planned a winter campaign to include a trip to a famous trapping ground about 75 miles northwest of our present location and which was reputed to be swarming with furred animals.

The prospect for making a safe trip, undisturbed by the dreaded Sioux, seemed much better during the cold of winter, and we proposed returning before the grass started in the spring, and hoped to make the round trip while yet the Indians were housed in their winter quarters. It was a foolhardy, or at least a very reckless plan; yet, like many other unfamiliar with the winter climate of the northern plains, we were destined to learn by bitter experience the terrors of the deadly blizzard.

Old Jim concluded to work the old ground as long as the weather would permit, and the third partner in the original company about this time quit the camp and returned to his home.

A man named Haley was hired to haul our outfit to the new location, and as the wind had swept the first snow of the winter into the ravines, leaving most of the surface of the prairie free of obstruction, we started with as light a load as possible, to make a rapid march and to give the driver time for his return to the settlements before the coming of another fall of snow. Haley had a span of powerful bay horses and heavy rations of grain for a week's time were hauled along, and which was judged sufficient to meet all contingencies.

On Dec. 3 the march began, and our progress was necessarily slow, as the entire absence of anything like roads obliged us to keep the only pace possible over the rough prairie, now frozen hard as stone. On the second night out from the settlement we reached a camp of two trappers of my acquaintance named Layton and Baker, who were located on some lonely sloughs about ten miles northwest of our old camp; and here the weather grew very much colder, obliging us to keep in the shelter of the friendly camp for a day and two nights.

The next day's march brought us to Lake Shetek, where we found two trappers camped in the abandoned house of one of the murdered settlers, massacred in the terrible outbreak of 1862; and who, with the open-handed hospitality of the fraternity, made us welcome and cheerfully shared the cabin with us.

Again the cold grew intense, and for two days more we hugged the fire, rejoicing not only over our own comfortable quarters, but also over the fact that the horses were in a warm stable, something we had scarcely hoped to find on the trip. A council of war was now held, and as less than a day's rations of corn remained for the horses, it was evident that the recklessly planned expedition would have to be abandoned.

Once more the weather moderated and grew strangely warm, the sky in the meantime being obscured by heavy, low-hanging clouds. Starting on the return trip as early in the morning as possible, we drove at the best pace the rough ground would permit, as we were very apprehensive of a snow storm. When five miles of the return journey had been accomplished snow began falling rapidly. While at Layton's camp I had taken a careful observation of the direction by the aid of the very best compass I ever carried, and now on the return the information obtained was priceless.

By consent of the party I walked in front with the open compass in my open hand, and while the little point of timber at Layton's camp, twelve miles distant, was only about fifty rods in width, and while at no time during the day could we see for more than one hundred rods in any direction through the falling snow, so perfect was the working of the little compass that, when in the afternoon the timber we were in search of suddenly loomed up through the falling snow, our course was found to be true as the flight of the crow.

A hurried council was now held, and so great was our eagerness to reach our old camp, ten miles further on, that, although we were unable to see the sun to determine the time of day, we quickly decided to take chances, and without pausing to greet the hospitable brethren of the guild, turned the horses' heads in the new direction, and again struck out upon the trackless plain. Snow to the depth of six or eight inches had fallen, and as we left the friendly timber behind, the snow-fall checked perceptibly and soon ceased altogether. When half a mile distant from the timber, some one chanced to glance backward toward the northwest. A shout and a pointed finger turned every eye backward to see the rolling wheels of the swiftly-moving chariot of the storm king. Fearful as was its appearance, its coming was truly grand. I have seen the rise of many blizzards, but never one whose coming was so swift. It was instantly apparent to all that to return to Layton's camp in the teeth of the gale was impossible, for the first breath of the whirling blast was like ice, and nothing, either brute or human, can move in the face of the full grown blizzard. Instantly the air was loaded with flying snow so thick as to render breathing difficult, and darkness began to gather around, not alone from the whirl of flying snow, but also from the approach of night, which proved to be rapidly following one of the shortest days of winter.

Again the little compass was brought into requisition, while all our lives seemed swinging in the oscillations of its faithful needle, which trembled as with the added load of responsibility. Almost at the beginning of the storm, while crossing a ravine, the front wheels of the wagon struck against an abrupt rise of ground and the wagon tongue snapped off short.

This new calamity, which for the moment almost took our breath away, proved a blessing in disguise, and was probably the cause of saving all our lives. No time was there for words.

Theirs not to make reply,
Theirs not to reason why.

Loosening the shivering horses from the broken wagon, Geo. Bellows, the corpulent, was mounted on one, and Haley on the other, and each man, seizing a quilt or blanket from the abandoned vehicle, hurried forward in the whirl of the fast increasing storm.

As I sprang to the lead of the little procession, a new cause of anxiety began to create uneasiness in my mind as I remembered that I had never taken the direction by compass from one camp to the other, but was trusting in the statement of Baker (Layton's partner), who had given us the result of a careful observation which he claimed to have made; and as I reflected upon the importance of the utmost care in taking directions across these treeless and but slightly undulating plains, where the topography of the country offered no clue to direction amid the whirl of the blinding snow, I remembered with regret that during our march over the same ground a few days before the haziness of the air had been just sufficient to prevent my obtaining the direction myself.

Not wishing to burden the minds of my comrades with a new anxiety, I hurried on in the swiftly increasing cold, while the whirl of the flying snow was indescribable. It was all important that I see the compass needle while daylight lasted, and yet it seemed at times an impossibility.

I was warmly clad, and the heavy quilt I had snatched from the wagon seemed glued to my body by the force of the gale as a postage stamp to a letter, yet through all that mass of clothing the cold pierced like a million needles, and while one hand carried the faithful compass, the other was kept busy clawing the ice from my face and eyes; for the snow, whirled ceaselessly into my face, seemed to thaw by contact with the skin and to freeze again at the same instant, and a thin coat of ice extending from the fur cap, pulled low down over my eyes, to the beard which covered the lower half of my face, seemed to form instantaneously, while all the forces of nature were in league with the gale to drive us to blindness and to death.

I am aware of the poverty of words to describe our battle with the storm. He who has never met the full-grown blizzard on its native heath is as powerless to understand its terrors as is a blind man to comprehend the glory of the rainbow: and he who, in the darkness of a

winter night, has wrestled for his life with the storm god of the northern plains, needs no telling. Even the horses now began to show a degree of fear, as strange as it was new to us. Haley rode right behind me, and his horse, paying no attention to its rider, now insisted upon touching my left shoulder with his nose continually. Like all trappers on the frontier, we were shod with moccasins—an absolute necessity in a winter climate where a pair of boots worn upon the feet meant frozen feet inevitably—and as the horse was sharp shod, the dread that the toe-calks of his shoes would sever the tendons of my legs became overpowering, and I shouted back: "Haley, keep your horse off of me! I'm afraid he'll step on my feet with his sharp shoes and cripple me."

"Why, I can't see you, Belknap; how the blank can I keep the horse off of you?" cried Haley.

There was really no help for it, although I wondered then and do until this day, how it was possible for that frightened animal to touch my shoulder a hundred times during that fearful journey without once interfering with my feet. Soon the darkness became so deep that the needle of the compass could no longer be seen, and closing it I returned it to my pocket, and the journey was continued guided by the wind which appeared to blow steadily from the northwest, almost directly in our backs.

We were really wrong in our direction, as was afterward found, our course being a point or two too far north, but in my anxiety to find the sloughs or lakes on which the camp was located I turned to the right each time we reached a depression, where, although the prairie grass had been swept clean by the autumn fires as over the rest of the plain, still the standing stubs of the larger weeds, which had grown on the lower ground, and which now projected above the surface of the snow, indicated the possible edge of a slough; and as I knew that any sloughs found on our route within miles of our present position were bound to be the right ones, I kept hoping each time I blundered into similar weeds that I had now found the edge of the slough of our anxious search, and only turned back to the old direction when the rising ground proved the supposition a mistaken one.

This was repeated several times, and carried us just far enough to the south to enable us to hit the extreme north end of the most northern slough.

Stumbling along through the rapidly forming drifts, I suddenly pitched headlong over something nearly waist high, plowing my way headformost into the snow. Screaming back to Haley, in a voice which rose above the roar of the tempest, to pull up his horse instantly, I turned and crept back on hands and knees to examine the object which had overturned me, and never did the face of dearest friend seem more welcome than did the glimpse of the humble rat house which had brought the hurried march to so abrupt a pause.

I knew that rat houses were built only on sloughs or lakes, and that there were none other sloughs within a radius of miles from the right one, and furthermore that the length of time traveled indicated to a certain extent that we were right at last.

It was easy to follow the edge of the ice by its smoothness, and soon a strange roaring sound indicated the proximity of timber, when our course grew plain to my mind, and after a short distance had been traveled along the shore of the lake, sparks of fire rising from out the earth in our front, gave friendly notice of the near presence of Old Jim, comfortably housed in the warm dug-out cabin, and of warmth, comfort and life for us at last.

Jim's amazement at our sudden advent was ludicrous to observe; the horses were sheltered under the bank, and, wrapped in quilts, stood the night's exposure very well, and the half cord of oak wood piled in the back end of the cabin kept the old fire-place roaring all that bitter night, while the cold grew so intense that no one of us lay down to sleep, but sat up and dozed in front of the fire all night. The blizzard at daylight sank to rest, leaving the snow hammered hard into drifts, and with a degree of cold which, I am confident, would have frozen mercury.

The night of that 10th of December, 1864, will not be soon forgotten by the trappers who yet remain alive of the old fraternity.

A brother of the writer, camped some twenty miles distant, was belated while gathering in his traps and overtaken by the blast while within half a mile of the timber which surrounded his cabin, and was guided to shelter only by the roaring of the wind through the treetops, which in his bewilderment he had already nearly passed by.

A friend named George Palmer, lost in the storm, reached the house of a friendly Norwegian late in the night, where he was taken in and cared for by the good Samaritan Norseman, and escaped from the blizzard with the loss of all his toes save two.

Two trappers, C. and B., from Spirit Lake, Iowa, were returning from their camp, some fifty miles distant, to their village home, and overtaken by the storm wandered until late in the night, when reaching the foot of a sheltering bluff which rose abruptly from the plain and afforded partial protection from the piercing wind, as they were in entire ignorance of their whereabouts, agreed to stay where they were and battle for their lives against the cold until the morning light, keeping watch over each each other that neither be allowed to go to sleep. Through all that weary night the struggle for life went on, while their dog froze stiff and dead by their sides; and B. afterward declared that C. prayed audibly, as Charles Reade says, "as men pray only for their bodies," and made the most solemn pledges of reformation if permitted to live until morning. As the blizzard at daylight died away, and the rays of the coming sun illuminated the landscape, they saw that they were on the north shore of Lake Okabena, while at the east end of the lake stood a grove of timber in which a trapper's deserted shanty stood, which was in plain sight of the scene of their suffering, and that now C. began swearing like a pirate at their ill success in not reaching the camp the evening before. Poor B. was himself again lost in a blizzard during the succeeding winter, and not even were his bones ever found.

As the morning dawned bright and clear after the terrible storm a council was held in the cabin, and as the two Bellows brothers were determined to return to the settlement and remain until spring, and Jim Morehead wished to return to his family for the winter, and as he wished to trap with the writer over the old ground during the following spring, it was agreed that all the rest return to the settlements while I remained to winter alone in the cabin and hold the trapping ground secure from intrusion until the following spring.

The broken wagon could not be removed until spring, but we planned for the driver and one other to return immediately with the sled and secure the wagon load of provisions, bedding and traps, which was done within a couple of weeks.

When the broken wagon was abandoned a cur belonging to the writer stopped behind to guard the load, unknown to any of the party, and was not missed until too far distant for possible recovery, when she was abandoned to her fate. All agreed that it was utterly impossible for anything to live through the night and poor Daisy was supposed to be dead. As Jim had no good moccasins with which to make the home trip, and was also minus an overcoat, I loaned him mine, which he was to return with the team when it came for the load of supplies on the broken wagon. Left alone I began pondering on the fate of my faithful dog, and nothing but the absence of overcoat and moccasins prevented me from returning to the wagon to learn her fate. As the days passed and the team did not appear my impatience grew, until, on the morning of the eighth day after the blizzard, I fashioned some moccasins of cloth and wrapping a blanket around me set out to recover her if alive.

Reaching the wagon a low feeble yelp greeted me and the poor creature crawled feebly forth from under the wagon to meet me. While snowdrifts were piled 10ft. high just beyond the wagon, singularly enough a depth of only 8in. was found under the wagon, and here the poor creature had, by the warmth of her body, melted a round hole through the snow to the ground, while all that she had eaten was a small corner of a frozen shoulder of pork and a handful of frozen beans, which she had gnawed out of a pot. I could have held in my two hands all she had eaten for eight days.

Feeding her carefully with small pieces of meat chopped fine, I got her back to the cabin, where she fully recovered, only to get hold of a lost poison bait prepared for a wolf, which proved more potent for evil than even the blizzard itself and ended her career at last.

ORIN BELKNAP.

CHICAGO AND THE WEST.

CHICAGO, Ills., Aug. 25.—The explosion in the new works of the Standard Cartridge Co., at Blue Island, imperfect mention of which was made last week, was a most unfortunate and serious affair, although if we may weigh matters at all in such times of death and disaster, it may be said that the accident might have been much worse. Two men were killed, and eighteen more or less seriously hurt. Only about 50lbs. of powder exploded, it being estimated that that was the amount in the four machines then running. The building was not much injured except in the breaking of the glass, but the machines in the place were ruined. It is thought that the accident was caused by a workman who was cutting in the head of a tin powder-can with a hatchet or chisel, instead of unscrewing the cap over the opening. The explosion of this can caused the others. Charlie Willard, who is known all over the trap-shooting world, is superintendent of the works. He escaped the danger of the wreck in a singular manner. He happened to miss the morning train out to the works which he usually takes, and by the time he got out that day the accident had happened. Charlie has been doing all he possibly can personally among the victims of the accident, and this work, with the strain attendant, has nearly made a nervous wreck of him already, and he shook all over when talking about it. It is a most deplorable affair. The company is doing all it can for the sufferers. Work will be duly continued at the factory, Mr. Rice, the manager, says, with the machines which were not yet in place at the time of the accident, of which there were a number. The factory was just finished, and as soon as it was in perfect running order the management intended to have a little reception as was stated earlier. It is not the business loss in this casualty that affects the management, but the loss of life and limb. This should weigh the less heavily when the gentlemen in charge are able to reflect that the accident occurred through no fault or carelessness of their own.

Aug. 26.—Messrs. Ben Dicks and Lee Hamline are absent in the Indian Territory, chicken hunting. It is not pleasant to chronicle any such a fact. It is not probable that the men who will go from here to the Nations to shoot chickens will be content with killing enough to eat. If they kill more they must leave them rotting in the grass, as thousands of shooters have done and are doing, unless they happen to be in the chicken shipping business, which is not a very good business anyhow. There are drawbacks to these long trips into good game countries, as our friends, Dicks and Hamline, will learn if they hit the shooting at its best. They will have to decide at once what to do with their birds, of which, in the grass shooting of that country, it is easy to kill from 50 to 100 a day, or was two or three years ago.

Last week there were large numbers of ducks on Maksaw-ba marsh. These are the local ducks that were bred there this summer. It is about time for them to make the regular migration to the north which is the invariable course with the Kankakee and Illinois ducks.

Messrs. Alex. T. Loyd, R. R. Donnely, M. T. Hart, of Crown Point, and perhaps another will leave here Aug. 30 for Iowa after chickens. They go to northwest Iowa, but have not definitely chosen their field.

Mr. Joseph Hawley and his friend, Mr. Jones, both well known in insurance circles here, left on the 20th for Minnesota on their annual chicken hunt. They go to Ortonville first, but will locate later and be gone two or three weeks.

Messrs. C. S. Burton, Hank Smith, and two other friends, will start soon for Otter Tail county, Minn., for three weeks or more of their annual unadulterated happiness with small-mouth bass, prairie chicken and ducks. They go to their old stamping grounds.

Mr. W. P. Mussey seems to have inaugurated at Maksaw-ba club house the new sport of shooting woodcock on a flyway. There is a point right at the railway crossing where two or three dozen of these birds cross every night just about dark. Two or three birds, before the "flight" is over, is about all that can be expected to the gun, but it is interesting fun in the dim light.

It is not known with any accuracy yet just what has been the extent of the lawless shooting of chickens in this State, but it is probable that the opening of the legal season, more than two weeks from now, will see the birds pretty much all thinned out over the open grounds. An insurance man, who offices near where I do, tells me that a friend of his, whose name with difficulty I suppress, brought in fourteen chickens two weeks ago from a little hunt not far from town. And so it goes. What good fun these early shooters spoil. If they would only wait till October, and shoot these birds over the corn, they would have grand sport. To shoot the "flappers" out of grass or stubble is boy's business.

Aug. 29.—Messrs. Ben Dicks and Lee Hamline are back from their Western trip. It seems that they changed their plans and did not go to the Indian Territory at all, but to Council Grove, Kansas. I wish these people would be more careful and go where they intend to go. It would save trouble in writing them up. I am afraid that the burning words that I have penned concerning the possible misdeeds of these gentlemen must go for naught, which is very annoying. The fact is, their Kansas chicken trip was not so very devastating, owing mainly to the fact that they lost both their dogs, a setter and a pointer, which belonged to Mr. Hamline, one by a rattlesnake bite and the other by distemper. Where was Ben Dicks with the medicines when that dog was snakebit? That's what Lee Hamline wants to know.

Mr. J. E. Pumphrey, of Columbus, O., well known in trap-shooting circles, is in town to-day and will shoot with the boys at Burnside. Mr. Pumphrey is on his way East, and has been as far West as Minneapolis, where the boys took him out on his first chicken hunt. Mr. Pumphrey says their party got 96 birds, and he did not find it hard to stop the flappers.

E. HOUGH.

COLORADO NOTES.

MONUMENT is a small village about sixty miles south of Denver, and twenty miles north of Colorado Springs. It is located on the main lines of four or five railroads running from this city to Denver. The adjacent country is called "The Divide," and is devoted mainly to the raising of very fine potatoes, wheat, oats, barley, etc. West of the village the country is mountainous, generally well timbered, and at the proper season of the year blackberries, raspberries, and choke cherries abound in luxuriant profusion. Of these fruits bears are very fond, and during this season are reported unusually plentiful in the immediate neighborhood of these fruit patches, retiring when pursued to the rocky fastnesses in the direction of Pike's Peak.

A short time ago a fresh and callow youth from this city, in company with a friend, was climbing the mountain a few miles west of the village on their way to Young's tie camp. The wagon was some distance behind, they having walked on ahead enjoying the bracing mountain air. But the road was rough and steep, and as they neared the top of the ascent the young man from the city was nearly winded. He was toiling painfully along with hat in hand and coat over his arm when a sudden stir in the leaves and a startled "Woof!" caused the young men to halt abruptly and gaze fearfully around. There, within ten paces, was (to them) an enormous cinnamon bear just rising from his disturbed morning nap under a pine tree. For an instant fear and astonishment paralyzed all parties at the unexpected meeting. Then the bear said "Woof!" which is probably bear language for "Good morning, gentlemen," and gazed at his visitors with glad surprise. The youths returned the compliment by saying "Bear!" But they did not prefix it by "Morning, bear," nor say it in a quiet, gentlemanly tone, such as is usually employed when meeting a stranger or a casual acquaintance in an out of the way place. They vociferated the ursine inhabitant's name with all the strength of their lungs, and then turned and took a beeline for the Atlantic coast down the mountain side, shedding coats, hats, and terrific yells at every jump. It was astonishing how suddenly their weariness vanished, and how rapidly the bracing mountain air had invigorated their frames and imparted speed to their footsteps. The bear, looking somewhat disgusted at this unceremonious departure of his visitors, ambled quietly off, and was seen shortly afterward as he disappeared over the mountain top half a mile off, in the direction of his rocky retreat.

A few days after this some of the men employed at the tie camp organized a bear hunt and proceeded to these rocks and caverns, where they succeeded in rounding up and killing a large cinnamon—possibly the same one encountered by the boys.

A few days after these occurrences a resident of the village, wife and child were out on the mountain picking berries. As a precaution the man took his gun along. The child, a little girl, strayed a short distance from its parents, and came suddenly upon a large bear, feeding upon the fruit. The child was paralyzed with terror and could neither move nor scream. The bear seemed anxious for a closer acquaintance and had advanced quite close to the child, when up rose the father from a patch of bushes with his gun in hand and blood in his eye. The skin of that bear is now drying upon the fence surrounding the family mansion.

The bears seen are all what is known as the cinnamon bear. They are not especially ferocious, though they make an ugly "scrap" when crowded.

Trout fishing is fair in this region, though no large ones have been reported this season.

Reports from the region of Meeker state that that section is overrun by tourists, who are slaughtering deer and elk out of season from mere wantonness. At this rate the large game of Colorado will soon be exterminated. If they want sport (with a spice of danger(let them go to Monument and try the bears.

Numerous fishing parties from this city have made excursions to Wagon Wheel Gap and vicinity, where the gamy trout are abundant and grow to a large size.

If quail could be protected for several years they would soon grow abundant in this State. In several localities on the Arkansas River east of here I have heard of there being quite a number of coveys. They are moving westward, and if not relentlessly slaughtered will, in a few years, be abundant in our mountains and valleys.

An antelope was killed the other day in this county by H. M. Morse, a crack hunter of this city. The shot which procured the game was fired at a distance of 500yds., breaking two of the animal's legs.

Colorado ought to be the greatest State in the Union for outing parties in the mountains. No snakes, no noxious insects, and beautiful weather about nine months in the year.

TENDERFOOT.

PUEBLO, Colo., Aug. 22.

SPORT IN NEW MEXICO.

ON the 28th of June last we left our mountain camp, having secured seven bears, a porcupine, four bay lynxes (wildcats), a considerable number of coyotes and a handsome crossfox, from about the middle of May to the 15th of June, after which date we got nothing, owing to two of men being unwell, which prevented us from moving to a fresh camp. One large cinnamon, shot by C., turned and came toward him, but was so badly wounded that he could get no pace on, and was easily despatched with a second ball in the head. We hauled him out on burros (donkeys), and a nice time we had for a solid hour cutting him up, and fighting the dense army of mosquitoes. By the way, these insects are, of all animals that infest the range, most to be feared, knowing no fear themselves. One old silver-tip fell to our bag—a magnificent specimen, measuring 7ft. from the tip of the nose to the tail, and covered with dense glossy fur. Of course, they grow much larger sometimes, but the very big ones are few and far between. This bear was shot through the heart, the top of which was completely cut off, but that did not hinder him from making one hundred yards or more before he died.

After leaving our camp our troubles began. The heat was intense and we had to make frequent stoppages, chiefly on account of a pony I had lately bought, which showed an irresistible desire to throw himself backward every now and again. Once, while going down a hillside that appeared to be an angle of 45 deg., or near it, one of the packs got loose, and the donkey, sneaking out from under it, made off as hard as he could run. However, "all is well that ends well." So we did at last reach the placer mines where we stayed for the night.

The next day we got within twelve miles of our intended camp, but the dogs began to suffer from the hot sand, having been used to the cool grass of the mountains; so bad, indeed, were they that three of them could only just make it in the next day, and their feet were completely raw. Luckily there was plenty of rest in store for them, for we are after trout and not bear just now. On our arrival we found trout in usual abundance, but some distance up the river. Notwithstanding the unfavorable weather three 4lb, fish have been caught by us, and quite a number ranging from 3lb. to 1lb. Any one with some small knowledge of fly-fishing can go up this river and catch many more fish than he could carry home, unless, indeed, he was a Sampson or Sandon. The Brazos is becoming known and deservedly famed for its large red-vented trout, and several other parties have been to try their luck this year.

If we meet with anything worth repeating during our fall hunt I will inform you. A. COAPE.

LABOR DAY IN THE WOODS.

BOSTON, Sept. 2.—The shooting season is begun. The open season on game birds in Maine begins Sept. 1, while the same is true of New Hampshire. By the act of the last Legislature in Masssachusetts the open season on all game birds was made uniform, on Sept. 15. Monday, Sept. 1, was Labor Day, a legal holiday in Massachusetts, and a number of Boston sportsmen took occasion to slip down to Maine for a day's shoot. The Saturday evening trains on the Boston & Maine carried several sportsmen, with dogs and guns. The promises of shooting in Maine are unusually good. Partridge are reported plenty, with more ducks than usual in the lakes and rivers. But the amount of spring shooting done on the shore birds is believed to be ruining that part of the game in Maine. Woodcock shooting does not promise very flatteringly, but still some of the knowing ones—gunners at Portland and Lewiston—know how to secure good bags, with good dogs.

Mr. Nat Manson, Jr., with his friend Ned Binner, both well known in the iron trade of Boston, started for Camp Stewart, Richardson Lake, Maine, on the 29th of August. They will be absent about three weeks, and they have planned for a rare time in the woods. They take for cook and guide Oscar W. Cutting, of Andover, who has cooked, guided and built camps and boat houses at Camp Stewart. He is a rare fellow in the woods—has staid at the "old camp" so long that he is a little homesick anywhere else. Ned Binner tells a rare story of "dusting partridges" with Oscar as a guide. In the city of Boston a favorite slang expression for run away or left is "got up and dusted." Well, Oscar had seen where some partridges had burrowed in the dust of the old logging road. They had been taking a dust both in the sand. He came back to camp with the account that the partridges were "dusting." Binner was taken back, but got his gun out to try for a shot. They went along a few rods when Oscar stopped. "Here is where they 'dusted.'"

Binner did not look at the ground, but for partridges in the air.

"Well, I don't care for where they got up and dusted, but where are they now?"

"I did not say they 'got up and dusted.' They dusted before they got up. Don't you see their little holes? There's where they kicked in the dust."

"Oh!" said the now enlightened Binner, as he examined the little round burrows. "There's a difference between 'getting up and dusting' and kicking in the dust before they get up." All the time he had thought Oscar meant that the partridges had suddenly flown away.

Geo. F. Freeman, of Harrington & Freeman, the Court street jewelers, proposes to take his vacation at Camp Stewart, from the middle to the last of September.

M. R. Fottler, statistical clerk at the Boston Chamber of Commerce, put in Labor Day among the birds at Franklin, New Hampshire. E. M. Gillam, commercial editor of the Boston *Advertiser*, was to have been with him, but was prevented by sickness.

F. N. Perkins, with Denny, Rice & Co., of the Boston wool trade, has been fishing and camping at Jackson, New Hampshire. He reports a good many trout and rare sport. He and his brother were rendered "a little nervous" by the fact that a bear weighing some 300lbs. had just been killed in that section. They saw the skin and savage claws at the last stopping place where they went into the woods. The first night they lay down in front of the camp-fire, and as most Boston boys would have done, they began to conjure up imaginary bear in every shape formed by the dim light in the forest. Sleep was a long time coming to their eyes. At last Frank fell into a drowse. His brother moved. He woke with a start. There were the two eyes and the black front of an enormous bear just beyond the dying embers. Frank seized his revolver, a .32-caliber of the bulldog pattern. The bear was glowering upon them. The frightened young man of the wool trade was no sheep to be killed by a bear, and he commenced to "pepper away." His brother awoke with a scream. The bear never moved. Frank had put three bullets into an old black stump with a couple of glints of moonshine for eyes.

F. R. Shattuck, of L. A. Shattuck & Co., of the Boston metal trade, has gone "down to the Cape" for a few days of needed rest. He will doubtless fish some with his old friend Capt. Jenkins. Fred is a fast friend of the FOREST AND STREAM. He is the poet of the "Immutable" and the "Mutable." SPECIAL.

A WEST VIRGINIA GAME COUNTRY.

Editor Forest and Stream:

Reading to-day the interesting communication of "Easby" in your issue of Aug. 21, descriptive of the south branch of the Potomac as a celebrated fishing resort, calls up pleasant recollections. The region referred to is not only a famous fishing resort, bnt is doubtless the best hunting ground and the most accessible to the great busines centers of any to be found in the country. It was my good fortune to spend the month of October, 1887, at Romney, and during most of the time I boarded in the family of Capt. C. S. White, State Fish Commissioner. I call to mind the fact that we consumed at his table, while I was there, three large wild turkeys and quantities of smaller wild game and fish, all taken within two or three miles of Romney. One of the turkeys was shot within a mile of Romney Court House, and within a mile and a half of the railroad station. There are plenty of deer, some bears, large numbers of wild turkeys and great quantities of smaller game, especially quail, in the immediate vicinity. As I said at the start, taking the great cities of New York, Brooklyn, Philadelphia, Pittsburg, Baltimore and Washington, as the great central business regien of the country, and this certainly must be the nearest and most accessible first class fishing and hunting resort.

But, I wish to refer to a fact that ought to interest numerous readers of FOREST AND STREAM, in the cities named especially, as well as in contiguous regions of the country. There is within five miles of Romney one of the most remarkable sites for a natural fish and game preserve of which I have any knowledge. Briefly stated, it consists of two mountain ranges running parallel, due north and south, with a valley between, barely wide enough for a driveway, and through which runs an excellent trout stream, where splendid catches are the rule during all trout seasons, like the present. The mountains and all contiguous land is heavily timbered and abounds in the splendid large game already referred to. When I was at Romney several square miles of this region could have been secured for a trifling sum, and I urged Capt. White and friends to secure it, and am under the impression that they did so.

I hope that if this communication reaches the eye of the Captain he will give the readers of FOREST AND STREAM a better description of the region than I am able to, for he is a life-long resident there, and an ardent sportsman as well, and can give interesting facts in this connection. MILTON P. PEIRCE.

COLUMBUS, Ohio.

HARD SHOOTING OR POOR SHOOTERS.

Editor Forest and Stream:

Let me tell you of an Ontario woodcock hunt at the opening of the season on Aug. 15 on the river. Twenty years ago you could find these birds in almost any bend of the river, but since the dairying and exporting of cattle to Europe it has destroyed and broken up their haunts to some extent. The shooting then opened on Dominion Day, it being six weeks later now, the birds are moulting. Our legislators intended to protect the birds, and destroy the summer shooting, as it is a very hard matter to find them at present. After an hour's drive, my comrade and I and the dog entered one of the many ravines and creeks which lead to the river on the north side. Near the top the ravine is broken by knolls and bogs which are covered by a plant about three feet high with a yellow flower—if you touch the bud at a certain time in its growth it flies apart with a snap. Here is the home of the summer woodcock or "bog suckers." It seems to suit them for feeding and boring on the beach knolls; and they are also protected from all tyros in the art of wing-shooting, as we soon found out. At the first bog we came to the dog (a cross between a Gordon and English setter) swung around among the flowering plants two or three times, as if there had been a bird there some time or other, but failed to find. As I went to step into the bog at the edge, I nearly stepped upon him; shot and missed. The dog proved to be a flat-catcher of the first water, as he chased the bird through the dense trees until we thought he was not coming back. When he returned, beautifully winded, and unfit for use for some time, we proceeded. There are small ravines which run back a few rods from the main one. We went up one of these; and here the dog and we ourselves got rattled and flushed and missed three birds in as many minutes. We hunted too fast and were over anxious. The heat was intense, the sweat pouring off from us in great style. We held a consultation at the head of the spring, which, to make matters worse was dry. We concluded that cock shooting was not in our line of business, yet it was our day off. We went back to the main creek, and went further down and flushed a woodcock. We were then about a mile from our lunch basket. We decided to return. In walking back we flushed bird after bird, which seemed to have a knack of eluding the dog very nicely. They would bunch in twos and threes on a dry knoll, where the sun would penetrate through the dense foliage and destroy any scent they emitted; and if we flushed them ourselves they would fly straight up over the tops of the lower trees or undergrowth; and one needs be an expert indeed to touch them, as eight feet of flight is all the time we had to shoulder and cover. My comrade, an Englishman and a thorough sportsman, was not a little chagrined, as he thought he was infallible in the art of shooting on the wing. We had lunch by a spring of sparkling water, and a short nap. We then resumed the hunt for two hours without success as to woodcock. We bagged a brace of whistle wings or high-holders, as they term them here. We saw different braces of doves flying through the woods, but could not get a shot at them; they were too shy. MINOR.

DELAWARE, Ont.

SHOOTING TALK.

Editor Forest and Stream:

I happened into Kendrick & Prettie's sporting goods establishment in Syracuse the other day, where one may usually count on finding the chairs held down by some of the city sportsmen, and while there I made inquiries of those present regarding the prospect for game the coming season. All were unanimous in declaring that reports were very encouraging for a good supply of woodcock and partridge (ruffed grouse). While I was present a report came in that an unusually large number of ducks are now on the Montezuma marshes. There have been some good catches of black bass on the Seneca and Oneida rivers this season. A gentleman who was in Kendrick & Prettie's when I went in reported having caught twenty-three nice bass the day before on the Oneida River, using crabs for bait.

From fish stories the party got to telling other kinds, and one or two seem worth repeating. A trap-shooter, well known in this section, is responsible for the following: He was in the country where quail are occasionally found, and one being heard near the house, one of the boys of the household got his muzzleloader and started for the quail. A. followed him, and they soon came to where they could see the bird sitting on the fence. The boy took aim and pulled the trigger, but the cap failed to explode. The boy lowered the gun to the hollow of his left arm, and turning to the right so he could see A., motioned to him to keep quiet as the quail had not moved. Then he removed the cap, dusted a few grains of powder into his hand and proceeded to prick the powder into the nipple with a pin, when suddenly the gun was discharged killing the quail.

An elderly gentleman said this reminded him of the time he was out for ruffed grouse in a very thick cover, where he could not shoot on account of the brush, while his friend who was with him killed three or four shooting from the hip, that is without raising the butt of the gun above the hip when shooting. OSCEOLA.

CENTRAL NEW YORK.

A FOX COUNTRY.—Walden, Vt., Aug. 27.—*Editor Forest and Stream:* A young man who is spending his vacation here had sent to him a copy of your paper of Aug. 21, and in it I noticed an article written by "Daphne" about still-hunting foxes. The article brought to mind the successful exploits of a young man who, until a few years ago, lived a few miles from me. He was a perfect fiend for foxes, and I don't believe the man ever lived that would take them in a trap as he did. If I remember right, he trapped and shot nearly one hundred in one season. Of course he set a good many traps, and foxes were plenty, but I think it a large number for one man to kill, and it made him famous as a fox trapper. He was very careful and said very little about his traps or catches, and no one that I know of ever learned his secrets. Foxes are getting plenty here again, but when Kittredge was here the farmers had little trouble to raise hens and turkeys. But this season they have done much damage, and this all notwithstanding a bounty of $1 is paid on them. I don't know where Mr. Kittredge is now, but the farmers would welcome him back, and if he should see this he might give your readers some useful information on getting rid of the pests.—A. L. PERKINS. [The stray copy of the FOREST AND STREAM that fell into the hands of Mr. Perkins has led to an odd train of circumstances, for the Kittredge sought for is, to the best of our belief, no other than "Daphne," who wrote the note on still-hunting foxes, and last week asked for a good trapping country.]

DAYTON, O., Sept. 1.—The pheasant season opens to-day, and the birds are plenty in Mercer and Auglaize counties of Ohio, Jay county, Indiana, and on north through three tiers of counties to the Michigan State line. Wild duck shooting begins to-morrow, but there will be none on the streams here until cold, stormy winter weather comes. Dove shooting is at its height, and bags of from twenty to sixty birds are brought in every day. Woodcock are moulting.

OHIO.—Cadiz.—Rabbits and quail are very abundant in this vicinity, as the season was very favorable, many coveys of quail being at this date as large and strong as the old birds. My pack of beagles are doing finely. They have had any amount of good runs this fall, and will be in great shape when season opens.—S. C. G.

MINNESOTA.—St. Paul, Aug. 25.—Chicken shooting is good in Minnesota; bass fishing excellent; and prospects for duck and geese fair.—H. W. C.

Camp-Fire Flickerings.

"That reminds me."

TOBOGA BILL.

Editor Forest and Stream:

A recent visit to Panama, now become familiar to every man, woman and child throughout the land through the stupendous frauds of the management of its would-be inter-oceanic canal, has brought to mind the story of Toboga Bill, an enormous shark which for many years inhabited the waters of Panama Bay, but which has been missing for the last decade.

This shark was generally seen swimming close to the sides and gangways of the ships in the harbor, and was considered so docile in manners that instead of being feared and killed he was cherished by the sailors and boatmen as an old and tried friend. Of course, many curious yarns have been told about him, but the one accredited to an old sailor, Peter Delf, rather eclipses the others, and I shall give it as I heard it told by a captain of one of the Pacific Mail steamers.

Peter was head lighterman for a number of years in Panama Bay for the Panama Railway Company, and it was his duty to get the cargo lighters to and fro between the railway wharf and the steamers out in the bay. One day he was working a lighter out to a steamer, which was to sail in an hour, when the wind fell light. A passing tug offered him a tow, but being an old-time salt he declined the tow without thanks, and worked away at his lug sail, shifting it from one side to the other in the

vain hope of catching more wind. Finally the wind failed entirely, and poor old Peter was left two miles from the steamer in great distress.

While bemoaning his luck and trying to think of some expedient by which he could get his cargo to the steamer before she sailed, he spied Toboga Bill swimming quietly alongside lookingly knowingly up into his face. He had been in the habit of feeding this shark on his trips across the bay, and thought, of course, the monster had come for a meal, so he proceeded to swear at him lustily for bothering him at such an inopportune time. Bill, however, didn't mind the oaths, but continued to look up into the old sailor's face in a beseeching manner.

Suddenly it dawned on Peter what his fishy companion wanted, so he got a rope, made a bowline on the end of it, and tossed it over the bow of the lighter. Bill took it in his mouth, swam off a little way and stopped, again looking knowingly in Peter's face, who divined at once that he wanted more rope, and gave him thirty feet more slack. Bill then took the bowline in his jaws firmly, and started in a straight line for the steamer, making the lighter fairly whizz through the water. When nearing the ship he let go of the line, sheared off, and let the lighter run neatly alongside of the open hatches of the steamer.

Since the disappearance of Toboga Bill another large shark has made his appearance, and though much smaller than his illustrious predecessor, proves himself much more of a shark in character. His name is Long Tom, and many unfortunate men are said to have been eaten by him, two quite recently. PISCATAQUA.

PORTSMOUTH, N. H., September.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

THE CLUBS OF THE ST. CLAIR FLATS.

II.

THE morning of the second day's journey toward the Flats broke clear and with a change of wind. No. 11 began to plow her way heavily but steadily up the river. We passed the Peoria Club house well along in the morning, rounded the lighthouse point, and stood away past beautiful Grosse Pointe, with its elegant buildings and drives. There is a large and showy club house here, but Grosse Pointe Club is rather social than sportsman in its make-up, and we need not linger in its description. The are numbers of cottages along this shore also, the distance from town being just sufficient for a pleasant drive. Afternoon parties, balls and fish suppers make much of the programme here.

The wind rose to goodish strength as we crossed Milk River Bay. We ran past numbers of pound nets. Jack Parker took the duck boat and ran over to the fishery, where the boats were unloading their catch. He found one mascallonge, a fish which it is unlawful to take in pound nets. The fisherman said he was about to put this mascallonge back in the water, but if he did it is doubtless the first act of the kind for him. All the fishers along have agreed that very few mascallonge, and those very small ones, were now found in the nets, whereas ten years or more ago they were numerous and large. No definite news, of course, could be learned here of any seining of black bass. The information was that most of this work was being carried on over in Baltimore Bay.

In the afternoon we left the land far away to our left and stood out into the open lake, heading for a long point which stretches out from the head of the bay. There was quite a sea on, and the wind was not especially favorable, but the skillful work of Captain Parker got us well along before evening. A black storm was now threatening, and it seemed wisest to anchor under cover of the point, which we did, making everything snug and shipshape that night in one of the creeks of the marsh. That night we found, a little further up the channel, the stakes where the wings of a fyke net had recently been set. Doubtless this net had done its work well, and it is a question whether the lone fisherman, whose hut we saw on the point above us, ever bothered himself with discriminations as to the fish that came to his net.

Before the dusk set down, we could see from our decks the long line of buildings far out in the lake, which constitute the group of the St. Clair clubs proper. We ate a hearty supper and passed a jovial evening aboard that night, flattering ourselves that we would soon be at anchor at the end of our journey.

But on the following morning the wind was light and unfavorable. We poled around the point, and spread sail then to the best advantage, but in spite of all, we ate our luncheon on board at noon, and it was 4 o'clock that evening before we ran in under the lee of the "made ground" at the long line of club houses and cottages, and again made ready for a threatening storm. As we tacked in for our last reach, we passed a boat containing four damsels from the Rushmere Club House. These we hailed after the manner of the country, and catching up the line they tossed us, we gave them a tow of a quarter of a mile or so, meantime gravely informing them that we were pirates and smugglers, and that it was our intention to take them out into the middle of the lake, scuttle their craft, and carry them off into captivity.

We came to anchor just back of the Rushmere Club house, and from our position had a very good view of what is really a unique scene. The "flats" of Lake St. Clair are miles and miles in extent, but throughout their extent there is not any land at all, unless an approach thereto may be found in the marshy banks of some channel. Even the deep channel of what is called the St. Clair River has no banks, properly speaking, in that section where we now were. On every hand the shallows spread away for miles and miles, covered in many portions with a regular wild-rice marsh, but showing little or nothing of terra firma, except a low island or so like the one called Strawberry Island, which we passed in coming up. Away off to our right, where we could see the black smoke clouds rolling up, beyond the two old lighthouses, was the "ship canal," which is simply a channel dredged through the shallow lake, the banks, which are built of the dredged dirt, being protected by willows thickly planted along them. Following up any given pillow of smoke, we could see it pass the big lighthouse at the end of the canal, just beyond the first of the line of club houses, and turn into the deep channel, or "river," whose edges touch the docks on the American side. Then the big boat would rush along past the buildings, hardly a stone's throw from our craft, which lay quite back of the buildings. Past these houses, and through this narrow channel of deep blue water, all the traffic of the whole Great Lakes system passes, going and coming, up and down. How great, how enormous that traffic is no one can know who has not stood and watched the unending procession of noble vessels which day and night glides by. Among these vessels are the fastest inland steamers of the world, whose time card equals that of any freight train. Besides these are countless sailing craft, odd and picturesque many of them, and the whole scene is a stirring marine panorama whose like is not elsewhere to be found.

Just across the narrow channel, where all the boats run, lies a low and marsh-covered shore line. This is on the Canada side. Beyond that, miles and miles, nobody knows just how far, lies a wilderness of marsh and channel, which is all included in the claims of the alleged "preserves" of the Canada Club. This club leases its territory of the Walpole Island Indians, who were supposed to have a sort of ownership of this region, nobody knows just how. This shutting up of so great a part of the marsh, including some of the best fishing (although the latter, being largely in navigable channels, cannot be stopped by right), is a matter viewed with great disfavor by the American clubs, and the Canada Club cannot be said to be in the least popular on this side of the channel. Barring this claim at preserving all the marshes and fishing beds of this interesting region are open territory. A great many readers have doubtless supposed that the wealthy clubs of the St. Clair Flats must own great bodies of land as preserves. This is not the case at all, and there is here no ground for the old outcry against club preserves. Each club owns the ground its buildings stand upon and that is all. Anyone who has money enough can buy privileges equal to those of the wealthiest club member, by the simple operation of digging up his real estate from the bottom of the lake. That is just what all the clubs have done. They have dug up their standing room. The preserves are those of nature only.

As far as we could see off to the left a thin and curving ribbon of this "made ground" followed the ship channel, clear around to the "Southeast Bend," and on this fragile support of artificial earth stand all the club houses and also an astonishing number of cottages, hotels and private residences.

The process of "making ground" is here not a very difficult or expensive one. The great dredging machines simply tear the bottom out of the lake, which may be only 8 or 10ft. deep, and pile up the results in a heap. Where the bottom is thus robbed, the water is of course very deep, and in this way have been made the innumer- short channels or "cut-offs" which separate some of the buildings from their neighbors. The price for such "made land" is about $50 per front foot, I was told. Of course the original appearance of this artificial ground is very rough, the dirt having a bluish clayey look as it lies in the huge piles fresh from the dredge; but the hand of man knows how to smooth all this down, and you will look far before you find much prettier lawns than some of those which lie along the channel on the St. Clair Flats.

There has of late been a sort of question raised as to the title to this ground, much of which has now become very valuable. Far above the spot which for the time constitutes our point of view, lies what is known as Hersen's Island. The Hersen heirs were many, and it has appeared to their interest to be of the opinion that Hersen's Island meant not only the island itself, but all the marsh, all the other islands and all the lake anywhere in that end of the country. The chief reason for this belief of theirs sprung from the fertile brain of one McQueen, of Toronto. The latter gentleman claims to have quit-claim deeds from about forty of the Hersen heirs, covering about all of the lake where the made ground now lies. The heirs were willing to quit-claim a little lake, more or less, to him for almost anything he wanted to give them. Mr. McQueen has also shown himself willing to quit-claim cottage sites, hotel sites and the like upon much the same basis, and he has really intimidated a number of recent builders into paying him sums of money in return for his "quit-claim' to their land. In some cases these sums have been as low as $20. In most instances McQueen's demands hade been met with prompt and peremptory refusal. It would seem about the best thing to do with that gentleman is either to drown him or give him twenty-four hours to leave the country. He is not strictly necessary.

We were now fairly upon our scene of operations. Messrs. Parker and Wherry began to cast about them in their line of work, which was to secure a better system, or a better possibility of a system, of fish protection on the Flats. Of this I shall speak later. On the following morning, the boys having very kindly loaned me the little duck boat—which was the best all-around boat I ever was in, for pushing, paddling or sailing, it being double-end, beamy, well decked, light of draft and provided with the nicest little centerboard on earth—I set out for a systematic trip among the club houses, beginning at the first one on our right, the great St. Clair Club, whose magnificent building is just above the mouth of the ship canal. Thence, on up the river, each club was visited in order, and in the writing will be taken up in the same order; so that our little story will touch, first, the St. Clair Club; second, the Mervue Club; third, the Rushmere Club; fourth, the Peninsula Club; fifth, the Delta Club; sixth, the Canada Club; seventh, the North Channel Club. The latter club is across the bay and some miles distant from the main body of the clubs; but it is a strong and worthy organization, and properly to be included in any account of the clubs of the Flats. Now, each of these clubs is different from the others, so that the story of each is interesting. E. HOUGH.

175 MONROE ST., Chicago.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

SOME PLEASANT MEMORIES.

I DON'T know when I have read anything, containing a like amount of reading matter, that gave me as much pleasure as did the perusal of the Bass Number of FOREST AND STREAM. I am not so successful in handling the rod as the gun, but I have long since found that the pleasure derived from the pursuit of either game or fish does not depend upon numbers or pounds. And I think that of all the different objects of pursuit "by field or flood" the black bass has yielded me more real unalloyed pleasure than any other.

My first acquaintance with him began during that impressible time of life covered by "the teens." Memory carries me back to the lakes and ponds of Hillsdale county, Michigan, where, a barefooted boy, armed with ironwood pole, line, and hook to match, and seated, with my elder brother or some other youth for companion, in a poplar dugout, I watched the frog or minnow bait as it "skittered" along the edge of the rushes and lily pads that fringed the shore, and several rods behind the boat, and I feel again the electric thrill that ran along the rough pole and to every nerve of the holder, when with a rush and a gleam the gamy fish left his hiding place and seized the tempting morsel.

Ah! I very much doubt if the older fisherman, though armed with more elegant outfit of boat and tackle, ever derives the same exquisite pleasure from that same electric thrill, as the barefooted urchin, with rough rig, but with freedom from care.

Later on I have tempted *Micropterus*, under different names, with different kinds of bait and varied success in other waters, from the lakes and rivers of northern Minnesota to the lagoons and bayous of the Gulf Coast, and have found him everywhere and in all places the same gamy fellow, a fighter to the end.

Along the Cypress Bayou, with its chain of lakes, from Shreveport, La., to Jefferson, Texas, was once a favorite resort of mine. In the late spring and early summer, when the rain had raised the waters, the "trout" were out in the overflowed land amid the grass, and following up every little branch and inlet in search of dainty morsels, and here they would readily take the bait.

But of all the waters of my acquaintance, I think all others must yield the palm to the streams of Arkansas, among which the White River and the Washita take precedence. The Washita from Arkadelphia to its source abounds in rapids and deep levels and meets the requirements of the black bass to perfection. White River is famous for its fishing. Fly-fishing is not indulged in to any great extent, although some local sportsmen in the towns and some visitors sometimes use the fly, but minnows are the popular bait. Fishing parties from Little Rock and other cities, both in and out of the State, often visit both of these streams and seldom return disappointed.

I have just read Myron Cooley's "Two Days After Bass," from Detroit, Minn., in your Aug. 7 issue. I have fished many of the lakes he mentions, and a summer spent in that neighborhood several years ago has furnished many pleasant memories ever since. One red letter day of that summer was spent on Graham's Lake in Otter Tail county. My companion on that day was a Mr. N. whom the Methodist Church had ordained to be a "fisher of men," and whom I found to be a fisher of fish as well. The day was delightful, the lake and surroundings beautiful, the company congenial, and the fishing all that could be desired. During the middle of the day we selected a grassy bank under the shade of the trees, ate our lunch, and took a long mid-day rest. The fish bit often enough during the early part of the day to keep us well entertained, and during the last hour of our stay we caught fish until we were ashamed to fish any longer as we already had as many as we could carry away.

We tried trolling and still-fishing with several kinds of bait. The Rev. D.D. out-scored me in numbers by long odds, but I had revenge on him in taking the largest fish of the day, more by accident than skill, I suspect. It was taken by trolling, with minnow for bait; was a bass and weighed two hours after 4¼lbs. Not a large fish, but good enough for "the Joneses."

The fish we caught were bass, perch, sunfish, pickerel, and wall-eyed pike. The most of the pickerel and perch we put back into the lake as we had as many as we wanted without them. LEW WILLOW.

MALVERN, Ark.

VIRGINIA TROUT AND QUAIL.

Editor Forest and Stream:

That I have been busy you may imagine from the fact that I have not wet a line this summer. I was on the Shenandoah, near Elkton in Rockingham county, for a few days in July and hoped to give the bass a trial, but the river was swollen and muddy and so prevented me. Trout with us are becoming very scarce. There are several good streams near this place, about twenty miles distant, but they are so closely fished that it is hardly worth one's while to try his luck. Further away, on the headwaters of the Greenbrier and the Elk, in Pocahontas county, West Virginia, there is still fine fishing; but the new times that have come upon us, with ore washing to befoul the streams, saw mills to sour them and timber cutting to take the cool shades off them, have almost done away with trout in Virginia. One thing in this connection, which I think worthy of the careful attention of men who have the means and a love of fishing and camping in and along clear mountain waters, is that a good many trout streams can be bought. Clubs might be formed, houses erected, and care taken to prevent excessive and improper fishing. Many an angler's paradise might here be preserved to the delight and the preservation of health of many a man who now sits too long at his desk.

One branch of sport still flourishes among us; indeed, under the operation of wise and well executed game laws it grows better year by year. It is partridge (Bob White) shooting. To this I am devoted, and spend many happy days in the fall and winter tramping over the windy ridges and through the wide fields of our lonely valley.

T. S. D.

STAUNTON, Va., Aug. 22.

A LARGE CARP.—The United States Commissioners of Fish and Fisheries has received the following note from Mr. Mark H. Wood, of Barrington Center, R. I.: "I took from my three-quarter acre pond a carp weighing 17lbs." We believe this is the largest New England carp.

BASS FISHING ON THE GREENBRIER.

CINCINNATI, Aug. 26.—When a disciple of Izaak Walton happens across a stream wherein the wily bass is wont to disport in great numbers, and the eager anglers at large know naught of its existence, he is apt to treasure his secret and selfishly monopolize the sport the gods have given. Such monopolistic instincts are not entertained hereabouts, hence this epistle.

The Greenbrier River finds a rugged basin at the foot of that jagged range of the Allegheny Mountains that separates old Virginia from her off-spring. The stream for one hundred miles or more pursues a circuitous course through abrupt cuts and rocky gullies, until it forms a copartnership with the New River, the result being the Great Kanawha. The water, clear as crystal, coming as it does for the most part from numberless mountain springs, rushes madly over a bed of disjointed rocks that form a home for bass unexcelled in its naturalness. From source to mouth the stream is a chain of pools separated only by vigorous ripples that appear to delight in carrying the fisherman's frail craft with an invigorating energy that sends the blood tingling through every vein. For miles the only evidences of civilization are the tracks and occasional trains of the Chesapeake and Ohio Railroad, which company follows the south bank of the river eastwardly to a point near White Sulphur Springs. The lofty mountains on either side, covered with maiden verdure, are occasionally replaced by picturesque rocky upheavals, not unlike the Hudson River Palisades. The presence of man is made manifest by infrequent fields of corn that at once suggest the feasibility of working billy goats in a plow. In close proximity to every corn patch is generally to be found a rude negro cabin, and in the twilight, while the dying embers on the earthen hearths emitted their faint glow and sent aloft, as if reluctant to depart, their ghost-like columns of curling smoke, the soft and sweet melodies typical of the darkies blended harmoniously with the hurrying waters. It is the music of which so much is written and too little remains.

But, what about fishing!

It is pretty hard work to convince the ordinary angler to believe that black bass will bite freely in the month of August anywhere south of the northern Michigan region. Yet, two decidedly amateur fishermen caught more than one hundred bass in the Greenbrier River in two days. To be sure, they were not of the size and weight to be exhibited in glass cases at a nickle an exhibit, yet they possessed the life, energy and ambition that combined make the bass the gamiest fish to be found in fresh waters.

Did they fight?

Well, if snapping in twain two sturdy rods can be accepted as conclusive evidence, they are fighters of the Sullivan school. Of course, on account of the rocky bed and constantly recurring ripples there is more strain on the rod than is experienced in lake fishing, where plenty of water will permit the free use of the reel. A taut line and but little play may abbreviate the pleasure experienced while landing the game, but the enervating aggressiveness of a short struggle more than counteracts any lack of fun that may arise because of the absence of a superfluity of water.

Here is a ripple, probably two hundred feet in length, that carries the angler's craft at break-neck speed, more enlivening by far than shooting Lachine Rapids on a Royal Mail Line steamer. The sturdy oarsman steers deftly in and out—now to the right and back to the left—narrowly missing huge sunken boulders that would certainly bring to grief an inexperienced pilot, while from the stern of the boat the fisherman has thirty or forty feet of line trailing through the startled waters. Suddenly the craft darts into smooth water, a pool of light green crystal, and a sharp tug at the line indicates the presence of the enemy. "See him rush!" "Give him line." "There he goes." "Reel him in." In his mad career he endangers the safety of the line among the rocks on the south bank. The boat is propelled slowly to what might be termed the leeward of a mass of hidden rocks, and the last round in the brief battle begins. Slowly but surely the line is taken in, care being exercised in avoiding the sharp edges of the jutting stones, until nothing remains but to land the boy. Yes, he's landed, proud and brave as when in his element, he leaps, turns and twists in the bottom of the boat, the bright rays of the sun greatly increasing the wonderful beauty of his glistening scales. "How much does he weigh?" "Two pounds, sartin," replied the ancient guide, with an air of positiveness that left no doubt as to his having been there "many a time."

An hour later, Mr. Fish, fresh from the frying-pan, tickled the palate as ne'er a morsel e'er tickled without the precincts of Epicurus' pantry.

Alderson, W. Va., is the center of the fishing region, and anglers may be certain of receiving courteous attention at that pleasant little place. VAN.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 27.—Mr. J. M. Clark of this city, well known in bait-casting circles, has gone to Trout Lake, Wis., after mascallonge. If he can get boats and a guide there he will probably go on up into the Manitowish country, and should there have good sport if the nights have grown cold enough this early. I have taken pleasure in directing a party of gentlemen from New York State to these same waters, and hope they will all have good luck.

Messrs. C. D. Gammon, H. D. Nicholls and Will Cribben have left these parts for an unknown region in Canada, via Grand Trunk Railway, after trout. This was the party which I was to have joined on a grayling trip to Michigan last week had not other developments prevented. Their change of base was decided upon very suddenly, and as the legal season was nearly out they could not wait for the writer, who can only hope they may strike it all right.

Mr. W. R. Rittenburg, of Fonda, Pa., called on me today to ask where he could find good fishing for bass near Green Bay or Oshkosh, Wis. I sent him to Neenah, and he should meet success there during his stay of a week or so. Mr. Rittenburg is of experience with the bass of the Susquehanna, and it is hoped he will find the right reefs in Winnebago.

Mr. John Soderberg is lately back from a week's stay at Cedar Lake (on the C. and A.—not the Cedar Lake close to Chicago) where he took my advice and went for a rest and a bass fish. Mr. Soderberg reports plenty of rain, snakes and frogs, but few bass.

Mr. W. U. Low, Hank Smith, F. C. Donald and C. S. Burton tried Cedar Lake also a couple of weeks ago. They caught one bass, lost another that was hooked, and Mr. Law stole one out of Ed. Varu's ice-house, and that was all they caught. Times have changed since my friend Harryman and I were there on the Fourth of July. The cold weather has probably driven the bass out of the rushes into the deep water.

Mr. O. N. Blomgren, of Blomgren Bros. & Co., this city, is just back from a four months summer journey in Sweden, where he did some fishing. Mr. Blomgren says that owing to the strict enforcement of the game and trespass laws in that country the fishing is very good there, while in regions here not settled for anything like the same length of time the streams are utterly exhausted. He had fine trout fishing in streams that were preserved by the landowners, taking some very fine trout on some American flies that he had carried with him. The Swedish trout, however, like their American cousins, preferred plain worms. The Swedish angle worm he found much like our angle worm, but the Swedish trout flies were far clumsier than ours. The anglers there paint their rods a light gray or slate color, so as not to alarm the trout. The trout in the language of that country is called "lax," and the pickerel, of which Mr. Blomgren also caught some good ones on the American skinner spoon, is called "gedda." Both the trout and the pickerel he describes as being very similar to our fish. A singular feature attended this fishing, which was nearly in the land of the midnight sun: there was almost no night at all. Mr. Blomgren caught trout between 10 and 11 o'clock at night, and even made some very successful photographs at a quarter of ten o'clock at night. He describes the country as very beautiful in that region, southwestern Sweden, near Ulrikshamn. The salmon streams, further north, he did not think were leased or preserved. There were wild deer in the mountains near by, and in the evening they often heard the crowing of the great grouse, the "cock of the woods," or capercailzie, known in Sweden as the "chedde." This bird is so shy that it is next to impossible to shoot it in the day time. It is shot on the roosts by night, in the way that is so deadly to our wild turkeys. Mr. Blomgren is delighted with his trip, and thinks Sweden a fine place for an angling or touring American to visit.

E. HOUGH.

ANGLING NOTES.

THERE is a report, which seems to be authentic, that on Aug. 11 a small-mouth bass was killed in Lake George that weighed 7lbs. 14oz. The only thing we know that would cast any doubt on this story is that the angler's name was Billy Patterson. Black bass are rather scarce in this lake, but like the trout in Raquette Lake, when you get them they are big ones.

Mr. A. F. Delafield, a prominent Connecticut angler, has just returned from Lake St. John. He reports landlocked salmon very abundant, but small, seldom running over 2lbs. in weight. They seemed to prefer small flies and the best killing one was dressed on a No. 6 Sproat, with turkey or mottled peacock wings, yellow body and black hackle, and with junglecock shoulders. His experience was, that unless one belonged to one of the numerous clubs that control the rivers emptying into the lake it was impossible to obtain any trout fishing.

The reports of the large trout caught in Lake Edward seems to be greatly exaggerated. One gentleman states that after fishing there for three consecutive seasons he has yet to see a trout brought in over 3lbs. in weight, and none are taken on the fly.

The early cold weather has made excellent fly-fishing throughout the Adirondacks. Mr. W. Holberton states that he never enjoyed better fly-fishing than he had last week at Brandreth Lake. He caught all the trout needed in camp, and never had to keep any under ¾lb. in weight. Once he had on two, each over 1lb. These two fish on a 4½oz. rod gave royal sport.

Mr. G. M. Fairchild, Jr., writes from Val Cartier, Quebec, that the trout fishing there is superb; so it looks as if the many anglers now about starting for the September fishing in Maine and Canada will have splendid sport. Deer are very plenty in the Adirondacks and in fine condition; many are already getting their blue coat.

It seems a great shame that the bass in the Walkill River cannot be better protected. The farmers along that beautiful stream are poaching in the most outrageous manner. This is one of the best waters for fly-fishing near New York, and if properly protected would afford fine sport for hundreds of anglers.

The following is an excellent and well tested list of flies suitable for Maine fishing during this month: Dark-Montreal, scarlet-ibis, professor, blue-jay, silver-doctor, fairy, grizzly-king, brown-palmer, brandreth, also the coachman and white-miller for fishing at dusk. Of course there are many other excellent flies, but this is a safe list for those who have not had much experience in Maine waters. These flies should be dressed on No. 6 Sproat hooks, unless the angler uses the patent fluttering flies, in which case No. 8 will be large enough. It is well to take a few flies in addition, dressed on No. 3 or 4 Sproat hooks, to be used when the water is rough or deep. Large trout will not rise from deep water at small flies as a rule. The best flies to use on large hooks are the brandreth, Parmachene-belle and white-miller. The large flies should be allowed to sink well under water before the recovery is made. Leaders for this work should be at least 6ft. long, and better 9ft., and they should stand a dry test of at least 4lbs. Forty yards of waterproof line, not tapered, on a good click reel with an 8oz. split-bamboo or hand-made wood rod, together with a large landing net, completes the outfit.

SCARLET-IBIS.

MESSRS. BUZZILENI AND SPADAVECCHI went fishing in a catboat last Sunday, and when they were pulled out of the water by the rescuers it was impossible to tell which was Buzzivecchi and which Spadaleni.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail [illegible] application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

THE PIKE OF LAKE MELISSA.

Editor Forest and Stream:

While Dr. Davisson and I were fishing in the chain of lakes south of Detroit City, Minn., we put in one day at Buck's Mill on the outlet of Lake Melissa. The stream is dammed at a narrow place and several hundred acres are overflowed, the water backing up nearly to Lake Melissa. The water in the pond is perfectly clear, but has a peculiar yellowish tinge that one sees sometimes in sloughs. There are floating islands of grass in the pond and tamarack trees grow in and around it. After a furious rainstorm we started fishing for big-mouth bass and caught several very large ones. In the deepest water Dr. Davisson made a cast and hooked what we supposed was a large bass, though he did not jump as the big bass of these waters always do. After a hard fight which tested all of the Doctor's skill he brought him to the landing net and I dumped into the boat a 4lbs. wall eyed pike, almost black on the back, a blackish bronze on the sides and shading off into a white on the belly. We anchored at once and caught several more, all large ones, regular demons to fight and game as any bass that ever swam, only wanting their acrobatic qualities to make them superior. In the strange colored water, as they darted around the boat fighting desperately after being hooked, they looked as if made of gold, and it was a sight that would make even a pot-fisherman's blood tingle. Mr. Payne and Mr. Hitchcock, of Casselton, Dakota, who were anchored near us, also caught several.

I have caught many wall-eyed pike, but never caught one colored as these were. The pike we caught in the lakes near the pond were the common, every-day, white-sided pike, with only a suspicion of bronze on their sides. Whether it was a different variety of pike, or whether living in the strange colored water gave them the deeper markings we were unable to find out. Their fighting abilities surprised us more than their coloring, the ordinary pike bearing about the same comparison to them that a rock bass would to a 5lbs. small-mouth.

The fish in these lakes are all game and there is splendid bass, pike and pickerel fishing to be had in Lakes Sally and Melissa, and the smaller lakes near them. We caught many bass that would weigh over 4lbs. and pickerel that would weigh 10 and 12. We hooked larger ones, but they got away with our light tackle. The lakes are being seined and the people residing near there seem perfectly indifferent to it. Several seine-reels were in plain sight on the shores of Lake Melissa the whole three weeks we were there. A. E. GOSHORN.

WINTERSET, Iowa.

BLUEFISH IN BUZZARD'S BAY.—New Bedford, Mass., Aug. 20.—Although Buzzard's Bay has been well stocked with large menhaden during the season, the bluefish have shown a much greater fondness for the young English herring. These herring are about three inches long, and are very abundant this year. For the past week or so the bluefish have been feeding, also, upon the very young menhaden, those a few inches in length, of which there are more in the bay at present than there have been for a number of years. Bluefish are very plentiful, and although they may frequently be seen rushing the schools of young English herring or small menhaden, I have not seen or heard of their making much of a raid on the schools of full-grown menhaden. This may be due in part to the fact that the bay bluefish generally run rather small this year, and are too lazy to bite a fish in pieces before swallowing it. The value of knowing that the bluefish are feeding on the smaller fish does not seem to be fully understood by the fishermen, as they, with few exceptions, stick to the eel skin drail or squid, when if they would use an imitation fish not over 5in. long, made of block tin, at least three fish would be hooked to one with the eel skin drail. To meet with the greatest success this tin drail should have indentations cut or pressed on it to represent the head, scales and eyes; it should be scoured bright with back of a knife, and have a piece of eel skin 1½ to 2in. long and ¼in. wide hooked through the middle, to make a proper tail for the imitation fish. When trolling let the boat sail very slowly, so that the drail may sink into the school of bait, as most fish prefer taking their food under water instead of coming to the surface to strike it, and thus getting their mouth full of air.—WILLARD NYE, JR.

FISHING NEAR WELLESLEY, MASS.—A good many black bass have been caught lately in the Charles River, Mass. A party living in Wellesley took a string of seventeen large ones from the river recently, and thirteen at another time. These fish ranged in size from 2 to 4lbs. At Natick they have been getting large quantities of white perch. I saw a string of eleven pickerel the other day that were taken from the river, but not one of them had a crooked tail. A peculiarity of the pickerel in the vicinity of Wellesley is the large number of individuals with deformed tails which are sometimes taken. I have been trying to get a specimen for the National Museum for some time, but although I have seen a great many during the past I cannot now find an example. The frogs are of large size and very numerous here this season. I caught one the other day that weighed 17¾oz., and I have made a first-rate model of him. I think a good active man ought to catch from 100 to 300 frogs a day in this vicinity at present. My brother and I caught a large water snake in Baker's Pond, and he has also gone into the model department where he will prove a startling feature.—S. F. DENTON.

COLORADO STREAMS.—I want to tell my brothers of the rod and reel where I have found some splendid fishing. I made my headquarters at Sapinero, Gunnison county, Col., and fishing for a few days in the Gunnison and its three tributaries, that empty within two miles of the settlement. Here the Utah trout were found in abundance. Then I fished up Lake Fork, for 22 miles, as far as Lake City. There was good fishing every mile of the way, and the one daily train is so accommodating as to pick up anglers that make the signal of distress. Lake City is a thriving mining camp, and a day or two can be well spent amid the beautiful scenery of this region. From Lake City a day's ride over the mesa, through a splendid game country, brought me to the head of Savoya Creek, which is literally alive with Rio Grande trout. Two days' fishing down Savoya Creek brought me to the Gunnison, six miles above Sapinero, having spent five days in encompassing the 65-mile quadrilateral.—SHOSHONE.

ON THE KALAMAZOO.

Master, I marvel, how the fishes live in the sea.
Why, as men do a-land; the great ones eat up the little ones.

HURROO, hurroo, for the Kalamazoo," cried John and I, as we stepped from the train at New Richmond, Mich., and gazed upon the beautiful river, in whose limpid depths sported untold numbers of huge bass waiting for our coming. That is the way we felt, anyhow, over the matter, whatever line of reasoning the bass may have pursued.

The Kalamazoo at this point is an inviting one for the angler. With cool water, swift current, numerous deep pools and eddies, and with grassy and shaded banks in long stretches of inviting green, it presented a picture to the long-time city dweller sufficient to make him dance and whoop for very joy, whether he caught any fish or not.

It was not long before John and Izaak, Jr., had their traps toted to the little hotel, and, although it was not far from dinner time, with the angler's usual impatience we had to try the waters at once, but with small success, being rewarded with a couple of half-pounders, which we triumphantly carried back to the hotel as a fore-runner of the big things to come. And this leads me to remark that angling is the art of anticipation combined with the science of realization. But I am bound to say the science part cuts no such figure in the calculation as does the art part. And it is well it does not, as there wouldn't be a fish left in the waters big enough for a kingfisher—no pun intended—to make a dive at.

After our dinner we felt better, and concluded to spend the rest of the day in a sort of experimental trip up and down the river to get the "lay of the land," even if it were water. As an experiment the afternoon was a decided success. We found everything that could be desired except the bass. True, we caught some small ones, one even up to a pound, but that was not what we wanted. We were after those lusty two and three pounders which would churn the water into foam and make the angler tingle from finger tips to toe ends. The bass were there—of course, they were; for hadn't Sid. Jones caught one a few days ago that weighed "nigh on to seven pounds," and Bill Smith seen one as long as his arm; and hadn't little Tommy Tucker caught one of six pounds on a little hook while fishing for shiners? So said the natives, and why should we doubt the statements, seeing we wanted them to be true?

The next day was Tuesday, and we decided to go up stream to where the Rapids River made its junction with the Kalamazoo. There we were assured was good fishing; it was a place where the bass had a sort of camp-meeting place, though we found that an adjournment had taken place before we arrived at the spot. Reader, have you ever had a day when everything went against you, despite your utmost precautions? Well, Tuesday was that sort of a day to us—a regular hoodoo day. Everything went amiss. If we dropped our hook into a likely pool, we would catch a snag. If we ran near the shore, our lines would catch on the bushes. If we pulled a frog out of our sack, he would give a kick and off he would go. But why detail the miseries of that day? Once, as our boat was rounding a point in the river, John had a bite which so excited him that he gave a yank sufficient to land the fish in the next county, only the fish took the frog, not the hook. Hastily pulling into the bank, and grasping a log to hold the boat, Izaak, Jr., cast out after the same fish, and proposed to show John how the thing should be done scientifically. Scarcely had the frog disappeared beneath the surface when there was a good strike, a yank in return, and Mr. Bass was hooked. He was a big one, too, and, after our run of luck, he seemed to be a yard long. The tussle was a sharp one, for no line could be given, or the fish would make for the snags and be lost. So he had to be played in the smallest limits. After some little time he came to the surface, deliberately stood upon his tail, turned a double back somersault, and was gone. "Where is your science now?" said John; but Izaak, Jr., never argues under such circumstances; he simply keeps still. In that pool we had six bites, and lost every one. Could anything be more exasperating? And the same blasted luck followed us to the end of the day. The only revenge we had was at the supper table, when we cleared off the landlady's table as would a flock of Kansas grasshoppers. John was so overcome by the day's luck that he couldn't even wink at the landlady's pretty daughter who waited upon us. Izaak, Jr., himself was not very hilarious, but he was too old an angler to grieve over one day's misfortunes.

The next forenoon we fished down the river, with the net result of a one-pound bass. But John had an experience. We were fishing from the bank, and I was a few rods below him, and between us was a clump of bushes. Presently, from John's direction came a tremendous splashing, and I knew something had been hooked. Rushing through the bushes, I found John with his hat off, hair on end, teeth set, and eyes fixed upon some critter he was trying to keep away from the bank. One glance was sufficient to show what the trouble was—a big dogfish; and all anglers know they fight like the very devil. John thought he had a bass as big as Noah's ark, but when I said "dogfish" his heart broke, and so did the hook, and the "lawyer" was gone. This wasn't the first trip with me for John to catch a dogfish, and if he doesn't stop that sort of work I'll chuck him in the river some time for unsportsmanlike conduct.

The outlook was so poor that after dinner we had a council of war, and decided that the next morning we would go up the road ten miles to Black Lake, where fishing was reported as good. So I wrote a note to Charles the Hunter, at Holland, to have a boat for us when we should arrive. A half day still remained to us, and we concluded to make another trip to the "Rapids" and see what would come of it. As we came to the deep pool where we had the bites of the day before we again tied up, and, by the blue heron of the Kalamazoo! in less than half an hour we had seven fine bass—three of 3lbs. each, two one-pounders, and the rest scattering. How those three-pounders did battle against the bamboo, but to no avail! The bass were the small-mouth, and concerning the discussion of which is the more game, the small-mouth or large-mouth, I think it depends on the water surrounding. Here in the Kalamazoo River, with its swift current, the fish have to hustle for a living. They can't lay around and loaf like the bass in the lakes, but must be up and fioning, or get left in the struggle for existence. The difference between a lake bass and a river bass is the difference between a spindle-shanked dry-goods dude and the pitcher of a base-ball club.

Our three days on the river had a fair ending after all, and yet, the next morning, as the train pulled us away, I could hear John saying something that sounded like "Shoo, shoo, the Kalamazoo!"—this because Izaak, Jr., had caught all the large bass.

The rest of the week we spent on Black Lake with very satisfactory results. The white bass, or silver bass, found abundantly in Lake Michigan, had this year come up to the head of the lake and furnished fine sport to the angler. They are a beautiful fish, gamy as the black bass, and on the table cannot be excelled. They run in weight from three-quarters to two pounds. Friday, however, was another off day in our outing, as we were wind bound all day at Stick-in-the-mud Point on the north shore of Black Lake. Thither we had gone early in the morning, and the wind blew great guns all day, and it was very rough in the evening when we rowed back. John got pale around the mouth when the whitecaps would slap him in the back; Charles the Hunter was tickled; and Izaak, Jr., handled the oars. Saturday afternoon, however, we had fine sport, and took a basketful of fine fish—black bass, white bass and croppie. On that day we had an example of old-time fishing methods. A native was skittering for bass with a cane pole 21ft. 13in. long, and with a line about half that length. He hooked a bass, and then we saw a funny maneuver; he jammed that pole down through the water toward China, until he could reach the line, and then hauled in the small bass hand over hand. We suppose it tickled him, and it most certainly did us.

Our week's fishing was over, and back to the city of Grand Rapids we went, where I had left the good wife and kid to engage in the joys of "visiting," at which Izaak, Jr., is not an expert. But even a week's absence had caused the kid to forget me, and she screamed with fright when I sought to resume our old relations.

But the joys of visiting soon palled upon my tastes and a few days later I was again on Black Lake, accompanied this time by Professor George. But a few years ago this latter individual was somewhat disposed to define fishermen *à la* Carlyle, but he has been converted into better ways through a son who is a great lover of angling. Professor George may now be classed with the fishing cranks, and has been known to rise at 3:30 A. M. so as not to miss the morning rise. Our success continued remarkable, and in one afternoon and the next forenoon we took 90 fish, all bass, except one big sheepshead, which we didn't count. Why is there such a prejudice against this fish? He is clean-looking, makes a good fight, and—but is he good to eat? Some say no and some yes.

But the time for the final reeling in of the line has come, and the tackle is carefully and tenderly laid away for a new resurrection the ensuing year. [Mem.—If there is no angling on the "other side" some fellows will have a mighty lonesome time of it.]

It will be noticed that Izaak, Jr., in this account of his outing has been chary in describing the beauties of nature. He might have dwelt lovingly on the glory of sunset on the waters; of the shimmering light falling through the old forest trees; of the sweet songs of birds—kingfishers and crows; of the hum of myriad insects—most mosquitoes; of the beauty and grace of the clambering vines—generally poison ivy; of the bracing air and glorious sunshine—which burned the skin off the tip of his nose; of the pure and sparkling waters—full of "frog spittle;" and of a great many other fine things which anglers write about when they fail to catch fish. But Izaak, Jr., skipped all these, for his success in angling was a sufficient theme about which to write. And in the long weeks which must intervene before another outing, the scenes and exploits of the present one can be lived over again, which is the privilege of all faithful anglers, and among them is he who signs himself

ST LOUIS, Mo. IZAAK, JR.

FISH AND GAME IN WEST VIRGINIA.—Capon Springs, W. Va.—Four miles from Capon Springs, and reached by a beautiful drive through the mountains, are situated Capon River and lake, where the anglers are now taking fine black bass and perch with a rod and line, using live minnows for bait, and sometimes substituting artificial flies. Yesterday I saw a bass weighing 4½lbs. which was caught there. Capon Lake empties into Lost River, a tributary of the Big Capon. Not far away is the lovely valley of the Capon, celebrated for its brook trout, which are still plentiful enough to attract anglers familiar with the region. Capon Springs is the center of a fine hunting territory. Woodcock are abundant, pheasants (ruffed grouse), and wild turkey were never more plentiful, although not yet in season. Deer and bear are plentiful, and the prospect for the first is unusually good at present. —E. T. M.

AN EEL ON THE FLY.—Norfolk, Va., Aug. 30.—An incident occurred in this neighborhood some ten days since which I think is worthy of record as being something out of the ordinary; and I deduct from it that you can add the eel to the fishes that take the fly. Mr. Joseph T. Allyn, a prominent lawyer of our city and a devotee of Izaak Walton, "may his tribe increase," spent a day at Virginia Beach, and fished in Lake Holly immediately in the rear of the Princess Ann Hotel. He used the fly, and among his catch of bass, strawberry and blue perch, which all rose freely, he hooked and caught an eel of noble proportions, which did some heavy lugging such as an eel only is capable of. The hooking was no accident, but was done "of malice aforethought" on the part of the eel, and he suffered the penalty of his act.—REYNARD.

A horde of noisy sparrows has chosen for a roost a tree in the yard of a citizen of Orange, N. J. For several evenings he has been experimenting with a sparrow disturber, which is at least a partial success. He has tied stout cords to nearly every limb of the tree and gathered the ends at his window. When the sparrows settle down for the night he goes to the window and jerks the string. The sparrows become "rattled" and flit away in the dark. Another citizen of Orange has a fine growth of ivy on the side of his house, and the sparrows have been inhabiting it throughout the year until recently. He has driven them away by going into the attic and sifting Scotch snuff and cayenne pepper down through the vine.

NAMES AND PORTRAITS OF BIRDS, by Gordon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 270 pages, price $2.50. For sale by FOREST AND STREAM.

Fishculture.

MORE ABOUT TROUT CULTURE.

DENVER, Col., Aug. 24.—*Editor Forest and Stream:* Mr. Milton P. Peirce affects much distress because I do not reply to his statements. It quickly became apparent to me in this controversy that Mr. Peirce did not desire information. In his own esteem, he already knew it all; nobody could teach him anything, hence there was only one course left to pursue—adopt his own tactics, meet him with his own weapons. For this I must beg the pardon of FOREST AND STREAM and its readers. Mr. Peirce has but one text and sings but one song—"Trout culture is a failure." True, he introduces variations now and then and spices it with Billingsgate. Yearly progress in trout culture, as reported in FOREST AND STREAM, proves that Mr. Peirce is wrong in his belief, but nothing that I might write would change his opinion. At least, he would not admit that it did. To the public he has proved but one thing—that he, Mr. Peirce, failed in trout culture (as I am assured he failed in various other undertakings), and that he is thereby convinced that every one else must fail in he same way.

I very earnestly concur in Mr. Peirce's desire that those sufficiently interested will look back over the controversy he has raised. In his latest and very labored effusion he has endeavored to escape the real issue much after the manner of the cuttlefish, but he must not forget that he has posed for years as a fishcultural critic, and has assumed the right to abuse at will all who do not share his views, and the time has come when he should make good his claim to that eminence in fishculture which is so loudly proclaimed in his own behalf, but which I have never known to be recognized by any one else. When Mr. Peirce can learn to conduct a controversy in a gentlemanly manner and not by charging all who oppose his views as either callow or with unworthy motives "with an axe to grind," etc., etc., he will receive proper courtesy no doubt and any amount of evidence that he may desire to receive and discuss fairly on its merits; but no self-respecting man, trout culturist or any other, can afford to submit to his dogmatic and dictatorial controversial methods. His intense egotism will not allow him to treat an opponent courteously or fairly, as is evidenced by a perusal of the short-lived "Journal of Carp-Culture and Rural Hydraulics," of which he was editor. The only recourse is to meet him on his own ground, or to treat him as one of those unscrutable inflictions of an All-wise Providence, which must be endured with patient resignation. Unfortunately this latter policy has already prevailed too long in his case, and so it has become impossible for any one having views at a variance with those of Mr. Peirce to mention them without encountering his charges of "self-interest." What has been the object of Mr. Peirce's various schemes and "fads" if not for his own self-interest?

If, however, he ever succeeds in overthrowing the beliefs and methods of such men as Spencer F. Baird, Marshall McDonald, G. Brown Goode, Herr von Behr, Max von dem Borne, Sir James Maitland, E. G. Blackford, Fred. Mather, Seth Green, Livingston Stone, and others, or impeaching their honor or sincerity, he will do it by practical demonstrations and not by abuse or charges of interested motives. The recoil simply knocks Mr. Peirce down every time he shoots. It is true he picks himself up, loads his blunderbuss and picks his flint anew every time, but it is no use, it is only a blunderbuss and it will kick.

His conclusions and prognostications concerning shad and whitefish culture have been in the same vein, though somewhat more indulgent toward the work of the U. S. Fish Commission, in that direction, treating it as being yet in the "legitimate experimental stage." Here are some of his opinions: "We have but little faith in the whitefish experiments, and not much more with regard to the shad." "Does any one suppose that one in fifteen of the plant of young shad made in the waters of the Delaware last season will ever be seen again by mortal eye? We have not the faintest belief that one in one hundred of them survived twenty-four hours after planting." How do these utterances sound in view of our present knowledge of the results in these branches of fishcultural effort? Mr. Peirce violently condemns the catfish for cultivation, although it is being taken up extensively for that purpose as preferable to the carp. He says, referring to the Colorado Fish Commissioner: "If the Commissioner had a practical knowledge of fish-culture, he would let every variety of catfish severely alone, and advise every one else to, as we now do."

It is well known, I am informed, where he is well known, and in fact a perusal of the meagre file of the late "Journal of Carp Culture and Rural Hydraulics," reveals the fact throughout that Mr. Peirce has all his fishcultural life been the "victim" of "jobs" and "antagonisms." He has been suppressed and misrepresented, and there has been an evident conspiracy throughout the fishcultural world to refuse him that recognition of eminence for which he so earnestly yearns, but I hope he will try, in the future, to repress himself sufficiently to enlighten us as to what he has done to deserve such eminence, rather than as to his personal entanglements, enough of which can be gleaned from what he has previously written. Let us know something of the very "valuable experiments of ten years" at Winona, upon which he bases his opinions, and also as much further back as that "long, careful, systematic experience" in fishculture as he likes. Let us know when and where he practiced trout culture. Let us also have some hint of the great fishcultural establishments created by Mr. Peirce, and the results, in tangible shape. Let us have the name of the paper of enormous circulation to which Mr. Peirce contributes, as I for one would be truly glad to subscribe if it comes up to my expectations as a comic publication. I would like to hear, also, what paper it was which said that Mr. Peirce was "generally acknowledged to be one of the best known and most reliable authorities on the subject of fishculture." The allusion to the three great publications of enormous circulation could hardly have referred to the publications of the "Rural Publishing Co.," although the late "Journal of Carp Culture and Rural Hydraulics" is the only publication in which I have ever seen any reference to Mr. Peirce as an "eminent authority" on fishculture. The prospectus to that short-lived record of Mr. Peirce's opinion's contained the following modest reference: "It will be almost superfluous for the publishers to say to most of those who will receive this prospectus that the editor-in-chief engaged by them is one of the best known writers upon fishculture, and is recognized throughout the civilized world as a leading, and in most cases the leading, authority upon carp culture. Fourteen editions, embracing several hundred thousand copies of his writings upon the subject, have been published and distributed in every civilized country upon the earth." As Mr. Peirce was the "editor-in-chief" of that paper during its very ephemeral existence, perhaps he can tell who wrote it.

In regard to Mr. Peirce's boast as to the fishcultural establishments he has fitted up, I have no doubt that his persistent advertisement of himself as the great and only carp culturist (on strictly moral principles), the deviser of the "American system of carp culture and expert in rural hydraulics," has had its effect in procuring him "jobs" throughout the country, and I am willing to add yet further to his fame by advertising him here. It is a great pity the defunct "Journal of Carp Culture and Rural Hydraulics," which was his personal advertising organ, having been devoted exclusively to the extirpation of the "trout culture delusion,"

and to an exploitation of Milton P. Peirce's great "American system," a compulsion of the adoption of the term "food carp" for that of German carp, and the advertising of specialties in the line of rural hydraulic pumps, wind-mills, water-rams, etc., Peirce's only rifle sights and Peirce's only shipping cans, had so brief an existence, for that was a proper medium for his lamentations.

Now, as Mr. Peirce, in his own estimation, holds the exalted position of censor in all matters pertaining to fisheulture, as opposed to that of fishcultural crank in the minds of others, and starts out invariably by referring to trout culture as a snare and a delusion because he found it so, and also by assailing every one who differs from him as either improperly interested or callow, I respectfully submit that it is in order for him to demonstrate his position as suggested above, by something more than mere bluster and assertion When he has done that and adopted a more courteous tone. I have no doubt that the trout culturists of the country will be pleased to gratify him in his very laudable desire to obtain information.

Simmering the whole matter down to its legitimate conclusions, the burning question is, are the great lights of fisheulture (leaving out small fry like myself) all wrong and only selfishly interested in fostering a delusion, and is Milton P. Peirce the great and only inspired, disinterested and altogether lovely prophet in the wilderness of fisheulture? I, for one, am willing to let the defense of trout culture for the present rest upon the opinions of those great fisheulturists of Europe and America whose faith and determination have made fisheulture what it is to-day, on the one side and of Mr. Peirce on the other. And if what I have said in this controversy with Mr. P. is blackguardism, and if he is innocent of that style of argument, I am very sorry and will have to stand the odium. Mr. Peirce has enjoyed a monopoly, without opposition or molestation, for a long time, and if he persists in keeping it up I may have something more to say. WM. N. BYERS.

TROUT CULTURE POSSIBILITIES.

Editor Forest and Stream:

In my numerous articles published by FOREST AND STREAM and other journals during the past dozen or more years, referring to certain phases of trout-cultural delusion, I have occasionally alluded to the possibilities of success by adopting certain lines of action in the matter of improving trout streams instead of continuing the delusion of artificial propagation.

I was born upon the extreme divide of one of the spurs of the Green Mountain range upon a newly-cleared farm. Near the house was a spring, which was the extreme source of a famed trout stream. A little rill ran from this spring past our house and within thirty or forty yards of the same, and my earliest recollections are in connection with this little stream. My brother, some years older, and now a venerable and staid D.D., made and floated tippy little boats and constructed rude little water wheels, which revolved under diminutive falls, for my especial amusement. The result was that this little stream possessed a peculiar fascination for me, and I spent many hours along its margin, and sometimes against the expressed wish of my mother, who died just a month prior to my sixth birthday; therefore, the time of which I write must have been when I was about five years old; but the recollection of the incident which I will now relate is as fresh and vivid as if it occurred but yesterday. There had been a number of frosty mornings, rendering the grass as white as snow, an article with which I had become quite familiar the previous winter by sundry sleigh rides to church, two miles away, and by numerous hand-sled rides managed by my now D.D. brother, who on one occasion, after foddering the cattle, carefully attached the tongue of the hand-sled to the tail-switch of a wild heifer, and, neglecting to remove me from the sled, prodded her with the hayfork after beading her toward the open meadow. For some reason, that heifer manifested the utmost disgust for the rest of the herd and endeavored to create remoteness between herself and them, and still further manifested her disgust by protruding her tongue and giving a blast that would have drowned the loudest horn of Jericho. Instantly the whole herd gave chase, with heads and tails erect. I have witnessed many fast things, from a tonsail iceboat to a note maturing in the bank, but I doubt if even an unfounded rumor ever made such time as that affrighted heifer. And I sat upright on the sled, holding fast to the sides with both hands, and passed through space in a manner which would have astonished a pre-paid half-rate telegraph message. My brother, now thoroughly frightened, called excitedly to me to "let go," but I stuck like a sealed Government envelope, from which has just been omitted part of a communication. The heifer cleared the little trout stream like a wild deer, and at the same time the switch of her tail parted from the sled, which was carried by momentum a long distance down the gentle incline, barely missing several stumps along the route, and finally came to a dead stop in the feathery snow. My brother was following close in the wake of the excited cattle, and although he has since spent many years on the "circuit" and many more as Presiding Elder, I doubt if upon the occasion of belated appointments, he ever made such time as upon that bright winter morning on top of the historic Berkshire Hills, while in his anxiety to ascertain if his cherished sled had sustained any injury.

O yes, I vividly remember that particular locality, but I have somehow wandered from my subject, for I was referring to sundry frosty mornings, and my mother had explained to me the difference between snow and frost, and especially when the latter had melted under the rays of a warm fall morning's sun, and I had been forbidden to go through the wet grass to the little stream to float chips down the ever-varving current. My favorite point for launching my imaginary boats was nearly in front of the house and just below a tiny water-fall which had caused a slight widening of the little stream, perhaps to thirty inches and leaving about twice that length of dead water, some fifteen to eighteen inches deep near the little fall. The bottom of this little body of water was covered with clean gravel. One frosty morning, disobeying the injunction of my mother to not go through the wet grass, I gathered an armful of chips and went down to my favorite launching ground. As I looked over the bank I was startled to see two large fishes dart under the projecting bank where I stood. I had frequently seen small fishes there, but never before such large ones, which I now think were ten or twelve inches in length. My childish curiosity was excited, and I lay down in the wet grass upon that bank and peered over into the water, and soon saw the noses of the two fishes gradually working out to the center of the gravel-bed, over which one of them slowly passed with a peculiarly gyratory motion and the other closely followed and soon commenced roiling the water, as I thought. I saw this operation repeated two or three times, when my mother appeared upon the scene and walked me to the house in quick time, notwithstanding my attempts to acquaint her with what I had seen. I subsequently crept carefully to that place and again saw the fishes engaged in these interesting operations, which nearly twenty-five years later became clear to me, under the explanations of Drs Ackley and Garlick, of Cleveland, O., the fathers of American fisheulture. I had seen, when but five years of age, a pair of trout, in their native haunt, engaged in the interesting operation of propagating their species. Since my first lessons under Drs. Ackley and Garlick, in 1853-4, I have frequently repeated my childhood exploit of watching wild trout on their spawning-beds, both before as well as since conducting their artificial propagation.

Some ten years ago, while making special investigations upon the subject of fish and fisheries for the last census, I visited the identical spot where as a five-year-old child I unconsciously witnessed for the first time the operation of propagation of brook trout. It was in the summer time, and I found only a nearly dry pile of gravel. The removal of the surrounding forest caused the spring to dry up during the summer, and the real living head of the still fair trout stream is another spring fully half a mile below, and which was formerly a tributary and at a point where respectable-sized trout were frequently taken. I have no doubt but what they still seek that point for propagating purposes. About a mile from the latter point there is another spring upon a farm owned many years by a relative, and where I have spent many a month during a term of years. This spring is the extreme head of another tributary to the same trout stream, and this tributary abounds in spawning places up to and including the spring in question. I know of scores of springs in that immediate region which head prolific little trout streams, where thirty or more years ago it was a common practice to catch trout to and including the head spring. Farming operations practically destroyed the fishing in most of them, but they have many of them of late been coursing through what have been termed "abandoned farms," which for many years have been growing up to brush and in some cases to quite a respectable growth of young timber. The trout have been gradually increasing, and the present season are reported as plentiful as ever.

Now, I am aware that I have been quite diffuse, even to tediousness, in this communication, but it has been a simple statement of facts, called out in part by the attempt of one of your correspondents to belittle my almost lifetime studies and investigations, particularly in connection with trout culture, and for many years before I wrote a word upon the subject. I have visited the region named every three or four years, and during the past twenty-five years have from time to time visited all the New England States, and almost entirely in the interests of fisheulture. My investigations have also embraced several other States containing trout waters, notably New York, New Jersey, Pennsylvania and West Virginia, in all of which I have conducted personal examinations and methodical investigations, while my extensive investigations by correspondence embrace every State and Territory of this country as well as all the leading countries of the globe. The result of these investigations is overwhelmingly conclusive, that artificial trout culture is at best a gross delusion. But, my investigations have taught another valuable lesson. By following nature's lines and profiting by her lessons, hundreds of trout streams can be restored to their old-time fertility. All through the mountain towns of New England where population has dwindled and farms have been abandoned, this recuperation of trout streams is being accomplished naturally. In hundreds of localities it can be accomplished artificially, and particularly when the stream can be controlled by fishing clubs or associations. I have during the past dozen years made a number of plans for this purpose. In the concrete, these plans consist in meandering the streams so as to double or treble their length, and, of course, their producing capacity. To deflect from the main stream little rills, running them when practicable a considerable distance before turning them again into the main stream. These little rills will be sought by the breeders in the spawning season, for their instinct teaches them to search for solitary pools where they will not be disturbed and where their spawn will not be devoured by other fishes Of course, provision is made for numerous little falls for aeration of the pools into which the falls should plunge. This is necessary both in the main stream and in the spawning rills And there must be innumerable hiding places prepared for the wary fish. Finally, an abundance of rapidly growing shrubbery and trees must be planted on the sunny sides of the serpentine trout preserve, for shade is an absolute necessity, in order to keep down the temperature of the water. All through the northerly portions of this country hundreds upon hundreds of miles of productive trout streams can be maintained for all time to come, unless a radical change comes over our planet. If one-tenth the sum which has been wasted in the delusion of artificial trout culture had been expended in the direction indicated, there would be a hundred miles of productive trout streams where but one now exists. MILTON P. PEIRCE.

FIXTURES.

DOG SHOWS.

Sept. 1 to 5.—First Annual Dog Show of the Youngstown Kennel Club, at Youngstown, O. S. D. L. Jackson, Sec'y.

Sept. 2 to 5.—Dog Show of the Wilmington Fair Association, at Wilmington, Del. F. R. Carswell, Supt., 101 West Sixth street.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. C. H. Corbett, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 22 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Sept. 23 to 26.—Third Dog Show of the London Kennel Club, at London, Ont. S. F. Glass, Secretary.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer Superintendent.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunoy, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brought, Secretary.

DOG TALK FROM ENGLAND.

HANLEY, England.—Mr. F. W. Dunning, the owner of Duke of Wellington and other good St. Bernards, has had the misfortune to lose his promising puppy, Baron Stanley (Sir Bedivere—Hykeham Queen). He contracted distemper at Leeds show, another victim of the folly of showing puppies.

It will be of considerable interest to American readers to hear that Mr W. Rust's Scotch collie Moonstone, bred by Mr. Geo. A. Fletcher, of Milton, Mass., by Scotson out of Moonlight, has recently won third at the Tunbridge Wells show. Moonstone won second to Chestnut Hill Kennels' Scotilla II. at Boston, Mass., 1890.

Mr. Mitchell Harrison's Christopher will remain in England, and personally I think Mr. H. is wise in his decision. There are more good stud dogs in the States now than we can possibly use. Scotilla can take his place very well, though I do not claim that he is as good.

I am pleased to see another American writer advising St. Bernard breeders to purchase good bitches. "Manhattan," in the *Canine World*, has taken up the question, and it is indeed a pity that the breeders cannot realize the importance of following his advice.

Mr. Shillcock, of Birmingham, has sold the St. Bernard Lord Hartington to some unknown American gentleman. Lord Hartington is by champion Plinlimmon and out of Florentine. He is orange and white in large splashes, with well marked head, good bone and head, 32in. standard, and I should judge about 180 lbs. weight. He has done quite well here in the stud, and has won a few firsts on the bench.

The new paper, the *Canine World*, is pitching into the English Kennel Club in great form on the score of raising objections to some entries and not noticing others just as objectionable.

Dublin Scot, the well known collie, has again changed hands. Mr. W. P. Kidd, of Manchester, has purchased him of Mr. Stretch.

The show of 50 English mastiffs to be given at Crystal Palace this week as a compliment to Dr. Derby, is indeed a compliment of the highest quality. There will be no competition, simply a collection for the Doctor's inspection.

I note "Hibernia's" article on beagles in FOREST AND STREAM just received. As I wrote in my last batch of notes I have not seen a single beagle in England yet. When I do I will have more to say on the subject. Regarding type I would not vote for either of the three. I should vote for beagle type which is neither bloodhound, harrier nor foxhound.

"J. W.," in his note on "The Dog Millais-nium" has caused many a smile in dog circles on this side. A little more of that style of journalism would make the journals more readable.

I visited the Crewe show last week. The horses, cattle, sheep, pigs, poultry, implements, etc., were a grand lot, one of the finest collections I ever saw, rivaling the Chicago cattle show, but the dogs were a very poor lot; 148 dogs and about 20 good ones in the whole lot. Mr. Astley judged all classes except collies. He did very well with the terrier classes, but must have had his eyes shut when judging the St. Bernards, field spaniels, etc. In black field spaniels the vhc. dog was an easy second. The winner in St. Bernard bitches, J. H. Ellis's Septima, has the advantage in nothing else but size. She is narrow in skull, long in muzzle, no collar and no depth of body. The winners in collie classes were mostly Mr. Stretch's and showed considerable quality. There was one good pointer, one of Mr. Norrish's breeding. The English setters were some well bred youngsters by Monk of Furness and Sir Frederick, and showed considerable quality. In the mixed setter class, second prize was given to the worst looking specimen of a dog that I ever saw a prize awarded to. Had it not been labeled a Gordon setter I should have called it a mongrel. In a few weeks we shall see some dog advertised with a long list of winnings, among them first at Crewe, 1890.

Mr. Harris's bull terrier formerly called White Wonder, that was protested against at the Boston show for being deaf, was deaf when born. He was bred by Mr Pratt, of Oak Hill, Stoke-on-Trent. He is by White Sam out of White Rose. Mr. Pratt thought that the puppy was deaf when born and sold it to Mr. Hughes, a postman at Stoke, for £1. The postman soon discovered that the puppy was deaf, but kept the matter as quiet as possible, but in spite of his precautions the dog finally became known throughout the section as the "postman's deaf dog." Mr. Hughes made up his mind to get even with Mr. Pratt and laid his plans very shrewdly. He wrote Mr. Heath, the former owner of Miss Glendynne, now called Attraction, Enterprise and other good ones, and got him to make a date to call and see the dog. He then goes to Mr. Pratt and tells him how wonderfully the puppy has improved and that Mr. Heath is talking of purchasing him. (Mr. Heath and Mr. Pratt were at that time trying to outdo each other.) Mr. Pratt not wishing to see his rival with the best dog in the country and supposing the puppy must have outgrown his deafness purchased him on the spot for £10. Of course he soon discovered that the dog was totally deaf and threatened suit, but as he had first sold the dog when deaf he was advised to let the matter rest. This much I know to be the facts. It is furthermore stated by those who ought to know that the White Wonder was soon after reported dead and the same dog was represented as another dog under another name. I have not questioned Mr. Harris in regard to the affair, but if he paid the price stated, £80, he was badly sold, whether he knew him to be deaf or not. If Mr. Hinks sold the dog to Mr. Harris and did not say anything about the deafness he is a swindler of the first water. Hinks & Pratt are one firm. American readers must not get this Hinks mixed up with James Thorpe Hincks, the Clumber man, at Leicester, or E. C. Hincks. It is Fred Hinks that sold White Wonder.

LONDON, Aug. 18.—At a special meeting of the Great Dane Club, Aug. 7, it was decided that hereafter any great D[illegible] with a cankered mouth, or with a joint or any part of tail removed, shall not be eligible for competition.

Although England can beat us in number and quality of field spaniels, Clumber spaniels and Irish water spaniels, it appears they can't afford to encourage the breeding of them. It seems decidedly strange to an American to see Clumbers and black and liver fields all run together in one class and called "field spaniels." And it is no sinecure for the judge to pick out the winner and give any satisfaction. It is not so in the very largest shows, but in small shows of 500 entries I have seen it many times.

"J. W.," in FOREST AND STREAM of July 31, gives Lord Calthorpe's weight at 208lbs. and Baroness Cardiff at 186. If Lord Calthorpe can show an ounce over 186 I will agree to eat every atom of him, with the owner's permission.

NAMOOSH.

THE ENGLISH SETTER CLUB.

THERE will be a meeting of the English Setter Club at the office of the secretary, 50 Broadway, New York, Sept. 25.

The Executive Committee have prepared the following circular, which should be promptly responded to by every lover of the English setter: "Office of the English Setter Club, New York, August, 1890. My Dear Sir: You will have noticed by the recent issues of interested papers, the formation of an English setter club, its organization and membership, which we hope meets your approbation. The officers elected and the committees appointed are fitted for their several duties, and together with these and the organizing members, composed of many of the principal breeders and owners from all sections of our country, we desire to form by additional membership and influence, as we should, the strongest specialty club in existence. To this end we appeal to every lover of the English setter to join us, that we may, by hearty co-operation and concerted effort, effect much that cannot be done otherwise. Among these things we mention the adoption of a standard, selection of judges for bench shows and field trials, a proper registration of the English setter, and what should constitute one (ridding ourselves of many that are improperly classed, and not include everything, as now, that is not a black and tan or an Irish setter), establishing, where possible, the right of property in dogs, and proper transportation of them by railroad and express companies, appointment of local committees to look after the care of English setters at bench shows, and to report any negligence or abuse to the owner; in fact, to take an interest in all matters that may tend to the improvement and care of this breed, and all will recognize that to best accomplish these objects, the largest possible influence of membership is needed. The membership fee and yearly dues are placed at a low figure, that none may excuse themselves on account of it. We ask your favorable consideration of this invitation to join us in our efforts for good to our favorites. An early reply is respectfully solicited. By order of the Executive Committee."

"SPECIALISM" IN DOG SHOWS.

WE hear a good deal of this question of "specialism," and the criticisms passed on the so-called "specialist" are quite as often as not condemnatory. On the face of it one would be inclined to say at once that there can be nothing in such complaints. Specialism, as it is called, is in truth nothing more than the division of labor. And any one would certainly suppose that a man would judge a particular breed better if he did not burden his mind with the study of breeds having nothing in common with that one. No man in his senses would deny that a man might be perfectly well fitted to judge a class of shorthorns and quite unfit to judge Channel Island cattle. We should get some rather odd results if a judge of Brahma fowls was turned on at Birmingham to award the prizes in the game classes; and so might multiply instances *ad infinitum*. Yet on the other hand vague discontent at a system generally has some element of truth underlying it. To intrust our shows to so-called "all-round" judges would be putting the clock back ten years. Still it is worth while to see whether "specialism" has not its dangers; if so, what they are and how they may be guarded against. Now to begin; there are breeds and breeds. There are breeds into which arbitrary points reckoned as merits by some accepted convention among breeders and exhibitors, but having no obvious effect either on the utility or beauty of the animal, enter. Now here the man who is not a specialist is obviously helpless. No amount of experience gained, say, among setters, will teach a man whether a pug's head, or tail, or color is of the correct pattern. It seems to me, however, that this in itself helps to illustrate the dangers which attend specialism, and which are present to the minds of those who denounce the specialist judge. There are many points where the most important points are those which plain common sense shows are needful to the working of the animal, and where convention has established certain minor points as desirable. Take, for example, an Irish setter. He must have certain essential points of make and shape needful for pace and endurance. He must also have a certain type of head and a certain shade of color as indications of purity of breed. Now these last are points where no knowledge derived from any other breed will help a judge. But in such points as shoulders, legs and feet, and the like, the wider the judge's experience, the more equal will he be to the task of criticism. If a judge of hounds were to say "I really can't judge setters; there are several detailed points proper to that breed which I don't understand," I should say he showed his sense. But if he were to say "I know nothing about these dogs," I should be tempted to say then there is a good deal about your own business that you also don't know. And I should certainly admit this. If a man had by any misfortune to travel somewhat out of his own province to judge a breed with which he is thoroughly conversant, the man who does know three or four breeds will do better, or perhaps one should say fail less, than the man who only knows one.

On the other hand, there is, as it seems to me, this overwhelming argument in favor of the specialist judge. A man can hardly have acquired the minute knowledge necessary for a judge—the habit of patient and thoughtful comparison, except by breeding and keeping continuously the kind of dog that he professes to judge; and the man who has done this is, in nine cases out of ten, a specialist. The man of many breeds is almost sure to be a man who may love dogs, but who loves winning prizes better; and of such, it seems to me, judges are not made. The man who really loves dogs for their own sake, to whom the task of comparison is really a labor of love, is almost sure to settle down—if he does not begin—with a special interest in a very limited number of breeds. Still he need not be absolutely or wholly a specialist. It is an old description of education that it should be "something to everything and everything to something." So I should say of the properly equipped critic of dogs. Only the "something of everything" will not be enough to enable him to judge with credit to himself or satisfaction to his neighbors.

The dangers of specialist clubs are, it seems to me the same. There is no doubt a fear that they may teach exhibitors to over rate what I have before called the arbitrary and conventional points of the breed. And there is yet a further danger. It is the business of a specialist club to be for its own breed the responsible department in the dog showing-world, to protect the interests of the whole body of exhibitors in that breed. And thus anything in the nature of exclusiveness is fatal. A club which professes to represent the whole body of exhibitors and really represents a section is worse than useless; it is misleading. And this, it appears to me, is a very strong argument against the policy of a club which refuses to accept any judge for its own breed who is not a member of the club. I know that I differ here from persons who speak with high authority. Certainly let a club draw up and revise a list of judges; let it encourage shows to adopt that list and exhibitors to insist on it. But good judges may stand aloof from the club, possibly not from any personal hostility to it, but from a score of reasons which do not in the least affect their fitness for the post. A specialist club ought to aim at making every breeder and exhibitor, even if he remains outside the club, into an ally.

The question of restricting certain prizes to members of the club seems to me to be on a wholly different basis. That is really a question of finance. If a club by so doing can attract fresh members, and thereby increase their funds and consequently its utility, let it do so. If the promise of a prize limited to members brings subscriptions of an equal amount the prize is self-supporting, and those who are not eligible for it are no worse off than they would be otherwise. It is not a question whether there shall be a close prize or an open one, but whether there shall be a close prize or no prize at all.

Whatever may be the dangers or drawbacks of the system, I cannot doubt that specialist clubs have done, and may do, great good for breeds in which they exist. It is a good thing to keep up personal communication and exchange of ideas between breeders, to set a number of men working on what one may roughly call a co-operative system for the same object, to substitute a corporate interest in the whole breed for a merely individual interest in one's own kennel.—*J. A. D. in English Kennel Gazette.*

WILMINGTON DOG SHOW.

THE dog show in connection with the annual fair in progress at Wilmington, Del., this week was opened on Tuesday morning. The catalogue showed a total of 190 entries, and the dogs were benched on the permanent stalls used last year in the cool ground floor of the large exhibition building. Mr. F. R. Carswell, of Wilmington, was superintendent, and he cannot be too highly complimented on the way he managed the whole affair.

The judges were Dr. H. Clay Glover and Mr. R. F. Mayhew, and they divided the classes about half and half. Dr. Glover worked by no means as rapidly as Mr. Mayhew, and a few of his classes were not judged until Wednesday morning. The following is a full list of the awards made up to 6 o'clock on Tuesday evening, when the fair closed for the day. As will be seen by the names in the list the quality of the dogs is excellent, and we may add that the judges' awards were well received by all hands:

MASTIFFS.—*Dogs:* 1st, Kensington Kennels' Brother; 2d, H. Barnett's Lu Lu; 3d, Woodbury Kennels' Don. *Bitches:* 1st, D. Woodson's Lady Caution; 2d, H. Barnett's Lady Tioga. *Puppies:* 1st, H. Barnett's Lady Tioga. Best in show, Lady Caution.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, Swiss Mountain Kennels' Archduke. *Bitches:* 1st and 2d, W. S. Diffenderffer's Blodwin and Lakme. Best in show, Blodwin.—SMOOTH-COATED—*Dogs:* 1st, W. S. Diffenderffer's Lord Hector; 2d, Diffenderffer & Shewbrooke's Lord Clifton. *Bitches:* 1st, Woodbury Kennels' Queen Bess. Best in show, Lord Hector.

GREAT DANES.—*Dogs:* 1st, Weisbrod & Hess's Marco; 2d, J. H. H. Maenner's Pedro. *Bitches:* 1st, Weisbrod & Hess's Flora; 2d, C. Heimerle's Irene. Best three, J. H. H. Maenner.

DEERHOUNDS.—1st, E. W. Jester's Thora III.

POINTERS—CHALLENGE—LARGE—1st, S. W. Pentz's Brake. SMALL—Hempstead Farm Kennels' Queen Fan.—OPEN—LARGE—*Dogs:* 1st, J. H. Winslow's Tempest; 2d, S. D. Riddle's The Beau; 3d, J. S. Colton's Prince. *Bitches:* 1st, Fleet View & Reading Pointer Kennels' Belle Randolph; 2d, W. H. Hyland's Laverack Elsa. SMALL—*Dogs:* 1st and 2d, W. H. Hyland's Pommery Sec and Ossining; 3d, Fleet View & Reading Pointer Kennels' Spot Dash. Reserve, J. S. Summer's Bang of Kippen. *Bitches:* 1st, Hempstead Farm Kennels' Merry Legs; 2d, J. H. Winslow's White Fawn; 3d, J. H. Tindall's Princess Bang. *Puppies:* 1st, W. H. Hyland's McGinty. Best dog owned in Delaware, Prince; bitch, Princess Bang.

ENGLISH SETTERS.—*Dogs:* 1st and 3d, St. George Kennels' Dick Roy and Don Del; 2d, W. H. Wallace's Punch. Reserve, D. C. Brown's Dandy. *Bitches:* 1st, E. Churchman's Ruby; 2d and reserve, St. George Kennels' Miss Dido and Maggie; 3d, G. W. Stanley's Melba. Very high com., Woodbury Kennels' Mollie. *Puppies:* 1st and high com., T. H. Hardy's Sam Randall and Blue Girl; 2d and high com., W. R. Fiele's Ivy and Dean; 3d, W. H. Wallace's Oakingham.

IRISH SETTERS.—CHALLENGE—E. Maher's Larry S.—OPEN—*Dogs:* 1st, I. W. Kemble's Major; 2d, C. Stevenson's Don. *Bitches:* 1st, W. W. Kendall's Leda Glencho; 2d, I. W. Kemble's Madge; 3d, G. W. Bush, Jr.'s Norah. *Puppies:* 1st and 2d, A. W. Thayer's Trix and Mona; 3d and very high com., W. F. Aschenbach's John L. and Nellie.

GORDON SETTERS.—CHALLENGE—1st, H. F. Smith's champion Roxie.—OPEN—*Dogs:* 1st, H. F. Smith's King Item. *Bitches:* 1st, H. F. Smith's Countess Roxie; 2d, J. E. Gans's Ruby Royal.

FIELD SPANIELS.—OVER 28LBS.—1st, W. H. Smith's Lady Daffodil; 2d, T. Wallace's Pascha.

COCKER SPANIELS.—OPEN—*Dogs:* 1st, Barnes & Rumney's Red Doc; 2d, Swiss Mountain Kennels' Toady Obo. *Bitches:* 1st, Barnes & Rumney's Hazel Obo; 2d, Swiss Mountain Kennels' Waggles. *Puppies:* 1st, Barnes & Rumney's Banjo; 2d, Swiss Mountain Kennels' Wiggles.

COLLIES.—CHALLENGE—Chestnut Hill Kennels' champion Scotilla.—OPEN—*Dogs:* 1st and very high com., Chestnut Hill Kennels' Roslyn Wilkes and Colonel Scot; 2d and high com., F. R. Carswell's (agent) Major J and Bonkie; 3d, J. Watson's Blair Athol. Reserve, Hempstead Farm Kennels' Hempstead Zulu. *Bitches:* 1st and 2d, Chestnut Hill Kennels' Cora II. and Jakyr Dean; 3d and reserve, F. R. Carswell's Lady Moll and Iduna. *Puppies:* 1st and 2d, A. R. Kyle's Attila Wonder and Noble Wonder; 3d, F. R. Carswell's Rutland Pet.

BULLDOGS—1st and 3d, C. D. Cugle's Bombardos and Derby Nancy; 2d, Woodbury Kennels' Sykes.

BULL-TERRIERS.—1st, 3d and reserve, Woodbury Kennels Meg Merrilies, White Stubbs and White Violet; 2d, E. D. Hays's Chessel's Flyer.

BASSET HOUNDS.—1st, Mrs. A. P. Stephenson's Janesse; 2d, St. George Kennels' Krooks.

DACHSHUNDE.—1st, B. Cannon's Waldmann I.

FOX-TERRIERS.—CHALLENGE—1st, Blemton Kennels' Blemton Rubicon; 2d, Regent Kennels' Blemton Consequence.—OPEN—*Dogs:* 1st, Blemton Kennels' Blemton Brawler; 2d, Regent Kennels' Regent Brisk; 3d, M. W. Taylor's General Grant. Reserve, L. & W. Rutherford's Warren Caitiff. *Bitches:* 1st, L. & W. Rutherford's Warren Jenny; 2d, Regent Kennels' Regent Edna; 3d, W. T. McAlee's Tennis. Reserve, C. H. Byron's Nellie Bly.

IRISH TERRIERS.—1st, Chestnut Hill Kennels' champion Breda Tiney.

SKYE TERRIERS.—1st, C. Stevenson's Lovett.

BLACK AND TAN TERRIERS.—1st, Rochelle Kennels' Dick; 2d, St. George Kennels' Winnie.

YORKSHIRE TERRIERS.—1st, F. Senn's Prince; 2d, Central Kennels' Lady K.

TOY TERRIERS.—1st, Woodbury Kennels' Tiney; 2d, A. E. Brown's Dot.

PUGS.—*Bitches:* 1st, R. T. Harrison's Nellie Bly. *Puppies:* 1st, R. T. Harrison's Maude H.; 2d, Seminole Kennels' Kash, Jr.

KING CHARLES SPANIELS.—1st, Mrs. F. Senn's King Victor; 2d, Central Kennels' Pansy.

MISCELLANEOUS.—1st, Geo. C. Whitman's smooth-coated collie Beauty; 2d, Chestnut Hill Kennels' Schipperke Othello; 3d, Mrs. A. A. Cobb's poodle Curly. Reserve, V. Laubacker's Dalmatian Dick. High com., A. C. Heck's French poodle Chief.

DEATH OF A PROMISING PUPPY.—*Editor Forest and Stream:* I have lost, from inflammation of the bowels, a mastiff puppy that promised to be the greatest show dog ever whelped in America. Several judges who had seen him considered him equal to his sire, champion Beaufort, in every respect. Of great size with the grandest short square head and smallest ears, with the most dense black markings. He was out of Gerda, so well known in England on the show bench, also the winner of Mr. Wade's special offered in England for the best moving mastiff. Champion Beaufort's reputation as the best stud dog ever known I am sure must be correct, I have seen litters sired by him out of inferior mastiff bitches which are of great promise. He is always sure to get good heads and black markings.—J. L. WINCHELL, (Fair Haven, Vt., Aug. 27).

FOX-TERRIER LOST.—Bloomfield, N. J., Aug. 30.—A small fox-terrier bitch disappeared Aug. 25, and I am afraid she has been stolen. Has solid white body and evenly marked head, black and tan patches covering eyes and ears, and small oval black spot on top of skull midway between ears. Lame in her left fore leg. Quite timid. Answers to the name of Trouble. Any information concerning her will be gratefully received.—W. H. JOECKEL, JR.

HAYFEVER sufferers send 5c. stamp for sample of Peshall's Remedy. GEO. L. WILMS, Jersey City, N. J. Regular size, 75c.—*Adv.*

THE OTTAWA DOG SHOW.

Editor Forest and Stream:

Our silence with regard to the dog show to be held here in connection with the Central Canada Fair, on the 23d, 24th and 25th of Sept., must have appeared peculiar to many, but it was our desire to be able to announce the list of special prizes when writing, and this has only now become possible. The show is held in a permanent building erected and fitted for the purpose, amply lighted and ventilated, with permanent benching capable of accommodating about one hundred and sixty dogs. Should a sufficient number of entries be received, it is the intention to build an additional wing. An ample exercising ground, surrounded by a 7ft. high fence, insures the dogs receiving sufficient exercise, their well-being will be looked after by a paid superintendent, Mr. C. C. Rogers, and an efficient staff of attendants, while the members of the committee will constantly be in attendance to personally see to the wants of the dogs and their owners. Exhibitors who are unable to attend in person need not hesitate to send their pets to Ottawa, as they will receive unceasing care and attention. Spratts Patent will feed the show. All possible precautions against fire are taken, and a fire engine, hose reels, and brigade of firemen are on duty night and day at the grounds.

Besides the attractions of the dog show, exhibitors should recollect that the Houses of Parliament and Department buildings of the Dominion Government, situated on a bluff overlooking the beautiful Ottawa River, not to mention the wonderful lumber mills, are one of the sights of the continent and amply repay a visit in themselves alone.

To those hesitating between London and Ottawa we would ask them to note that while we do not offer quite as much money in prizes as the Western city, our entry fee is but one dollar as compared to two at London, while our special prize list is far the more liberal of the two. No trouble need be apprehended in crossing the United States dogs over the border line, for arrangements are made with the customs authorities constituting the show grounds a "bonded warehouse" for the time being. A special feature of the Ottawa show is the Central Fair Association's special first class diploma for the best specimen of each breed, which is a very handsome affair of large size. Mr. James Watson, the popular and veteran judge of Philadelphia, will judge all classes. Arrangements have been made with the express companies running into Ottawa to return all dogs free of charge that have paid full rates one way: also with the railways, who have agreed to return all dogs free when accompanied by their owner or attendant, excess baggage rates being charged one way. Our list of special prizes as collected to the present date includes:

Five dollars for best in mastiff, St. Bernard, black and tan terrier, pug, English setter, Irish setter, Gordon setter, pointer, greyhound, beagle, Clumber spaniel, cocker, collie and fox-terrier classes; $5 pair of trousers for best dog or bitch fox-terrier; $10 for best kennel of 4 setters, any breed; $10 for best setter puppy; $3 for best foxhound, bull-terrier, best conditioned dog; with various reading matter to the best puppies and a dozen photos of himself for the biggest dog in the show. Ottawa is young in knowledge of dogs; and as its people are now awakening to an appreciation of them, this city offers a promising market for high class stock of all kinds, especially in setters of all kinds, pointers, greyhounds, beagles, terriers of all breeds and all the non-sporting varieties. Entry blanks and information may be had of F. Arthur Jackson, Sec'y, Central Canada Fair, Ottawa. The regular prizes are $7, $3 and certificate to third, 60 classes. Entries close Sept. 13.

BENCH SHOW COMMITTEE, Central Canada Fair.

THE BARZOIS.—*Editor Forest and Stream:* In a letter I received a few days ago from Mr. Hugh Dalziel, of Surrey, Eng., the author of several able works on the dog, and the same gentleman who came over some few years ago to judge our dogs at the W. K. C and other shows, and in speaking of the Russian greyhounds, and of Krilutt in particular, he says: "Krilutt is the handsomest Barzoi I have yet seen, and I have known every one of the breed exhibited in England. If the Russian dogs that are to compete with Krilutt at Crystal Palace show in October, on their way to America, can beat Krilutt they must be marvels. I hope they are, for it is always a pleasure to see a better than the best." We shall anxiously await the show coming off at the Crystal Palace, and whether or not Krilutt is beaten, we shall give them a hearty welcome to our shores, and as they go westward bid them increase and multiply and bring good luck to their new and enterprising owner.—H. W. HUNTINGTON.

DANDIE DINMONT SALE.—I have bought Mr Naylor's (Mt. Forrest, Ill.) entire kennel save one exception.—W. E. HOFF (Chattanooga, Tenn.).

KENNEL NOTES.

BRED.

☞ **Prepared Blanks sent free on application.**

Jersey Maid—Hesper. Pauline Kennels' (Jersey City, N. J.) St. Bernard bitch Jersey Maid (Plinlimmon, Jr.—Maude) to E. B. Sears's champion Hesper, Aug. 26.

Queen Vic—Roger. E. A. Ohmer's (Dayton, O.) English setter bitch Queen Vic to L. Gardner's Roger (Count Noble—Queen Meg), Aug. 11.

Queen Bess—Dick Swiveller. J. P. Spelling's red Irish setter bitch Queen Bess to Geo. H. Covert's Dick Swiveller.

Nancy—Toons Royal. A. P. Mack's (Rochester, N. Y.) Yorkshire terrier bitch Nancy (Bradford Harry—Tangle) to North Fields Yorkshire Kennels' Toons Royal (champion Dreadnaught—Filis), Aug. 25.

Flo—Bradford Harry. C. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Flo (Bright—Fan) to P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), Aug. 29.

WHELPS.

OLD SUBSCRIBER, Argentine, Mich.—The little fish which you caught on a fly is the blue-spotted sunfish (*Lepomis cyanellus*). It is also called green sunfish and red-eye. This fish is found in tributaries of the Great Lakes and throughout the Ohio and Mississippi valleys, as well as in streams tributary to the Gulf of Mexico. The blue-spotted sunfish grows to a length of 8in. under favorable circumstances. It is a beautiful fish, and, as would be expected from its wide range, varies greatly and has been described under many scientific names. It is certainly one of the most widely known sunfishes of the West. In our Black Bass Supplement Dr. Henshall describes the game qualities of our sunfishes, and states that some of them rise eagerly to the artificial fly and make a gallant fight. You will find good figures of the species in the Ichthyology of the Pacific Railroad Expedition, under the names of *Calliurus formosus* and *longulus*, Plate V., Figs. 1-4 and 5-8; also Plate VI., Figs. 5-8.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NEW GAS GUN.

WASHINGTON, Aug. 30. The declaration of the Paris *Paix*, echoed by the London *Daily News*, that M. Paul Giffard's substitute for gunpowder as the charge for small arms is likely to revolutionize the art of war, is not received with entire faith by all our officers. It is said that the Chamber of Commerce of St. Etienne has already given the inventor a gold medal and $2,000 as a testimonial of the success attained by this novelty; but a fair statement probably is that in its present form the *nouvelle balistique* can never be a complete substitute for gunpowder, although within its restricted limits it has remarkable merits.

Since 150 or 300 "drops" or charges of the liquid carbonic acid gas can be stored in the small steel reservoir under the gun barrel, and one charge falling into the chamber volatilizes and explodes in contact with the air, so forcibly as to drive out the bullet, the firing can go on very rapidly and continuously. Supposing the soldier to have an extra steel cartouche or cylinder with him, he would carry 600 charges of the liquefied gas, each liberated as fast as the trigger could be pulled. Still, the loading with bullets which are dropped separately into an aperture in the breechlock, must go on, and this double process must be continued. Other advantages possessed by this weapon are smokelessness, a very moderate report, safety in use, and the preservation of the barrel from fouling. Perhaps the sportsman, even more than the soldier, will appreciate the lack of smoke and of noise which might alarm his game as well as the advantage of finding his gun barrel smooth and bright after 300 rounds. As it does not need to be heavy, the weapon can be manufactured at small cost, while the cylinder full of the liquid costs only a few cents.

But a fundamental shortcoming of the Giffard gas gun, which in its present state must dispose of its claim to be the "military weapon of the future," is the shortness of its range. The extremely low pressure which the gas exerts on expanding, as compared with gunpowder, can hardly make it effective at much above a third of a mile. Troops armed with such a weapon might therefore be at the mercy of an enemy possessed of rifles sighted up to 1,300yds. Special forces might carry them and reserve their fire until the enemy should be within their inferior range; but such a double system arming would not be generally approved. The rifle, as it appears, would also have to be held in a limited position in order that the drop of liquid may be properly volatilized, and this might be a drawback in battle. But it would seem to be an acquisition in any case to the sphere of machine guns. Unfortunately, criminals may also appreciate the advantages of its smokelessness and comparative noiselessness.

But perhaps the most interesting suggestion made in regard to this new invention is that it ought to enter the field of heavy guns instead of small arms, and apply itself to the projecting of shells filled with dynamite and other high explosives. Commander F. P. Barber of our navy, a well-known expert, has pointed out that this liquefied gas of Giffard should really be put upon the plane of compressed air as an explosive power for such projectiles. Like the pneumatic gun of the Vesuvius, it has a low pressure and a short range, but a pressure which is fixed and which can be most accurately measured. This means absolute safety in the use of the high explosives as the bursting charge of the projectiles. Moreover, the pressure of the carbonic acid gas remains uniform to the last drop of the liquid. As the pneumatic gun gives a mortar-like fire, the asserted necessity of not depressing the Giffard gun would not put it at a disadvantage by comparison. This use of the new projecting power, as suggested by Commander Barber, may turn out to be the most practically important one, at least for military purposes, and at any rate it suggests the future of mortar fire with shells containing large charges of high explosives at short or medium range.

Another suggestion is that the new liquefied gas may be really only the pioneer in new experiments, and that if it has so low a pressure as to give too short a range for infantry arms, yet some other substance may do better. At all events, one more step is taken in replacing, for certain military purposes, the irregular and violent shock of gunpowder by slowly acting but steady and accurately measured expansive forces.

DEER HUNTERS' ASSOCIATION.

DAYTON, Ohio, Aug. 30.—The Deer Hunters' Association of Southwestern Ohio held its eleventh annual reunion and rifle tournament at Greenville yesterday. The association is made up of representatives of clubs in five Ohio counties and adjoining territory in Indiana, who go each year in camping parties hunting bear and deer in Northern Wisconsin and the woods of the Upper Michigan peninsula. The members are all skilled hunters experienced in woodcraft, and most all of them gray-haired men who have been making these expeditions to the north for big game for thirty years.

Their reunions are held on the beautiful club range in a clear strip of timber near Greenville, O., where the members for fifty miles around assemble each year. One hundred crack shots were there yesterday, weather fine though windy. The rifle range runs through an opening in the woods, the firing and target sheds, neat substantial buildings being 200ft. apart, the shooter always facing the south, the target shed on a slight elevation. The officers all reside in Greenville. A. N. Wilson, President; G. A. Katzenberger, Treasurer. Frank Culbertson, Secretary. At this reunion a number of hunting expeditions were planned, the first party to start for Michigan Sept. 22.

First match, at 200yds. off-hand, open sight, three shots each. American field target, possible 30 rings, 60 entries, five money prizes.

M. Hampton, Richmond, Ind., 8, 8, 10, total 26, first prize. A. N. Wilson, Greenville, O., 8, 8, 8, 26, second prize. Dock Merling, Greenville, 7 8, 9, 24, third prize. J. L. Heck, Union City, Ind., 6, 9, 9, 24, fourth prize. Daniel Heim, Greenville, 7, 9, 7, 23, fifth prize. Other scores were: Gus Sander, of Dayton, O., 22; J. H. Schwable, Greenville, 22; S. R. Bell, Union City, 22; W. J. Glunt, Union City, 22; James Knick, Greenville, 20; Charles Mattner, Lewisburg, O., 19; C. Holt, Eaton, O., 19; Ross Pitman, Hollandsburg, O., 18; Frank Culbertson, Greenville, 18; T. E. Garrette, Euphemia, O., 17; A. C. Cunner, West Alexandria, O., 15; J. D. Baker, Arcanum, O., 15, Charles Knick, Greenville, 12

Second match, 200yds., muzzle rest, no restriction in sights, three shots, German ring target, possible 72, 85 entries, five money prizes:

A. E. Clemmer, of West Alexandria, O., 48; G. A. Katzenberger, Greenville, O., 67; S. R. Bell, Union City, Ind., 47; Benj. Fye, Richmond, Ind., 64; J. M. Woodbury, Union City, Ind., 46; Charles Knick, Greenville, 53; Perry Green, Hollandsburg, O., 47; Thomas Jones, Union City, Ind., 66; Ed Schwind, Dayton, O., 62; Julius Wehner, Dayton, O., 60; Julius Weinstein, Dayton, O., 50; Robert Appleby, Eaton, 54; Philip Kern, Dayton, 40; A. N. Wilson, Greenville, 59; F. Culbertson, Greenville, 56, James Knick, Greenville, 41.

Katzenberger won first, Jones second, Fye third, Schwind fourth, Wehner fifth prize.

An exciting feature of the afternoon was the shooting at the hunter's moving targets, a life size picture of a buck, doe, fawn or bear on each of the four targets, the center being over the animal's heart, 12 rings, and the outside ring calling for the red flag. Conditions of the four matches, 100yds. off-hand, open sights, one shot each man at each target, possible 12 rings in each match, possible aggregate 48, 91 entries, 8 prizes on each target, and the Association gold medal to the shooter making the highest aggregate score in the four matches. Following are the eight winners and their scores in each of the four matches:

Buck target—Ed Culbertson, of Greenville, O., 12; M. Loxley, of West Alexandria, O., 12, John Yeke, of Eaton, O., 12; Chas. Johns, of Greenville, O., 12; J. D. Wilson, of Lewisburg, O., 11; J. N. Woodbury, of Union City, Ind., 11; R. Thomas, of Eaton, O., 11; Dr. Evans, of Greenville, O., 10.

Doe target—S. P. Younce, of Lewisburg, O., 12; Phil Miller, of Eaton, O., 12; Wils Kerby, of Greenville, 11; A. N. Wil or, of Greenville, 11; S. S. Black, of West Alexandria, O., 11; Gus Sander, of Dayton, O., 11; J. L. Heck, of Union City, Ind., 11; Ross Pitman, of Hollandsburg, O., 11.

Fawn target: M. Foxley, of West Alexandria, O., 12; Thomas Jones, of Union City, Ind., 12; [illegible] 12; [illegible] 12; [illegible] 12; T. W. Bi[illegible] of West Liberty, O., 11; S. [illegible] 11; Henry Heisler, of Greenville, O., 11

Bear Target: L. F. Cuprave, of Eaton, O., 12; F. Gazelle, of Lewisburg, O., 12; W. H. Schaefer, of Germantown, O., 12; Henry Heisler, of Greenville, 11; J. L. Heck, of Union City, Ind., 11; John J. Wilson, of Union City, Ind., 11; Gus Sander, Dayton, O., 11; L. F. Parmalee, of Lewisburg, O., 10.

Prizes in each of the four matches were articles suitable to life in the woods, such as heavy blankets, rubber clothing, belts, hatchets, etc.

The gold medal was won by J. L. Heck, of Union City, Ind., by a score of 39. Charles Johns, of Greenville, was second with 38, which was just the score that Nils Kirby, of Greenville, won the medal on last year. Heck's score of 39 is the highest aggregate made by any shooter in these four matches in seven years.

BROWN.

SAN FRANCISCO.

SAN FRANCISCO, Aug 24.—The greatest shooting event of the season was that of the San Francisco Gruetli Shooting Section, which took place at Harbor View to-day and consumed the entire day, from 9 o'clock in the forenoon until sundown.

It was a free-for-all day and made up of four separate contests, the public, or cash target, honorary target, luck target and membership target.

In the cash target contest each competitor was required to purchase tickets at $1 a piece, each ticket entitling the holder to four shots, and there was no limit placed upon the number of tickets one might purchase. Each ticket of four shots, however, counted as one person in the race for prizes, so there was nothing to prevent any one person from winning any number of prizes, provided he was good enough marksman. Following are the names of the first ten prize winners:

First prize, $30, won by A. Johnson, 95 points out of a possible 100; second, $25, F. Kuhuly, 95 points, third, $20. H. Brown, 94 points; fourth, $18, McLaughlin, 93 points; fifth, $15, George Helm, 93 points; sixth, $12, William Glindeman, 93 points; seventh, $10. H. Hett, 91 points; eighth, $9, A. Strecker, 90 points; ninth, $8.50, Rahwyler, 90 points; tenth, $8. James Dornbier, 89 points.

The first bullseye shot (24 rings) of the forenoon was made by A. Rahwyler, prize $2.50; last bullseye shot, afternoon, John Straub, prize $2.50; last bullseye, forenoon, A. Gehret, prize $1; first bullseye, afternoon, George Helm, prize $1.

In addition to the above prizes a special prize of $5 was offered to the one making the best five scores during the day—the winners of the first three prizes barred. This was won by George Helm, score 92, 92, 93, 92, 91.

The honorary target contest was of a higher grade than the cash target match, to the extent that only three shots were allowed per ticket of $1. In other respects the conditions of the match were the same. Seventy-five prizes were contested for in this match, consisting of watches, jewelry, silverware, wearing apparel, etc. Following are the first ten winners: First won by F. Kuhn, by 73 out of a possible 75 points; second, William Glindeman, 72; third, George Helm, 71; fourth, A. Johnson, 69; fifth, A. Strecker, 69; sixth, A. Rahwyler, 68; seventh, H. Brown, 68; eighth, F. Yung, 67; ninth, A. von Well, 67; tenth, James Backman, 67.

The target that held out the most tempting inducements, however, was the Target of Luck, since the prizes competed for were by far the most valuable, and the chances of winning considerably reduced. Each competitor was allowed to purchase but two tickets, each ticket allowing two shots. Unlike the other contests, that was the limit. The first ten winners are as follows: First prize won by E. Hovey, 37 points; second F. Kuhule, 37; third, J. Straub, 37; fourth, F. Genret, 36; fifth, G. Orsi, 36; sixth, A. Johnson, 35; seventh; A. Gehret, 34; eighth, G. Helm, 33; ninth, C. Meyer, 32 points; tenth, R. Finking, 32.

The members' prizes have not yet been decided upon fully, but it is known that the first one will be a fine blooded bull and the second a bedroom set. Following are the winners in the membership target:

1. F Gehret	18 20 22—60	6. P Baumgartner	10 23 13—55
2. A Gehret	21 20 19—60	7 G Ors	23 6 24—53
3. A Rahwyler	24 10 22—56	8. E Weber	19 14 20—53
4. P Siyesser	22 9 24—55	9. E Christin	22 12 19—53
5. V Luthold	23 14 16—55	10. J Hugenin	20 13 20—53

The following committees from the several rifle clubs had charge of the event: California Shooting Club—Capt. Fred Kundli, R. Finking; Swiss Rifle Club—J. Dornbierer, P. A. Ginini; Turner Schuetzen—Capt. Zimmer, G. Helm; Germania Schuetzen Club—Leo Klotz, Doc Muff; Gruetli Schuetzen Section—A. Rahwyler, John Bruegger, Emil Weber; J. Appenzeller, Louis Hauser, Fritz Gehret, Mr. Reupp; Eintracht Schuetzen Section—H. Gumbel, H. Schubert.

NORTH END.

EPHRATA, Pa., Aug. 30.—The North End Rifle Club gave a shoot at their range Thursday, Aug. 28, and there was quite a large attendance. Besides the members of the home club the following were present from abroad: Lancaster Schuetzen Verein, Jacob Wolfer, Thos. Anderson, Jas. B. Best, Howard Grossman, Ed. Deisley, Chas. Franciscus. Villa Rifle Club, of Lancaster—Peter Dommel, H. J. Kegel, L. W. Knapp, Jr. Columbia Rifle Club—G. F. Hiltz, M. H. Smith, Fred Gerfin, Lewis Smith, Wm. Schoenberger, Frank Treible.

The matches were shot at 200yds., and the first one was for a gold and silver medal. It was shot at rest. The result was as follows, out of a possible 100:

J Wolfer	5	7	5	8	7	8	5	4	6	8—63
T Anderson	6	4	7	0	7	5	10	6	5	4—55
E Deisley	0	7	4	0	4	3	8	8	4	9—47
L Knapp	0	0	3	4	3	5	5	5	0	7—32
J Best	0	0	0	0	4	4	0	0	0	3—11
P Dommel	0	0	0	0	0	0	0	0	0	0—0
H Kegel	0	6	0	5	8	10	5	7	7	0—48
C Franciscus	8	7	7	8	7	10	9	6	10	5—77
M H Smith	7	3	5	6	5	6	7	4	4	9—56
G Hiltz	0	4	0	6	4	6	4	4	0	0—34
F Girlin	6	0	6	5	4	8	8	10	0	0—59
F Treible	5	7	0	6	4	7	4	5	5	8—51
W Schoenberger	7	4	3	0	4	4	4	9	8	0—40
L Smith	7	3	5	8	6	5	7	8	5	4—58
W Carpenter	10	10	8	7	10	10	10	7	8	6—83
W D Winter	5	10	8	7	7	6	10	9	10	8—81
C Konigmacher	10	6	9	5	5	6	10	0	10	8—69
J S Schaefer	8	10	7	5	7	10	6	7	10	10—81
C Wenger	9	8	9	10	9	9	10	9	9	10—92
R W Bickley	4	4	9	7	5	5	6	4	4	8—56
L Wiest	5	5	6	6	6	6	6	9	6	5—66
D B Lefever	0	0	4	6	5	7	7	0	4	4—37
M Kafroth	8	4	8	6	4	6	8	6	7	6—93
S A Stober	7	9	5	6	8	6	8	6	4	6—68

The gold medal was awarded to Clayton Wenger and the silver prize to W. Carpenter. Last year these medals were won by Messrs. Wiest and Winters, who were allowed to keep them until this year. Next year the four gentlemen will contest for them.

The second match was for a silver medal, 200yds. at rest, 5 shots each.

Wolfer	6	6	5	5	0	—22	Schoenberger	4	7	6	3	4—25
Anderson	8	7	6	6	7	—34	L Smith	6	6	10	5	5—32
Deisley	4	3	6	7	3	—23	Carpenter	4	9	6	10	8—37
Knapp	0	0	7	5	7	—19	Winters	7	6	6	4	9—32
Best	0	3	4	0	7	—14	Konigmacher	7	5	5	6	7—30
Dommel	5	5	0	9	9	—28	Shaeffer	6	9	8	6	6—35
Kegel	5	7	8	5	6	—31	Wenger	8	9	7	8	5—37
Franciscus	8	4	7	4	4	—27	Bickley	10	5	3	6	3—27
M H Smith	10	4	5	5	5	—29	Wiest	6	8	4	7	9—34
Hiltz	0	6	3	4	0	—13	Lefever	0	4	0	4	4—11
Girlin	5	9	8	8	0	—27	Kafroth	10	7	8	7	8—40
Treible	5	0	7	5	6	—23	Stober	9	9	7	9	7—40

In the shoot-off, at 3 shots each Stober won as follows: 7, 4, 10—21. Krafroth 7, 5, 7—19.

The third match was five shots each, off-hand:

Wolfer	5	3	3	6	5	—22	Schoenberger	3	4	3	5	0—15
Anderson	7	7	8	6	4	—32	L Smith	0	4	9	7	4—24
Knapp	3	0	0	0	4	—7	Carpenter	10	0	6	7	5—28
Best	0	0	0	7	0	—7	Winters	4	5	5	5	4—23
Dommell	3	0	0	6	0	—9	Shaeffer	5	3	7	7	10—32
Kegel	5	0	6	3	0	—14	Wenger	6	5	8	5	6—30
Franciscus	5	6	8	8	0	—27	Wiest	6	7	10	8	8 39
Smith	7	8	0	6	5	—26	Lefever	0	0	3	0	0— 3
Hiltz	7	0	3	0	10	—20	Kafroth	4	0	0	4	0— 8
Girlin	3	6	6	5	8	—28	Stober	6	4	0	5	4—19
Treible	5	8	4	4	3	—24						

Wiest won first prize. The North End Club held their own against all comers and some member of their team were winners in each contest.

JERSEY CITY, N. J., Aug. 30—In the competition for the handsome gold medal, emblematic of the championship among members of the Marion Rifle Club, Jersey City, the aggregate scores to date are as follows: L. P. Hansen 1,417, J. Speicher 1,304, J. Rebhan 1,302, Wm. Weber 1,103. H. Mahlenbrock 1,071, T. Stiff 1,012, C. Bauchle 743, A. Braun 563, J. J. Autenreith 389, and A. [illegible] 315.

[illegible] regular weekly competition of the Marion Rifle Club [illegible] handsome gold medal [illegible] scores made on [illegible] possible 220 points on the standard 25-ring bar or at 75ft. distance: A. Meyer 238, F. Brandt 235, A. Meyer 229, J. Fowkel 223, L. Vogel 222, B. Koch 208, M. Rogers 208, R. Dewey 205, W. Gressner 202, H. Klempt 202, A. Buley 202, and P. Kanel 200.

NEW JERSEY TEAM.—Gen. Wm. S. Stryker, Adj.-Gen. of New Jersey, has named the State team for the Creedmoor matches as follows: Brigadier-General Bird W. Spencer, Inspector-General of Rifle Practice; Brevet Brigadier-General George E. P. Howard, Acting Assistant Inspector General of Rifle Practice; Colonel James M. Van Valen, Assistant Inspector General of Rifle Practice; Colonel Anthony R. Kuser. A. D. C., Staff of Commander-in-Chief; Major William S. Righter, A. D. C., Division Staff; Major R. Heber Breintnall, First regiment; Captain Wm. F. Decker. Company C, First battalion; Second Lieutenant Henry R. Goesser, Company A, Second battalion; Sergeant Alexander C. Neumann, Standard-Bearer, Division Staff; Hospital Steward Frank H. Lalor, Seventh regiment; Color-Sergeant Chas. Chinn, First battalion; Corporal August Dietrich, Company C, First battalion; Private William Oscar Vincent, Company H, Fifth regiment; Private William Hartmann, Company B, Seventh regiment; Private John Ranson, Company B, First battalion. Brigadier-General Bird W. Spencer, Inspector-General of Rifle Practice, is the captain of the team. Brevet Brigadier-General George E. P. Howard, Adjutant, and Lieutenant-Colonel William H. Early, quartermaster. The officers and team will report to General Spencer at Creedmoor on Thursday, Sept. 4, at 9:30 A. M.

CREEDMOOR, Aug. 30.—The fifth in the series of matches for sharp-shooters' medals, for members of the National Guard, was shot on the 500 and 600yds. ranges at Creedmoor to-day. The day was fair with a strong breeze. Following are the scores of the prize winners, 5 shots each distance, Remington State model rifles:

	500yds.	600yds.	Total.
I S Shepherd, Co D, 23d Regt.	24	24	48
E S Spink, Co F, 23d Regt.	24	20	44
W R Pryor, staff, 23d Regt.	22	20	42
W A Stokes, Co H, 23d Regt.	21	21	42
J McNevin, non-c m staff, 13th Regt.	25	22	47

J T Hull, Co F, 23d Regt.	22	21	43
S F Fahnestock, Co I, 13th Regt.	23	19	42
J W Hale, supernumerary.	22	21	43
C H Smith, Co B, 71st Regt.	22	20	42
J N Munson, Co G, 7th Regt.	22	20	42

BOSTON, Aug. 30.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day with a good attendance of riflemen. Some fine scores were made in several of the matches. Mr. Francis (Rabbeth) made two fine scores of 116 each at rest, these being the highest scores made at this range this year. Following are the best scores made to-day, distance 200yds., standard American target:

Record Off-Hand Match.

J Francis	111 A H Ballard. 102
W P Thompson	110 A R Long. 99

Record Pistol Match, 50yds.

H Severance	92 O M Howard. 85
W Charles	89 H W Gill. 83

Champion Off-Hand Match.

W Charles	90 O M Howard. 74
S T George	79

All-Comers Rest Match.

J Francis	116	L R Avay	105 A G Horne. 103
F Daniels	110	M T Day	103 J B Hobbs. 101
A H Ballard	106		

All-Comers' Off-Hand Match.

W Charles	89	S C Sydney	80 D R Ball. 71
H Severance	82	S T George	79 A N Mann. 70
C H Eastman	80		

MARION, N. J., Sept. 1.—The Marion Rifle Club of Jersey City held its annual prize shoot on its range at Marion to-day. Among the many visiting rifle shooters were members of the Newark Shooting Society, the Howard Rifle Club, the Our Owns of Newark, and the Zeitler Rifle Club of New York. With good management the competition was a success socially and financially. The winners of prizes on the different targets follow: Target of honor, open to members only, 200yds. off-hand, A. Brown, first medal; J. Rebhan, L. P. Hansen, Wm. Weber, H. Hoersch and J. Autenreith took the next five prizes.

Prize target, 200yds., off-hand, four handsome pieces of silverware, won by L. Joiner, J. Coppersmith, J. Rebhan and J. Speicher.

500yds. competition, Creedmoor target, three strings of 5 shots each man, possible 25 points—L. P. Hanson 23, 23, 21; total 67. H. Hoersch 21, 21, 19; total 61. J. Autenreith 21, 20, 19; total 60, and A. Braun 18, 18, 17; total, 53. The two premiums for the highest and second highest aggregate of points were won by J. Autenreith and L. P. Hansen.

Short range, 23-ring target, 75ft., 9 shots, possible 225 points: J. Coppersmith 223. L. Joiner 223, L. P. Hansen 222. J. Snellen 222, G. Wildman 219, M. Hoff 219, J. Rebhan 219, Vogel 218, C. Bauchle 218.

Ring target, 200yds., 3½in. rings, possible 75 points on 3 shots, best 3 tickets to count: J. Coppersmith, 68, 70, 74 total 212. L. Joiner 66, 66, 70; total 202. M. Vogel, 64, 65, 69; total 198. M. Speicher, 65, 65, 66; total 196; J. Rebahn, 65, 65, 66; total 196; L. Flack, 63, 64, 68; total 195; J. Autenreith 71, 58, 66; total 194. L. P. Hansen 63, 63, 61; total 187. The premiums for most points were won by L. Joiner, J. Coppersmith and L. P. Hansen.

NEW YORK RIFLE CLUB.—Creedmoor, Aug. 30.—The New York Rifle Club held the last one of a series of 200yds. handicap matches to-day. The scores were not up to the average, owing to unfavorable weather conditions, and an interruption during the best time for shooting, we having to leave our targets on account of the military shooters, who were shooting at 500 and 600yds., and who were stationed almost immediately in our rear. Following are the scores:

J E Geusch	81+1=82	T Loyd	69+8=77
M Herrington	80+1=81	Dr Chadbourne	62+8=70
J Duane	76+2=78		

Messrs. J. S. Case, C. E. Taynior, J. F. Klein, Maj. Shorkley and John Macauley were also present, but did not shoot in the match, preferring to spend their time practicing with various guns and ammunition. The winners of the various prizes cannot be announced until the return of Secretary Dolan, who is away on a visit to Canada.—M. HERRINGTON.

NEWARK, N. J., Aug. 28. Half a dozen of the Shooting Society members were at the park this afternoon, and a big lot of powder was burned. In the members' trophy match John Coppersmith made 201, G. D. Weigman 207, on which a 5-point allowance is to be added, C. H. Townsend 205 and an allowance of 10 points. In a practice shoot J. T. Collins made 219, 116; John Coppersmith, G. D. Weigman, 198, 199. Coppersmith and Townsend used a new 14-pound Wurfflein .32-40-165 rifle, with a 32in-barrel, which did some close shooting.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Sept. 9.—Tolley's Tournament, Catskill, N. Y. Geo. F. Tolley, Secretary.

Sept. 9-10.—Hyers Hurd's and F. R. Hunsiger's Peoria Black Bird and Blue Rock Tournament, at Peoria, Illinois.

Sept. 9-11.—St. Paul Gun Club Tournament, Hamline, Minn. Professionals barred. C. D. Pounsby, Pres., St. Paul.

Sept. 9-12.—Cincinnati, O.—Al Bancle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limbeur, Sec'y.

Sept. 30, Oct. 1-3.—Sixth Annual Tournament of the Middlesex Gun Club, at Plainfield, N. J. Two days targets, two days live birds. $1,000 guaranteed. Programmes ready for distribution Sept. 1.

CENTRAL ILLINOIS TOURNAMENT.

JERSEYVILLE, Ill., Aug. 29.—The twelfth annual tournament of the Central Illinois Sportsmen's Association was held here Aug. 26, 27, 28 and 29, and was a grand success in every particular. With the exception of Tuesday morning, when a heavy rain fell, the weather was just suited to the sport. The attendance throughout was satisfactory and a heavy programme was worked off. The special prizes contested for were both numerous and valuable. On Tuesday the affair was honored by the presence of Wolfred N. Lowe, of Chicago, who came here for the purpose of conferring with the sportsmen with reference to the betterment of the game laws. More stringent laws are to be asked for from the several assemblies this coming winter, and an effort will also be made to induce the law makers to pass a bill for the appointment of game wardens in each county in the State, whose duties will be to see that the game laws are not violated. Mr. Lowe is an enthusiastic sportsman, and he is laboring diligently to save what little game remains within the boundaries of this State.

The honor of entertaining the members of this association next year fell to Jacksonville. Bunkerhill wanted it, but after a long fight in the convention which held it in a deadlock for a couple of hours, Jacksonville came out with flying colors. Officers for the ensuing year were elected as follows: Dr. C. Henry, of Jacksonville, President; Geo. Crosby, of O'Fallon, Vice-President; J. B. Thompson, Secretary; H. D. Duer, Treasurer; the two latter of Jacksonville.

Standard traps and targets were used for all programme events, governed by the rules of the A. S. A. Ties divided unless otherwise stated:

First Day.

Shoot No. 1, open to all, 10 single targets, entrance $1.50:

C Parent	0000101001— 4	N Crosley	1100111111—8

Blue Bill	112212—6	S Harris	121201—5
Maholen	112102—5		

In the presence of a large crowd at the park on the afternoon of the last day Jim Elliott, of Kansas City, defeated Ed Spencer, of Carrollton, Ill., in a live bird match for $100 a side. At Kansas City last May they shot a live bird match for $100 a side, which was won by Elliott by a score of 97 to 96. Spencer had quite a little bad luck in the affair, and feeling confident that if allotted his share of luck he could defeat Elliott, he agreed then to shoot him another match. The match was arranged and took place here to-day, and like the former went to the Kansas City man, who has just won a long chain of unbroken victories.

The birds used for to-day's affair were a very indifferent lot, and the scores made by the contestants are no credit to them or any indication of good work. Not more than 25 out of the 200 trapped took wing without having to be flushed. Spencer had a shade the hardest birds, and made several pretty second-barrel stops of tailers. Conditions of the match were 100 live birds, Hurlingham rules, for $100 a side. The score:

Elliott	2221210122111122221211111111212212111111212121121

UNSER FRITZ.

LONDON, ONT.

LONDON, Ont., Aug. 26.—The Rodney Gun Club, an association made up of all the crack shots along the M. C. R. line, tried conclusions with a team of ten men from the London Gun Club on the home grounds yesterday. The local men thought that they would have an easy thing to do in worsting their opponents, and for this reason were not careful to pick out all their good shots; but before the first squad had finished firing the majority of them had greatly changed their minds, as the boys from the 'quail grounds" demonstrated clearly that they knew how to handle their guns. At the finish of the first squad the visitors led with 90 dead birds to their credit, against 76 for London. The home team's second squad, however, included some of their best shots, such as Redpath, Evans and Jaynes, who began their work with a determination to make 100 out of a possible 150, and the score shows that they succeeded, Redpath making the highest score of the day by securing 25 birds out of the possible 30. Messrs. James, Evans and McDougall did some excellent shooting. The score:

Rodney—First Squad.

THE COMING TOURNAMENT.

Arrangements are fast being completed by the Executive Committee of the London Gun Club for the holding of a grand tournament in this city under the auspices of the club. Although the exact day has not been set, it has been decided to hold it during the second week of October. Mr. H. A. Penrose, of Corry, Pa., has been engaged to superintend the affairs of the meeting, and will no doubt add much to its success by his long experience in sporting matters. The committee intend to profit by the experience of the recent Toronto tournament, and have decided that the tournament shall be open to none but Canadian sportsmen, as in the Toronto meeting about seventeen Americans carried off fully two-thirds of the prizes, and by their entrance kept out many Canadians who refused to shoot with them.

The committee expect to have a prize list amounting to $1,500, and have already received intimation from several of the more prominent shooters of western Ontario that they will be pre ent. The programme will be varied somewhat from ordinary trap-shooting by a few hundred shots at live birds. Keystone targets and the rapid-firing system will be the order for trap-shooting. Subscription will be placed before the citizens in a few days, and the committee expect that as the sportsmen have been characterized for their liberality that the merchants and others will not be backward in evincing similar interest in the tournament to insure its success. Team shooting will constitute a feature of the affair.

WELLINGTON, Mass., Aug. 30.—The last contest in the merchandise match for August took place at the grounds of the Wellington Gun Club to-day. The scores made follow: Gore 18, Melcher and Sanborn 17, White, Bennett, Bond and Bradbury 16, Cowee 15, Hammond and Porter 12. The winners of the merchandise prizes, the best three scores at 20 birds to count, were: Bennett 51, White and Perry 49, Melcher 46, Gore and Bond 45. The other scores were: Sanborn 44, Bradstreet 41, Cowee 35, Porter 27.

CORRY KEYSTONES.

CORRY, Pa., Aug. 28.—At our next meeting our club will probably adopt the Keystone professional rules for shooting for the medals. Our present professional rules call for 6 traps, but at our tournament last week we used 10 traps in a straight line, which is faster and makes the shooting much more difficult. For our club shoots we shall likely use 8 traps, 5 in a straight line, the regular distance from the score, and 3 traps, 60yds. from the score, directly in front of No. 3 trap; 5yds. apart to throw a straight incomer, and a right and left-quartering incomer. The inside traps to throw a right-quarterer, left quarterer, straight-away, right-quarterer and left-quarterer. The traps to be numbered, inside 1, 2, 3, 4, 5 and the outside traps 6, 7, 8; to be pulled according to indicator. Mr. M. F. Lindsley, Superintendent of the American Wood Powder Mills, asked me to add to my present rules the 3 outside traps, throwing incomers, which makes the shooting much more like live bird shooting, which I have done. Printed forms of the new rules can be had by addressing the Keystone Manufacturing Company, Corry, Pa. Owing to the bad weather that has prevailed since our tournament opened and continuing until the present time, our attendance was small at our last weekly shoot. First match, Keystone professional rules, 6 traps:

Edwards	0110000110101000011111100—12
Starbird	1111101100110001111000110—15
Wetmore	0111100001001100000100011—11
Laurie	1111101011101100001111001—16
Austin	1101000101011111010010011—15
Penrose	0110111010011010111010011—16

Second match, same conditions:

Wasson	0011011000001000010001100— 8
Dunbar	1000011000010110000010111 10
Wetmore	0110100111101111010111111—17
Edwards	0101000000100001010101001— 9
Starbird	0011111000101111101010101—14
Penrose	1110111100101111111110111—20

Third match, amateur rules:

Edwards	0111111101010011111111111—20
Wasson	0010011010100001110111100—13
Penrose	1011111111101111111111111—23
Wetmore	1111111111111011111011111—22

Match for club medal, 5 traps:

Edwards	0011011011110011011011001—16
Starbird	1111100011011011011111111—19
Wetmore	1011111011111111111111101—21
Laurie	1101111011011011011001101—17
Austin	1111111110011111111111110—22
Penrose	1111111010110111111111111—22
Blair	1101011010100100010101110—13
Ward	0010011111001101 0000
Dunbar	1000100100101011011001011—12
Wasson	0001110110001110010001111—13

Shoot off for first gold medal: Austin 4, Penrose 5. Penrose won first gold medal, Wetmore second, Starbird silver medal.

MADISON COUNTY.

CANASTOTA, N. Y., Aug. 30.—The fifth meeting of the Madison County Sportsmen's Association held here Tuesday, Aug. 26, was well attended, all the clubs being represented. The day was cloudy and one or two light showers fell during the P. M., but they were not sufficient to dampen the ardor of the shooters, and the entire programme was carried out. All of the shooters did not arrive until noon, so the second event for the team championship was postponed until their arrival, and the two next events were shot off in the meantime. All events were at kingbirds from five traps, rapid firing system, except the second.

In the contest for the individual championship of the county, Mr. Maxwell, of Oneida, and Mr. Roberts, of Canastota, tied on 24 out of a possible 25, but as Mr. Maxwell was obliged to leave to catch his train the tie will be shot off at some future date. The prize is a beautiful gold badge, properly engraved, donated by the Canastota G. C., the winner to hold the same until won from him at some future shoot of the Association. A silver butter dish (value $10) to one making best average in all contests was won by Mr. Markham, of Oneida. This was also donated by Canastota G. C.

Following is the score, which was obtained through kindness of Mr. Salisbury, of the Canastota *Bee:*

Contest 1, 10 single kingbirds, entrance 75 cents: Maxwell 9, Suits 9, Cavona 4, Frier 10, Peet 9, Briggs 7, Lansing 7, Ostrander 6, Curtiss 6, Atwell 4, Webber 4, Markham 10, Roberts 7, Card 6, Dwyer 8, Salisbury 8, Gard 7, Crittenden 4, Morse 5, Clow 8. All ties div.

Second event, team championship of Madison county, first prize $150 cup; second prize, $25 cup, 15 singles and 6 pairs kingbirds. Team entrance $3.

Oneida First Team: Markham 21, Maxwell 23, Cavona 21, Clark 14, total 79

Eaton First Team: Peet 25, Fryer 21, Curtiss 20, Briggs 19, total 85.

Cazenovia First Team: Atwell 17, Dwyer 17, Thompson 18, Webber 15: total 67.

Canastota First Team: Lansing 23, Salisbury 16, Clow 17, Roberts 24; total 83.

Cazenovia Second Team: Card 15, Cruttenden 20, Bass 10, Morse 15; total 60.

Canastota Second Team: Ward 17, Ostrander 20, Suits 15, Barret 17; total 69.

First, Eaton First Team; second, Canastota Second Team.

Contest 3, 15 singles, entrance $1: Markham 15, Maxwell 13, Suits 9, Cavona 13, Peet 13, Roberts 13, Briggs 10, Morse 9, Dwyer 12, Fryer 12, Lansing 13, Atwell 11, Salisbury 9, Ward 10, Curtiss 13, Ostrander 6, Card 8, Cruttenden 6. First, Markham; second shot off, won by Maxwell; third, div. by Dwyer and Fryer; fourth, Atwell; fifth, Briggs and Ward.

Contest 4, 20 singles, entrance $1.50: Markham 20, Maxwell 17, Cavona 16, Peet 19, Fryer 12, Roberts 14, Lansing 19, Briggs 15, Salisbury 19, Ward 15, Cruttenden 12, Clow 17. All ties div.

Contest 5, 10 singles, entrance 75 cents: Briggs 8, Graham 8, Cavona 9, Curtiss 7, Suits 5, Lansing 8, Card 6, Thompson 6, Dwyer 8, Ostrander 8, Peet 9, Maxwell 6, Markham 10, Bishop 7, Cruttenden 8, Salisbury 9, Roberts 7, Atwell 7, Cheeney 5, Clow 7. All ties div.

Contest 6, 15 singles, entrance $1: Markham 14, Maxwell 14, Curtiss 14, Lansing 14, Peet 14, Ostrander 13, Suits 8, Roberts 15, Cavona 14, Cruttenden 10, Salisbury 12, Bishop 8. First, Roberts; second, shot off and div. by Curtiss. Lansing and Peet; third, Ostrander; fourth, Salisbury; fifth, Cruttenden.

Contest 7, 5 singles and 5 pairs, entrance $1: Maxwell 12, Markham 13, Lansing 10, Cavona 10, Roberts 14, Peet 10. All ties div.

Contest 8, walking match, 10 singles, entrance 75 cents: Roberts 8, Ostrander 1, Salisbury 9, Graham 5, Lansing 8, Clow 7, Barrett 6, Ward 6. Ties on first div.

Contest 9, 15 singles, entrance $1: Lansing 9, Salisbury 10, Roberts 12, Graham 4.

Contest 10, 25 singles, for individual championship of Madison county, entrance $2: Markham 23, Roberts 24, Lansing 17, Maxwell 24, Peet 22, Salisbury 18. Maxwell and Roberts tied for badge and div. first; second, Markham; third, Peet; fourth, Salisbury; fifth, Lansing. OSCEOLA.

PHILADELPHIA, Aug. 30.—The third quarterly shoot for the yearly prize of the Frankford Gun Club took place on their grounds at Frankford this afternoon. There were 9 contestants, each shooting at 25 Keystone targets, thrown from 5 traps, under American Shoo ing Association rules. A large number of spectators witnessed the excellent shooting through the entire match.

J Crother	19	T Ridings	15
E Sawson	18	B Bourne	17
E Betson	22	D Meyers	18
J Hilt	17		
T Rowcroft	17		
W Timm	18		

On the grounds of the Parker Gun Club this afternoon 8 shooters contested in a match for a watch. The conditions were 3 birds up, thrown from 3 traps, under American Association rules. Each contestant shot two chances, and at the end of the first round four chances remained in, W. Timm having two and Messrs. Jones and Hack one each. In the shoot-off Timm, who had shot splendidly throughout, carried off the prize:

Hack	5	Timm	8
Lund	1	Kerr	1
Rowcroft	3	Hey	3
Jones	4	Lawless	4

There was a good attendance at the grounds of the North End Gun Club at Frankford to-day. It was a family shoot for the regular monthly prizes. Class shooting, 25 single Keystone targets each man. The prizes offered were gold watch charms representing a setter dog, and were won by Wm. Wolstencroft, F. Barron and W. Howe. The score:

Class A.

W H Wolstencroft	21	J Wolstencroft	18

Class B.

F Barron	21	J Rothacker	18
J C Corson	12	W Wilson	12
		N Swope	17
		J S Somers	16

Class C.

E Ridge	15	W Howe	18
		D Hartley	9

STAMFORD ROD AND GUN CLUB, Aug. 25.—First event, 5 bluerocks:

A S Pitt	00111—3	N C Downs	10100—2
H Oothout	10010—2	I P Tafft	00111—3
G B Hendrie	11111—5		

Second event, 5 bluerocks:

W B Rice	10111—4	I P Tafft	01111—4
J D Goulden	00110—2	A S Pitt	10111—4
H Oothout	01110—3	G B Hendrie	10110—3

Third event, 5 bluerocks:

W B Rice	11111—5	C E Smith	00000—0
H Oothout	11111—5	A S Pitt	10111—4
G B Hendrie	11010—3	N C Downs	01010—2
J D Goulden	10101—3	E Vanderwerken	10001—2
I P Tafft	11110—4	Harry Bell	10001—2

Fourth event, 5 bluerocks:

W B Rice	11011—4	G B Hendrie	10111—4
Harry Bell	01101—3	E Vanderwerken	10001—2
H Oothout	10111—4	C E Smith	11100—3
A S Pitt	11111—5	N C Downs	10001—2
J D Goulden	00100—1	J E Palmer	10001—2
I P Tafft	11111—5		

Fifth event, miss and out: Tafft won. Sixth event, miss and out: Hendrie won. Seventh event, miss and out: Oothout, Rice and Hendrie div.

HIGHLANDTOWN, Md., Aug. 28.—Maryland Gun Club shoot at 25 Keystones, 5 traps, A. S. A. rules:

Hughes	1011111010101011101111111—20
Simmons	1010111010101010101010101010—15

Sweep at 4 live birds, $2 entrance: Sigler 4, Russel 4, Collins 4, Albee 4, Haggerty 4, Lindsley 4, Hunt 4, Howard 4, Inwood 3.

CLEVELAND, Aug. 28.—The regular shoot of the Cleveland Gun Club was held this afternoon at Blue Rock, at 25 birds, and resulted as follows:

Cogswell	20	Marbach	18
Hebbard	17	King	11
Jones	17	Williams	16
John	12	Carter	19
Frederick	19	Wilson	14
W H Tamblyn	20	F Tamblyn	16
		Connell	19
		Mack	17
		Jack	17
		Post	9
		Tuam	11

Cogswell and W. H. Tamblyn shot 5 birds for the first badge. Cogswell losing 1 and Tamblyn making the 5 straight.

CHICAGO, Ill., Aug. 26.—The new Fort Dearborn Club of Chicago promises to be about the strongest of our trap-shooting organizations, and has some features in its making which are interesting. The membership is limited to thirty, and there are twenty-seven members now. The club is duly incorporated, the original members being W. N. Low, C. D. Gammon, H. D. Nichols, W. P. Mussey and Abe Kleinman. The President is W. N. Low; Vice-President, C. S. Burton; Secretary-Treasurer, W. P. Mussey. The board of managers are Messrs. Gammon, Nicholls and Kleinman. The annual dues are $3, and the membership fee $5. Two medals are put in competition, one for live birds and one for artificials, the first worth $50, the latter $20. Mr. Van Uxen offers a suit of moleskins for best average, the Jenny & Graham Gun Co. a coat or gun case for second average. On targets Abe Kleinman offers for average 100 E. & C. or Schultze shells. A very good rule adopted by this club is that in the selection of officers or selection of a team, no nominations shall be made, but all election made by secret ballot. Another good thing is that the members may not form any team whose services do not belong exclusively to the club on call. Fort Dearborn Club will thus go into the next State meet with a very strong team at its command, and will be very likely to make the tall corn crack when it turns loose. The club shoots, which have already begun, will be held at Watson's new park at Burnside.—E. HOUGH.

BROOKLYN, Sept. 2.—To-day's varying and tricky wind prevented the redoubtable marksmen of the Acme Club from making their usual large scores in the regular monthly blue-rock contest at Dexter Park shooting grounds. The standards were thrown right and left from two traps at medium height, and the only man to keep his score sheet clean was T. Short, who broke the possible 20. Mr. Link captured second prize with 17. Three impromtu sweepstakes, in which Kunzweiler, Short, Dethloff, and Link were the principal winners, following the regular event. The scores: Regular club shoot, 20 blue-rocks each man, 21yds. rise right and left angles. T. Short 20, L. Link 17. Kunzweiler 15, Menkel 15, M. Schottler 12, Maier 11, Greiner 10, Dethloff 10, Florney 10, Munk 10, Roesch 7, Koerner 7. Referee President C. Dethloff.

HARTFORD, Aug. 26.—At the annual meeting of the Colt Hammerless Gun Club, Mr. A. C. Collins was again elected president, Egbert Decker vice-president, W. H. Hopkins treasurer, M. H. Cook, secretary, and J. C. Capen with the above form an executive committee. The treasurer reported a balance of $190 in his hands. The club has a membership of 90, and has a fine house and grounds on which they shoot every Saturday afternoon. The club has not only given financial aid to the Connecticut Fish and Game Protective Association, but its members are always willing to give information of any illegal shooting or fishing.—M. F. COOK, Secretary.

WORCESTER, Mass., Aug. 28.—At the regular meet this week of the Worcester Sportsmen's Club, at Coal Mine Brook Range, there was a match of 100 clay pigeons between Charles Crompton and E. Welsh, the result was: Crompton 78, Welsh 77. The merchandise contest was continued, in this contest each man has a possible 25 clay pigeons. The work this week resulted as follows: G. J. Rugy 23; W. E. Johnson and E. B. Burbank each 22; C. H. Howe, W. S. Davis, and E. T. Smith each 21; M. D. Gilman, E. Whittaker, W. D. Jourdan and Charles Crompton each 20; C. B. Holden, C. E. Foreland, George Adams, A. B. F. Kenney and E. Welsh each 19; H. W. Webber 18; E. S. Knowles, V. F. Prentice and H. Colvin each 16; J. B. Garland 15; A. Gilman 14; F. Forehand 13; E. F. Swan 12; C. R. Burnett 10; E. James and C. S. Day each 9.

STATEN ISLAND, N. Y., Aug. 29.—The Island City Gun Club held a successful sweepstake shoot at South Beach to-day. There was a strong wind from the bay, but as it was at the marksmen's backs it did not affect the shooting materially. The grounds are not of the best, there being but three traps and no fence inclosing the space used for shooting. There were several match shoots decided during the day, and lots of money changed hands on the results. The scores made in the sweepstakes, at 5 birds each man, were as follows: L. Bardes 5, Wm. Grant 5, Chas. Schneider 4, T. Smith 4, O. Nichols 3, J. Myers 3, Barney McAloon 3, Neils Nelson 3, J. Rueger 3, J. Triebel 2. Bardes and Myers had a match shoot at 6 birds each, and tied with 4 apiece.

ST. PAUL, Sept. 1.—The annual tournament of the St. Paul Gun Club, which is to be held at Hamline Sept. 9, 10 and 11, will be open to all comers except professionals. The contest for the Chamber of Commerce badge will be the principal event of the contest, and it will be shot for on the second day. American Shooting Association rules will govern, and the sport will begin at 9 A. M. each day.

HAMBURG, Aug. 31.—Dr. Carver, the shooter and Wild America proprietor, beat his own record here to-day by four minutes and twenty seconds, in breaking 1,000 glass balls with a rifle in exactly thirty-four minutes. The shooting took place in the presence of 30,000 people.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

SEPTEMBER.
20. New Jersey Athletic, Bergen Point, Fall.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.
Commodore: HENRY STANTON.....} New York.
Secretary-Treasurer: F. L. DUNNELL,}
Vice-Com. *Rear-Com.* *Purser.*
Central Div..Geo. A. Warder....E. L. Frueh.....J. K. Bakewell, 110 Diamond street, Pittsburgh, Pa.
Eastern Div..Dr. J. A. Gage.....A. S. Putnam.....Ralph F. Brazer, Lowell, Mass.
N'thern Div..W. J. White.....W. J. Read.....C. M. Whitlaw, Montreal, Can.
Atlantic Div..M. V. Brokaw.....I. V. Dorland.....W. R. Haviland, Yonkers, N. Y.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for the current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, 34 Montauk Block, Chicago, Ill

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

NEW YORK C. C. INTERNATIONAL CUP.

THE third series of races for the New York C. C. international challenge cup was sailed on New York Bay on Monday and Tuesday, resulting in the retention of the cup, though the honors of the sailing were very equally divided.

The trial races were held on Aug. 29-30, there being a good number of crack sailors present. The first race, on Friday afternoon, was sailed in a good breeze, the course being two rounds off the club house, a strong tide running. Vagabond ran over a log and tore off her deep fixed rudder, while Uno broke her steering gear. The second race was sailed on Saturday afternoon, in a strong wind. The course was three rounds, about 7½ miles. Toltec carried away a mast, Vagabond broke her mizen step and Guenn capsized. Lieda capsized when in a good place on the second round, but righted, bailed out, and finished second. The full times of the two races are as follows:

AUGUST 29, START 5:54.

	1st Round.	Finish.	Elapsed.
Wasp, Paul Butler, Vesper	6 31 50	7 04 55	1 10 55
Lieda, S. Schieffelin, New York	6 36 15	7 10 45	1 16 45
Beta, T. S. Oxholm, Yonkers	6 37 30	7 11 45	1 17 45
Toltec, W. W. Howard, New York	6 44 00	7 20 00	1 26 00
Vagabond, C. J. Stevens, New York	6 38 30	disabled.	
Uno, H. L. Quick, Yonkers	Disabled.		

AUGUST 30, START AT 3:50.

	1st Round.	2d Round.	Finish.	Elap'd.
Wasp, Paul Butler, Vesper	4 17 10	4 40 31	5 09 05	1 23 35
Lieda, S. Schieffelin, New York	4 14 10	4 40 13	5 06 50	1 21 20
Beta, T. S. Oxholm, Yonkers	4 15 45	4 42 25	5 08 52	1 23 22
Toltec, W. W. Howard, New York	Disabled.			
Vagabond, C. J. Stevens, New York	4 16 45	4 42 07	5 15 45	1 30 15
Pterodactyl, B. H. Nadal, N. Y.	4 17 26	4 42 23	5 14 30	1 29 00
Uno, H. L. Quick, Yonkers	4 13 40	4 36 10	5 01 06	1 15 36
Guenn, Wm. Whitlock, New York	4 24 27	Capsized.		
Hornet, W. Wintringham, Brook'n	4 18 15			
Random, C. B. Vaux, Yonkers	4 16 25	4 42 32	5 09 23	1 23 53

As the result stood on Saturday night there was little to guide the committee in chosing between Messrs. Butler and Quick, so early on Monday morning a third race was sailed in a light wind. Wasp led over two lengths of the course, but finally lost the wind for a time at the first Buoy, Uno passed her and winning. It was then decided to select Mr. Quick as the representative of the New York C. C. in defending the cup. By 10 A. M. there was not wind enough to enable yachts and catboats to breast the strong ebb tide that was running to leeward, and the canoeists and their friends waited rather impatiently until after 3 o'clock before a light southerly breeze came in against the N. W. wind that had been all day about the Upper Bay. The course was the usual club triangle, off Stapleton, but owing to the drifting of the buoys the distance could not be accurately determined. There was a long leg to windward, down the shore, a dead run up the channel to second mark, and a short reach across to the finish, three rounds. The tide was near the last of the ebb, but running quite strong. At the gun Canuck was near the line, going over within 10sec., but with little headway; Uno was just over the line, being obliged to work back and re-cross, being 55sec. late. She carried two hoisting sails of 105ft. while Canuck's standing rig had 120ft. Canuck crossed on port tack and at once filled away on starboard, heading offshore; Uno followed the same course but about 100ft. to leeward. After one long leg out Canuck tacked and stood in for the lower mark, Uno following. When near the shore each made a couple of short hitches and then went by the buoy with sheets off. In reaching Uno had made up 15sec. on Canuck in the beat. The wind was very light as they ran up against the tide, sometimes winged out and sometimes with booms on opposite sides as the two ran along together. Uno overtook Canuck, both passing the second mark together, and ran by her as the turn was made, opening up about 100ft. between the pair at the end of the round and with 15sec. of time between them. The other rounds were but repetitions of the first, the differences at each mark being shown by the times below. The windward leg was made in two long hitches with a short one at the end. On the down wind leg of the last round Canuck ran through Uno's lee and took the lead, but held it for only a few moments, Uno being safely ahead at the second mark. The finish was timed: Uno, 1:24:31. Canuck, 1:25:04, giving the race to Mr. Quick by 33sec. It was nearly 5 P. M. when the race finished, and Mr. Jones was averse to sailing a second race at once, so a postponement was made until Tuesday morning. The elapsed times were:

	1st Round.		2d Round.		3d Round.			
Uno	12 30	25 20	29 38	41 19	51 49	56 10	1 07 00	1 20 20	1 24 31
Canuck	12 00	25 20	29 53	41 40	52 24	56 48	1 07 11	1 20 31	1 25 04

On Tuesday morning there was a light but puffy wind from S.W. blowing over the hills back of Clifton. Mr. Quick did not reach the club house until 11 A. M., and then some time was lost in wrestling with a refractory mast tube, so that it was 12:45 when the race started. Canuck carried her largest mainsail, 90ft., the mast being 18ft. long, with a mizen of about 40ft., and Uno discarded the lowering rig of Monday for a larger standing rig nearly equal to that of Canuck. The mainmast, however, was of pine, and a weak stick, that threatened to break and required much favoring through the race. The course was the same as on Monday, the tide just running ebb, while the first leg down the shore was a close reach, the second a free reach, with a short hitch across on the wind to finish, three rounds. Canuck was to windward before crossing, but fell to leeward at the line, Uno running out ahead on her weather. The puffs struck them heavily at times as they reached down for the first mark, Canuck standing up straight and working out to windward, while Uno had to beg to save her mast. At the jibe for the first mark Uno had gained 8s., but on the reach against the tide to second mark she added 1m. 2s. to this. They luffed around the mark for the second round with Uno 2m. 21s. ahead.

They went away with the wind further ahead and somewhat stronger, allowing Canuck to carry her heavy spar and big sail better, while Uno was not so well off as before. It was now a beat to the mark, Canuck doing the better work and soon crossing Uno's bows. At the turn she showed a lead of 35s., having made up nearly 3m on the one leg. Off the wind Uno caught her a little, being only 7s. astern at second mark. The next leg was something to see; the two came in, on the wind, Canuck ahead and luffing to prevent Uno passing, the latter gaining until, as Canuck luffed around the mark Uno shot inside of her, the two being laid flat at the same time by a specially heavy puff. Mr. Quick got out and put one foot on the centerboard, saving a capsize, while Canuck luffed and ran clear ahead. On the long windward leg the superiority of Canuck was again apparent; she stood up stiffer and held a better course than Uno, the latter not daring to take the puffs on account of her mast.

At the first buoy on the last leg Canuck led by 1m. 38s., all gained on the one leg, but as she came for the buoy the wind dropped, leaving her becalmed for a few moments, in which time the tide caught her and carried her down on the buoy, her stern and rudder dragging against it. Mr. Jones sailed on, finishing 2m. 37s. ahead of his rival, and at once announced the fact of the foul. Under Rule VIII. Canuck was disqualified and the race went to Uno, but Mr. Quick declined to accept this result, and offered to let the race go and sail a new one in its place. This generous offer, however, Mr. Jones would not accept, saying that as the fault was his it was only fair that he should stand by it. This of course ended the racing, leaving the New York C. C. for the third time holder of the cup. As Mr. Quick is a member of the Yonkers C. C., the cup will be turned over to the custody of that club as soon as it is returned to the holders by the Brooklyn C. C., who have it now in possession. The full times of the race are as follows:

	1st Round.		2d Round.		3d Round.			
Canuck	8 45	19 39	25 10	35 15	42 48	47 15	58 45	1 06 43	1 11 19
Uno	8 35	18 30	22 49	35 50	42 55	47 15	1 00 18	1 08 55	1 13 56

The result was a great disappointment to every one concerned, as it was evident that the two men and their boats were very evenly matched and that another very close race was to be expected, the result probably depending on which canoe found the wind most suitable for her. In this race Mr. Jones was at a disadvantage in this respect at the start, his large and heavy rig requiring a certain weight of wind to enable him to carry it steadily. As it breezed up his chances improved, as the times show, while Mr. Quick suffered in proportion through his light spar, which demanded the most careful nursing in such puffy weather.

While the fouling of the buoy did not affect the real merits of the race, and every one would have been glad to have ignored it entirely, it is a point which is covered by an imperative rule, one that has been found of the first necessity in all yacht and canoe racing, and which the club had no power to set aside. The only possible solution of the matter was in the acceptance by Mr. Jones of Mr. Quick's sportsmanlike offer to call the whole race off and try again, and all racing men will appreciate the spirit with which this offer was made on the one hand and declined on the other. No better proof could be desired of the generous and chivalrous love of sport which has always characterized canoe racing, or the respect which canoe men themselves have for the rules they have made to govern their racing. Mr. Jones has returned home, but has left his canoe here in hopes of sailing her, as he proposes to give up canoe racing for yachting.

THE LACHINE RAPIDS COURSE.—Before the first race for the New York cup was sailed, Mr. Jones, who had been struggling for several days with the tides of the Upper Bay, was asked where the next race for the cup would be held in the event of his winning it; whether it would take place off Brockville. He looked for a moment at the ebb tide traveling at a 10-knot gait over the starting line and by the dock, and then remarked, "I think that I should select the Lachine Rapids as the fairest place next to New York Bay."

A. C. A. MEMBERSHIP.—Atlantic Division: Geo. W. Arnold, Jr., Harry L. St. John, L. R. Rogers, Walter Douglass, Gilman S. Stanton, Frederick E. Stanton, New York; O. D. Roberts, Brooklyn; R. P. D. Bennett, Garden City, N. Y.; Edward R. Gnade, Rutherford, N. J. Eastern Division: R. Wilton Lockwood, E. L. Florence, Norwalk, Conn.; John E. Goodwin, Geo. S. Ford, New Haven, Conn.; Albert W. Orton, Rome, N. Y.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 25 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

BEVERLY Y. C., AUG. 23.

164TH REGATTA, FOURTH OPEN SWEEPSTAKES, MONUMENT BEACH.

THE race was started in a moderate N.E. breeze, which kept dying out. All the boats finished in a very light air against a head tide. In first class Thyra evidently had not read the rules, as she threw ballast overboard after preparatory signal was set, and was ruled out in consequence. The new Crosby boat Dora beat Mattie easily. In second class Widgeon showed what she could do properly handled, while Anonyma's poor position was a surprise. In third class Daisy broke tacks with the others, while the three sister boats made a hot and close race of it. Rip was missing in fourth class, and Edith had a walkover.

FIRST CLASS.

	Length.	Elapsed.	Corrected.
*Thyra, R. G. Shaw, Mon. Beach	27.07	3 01 02	2 50 35
Dora, C. W. Bliss, B. Y. C.	27.05	3 04 46	2 54 24
Mattie, Howard Stockton, B. Y. C.	28.10	Withdrawn.	

SECOND CLASS.

THIRD CLASS.

Cayuse, F. W. Sargent, B. Y. C.	22.09	2 45 44	2 34 06
Puzzle, Wm. Amory, 2d, B. Y. C.	22.09	2 47 00	2 35 22
Elna, John Parkinson, B. Y. C.	22.10	2 47 13	2 35 40
Daisy, Howard Stockton, B. Y. C.	21.01	Withdrawn.	

FOURTH CLASS.

Edith, Irving Chapman, B. Y. C.	19.04	2 07 27	1 54 56

*Ruled out.

Winners—First prize: Class 1, Dora; Class 2, Widgeon; Class 3, Cayuse; Class 4, Edith. Second prize: Class 2, Mollie; Class 3, Puzzle. Third prize: Class 2, Mist. Judges: Geo. H. Richards, F. E. Cabot, A. H. Hardy.

165TH RACE—2D CHAMPIONSHIP.

This race was started at Marblehead, Aug. 23. The wind was a good N.E. breeze, accompanied by rather a heavy sea and a pouring rain that was as effectual as a pretty good fog.

In the first class, although Saladin, Shark and Hawk had entered, only the latter turned up, owing to a misapprehension, both the others thinking none of the three would start, and all being willing to take a rest after last week's racing.

In the second class Wraith found it too heavy weather to get down from Boston, and Sprite beat Queen Mab easily. In third class keels Hornet had frightened out everything in her class except Nixie, whose owner had more pluck than the others, while in the centerboard division no one but Wanda dared tackle Kiowa in the seaway, and Wanda had not been able to repair her centerboard, carried away after race of the 16th; so Kiowa had a sail over, although Niobe was under way at the line and Edith lying close by with her racing crew on the wharf.

Kiowa did not hear first whistle, and so was handicapped at the start about two minutes, but it made no difference, Hornet can sail away from any 20ft. catboat ever built, at least in Eastern waters. Susie, who won the 24ft. championship in the C.Y.C. last week, tackled the 20ft. class, but was easily beaten by Kiowa and played with by Hornet.

In fourth class Psyche had entered, but could not beat down from Boston against the northeaster, so Dolphin had a walkover.

It was the smallest championship race but one ever sailed by the club, and it was rather rough on the boats that started to have the others keep out of the race. Courses, first and second classes, 10½ miles; third and fourth classes should have been 7½, but was 8½ miles. Time as follows:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Hawk, Gordon Dexter, slp	38.03	2 33 35	2 32 29

SECOND CLASS.

Sprite, H. P. Benson, slp		2 37 45	2 27 52
Queen Mab, W. O. Guy, cat		2 44 40	

THIRD CLASS—KEELS.

Hornet, Com. Paine, slp	26.04	1 48 17	1 41 18
Nixie, C. L. Cochrane		2 07 35	1 58 58

THIRD CLASS—CENTERBOARDS.

Kiowa W. A. & W. L. Jeffries, cat	22.07	1 57 05	1 46 02

FOURTH CLASS.

Dolphin, Royal Ribbon, cat	18.00	2 15 56	2 09 52

Champion pennants won and held by Hawk and Dolphin won by Sprite and by Hornet tieing Kiowa. Judges' yacht S. S. Gleam, B. Y. C. Judges, John P. Cushing, Jos. A. Iasigi.

Harbinger and Eureka's lengths as given by their owners make no difference in prizes on the 16th, as White Fawn and Tom Cat win.

NEW YORK Y. R. A. REGATTA, SEPT. 1.

THE second annual regatta of the New York Y. R. A. was sailed on Monday, the wind being very light, and the race a quiet and easy one. The classes and courses were:

Class A, schooners, 40ft. and over. Class B, cabin sloops, 53 to 62ft. Class C, cabin sloops, 45 to 53ft. Class D, cabin sloops, 38 to 45ft. Class E, cabin sloops, 32 to 38ft. Class F, cabin sloops, 27 to 32ft. Class G, cabin sloops, 27ft. and under. Class I, open sloops, 27 to 32ft. Class J, open sloops, 23 to 27ft. Class 3, open sloops, 23ft. and under. Class 4, cabin cats, over 28ft. Class 5, cabin cats, under 23ft. Class 6, open cats, 27 to 32ft. Class 7, open cats, 23 to 27ft. Class 8, open cats, 20 to 23ft. Class 9, open cats, 17 to 20ft. Class 10, open cats, 17ft. and under.

Start and finish between Liberty Island and Oyster Island Buoy. Course 1, for classes A, B, C, D and F, to and around Buoy 9½ and return, 24 miles. Course 2, for classes G, I, 2, 4, 6 and 7, to and around the Red Bell Buoy, at north entrance of the Swash Channel, and return, 19 miles. Course 3, for classes 3, 5, 8 and 9, to and around Buoy 13 off Swinburne Island, and return, 14 miles. Course 4, for class 10, to and around Buoy 15, and return, 11 miles.

The full times were:

In Class C Dolphin has a walk over. Avalon wins in Class D. In Class E, Mergus; in Class G, Soutter Johnnie; in Class 1, Eagle Wing; in Class 2, Our Own; in Class 3, Just Woke Up; in Class 4, Henry Gray; in Class 5, Ripple; in Class 6, Nora L.; in Class 7, Nedeva; in Class 8, Undine, and in Class 9, Bon Ton.

Messrs. Geo. E. Gartland and Com. Bussell were the judges.

COMING RACES.

ON Saturday the Larchmont Y.C. will sail its annual fall regatta, with a special race for cabin sloops and cutters, in the classes 30 to 40 and 40 to 50ft. cor. length, on Monday. On Saturday last the same club held a race for open boats. On Sept. 10 the Eastern Y. C. will sail its fall regatta off Marblehead, open to the 30, 40, and 46ft. classes. On Sept. 13 the New York Y. C. will sail a fall regatta, under the following conditions;

The start will be made off Scotland Lightship at 11 A. M., wind and weather permitting.

Courses.—To windward or to leeward and return. Course I, for class V., schooners; classes VI. and VII., sloops, cutters and yawls; nine miles. Course II, for all other classes, all types included; thirteen miles.

Prizes.—A $250 prize in each class when two or three start; a prize of $75 for second, if four or more start; and a special prize of $250 for keel schooners sailing in one class, if two or more start.

Entries addressed to the Regatta Committee, New York Yacht Club, No. 69 Madison avenue, will be received up to 10 P. M. on Sept. 12.

The matches between Minerva and Liris will be sailed off Larchmont on Sept. 6-8, and on the same days Gossoon and Ventura will race off Marblehead, the latter having challenged Gossoon's claims to the championship. On Sept. 9 a match will be sailed between Gossoon and the 40-footer Milicete. A match was set for last week between Mariquita and Mocassin, at Newport, but it was not sailed. Besides these races several other private matches have been made, to be sailed during September.

ATALANTA.—The sloop Atalanta, designed and built by the late Capt. Cuthbert to sail for the America's Cup in 1881, in which contest she was beaten by Mischief, was partly burned at her moorings in Charlotte Harbor, on Thursday night of last week. Her owner, Mr. George Eyre, of Brighton, Ont., was at the banquet of the Rochester Y. C. and during his absence the yacht caught fire. Before the fire department could reach her the deck, interior and sails were destroyed, the hull being comparatively uninjured.

METEOR.—On Aug. 23 as the steam yacht Meteor, Mr. T. J Montgomery, was going down the Bay off the Battery she was run into by the steamer Guyandotte, of the Old Dominion Line, bound out. The yacht was badly cut into on the starboard side, abreast of the pilot house, and as she was making water rapidly she was quickly towed to the point off Governor's Island and beached. At low water the hole was stopped, the yacht pumped out and towed away for repairs. The responsibility for the collision has not yet been determined.

THE LAKE Y. R. A. CIRCUIT, 1890.

THE account of the L. Y. R. A. round in the last issue of the FOREST AND STREAM brought the racing down to Cobourg, where the third race was sailed on Aug. 18. The remainder of the programme included a race at Kingston on Thursday, Aug. 21, at Oswego on Saturday, and at Rochester on Monday, the fleet disbanding after the latter race. In order to cover the hundred miles between Cobourg and Kingston in time, it was decided to tow, going by way of the new Murray Canal; and on Tuesday the tug Emma Munson, of Kingston, started from Cobourg with a heavy hawser astern, to which thirteen yachts made fast, each having a bow and stern line to the hawser, leaving her at liberty to drop out of the tow at any time. Oriole returned to Toronto, Aileen, Deerhound and Velnette started for Charlotte, the port of Rochester and the station of the R. Y. C., and there was left in the fleet Vreda, White Wings, Nancy, Yama, Merle, Verve (Toronto), Volante, Maud B., Nadia, Vision, Samoa, and Cricket. Leaving at 4 P. M. on Tuesday, the fleet anchored off Kingston at 8 P. M. on Wednesday, Cricket having dropped off and started across the Lake for Oswego.

On Thursday morning the wind was fresh from S.E., the fleet starting with jackyarders aloft. The course was from off the town around a buoy across the river, then around the starting buoy and off around a buoy up the river to the start, two rounds. The smaller classes sailed shorter courses, using the same buoys. Norah, of Belleville, joined the fleet for this race. The first round was sailed in a strong wind, jackyarders coming in, the times being: Norah 11:40, Vreda 11:45, Yama third, White Wings fourth. The wind now increased until the yachts that continued the race were under close canvas, White Wings, Verve, Condor, Gracie, Ariadne, and all save Samoa in the small class giving up. Vreda beat Nora; and Yama, under three reefed main and small staysail, beat Merle badly. As Yama came home her No. 3 jib, which was stopped on the bowsprit, got adrift and was split by a sea that filled it as she rose. Merle sailed well in the sea, but had no show against the little Fife cutter. In addition to the wind and sea it rained heavily, while the weather was very cool, putting the sailormen in a very poor plight.

After finishing Vreda ran into the harbor under the guidance of a local amateur, and found a very bad berth. Her two anchors dragged and she went into the stone piers of the railway bridge, where her port side was badly battered, the steel plates being dished between the frames. A party of soldiers from the fort came to her aid with planks from a lumber yard near by, which they ran down between her and the pier, thus breaking the blows. Had she been a wooden craft she would have sunk very quickly after such a severe hammering. As it was, she came off without any vital injury, continuing the circuit, but her side will need some careful treatment to restore the original shape. The new Volante fared still worse, going ashore on Point Frederick, where she sunk. She was raised next day and docked, some seven new planks being put in, after which she rejoined the fleet at Oswego Monday night. A number of other yachts were more or less damaged, while all hands were thoroughly tired out by night. The summary of the race was:

SPECIAL CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Vreda	10 00	1 22 05	3 22 05	3 16 16
Norah	10 00	1 25 50	3 25 50	3 23 50

White Wings and Condor did not finish.

40-FOOTERS.

Merle	10 00	2 08 30	4 08 30	4 06 00
Verve	10 00	Did not finish.		

35-FOOTERS.

Gerda	10 15	2 35 00	4 20 00	4 20 00
Gracie	10 15	Did not finish.		

30FT. CLASS.

Samoa	10 15	1 50 03	3 50 32	3 50 32

Volante, Norma, Ariadne, Nancy, Kelpie and Maud B. did not finish.

On Friday a few of the yachts started for Oswego, reaching there after a very rough passage across the lake, but all idea of a race on Saturday was given up. With a fair wind the rest came in on Saturday, thus having a day of needed rest before the next race.

Monday morning was clear and bright, with little sea and a nice breeze, the course being laid S. W. by W., five miles, making a beat out and a run back, three rounds for the larger yachts and two for the smaller. The start was made off the breakwater at 10 A. M., some of the yachts being a little late and straggling over. Oriole had come from Toronto, the old Katie Gray was entered, and Wona, Romola and others of the smaller yachts were on hand. Mr. Will Fife came up from New York to sail on Yama, though the yacht, under the L. Y. R. A. rule, was steered all day by Mr. Allan Ames. Starting under Oriole's lee and just ahead of White Wings's lee bow, she was soon the leading boat, coming out ahead of the Hamilton Verve, which had started some time ahead of her. Yama, Oriole and White Wings worked along the shore, while Verve and Merle stood out in the lake, gaining by more wind. Yama was first boat at the outer buoy, and had a long lead on the fleet at the end of the first round, having carried spinnaker in. On the next leg out Merle carried away a new jaw made for her at Kingston, and started home.

The wind fell very light on the second round, there being barely enough to take Yama around the outer mark, while Oriole was becalmed for a long time. The end of the race was little better than a drift, Yama being in a long time before the other boats had made their second round. Vreda did little, the wind being too light for her. Katie Gray made a good race in her class, beating Gracie. Yama took the pennant presented by Com. Mott for the best time over the course by an Oswego yacht. The times were:

FIRST CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Oriole	10 00	5 05 30	7 05 30	7 05 30
Vreda	10 00	Not timed.

25FT. CLASS.

Maud B	10 10	12 37		
Romola	10 10	12 55		

In the evening a dinner was given at the club house, all the yachtsmen in the fleet being present.

The race at Rochester had also been postponed one day, so that Tuesday and Wednesday were left to reach Charlotte, nearly 60 miles distant. Some of the yachts sailed at midnight on Monday, reaching Charlotte at noon next day, the wind being light most of the time; others, especially those which left last, met head winds and heavy seas on the lake. Merle waited for repairs to her gaff and did not get away until Wednesday morning. She made Big Sodus, about half way, and put in, the weather being too heavy, thus failing to reach Charlotte in time to start.

The course for the Rochester Y. C. regatta was up the lake shore, buoys being set at 5 and 7½ miles respectively, the two larger classes sailing two rounds of the long course, 30 miles, and the smaller classes two rounds of the short course, 20 miles. The smallest class, open boats, sailed but one round. The wind was strong directly down the shore and making a beat to the outer mark. The start was made off the west pier, the largest class going off at 10:30. The Hamilton Verve having lost her topmast at Oswego went in without one, trusting to the breeze holding. Vreda led both Oriole and Aileen, going to windward in grand shape, and having a long lead at the turn. There was a good working breeze and quite a sea at the start, but both fell as the day advanced. Off the wind Oriole gained on Vreda, and collared her near the end of the first round, but on the next leg to windward Vreda picked up, in the end saving her time easily from the larger boats, in spite of the schooner's allowance for rig. Aileen was third all day, but beat Oriole by a 30 seconds at the end. Yama had nothing in her class, so Deerhound started to make a race, but came to grief, losing the jaws of her gaff. Nancy also met with the same mishap. The full times were:

FIRST CLASS.

	Start.	Finish.	Corrected.
Vreda	10 30 53	4 34 56	5 51 54
Aileen	10 30 59	4 37 09	6 04 09

After the race a dinner was given to the visitors by the Rochester Y. C., the prizes being presented, after which the fleet was disbanded and the round of 1890 was at an end. The entire round occupied a little over two weeks, the distance covered being about 560 miles, not including the cruises to the rendezvous and from the last port. In addition six races were sailed. Some of the yachts which made the entire round, such as Samoa and Nancy, are but 25 to 27ft. l.w.l., while the little Wona, of 22ft., and the still smaller Romola, of 18ft. ventured each a long way from home. Considering this sea which has to come up at a short notice, and the severe storms that are to be found frequently enough in August, a racing cruise of such a length, and by small yachts, is no small achievement to carry through successfully, and that it is done every year speaks well for the spirit and skill of the lake yachtsmen.

The Lake Yacht Racing Association and its annual circuit of races have passed beyond the experimental stage, and are well and firmly established, and though there is much to be done before the fleet is worked up to the highest standard, a good start has been made in all matters of organization and government. From its formation in 1884 to the present time the L. Y. R. A. has followed the policy of adopting good rules with an eye to the future, rather than temporizing over vital matters out of consideration for any local interests, and the wisdom of this course is now apparent. While the fleet is still a small one, and many of the yachts are by no means cracks, there is every opportunity and incentive for improvement in the right direction, and each year shows a steady advance. The resolute prohibition of shifting ballast and unlimited crews from the first, though strongly opposed at the time, has done much for the young fleet, and other equally wise legislation has since done more, until, in spite of small size and rough finish, the lake yachts are in the main excellent little craft.

The larger and finer yachts that have been brought to the Lake or specially built there, as Vreda, Oriole, Yama and Merle, are of course equal to any of their class, but it is of the smaller and home-built boats that we speak in particular. There is growing up a fine class of small sea-going yachts that are back and forth across the Lake at all times through the season, and that make the complete circuit each year. The old shoal centerboard craft that once monopolized the prizes at each port have largely disappeared, making way for abler and better as well as faster boats. This year the fleet has been increased by some very important additions, both from within and without. The largest of these is the 20-rater Vreda, a steel cutter, designed by Mr. Watson, and built on the Clyde in 1888. She is a handsome vessel of 45ft. l.w.l., 10ft. beam and 9ft. draft. Below she has very good accommodation, though much of the space has been given up to the forecastle. She is practically identical with the 20-rater illustrated in the FOREST AND STREAM of Aug 8, 1889. Her rig is quite small, boom and bowsprit being very short, and it is not enough to drive her in light weather, though with a moderate increase she will probably do well on the Lake. Owing to her long passage and late arrival there was not time to fit her properly before the beginning of the circuit, and she has sailed under many disadvantages, but with a suitable rig and a new coat of paint she will prove a credit to the Lake fleet in speed and appearance. Her details and deck fittings are of the latest pattern.

The new Fife cutter Yama has already been described in our pages, and it is only necessary to say that she has proved as fast as she is handsome, and in no way discredits her designer or her sister Minerva. She has easily beaten her chief opponent, the Burgess centerboard Merle, on every occasion, and has proved herself specially fast in light winds, while equally good, so far as can be seen, in heavy weather. She, too, was hardly ready when the season began, and her owner, Mr. Allen Ames, had little opportunity to sail her and learn her ways, but he has steered her admirably in all her races, frequently beating the larger yachts without allowance.

While these two boats claim special notice as equal to the best of their class afloat anywhere, they are no more interesting than the smaller craft that have been built on the lake, by home designers and builders, to fit the new corrected length classes. The popular class thus far is the 30ft., calling for boats of about 26ft. l.w.l., and several of these have been built since the class was established last fall. The most successful of these, judging from the racing, is Nancy, designed and built by Mr. Thos. Dadson, of Hamilton, and owned by Dr. F. S. Malloch. She is 25ft. l.w.l., 8ft. 3in. beam, and 5ft. 6in. draft, a keel boat. Another in the same class is Samoa, designed by her owner, Mr. Æmilius Jarvis, of Hamilton, a fine little ship of 27ft. 6in. l.w.l., 8ft. 6in. beam and 6ft. draft, with clipper stem and very taking sheer, not unlike the Gardner boats. The racing indicates that Mr. Jarvis has taken too large dimensions for the hull, and Samoa has need of more canvas in ordinary weather, though all right in a blow, being the only yacht out of 7 starters that made the course at Kingston. Another new boat is the Volante, designed and built by Mr. George Webster, of Hamilton, 26ft. l.w.l., 7ft. 6in. beam and 6ft. 6in. draft. Her iron ballast, partly inside, does not give her the required stability, but with a lead keel she should make a good showing. The smallest of the new fleet is an 18ft. craft, Romola, designed and built by the steward of the Rochester Y. C. last winter, a handsome little clipper with a good sheer and long ends. All of the new yachts are of modern type and graceful outline, and show that the amateur designers of Lake Ontario are living to learn.

The weak point of the fleet as a whole is in the appearance; there are but few of the yachts which are kept as they should be, and many show the need of a good planing, with judicious doses of paint, putty and elbow grease. The hulls are strongly built, the deck fittings and appointments are improving each year, but there is a rough look about the woodwork which is not necessary, and the spars, gear and ironwork show a lack of neatness and finish. This is partly due to the fact that few paid hands are employed, the yachts being sailed by the owners and their friends, and with good seagoing bottoms and strong rigs it is a secondary matter, but at the same time there are a number of yachts in the fleet which might be easily made to show to infinitely better advantage by a little more care and labor in this direction. All this will come in time, and Yama is likely to prove a most valuable object lesson to the lake, as her fittings are most complete, and she will be kept in condition to show them with advantage.

So far as the first year's racing goes, it is at the very least a negative proof in favor of the new classification, the classes having the usual number of entries and the boats certainly being as well matched as of old. In some cases certain boats have been at a disadvantage, being built for a waterline class; but the result has, as a whole, been very satisfactory. There is room for a good class at about Vreda's size, not over 50ft. corrected length, as such a yacht can be within the working limit of draft on Lake Ontario and yet give abundance of room. Just now Vreda is obliged to race with Oriole, a 70ft. l.w.l. schooner, the result being a matter of weather but is satisfactory to none.

The next class, 46ft. corrected length, calls for a boat about 40ft. l.w.l., and might be made to take in such craft as the original forties Baboon and Xara, with a little lightening and reduction from 47 to 46ft. corrected length. The Lake 40ft. class, corrected length, promises to be a most promising one, a boat like Yama, with an after stateroom and a good cabin, offering most desirable accommodations for local uses. The presence of this new boat is likely to stimulate some of the Lake yachtsmen to build to beat her, and the addition of a new boat or two by other designers would make fine sport next year. The 35ft. class as yet has no new boats, but a number of old ones which keep the racing alive in it. The next class, 30ft., includes a number of modern keel boat of 25 to 27ft. l.w.l., and as these boats are accustomed to make the full circuit every year, racing at all ports, and at the same time are of very moderate cost, this class is likely to fill rapidly.

A new feature of the Lake racing is the "one-gun" start, adopted last fall and used this year in all the races with unusual success, considering its novelty. Delays occurred in some cases, but as a rule the starts were well timed and the yachts went over with the gun; so that even better results may be looked for next season. One thing, however, is necessary, not only on this account, but in order that all the details of the timing may be properly attended to. An official timekeeper should be elected, an experienced and reliable man, who should have entire charge of the watch, the gun and the record in every race, thus reducing the matter to a system. He might select his assistants from the regatta committee or others of each club, but should have entire control and responsibility. As matters are now, with but one or two races each year in some clubs, there is little opportunity for a regatta committee to learn from experience, and the timing is too important a matter to run any risks with. The novice, even though an experienced yachtsman, is not to be trusted with the gun and watch, especially for a one-gun start, while the accurate timing of the finish of a large fleet, and the prompt calculation of the result, demands constant practice on the part of those to whom it is intrusted. The fleet is now properly numbered, each yacht as it is enrolled being given a number which she keeps permanently; the one-gun start is likely to be retained, and with a few more yachts in several of the classes and the whole business of starting and timing in experienced and responsible hands, the Lake Yacht Racing Association will be equipped with as complete and perfect machinery for carrying out the end indicated in its title as any similar body afloat on fresh or salt water.

GOSSOON AND MINERVA, AUG. 23-26.

THE close of the Corinthian series at Marblehead on Aug. 20 left Gossoon and Minerva with an even score, each having won four races from the other. In order to settle the question a series of three private matches was arranged, to be sailed at Marblehead, for $100 per side. The first race was sailed on Aug. 23, the course being 10¾ knots dead to leeward, from Half Way Rock to Fawn Bar Bell Buoy, and return. The races were arranged under a mean of the allowances of the Eastern and New York Yacht Clubs. Saturday morning was rainy and foggy, with a moderate N. E. wind and a heavy sea, when the tug W. H. Clarke, with the judges, W. S. Eaton, Jr. and H. H. Buck, anchored N. W. of Half Way Rock. Gossoon, with Mr. Chas. Adams at the stick, was carrying a large jackyarder, but Minerva, anticipating a start to windward, had set her small one. When the handicap gun fired at 10:40 neither had crossed, but half a minute later they went over together, Minerva to windward, spinakers were set to starboard and balloon jibtopsails were run up over the jibs, the two running off very fast before the sea. Gossoon ran ahead and made a steady gain from the start, showing about a minute and a quarter lead when half the leg was covered. She was the first to take in kites at the leeward mark, Minerva carrying her spinaker well up to the turn. The two luffed around the buoy as follows:

Gossoon	12 22 02	Minerva	21 24 24

Gossoon had thus gained 2min. 22sec in the run of 11 knots. She carried her large jackyarder and a baby jibtopsail, Minerva having her second jackyarder and no jibtopsail. A long stretch was made on starboard tack toward Nahant, the pair tacking about 1 P. M. and heading into a bad sea. Minerva now set her jibtopsail, being astern and a little to leeward of Gossoon. The next inshore tack was made at 1:47, Gossoon following Minerva around. When they tacked again and stood out by Pig Rocks they were timed:

Gossoon	2 12 47	Minerva	2 17 44

After passing the buoy on Pig Rocks Minerva again stood inshore, Gossoon following, and from here to the finish they made short hitches. Both wind and sea now increased and Minerva began to gain on her rival, but not enough to save the race, Gossoon finishing 2min. 25sec ahead. This was more than her allowance and won her the race.

The second race was sailed on Aug. 26, there being a calm at 10 A. M. when the tug anchored off Marblehead Rock with a large fleet of yachts in attendance. A little later however a breeze came in from S. E. and the course, 10 miles, was made known. The start was made at 11:28, Gossoon having a good berth to windward and going over at 11:28:40, while Minerva was 23sec. later. Both carried large jackyarders and small jibtopsails and went over the line on the same tack. Gossoon began to draw away, increasing her lead steadily from the start and losing little or none of it at any time during the windward work. Long tacks were made, some sea being met off shore. When 6 or 7 miles out, Minerva, finding the wind much stronger, sent down her topsail and set the No. 2, losing a little time by it, which was doubled when she had to send up the big one again off the wind. Gossoon had tacked by the mark, started sheet, set spinaker and was well on her way home with a lead of over 6min. before Minerva turned, the times being:

Gossoon	1 40 15	Minerva	1 46 58

The time of setting spinnakers was 1:57 for Minerva and 2:22 for Gossoon. On the run in Minerva gained 1min. 10sec., but this was too little to count, and Gossoon finished with a lead of 6min. 33sec., the full times being:

	Start.	Finish.	Elapsed.	Corrected.
Gossoon	11 28 40	2 57 24	3 29 24	3 29 24
Minerva	11 29 03	3 02 57	3 34 57	3 33 07

Gossoon wins by 5min. 33sec. elapsed time and 3. 43sec. corrected time, she thus wins the $300 prize and stands for the time being in the place that Minerva had so long held at the head of the 40ft. class.

RHODE ISLAND Y. C. OPEN REGATTA, Aug. 27.—

The fourth annual open regatta of the Rhode Island Y. C. was sailed on Aug. 27, in a strong S. W. blow that caused the yachts to drag their anchors. The wind moderated by noon, the race being sailed in a fresh westerly breeze, but the larger yachts that were entered did not turn up. The full times were:

CLASS 2.

	Start.	Finish.	Elapsed.	Corrected.
Diamond	2 18 30	4 29 52	2 11 22	2 10 28
Mascot	2 18 00	4 35 18	2 17 18	2 17 18

CLASS 3.

Iris	1 58 17	5 00 45	3 02 28	3 01 18
A. P. E.	1 58 10	4 55 10	2 57 00	2 57 00

CLASS 4.

Widgeon	2 04 30	4 11 47	2 07 17	2 07 09
Faust	2 04 19	4 13 48	2 15 29	2 14 05
Mollie	2 02 26	4 12 47	2 10 21	2 10 21
Edna	2 02 15	4 20 42	2 18 27	2 14 33
Alice	2 02 26	4 58 45	2 36 18	2 31 33
Pawpaw	2 02 10	4 34 15	2 32 05	2 30 29
Victor	2 02 45	4 25 03	2 22 18	2 19 41

CLASS 5.

Scud	2 09 02	4 34 34	2 25 32	2 25 32
Unknown	2 12 35	Did not finish.		
Hesper	2 18 19	4 48 55	2 33 30	2 32 00
Daisy	2 09 27	4 36 06	2 26 39	2 25 52

CLASS 6.

Mist	2 15 00	3 25 19	1 10 19	1 07 38
Bat	2 15 00	3 27 50	1 12 50	1 11 13
Zara	2 15 00	3 16 54	1 01 54	1 01 26
Nettie	2 15 00	3 18 19	1 03 19	1 03 19
Shadow	2 15 00	3 21 46	1 06 46	1 05 54

All starters in class 6 were handicapped. Diamond, in addition to taking the first regular prize in her class, also won the special prize in that class, on sail area measurement. A. P. E. also won the special prize in her class on measurement of sail area.

ST. LAWRENCE Y. C.—The third race for the first-class challenge cup, presented by Mr. C. H. Levin, was sailed over the St. Lawrence Y. C. course, off Pointe Claire, on the morning of Aug. 23, the match being between Lulu (the winner of the two previous races, 29ft. corrected length) and Chaperon, 28ft. 6in. The wind was north and very puffy, and it began to rain at 8 o'clock and kept on raining steadily and remorselessly all day. The starting gun was to have been fired at ten o'clock, but Chaperon was towed up to the Pointe with her sails unbent, and the whole forenoon was spent in getting her into proper shape. The gun was fired at 12:05 and the boats crossed the line, Chaperon at 12:09, under jib, jibtopsail, staysail and mainsail; Lulu at 12:09:30, under jib and mainsail. On the run out to the east buoy Lulu gained a little, and to avoid being blanketed the black cutter held down below the buoy and gave Lulu a chance to skip around it and take the lead. It was a long reach, with the wind well over the quarter, to the southwest buoy; and both boats caught it hot for a while, for the gusts came down across the lake as if they were being fired from a gun. About a mile from the buoy Lulu put in two reefs and Chaperon put in one, and did it smartly enough to secure the lead again. At the buoy Lulu managed to get to windward of the cutter and to get the lead. On the beat up to the north buoy the sloop fairly went away from the cutter, both lying closer and footing faster. It was a close reach back to the east buoy, Chaperon was driven for all she was worth, and gained steadily on the sloop and still further reduced the latter's lead on the beat from the east buoy to the finish line. Lulu had made so much, however, that she could not be caught, and the finish was as follows:

	Start.	Finish.	Elapsed.
Lulu	12 09 30	1 48 45	1 39 15
Chaperon	12 09 00	1 51 17	1 42 17

Lulu, therefore, wins by 3m., and having won three matches in succession she becomes the winner of the cup.

RACING ON THE HUDSON.—On the afternoon of Aug. 23 a regatta was sailed on the Hudson River from Washington Heights, open to several classes of boats, for prizes presented by John A. Cameron, of 152d street. The course, which was about twelve miles, was from 152d street to a stake boat on the Jersey shore off the Palisade Park (just below Englewood), from thence to a stake-boat off the chemical works at Edgewater, and return to 152d street. At the start a strong N.W. wind was blowing, the sea being rough. The skiff Valiant was the first off, going by the starting line with a big rush on the instant of the signal. Just as the catboat Roma was coming about to cross the starting line she carried away her mast at the deck, and was towed in. Valiant led almost up to the second stakeboat, and the way this skiff with her leg-of-mutton sail traveled along was a surprise to many. The Cameron here took the lead and headed for the New York shore, where the wind was strong with a down tide. Valiant and Frankie V. foolishly held to the Jersey shore and lost badly by so doing, there being little wind and a tide butting against them. The greater part of the race was sailed in a succession of rains, squalls and calms. Cameron won the sloop race, Dolphin the catboat race and Ino the steam launch race. The official figures are as follows:

SLOOPS.

	Length.	Elapsed.	Corrected.
J. A. Cameron, J. J. McCarthy	26.00	2 10 20	2 10 20
Arrow, Madden	19.06	2 40 22	2 30 37
CATBOATS.			
Roma, C. C. Griffin	19.00	Carried away mast.	
Dolphin, H. C. Schwartz	19.06	2 07 45	Handicap'd 7m.
Frankie V., F. Van Riper	18.11	2 27 43	2 26 53½
Mystic, F. C. Stratton	20.00	Did not finish.	
Rambler, Davis	18.00	2 37 50½	2 34 35½
Valiant, C. J. Leach	15.08	2 51 53	2 46 08
STEAM AND NAPHTHA LAUNCHES.			
Perseverance, Elliott & Co	23.06	1 21 50	1 21 48
Ino, J. M. Cummings	23.06	1 07 10	1 07 10
Flirt, A. B. Tower	23.06	1 07 46	1 07 44

The last named race was very close and interesting. All the launches were well handled. The Perseverance broke down a few yards from the finish. The judges were G. T. Holihan, C. H. Kruse, L. C. Vannier and Jas. Miller.—L.

LARCHMONT Y. C. OYSTER BOAT RACE.—The annual race of the Larchmont Y. C. for the oyster boats about the Sound was sailed on Aug. 23 over the Captain's Island course of the club, 22 knots, the wind being fresh N.E. The times were:

FIRST CLASS SLOOPS—PRIZES $50 AND $25.

	Length.	Elapsed.	Corrected.
Jennie R., A. L. Ford	35.00	3 37 47	3 31 47
Combination, L. B. Smull	35.06	3 52 06	3 46 51
Agnes, F. Morris	39.00	3 53 31	3 53 31
Mary Ella, A. B. Jones	41.00	Disabled.	
SECOND CLASS SLOOPS—PRIZES $40 AND $25.			
Emma R Martin, G. W. Martin	30.07	4 02 35	3 59 47
Claudia M., A. L. Ford	29.06	4 03 18	3 59 03

Winners—First prize, class three, Parole; class four, Edith; class five, Worry; second prize, class four, Mattie. Regatta committee, J. Gorham Palfrey, chairman; Irving Chapman, G. G. Van Rensselaer. Judges, Dr. J. S. Whitney, Messrs. O. M. Angier, A. L. Briggs.

CORINTHIAN NAVY.—This organization continues to grow and has now passed the two hundred mark in membership. The cruise which was held in the week ensuing between Aug. 2 and 9 was most successful, nine boats reporting to Commodore Connolly at Greenwich, Conn. The East River Squadron held their regatta off the Knickerbocker Yacht Club House, at Port Morris, on Aug. 16. The entry list was large, and every class except cutters filled. Mr. A. Dahm-Petersen managed the affair, and deserves great credit for its success. The Staten Island Sound Squadron will hold its fall regatta on Sept. 6. Entries may be made with Mr. Louis Berg, The Alpine, Broadway and 33d street. The West Long Island Sound Squadron of the Corinthian Navy will hold its annual regatta at Greenwich, Conn., on Sept. 13; entries may be made with Mr. F. B. Jones, 40 Wall street. The following are proposed for membership: F. C. Barber, E. T. Cushing, A. D. Prince.

The West Long Island Sound squadron will give an open regatta on Saturday, Sept. 13, at Greenwich, Conn., the start to be at 1 P. M. Entries may be made with Mr. F. B. Jones, 40 Wall street. The Staten Island Sound squadron will give its fall regatta off Sewaren, N. J., on Sept. 6. Entries to be made with Mr. Louis Berg, The Alpine, Thirty-third and Broadway. A regular meeting of the association will be held at the Hotel Marborough on Sept. 29, at 8 P. M. Proposed for membership, R. Wilton Lockwood.

New Publications.

THE SALMON FISHER*

MR. HALLOCK'S book of the salmon is in convenient form for ready reference, and will be read with a great deal of pleasure by anglers. The chapters devoted to the equipment for salmon fishing, the methods to be adopted, the reviews of the author's own exploits on salmon rivers and of the details of salmon fishing, particular instructions for the skillful handling of the fish, descriptions of the celebrated preserves of famous anglers, and the index of the salmon waters of Canada and adjacent provinces are admirably executed and have a permanent value.

Concerning the life history and the distribution of the *Salmonidæ* we differ in some essential points from Mr. Hallock. For example, in the Eastern Continent one species of trout, *Salmo macrostigma*, is found in northern Algeria in about latitude 37° N. In North America the most southerly trout recorded was described by Prof. Cope in the *American Naturalist* for August, 1836, page 735. This is a black spotted species from streams of the Sierra Madre, Mexico, at an elevation of 8,900ft., in the southern part of Chihuahua near the boundaries of Durango and Cinolas, N. Lat. 28°. This carries the family nearly 12° further south than Mr. Hallock's limit. The rainbow trout, *S. irideus*, is known to occur as far south as the Mexican boundary, about latitude 33°; and the brook trout, *S. fontinalis*, is native in western North Carolina below latitude 36°.

There are many difficulties in the way of determining the distribution of the *Salmonidæ*. Scarcely anything definite is known about this family in the northern part of British America, and the "monstrous salmon weighing up to 75lbs. and measuring 20in. in depth," referred to by Schwatka, are more likely to be lake trout than salmon. For the occurrence of this large species in the region in question we have the authority of Richardson, a renowned zoölogist, who studied collections from many portions of the Territory. The good condition of this supposed salmon in winter, under 6ft. of ice, is another argument in favor of the belief that it is lake trout. From all we can learn from natives of Alaska, who accompanied us to the lake sources of salmon streams, and from the testimony of white men engaged in the Alaskan canneries, salmon can be caught in these lakes at any time during the winter under the ice; but they never recover their plumpness and all die in the early spring. Mr. Hirsch, who has spent many years in Alaska and is thoroughly acquainted with its salmon and trout, has assured us that no living adult salmon come down the Karluk River in the spring. Although the Atlantic salmon recuperates after spawning there is scarcely any evidence to show that the species of Pacific salmon return to the sea alive. As to the distribution of the quinnat salmon, the species has never been traced with any certainty above the Yukon River. The only species which are positively known to range further to the north are the dog salmon, *O. keta*, and the little humpback, *O. gorbuscha*. Specimens of the keta have been obtained in Kuwuk River, a tributary of Hotham Inlet, and the little humpback has been taken by Capt. Smith in the Colville.

We have reason to believe that the Pacific salmons, at least, take very little food in rivers. They come in from the sea pursuing herring, capelin, lant, and other marine fishes of small size; but while these probably attract the nobler species into the bays they do not ascend streams, and the salmon leave them behind when the rush into fresh water begins. It has not been the writer's good fortune to find sand worms in rivers above tide limits, and he doubts their occurrence in fresh water in quantities sufficient to form a food supply for hungry salmon.

There is no evidence of the landlocking of any other Pacific salmon than the red fish, *Oncorhynchus nerka*. It is highly probable that landlocking occurs in this species, for numerous quantities of small red salmon, which are sexually mature, have been observed in Idaho, Washington and British Columbia. We recently examined examples of ten inches or less in length, both sexes of which were ready for spawning or partially spent. These are from the Puget Sound region, and were collected by Prof. O. B. Johnson, of Tacoma. A small fish like this would scarcely answer the description given by Mr. Hallock of the 40lbs. specimens occurring in lakes of the West and Northwest. The great lake trout, however, *Salvelinus namaycush*, abounds in lakes of Idaho, British Columbia and Alaska, and is probably the species alluded to.

The number of dead fish to be found along Alaskan streams, except in the vicinity of canneries, is frequently exaggerated, and it is pretty certain that bears do not pursue their prey anywhere near the haunts of man. When we have been fortunate enough to discover a bear in the act of fishing it has only been by a considerable outlay of stealth and patience. We have the impression that the fourteen salmon taken from a Clackamas pool in one day by a single rod were the steelhead salmon referred to by Mr. Stone in FOREST AND STREAM of Aug. 8, 1889. This of course is not a true salmon, but a large black-spotted trout. In southern Alaska a great many quinnat salmon are caught in the salt-water bays by trolling, using sea herring for bait.

We cannot leave this interesting subject without calling attention to the fact that the theory of the fresh-water origin of the *Salmonidæ* and its date from the later Tertiary has no accepted basis. No fossils belonging to the salmon family proper have yet been found. The genus *Rhabdofaris*, of Cope, which has been used as a text by those who proclaim the fresh-water origin of the family, differs radically in a very important particular from all the members of the true *Salmonidæ*, and the probability is that it will finally be assigned to a very different place in our systems of classification. T. H. B.

*The Salmon Fisher, by Charles Hallock, New York. The Harris Publishing Co., 1890, pp. 126.

Valuable Game Preserve

FOR SALE.

The proprietor of the celebrated Seal Island (Batture aux Loups Marins) below Quebec, is disposed to sell this property. It is renowned for the immense number of wild geese, including the snow goose, brant, black duck, teal, plover, snipe, and great variety of beach birds, which frequent it. A club or other parties intending to purchase, the owner will give an opportunity of proving that it is historically true the greatest game preserve of its kind in America. Over 250 black ducks by one gun were bagged during the rise of one tide. For further information and references apply to A. TOUSSAINT & CO.,

Proprietors, Quebec.

N.B.—Hunting opens on 10th September next. Parties intending to purchase should write before this date, to try their luck in due time.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should be meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

BIRD PORTRAITS.

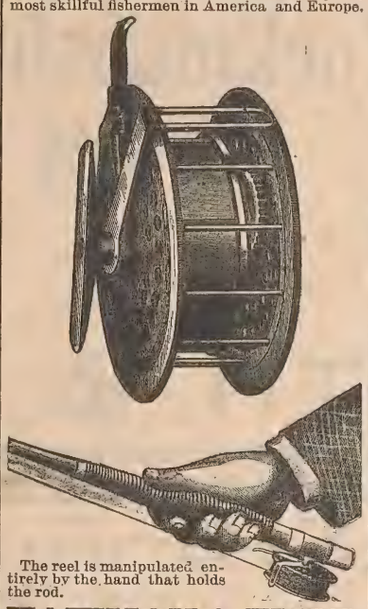
Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.



DAVIES & CO., 1 Finch Lane, Cornhill.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other reel.
FIFTH. It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 11, 1890.

VOL. XXXV.—No. 8. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

WANTED—AN ANTI-BRUTE LEAGUE.

WHEN a man joins a fraternity and assumes its badge of membership, he takes upon himself an obligation not to disgrace that body. It would be happily conditioned if all those who claim to belong to the fraternity of sportsmen, while wearing no outward token of their membership in the craft, should feel a like obligation to do nothing which would bring discredit and dishonor to their fellows. As things go now, any individual man or brute is at liberty to trap himself out with the implements of sport, and conduct himself with decency or indecency, as his instincts prompt, and still claim to be a sportsman.

There is a Philadelphian—a deer hunter—who deserves to be read out of the fraternity of sportsmen and into jail. We find his latest exploit recorded in the Albany *Argus* of Sept. 9. It happened on Chateaugay Lake, in the Adirondacks. Two ladies, one of them being Mrs. Dr. Sandon, of this city, were out on the lake in a boat on Monday of last week, when they saw a doe and her spotted fawn emerge from the cover on the lake shore, the hounds being close behind on their tracks. A rifle crack was heard, and the doe was seen to fall on the beach. The little fawn in its terror swam out into the lake, and coming near to the boat in which were the two ladies, it was caught by Mrs. Sandon, who lifted it by the ears out of the water into the boat. The Philadelphia "sportsman," who had killed the mother deer, hereupon hurried up in a boat and demanded the fawn, threatening to shoot it in the lady's arms if she did not give it up. Frightened by his brutal threats and menacing bearing, Mrs. Sandon handed over the fawn. The Philadelphia brute drowned it.

The full record of Adirondack deer hounding would show scores of outrageous deeds of wantonness and hardened brutality, but we very much question if there are many incidents even in that record more disgusting than this. It is many degrees worse than what happened on the following Saturday on Lake George, when John Cronkhite, proprietor of the Trout Pavilion, took out a number of New York guests, drove a deer into the water, rowed out to it, cut its throat, towed it ashore and proudly displayed it suspended from a tree as the steamer Horicon passed the hotel in the afternoon.

Manifestly when city snobs in the Adirondacks commit these water-killing abominations year after year, the tone of public sentiment prevailing at the hotel resorts in that region must be exceedingly debased. Reformation in that quarter can at best be slow. But surely there should be some way of expressing the feeling of New York sportsmen at large on such outrages. If the New York Association for the Protection of Fish and Game were still in existence—in its old type of membership—we might look to that body for action in these cases. In the absence of any organization of the kind, might it not be entirely practicable for a number of sportsmen to organize themselves into a society for the express purpose of voicing the sentiment of decent men respecting the brutalities of snobs in sportsman's guise? Properly conducted such a league might at least have some deterrent influence, for these fellows of low instincts, like this Philadelphian, are nevertheless quite prone to shrink from the expressed scorn and censure of sportsmen. They would find in the attentions bestowed on them by an anti-brute society less satisfaction than they now derive from the homage paid them by their fellow snobs.

What we need is an anti-brute league; and for that matter, not one but a dozen.

THE MUDFISH OR LAWYER.

IT is reported that the mudfish (*Amia calva*), which made its appearance in Seneca and Oneida rivers, New York, in large numbers, recently, is a mysterious visitor, its origin being unknown. During the last three months fully fifty, averaging 2lbs. in weight, have been caught in the streams mentioned, usually with crawfish for bait. Their sudden appearance in such numbers has excited apprehension that they may prove destructive to game fish, and the misgiving is well founded. The mudfish is exceedingly voracious and clings to life with the tenacity of a bulldog. Its jaws are massive and armed with strong, sharp teeth; its body, moreover, is protected by a covering of bony scales, and the skull bones are thick and heavy. The cold water of trout streams is not favorable to the existence of this fish and we may, therefore, rest easy as far as they are concerned; but the black bass, perch and most other fishes inhabiting waters of moderate temperature, together with the smaller fishes upon which these subsist, are liable to extermination when associated in close quarters with the worthless mudfish.

HOXIE.

AN old woman being in want of a goose-herd, Reynard offered his services. Installed as goose-herd, he did his duty so assiduously that at the end of a fortnight there remained of the geese to be herded only one scrawny old gander, which the fox had disdained as too tough to be eaten.

The people of Hopkinton, Rhode Island, had some partridges and woodcock in their game covers, for which they appointed a farmer named Hoxie game warden, and set him to guard the game. He went at it in Reynard style, preserving it—after he had shot it out of season—by hiding it in wells until he could sell it. Hoxie was rapidly reducing the Hopkinton game to the single gander status, where it would require no more policing, when the subject was brought to the attention of President Penny of the Society for the Protection of Game and Fish. We have already reported how this game-thieving constable was neatly trapped with a basket of birds in possession, and how with his contraband booty he attempted to skedaddle.

We recur to the case because Hoxie appears to be a fair type of one class of Rhode Island farmers. It is a common practice for many of them who live near the popular summer resorts on the shore to kill immature game birds for sale to the hotels.

Hoxie is reputed to be worth thirty or forty thousand dollars; and presumably is not driven by sufferings of his family to provide food for them in this way. He appears to have had an appetite for illicit game, and when a man has once contracted such a taste he cannot be cured of it by investiture with a game warden's badge, no more than a fox can be cured of his hankering for poultry by being made goose-herd, or than a sneak thief can be made honest by putting a policeman's uniform on him. Moreover Hoxie is a ring politician, and a crony of the judge before whom he was tried for this offense, and who let him off so tenderly that the prosecuting society announces its intention of going to another court with the case. The further progress of the suit will be watched with interest. The society is a strong one. Its membership is growing; and there is work enough to keep it busy.

THE DECLINE OF LARGE REGATTAS.

THE most important event of the week in yachting is the announcement of the abandonment by the New York Y. C. of its proposed fall regatta, set for next Saturday. After weeks of preparation and every effort to secure entries, the regatta committee is compelled to announce the abandonment of the race, the entries being too few to warrant the trouble and expense. The present season has been marked by two important features, the great regattas of the two large clubs have all been failures, owing to the very meagre entries, while at the same time there have been more match races sailed than ever before.

At first sight these two facts would seem to be contradictory, but a closer examination will show that both follow naturally from the same cause. The racing yacht has reached a degree of perfection which, while it intensifies the rivalry between a few of the fastest in each class, makes it absolutely useless for any but racing craft to start in the races. The line between the cruiser and the racer is so sharply drawn in actual practice that it can no longer be ignored by the yacht clubs; its existence must be recognized and rules made to fit the altered conditions of racing.

After the many failures of this season, it is plain that the great open regatta is a thing of the past, unless some method can be devised for separating the thorough racers from the great majority of other craft that formerly started; a task that is by no means an easy one, but which the clubs must take up very soon if there is to be any general revival of yacht racing next season.

ONE DRAWBACK in the visiting sportsman's satisfaction in Maine, and it must be conceded that it is a decided drawback, is the fact that he may not take home his venison. This is a wise provision in general, its intent being to cut off entirely the marketing of Maine venison. But there are modifications of the non-export law which serve their purpose admirably and which do not bear as a hardship on the sportsman whose intentions and actions are honest. By limiting the amount of game that may be exported in one season by one individual and by requiring the owner to accompany the meat while in transit, it has been found quite feasible in other States to cut off the marketing of venison, while at the same time the sportsman is allowed the satisfaction of taking home the game he has killed. We do not know that ingenuity has as yet devised any scheme by which the purpose of such a law can be thwarted, or the privilege given sportsmen abused. We should like to see it tried in Maine.

SALMON IN THE HUDSON have been noted by scores this season; and now that a Rogers fishway has been put into the dam at Mechanicsville, the fish are going over that obstruction in large numbers. The stocking of the Hudson with salmon may now be regarded as an established success, or at least as an enterprise for which success can with excellent reasons be promised. There are other dams and falls yet to be provided with fishways, and now that the Mechanicsville way is proving so effective, it would be only folly to postpone extension of this work. The Hudson, as a salmon river, is destined to be famous.

WINNINISH FROM THE METABETCHOUAN.—In answer to our request for winninish Mr. C. C. Maxson, of Westerly, R. I., has sent us three fresh specimens, which were taken in the Metabetchouan River, P. Q., Sept. 3. Mr. Maxson calls attention to the marked difference in coloration and ratio of weight to length between these fish and examples from the Discharge. We shall take great pleasure in fully describing these beautiful specimens in our next number. Mr. Maxson has our hearty thanks for his courtesy.

The Sportsman Tourist.

A RIVER.

LONG ere the ruthless march of trade
Had ribbed the land with sunset-reaching trails
Or human vandals torn
The robe the spring's soft touch has laid
On Nature's shoulders bare, or sweeping sails—
Like conq'ring banners borne—
Had filled with freighted argosies
The liquid highways to the seas;

Young warriors, hast'ning to the fray,
A thousand strong, with flashing silver mails
And wind-torn crests of white,
Have rushed down ravines far away,
Their chargers' hoofs, like soft-toned, chiming flails
(That thresh to threads of light
The restless beds of pebbles there)
Stringing linked cadence on the air,

That melts to silence, as they swell
Their banded comrades' stealthy march between
The walls of forest bough—
Whispering faintly as they tell
Of the ferocious strength that creeps unseen
Beneath the outward show
Of peace and fair security,
To spring at last upon its prey.

Though prisoned in high corridors,
Self-carved in blinded rage from solid rock
Naught but itself its scars,
Till white with sweat, 'neath storm-kings' spurs,
It charges with resistless shock
Against the puny bars
Men raise against the mountain god
And snaps them like a willow rod.

BROOKLYN, L. I. K. H.

TRAPPING DAYS.

III.—PERIL.

THE winter following the departure of the other trappers to the settlements, during which I lived alone in the cabin thirty miles beyond the most remote of the settlers, was the most monotonous and lonely of my life.

When all bird life had disappeared from the bleak plains, and when no living thing moved above the snow, save the foxes, the frost reigned supreme.

The foxes grew at length so very cunning that the most tempting bait failed to lure them nearer than 50yds. from a trap. Mentioning this to an old trapper of twenty years' experience during the next summer, he smiled and asked, "Why didn't you bury your bait also? That," he continued, "was the very plan to adopt if you wished to deceive them Bury both trap and bait as though you were trying to hide them securely, and the cunning animals would have soon unearthed them both for you."

Sam Baker, the partner of Layton, had gone home at the beginning of the cold weather, and Layton and myself were the only men who wintered on the trapping grounds. Layton's axe broke in the middle of winter, and he was obliged at great risk of freezing to make a trip to the village of Spirit Lake to secure a new one, stopping at my cabin over night on the journey. The first day after reaching his cabin with the new axe, while chopping down a tree for fuel, the wretched implement, for which he had just made the toilsome journey of 120 miles on foot, broke squarely in two, and the whole distressing expedition had to be repeated.

With the first moderation of the severity of the winter weather during the month of February, Jim returned to the cabin to assist me in the spring catch, which is often quite valuable. Although we did quite well with other fur, the muskrat trapping proved a failure, owing to the intensity of the cold of the winter, which proved exceptional, and hundreds of rats were frozen to death in their houses, sometimes to the number of half a dozen to each house, and their decaying carcasses appeared among the drifting rushes when the waves washed their houses to pieces in the spring. The same ground which had yielded over a thousand skins in the fall, now carefully trapped for weeks, gave us just ninety-eight rats.

The first thaw came early and continued until the ice was half gone, and when the wildfowl returned in countless numbers we grew jubilant over the coming of the spring During the first days of April the cold returned in all its vigor, and again the ice locked everything solid on the surface of the lakes save where the wildfowl swarmed, and by the warmth of their bodies kept open water for a space.

Jim and I now turned our attention to shooting ducks for their feathers; and the old single-barreled, muzzle-loading shotguns proved quite efficient, our best day's score being 67 ducks.

As our provisions were none too plentiful, and as we wished to stay on the trapping ground as long as was prudent, the dogs, of which we now had two, had long since been turned out to forage among the bait carcasses for their food. It may be best to explain that during the fall trapping the bodies of all animals caught in traps and which can be utilized for bait, are, if possible, carried to the cabin and piled conveniently near, both to make food for flesh-eating animals as scarce as possible on the prairie (thereby keeping the wild animals hungry and eager for bait continually), and also to enable the trapper during the cold of winter to have on hand a plentiful supply of bait without the trouble of hunting it.

It was pretty rough on the dogs, and nothing but our necessities compelled it. It was interesting to observe the choice of the dogs among the different animals. Muskrats were taken first, next badger, skunk or coon without much choice; then fox, next otter, and last of all mink, which was eaten with evident disgust. So severe was the unavoidable lesson, and so keen were the dogs' recollection of it, that it was amusing to the last degree to both Jim and me, when at length the shotguns began to pile up the ducks around the cabin in such heaps that plentiful rations for the dogs were now fully assured, to observe that so particular was old Coaly (Jim's dog) to make assurance doubly sure, that on a multitude of occasions he would rise from his repast, and taking a fine duck in his mouth trot back on the hill and bury it in the dry dirt on the top of the gopher knolls.

This habit of burying meat grew insatiable with the old dog and led at length to the most ludicrous incident I ever observed. Jim and I were one day walking around the largest slough, and while Jim carried his shotgun I had taken the old muzzleloading rifle, which with the shotguns constituted our only weapons, and as we started to walk around a long narrow arm of the slough two wild geese rose from the water. As they were too far distant for the small shot in Jim's gun I fired at the foremost one and wing-tipped the other, which fell into the water of the narrow slough and Coaly was sent in to retrieve it. Finding himself near the other shore when the goose was secured Coaly dragged him out on that side and disappeared from our sight among the cane which lined the shore, and we hurried around the slough to secure the fowl, if possible, before the dog had torn it. Nearing the place, at length, we met the dog hurrying to meet us, wagging his tail and appearing in an ecstacy of enjoyment over the sport, but no goose was to be seen. Feathers and other evidences of a tussle were to be seen, but no bird.

For twenty minutes we hunted all over the narrow point, to which, by the way, the dog seemed quite unwilling to return, before Jim noticed the black feet of the goose protruding from the black dirt of a gopher-knoll. Unearthing it we found no evidence of its having been hurt, save by the rifle ball, and while thoroughly alive, for some reason it had remained quiet while the dog buried it and made no move that we observed until after we had dug it up. The look of disappointment on the face of the old dog at the failure of his little scheme was indescribable, and we laughed loud and long over the absurd affair, which seemed greatly to increase the dog's discomfiture.

The time of year had now arrived when danger from the Sioux grew imminent, and yet like many others we grew heedless; and while having good success at fur catching foolishly prolonged our stay on the trapping grounds, tempted by the hope of more money, the lure which leads others besides trappers to destruction.

There were only two times in the year when we feared the coming of the Indians. In the early spring, with the coming of the first grass for their ponies, came the cunning Sioux, while, yet the grass was insufficient to sustain the big American horse of the settler in a possible pursuit; and during the harvest month of summer time, when vegetation for the covering and concealment of the murderous wretches was in its fullest devevelopment, and only during the time of the full moon. With the approach of either of these seasons the apprehensions of the trappers were excited, for during the harvest month many were apt to be traveling along the frontier from one system of lakes or sloughs to another in search of good trapping ground for the coming fall and winter; and of all who were exposed to the depredations of those whom Frémont justly called the "Arabs of the New World," the one whose situation was the most perilous was unquestionably the isolated trapper. Waylaid on any one of the many lines of his necessary daily travel in attendance upon his traps, his path was beset with perils which no amount of watchfulness on his part could obviate, and the list was long of adventurous men, who, to gain the means of subsistence for those dependent upon them, sallied forth in quest of furred animals and were never afterward heard of; and the escape from unseen dangers of others seemed at times little less than miraculous.

The time of the full moon was invariably chosen by the Sioux for their depredations, in order that all their traveling might be done by night and they thereby be enabled to appear unexpectedly in places supposed to be secure, when the charge of the savage upon his helpless victim was as sudden as the leap of the jungle tiger.

Jim and I were one day attending our muskrat traps in the largest slough, having left the dogs in the shanty, and while Jim paddled down the main lake I attended some traps set in the narrow arm of the slough, where I had shot the goose with the rifle, and regaining the main body of the water and observing Jim's canoe pulled up on the bank far down the lake, paddled on down to him. He greeted me with the question: "Did you hear them dogs?"

"No," I replied; "I was back in behind the hills, and if they barked it was unknown to me."

"Well," said Jim, "they barked real savage for a minute or so and then stopped, and in a few minutes they turned loose again worse than ever."

Everything was quiet now at the shanty, and leaving our boats we walked back, scanning carefully any and all cover on our way which might shelter a savage. All was quiet at the shanty, and yet we were uneasy. We knew that besides ourselves there were only a party of three, a man and two boys, camped at Lake Talcott (an enlargement of Des Moines River similar to Lake Pepin on the Mississippi), and Jim Layton, ten miles above us, who yet remained out on the trapping grounds; and while we were not on the line of travel of the Lake Talcott party, if by any chance either of them or any other white man came to us they would go straight to the cabin and easily make friends with the dogs.

Searching carefully all the ground between the lakes back of the shanty, just one solitary fresh moccasin track was found, about 150yds. northwest of the cabin, on a high knoll, where somebody, trying to get a look at the cabin, had stepped on a gopher knoll. A wink is said to be as good as a nod to a blind man, and taking the rifle and one shotgun loaded with buckshot, we started immediately to the settlements for a team to move our outfits back to civilization. Securing the team, we went back after our things and brought them in without trouble.

The man of the Lake Talcott party about this time came in also for a team to move their outfit home, leaving the two boys to take care of things until his return. A warm muggy day came while he was absent, and the boys, attending to their traps and carrying their guns around during the day, got them both wet, and, boylike, neglecting to clean and dry them in order to render them sure fire when needed, lay down to sleep in their bed without removing their clothing, only drawing off their boots. Their cabin door opened outward, and just at daylight, shortly after they awoke, they observed their door opening and saw an Indian swing it around and set a stick against it and then spring back and raise his gun alongside two others who stood with guns presented. At the first sight of the Indian the boys sprang from their bed, and while in the act of throwing off the covering and springing to their feet the savages fired. The distance was not over 15ft. (I afterward examined the ground carefully), and while it could not again have been done in a thousand times' trying without both being killed, the only hurt either sustained was a flesh wound by a small bullet through the calf of one of their legs. Seizing their guns, the boys aimed and snapped, but both guns failed to go. Instantly the thought of running, while yet the guns of the Indians were empty, came to their minds, and with a word to each other they sprang through the low door and rushed for the prairie. As they did so, one or more charges (probably from double-barreled guns) greeted their rush for the open air, and the unwounded boy, Tom Kirkpatrick, had a bullet part the hair and graze the skin of his forehead.

As the Indians ran after them the boys presented their guns, and after this maneuver had been a few times repeated the wretched cowards turned back to plunder the camp, and the boys were left to make their journey of forty miles to the settlements in their stocking feet over the burnt grass stubs of the prairie.

In the afternoon the wounded boy declared his inability to proceed further, and requested Tom to go to the settlement and bring a wagon out for him. Tom accordingly hurried on, and just about sunset, while descending the river just above the town of Jackson (which town, by the way, consisted alone of a frontier post office), just as he reached the crest of a low hill and glanced across the ravine to the summit of the next hill in front, he saw five Sioux, who, catching sight of him at the same instant, came for him on the run, spreading their line like an opening fan as they ran. Tom turned and ducked down behind the hill, and instead of running down the ravine toward the river, turned and run up it and out on the high prairie, where, providentially for him, stood an old deserted field which had belonged to a Norwegian settler murdered in the last massacre, and which, now surrounded by a high rail fence, was occupied by a dense crop of tall weeds. Tom sprang over the fence, and in his peril and his fright not forgetting to carefully part the weeds in front of each step and close them together behim, worked his way well out into the field and fell flat. Soon an Indian, quickly followed by two others, appeared perched on the top of the fence, where for minutes, which doubtless were anxious ones for Tom, they surveyed the apparently unbroken expanse of weeds, and at length to his great relief turned back toward the river. Lying quietly until darkness shrouded his movements, Tom made his way out of the field into the prairie, and making a wide detour reached the house of a friendly settler a few miles down the river, where just before morning the other boy put in an appearance, having been unable to rest in the cold of approaching night, but compelled thereby to keep moving, and doubless passing the other Indians in the night time.

These boys both declared that when the Indians chased them at the shanty they saw plainly three fresh scalps dangling from the belt of one of them, and as only three trappers—Jim Layton, Jim Morehead and I—were known to be out, the anxiety among our friends was great; and when, all unconscious of the doings of the wretches (who, I have no doubt whatever, were the very scoundrels who were foiled by the vigilance of our dogs), we drove down the hill the next day in sight of the little settlement, a dear brother of mine met us with open hands extended and with a voice unintelligible with emotion, and we learned for the first time what the barking of our dogs at the shanty a few days before had really signified.

ORIN BELKNAP.

Natural History.

SIX WEEKS WITH A SPARROW FAMILY.

AS I stood by my chamber window one morning at about six o'clock, I saw a song sparrow on the board walk below, gathering blades of grass. Very soon she disappeared in the side of the terrace, upon which the walk was laid, and when she had disposed of her materials came out and gathered more. I thought she was rather neighborly in selecting a site for her home and was afraid she would soon be frightened away, as it was almost underfoot; but I suppose the birds had learned somehow that we were friendly creatures, and that we kept no cat, for they have built all round the house ever since, on the ground, in the lowest crotches and branches of trees, very near the house, and even on the house under the ends of the roof.

The next morning the bird was there again at work. Birds build busily early in the morning, before the people are about, and leave it for the rest of the day. The next day I walked along below the terrace and looked in upon her as she was sitting on her nest, but as I went very quietly and immediately retreated, she did not fly off. Every person who came in or went out of the side door of the house walked almost over the head of this little bird, but she did not fly off unless we stopped and looked in over the railing. This we ceased to do when we found that she objected to this familiarity. I sometimes looked in when she was away, and after four days' sitting there were five eggs. Two weeks later there were four birdlings. I was frequently awaked at five o'clock in the morning by a great outcry among the birds on that side of the house, and going to the window would perceive the cause to be our neighbor's black cat. I would induce her to leave in a hurry, and while she fled the birds broke out into songs of thankfulness; then all was silent and I went back to slumber a while longer.

The sparrows remained in the nest one week, then one day as I entered the yard I saw the mother bird on the trellis of the grape vine, about a rod from the nest, chirping vociferously and anxiously. I feared that the little birds had come to grief, and looking into the nest, saw that it was empty. But when I saw her fly down into the grass and keep silent a moment, I concluded that they were all right, but had just come out into the world and the mother was anxious for their safety for the night. I had noticed that all the while she was chirping she had in her mouth what looked like a bit of dried grass, and I wondered what this was for. I had noticed, also, that she occasionally flew straight upward for three or four feet, and supposed she was trying to teach the little ones to fly, but I thought she was foolish to think that the stupid little things, that I knew fledgelings to be, would look up to see what she was doing. Then I observed that when, after a descent into the grass, she came back to her perch

on the trellis there was nothing in her mouth. So then I knew that what looked like bits of grass were certain long-legged, long-winged insects, which she had caught in her upward flight, and that it was not a lesson in flying as I had supposed. As I never, at any one time, saw a sparrow fly in a vertical line, I suppose it was the emergency of the case that called forth this unusual conduct; she could thus obtain food for the little ones without leaving them, and it would appease their hunger if it was not their usual food. It would seem that her loud chirping was to arouse their dormant energies; and when she had succeeded in getting one a little higher up in the world she would give it her mouth full of insects, but she would not give one a bit until it had made an effort in that direction. I had seen one little tailless ball of feathers flutter up to the first and then to the second bar of the trellis, and another was sitting drowsily in the top of a rose bush near the nest. Meanwhile the father bird was in the garden with the rest of the family, and I concluded that he had put them to bed in the raspberry bushes. Twilight was now coming on (I had watched them for an hour), and as she had got them out of the reach of prowling animals, she ceased her lecturing, and silence like a poultice fell to heal the waves of sound. I think she must have felt exhausted and sleepy after her great anxiety and energetic eloquence. She went around and gave a look at each of the little ones, then flew up into a tree and gave a goodnight song, came down once more to see that they were all right; then went back to the tree for the night.

For two weeks longer I watched these sparrows as they lingered about near the nest, picking food in the narrow strip of flower bed under the windows or meditating on the walk. The old birds still fed the young ones, though they were full grown, and their tail feathers had lengthened day by day, until before the end of two weeks they were of proper length. When robins leave the nest, they go further off and do not linger in its vicinity.

I left home before the sparrows did for a two-weeks' visit. On my return I found a nest of unfledged sparrows near the other side of the house, and in a novel situation. It was in a whirl of pea vines which had slipped half way down from their support. There came two or three rainy days, and when I again looked into the nest the little birds were dead and the nest was alive with lice, which sometimes kill the young, and are caused, I suppose, by dampness. The poor disappointed mother sat for hours near by in a dejected manner, with a worm in her mouth. The successful family were reared on the sunny side, and the other on the shady side of the house. It is, indeed, a great success for a ground sparrow to raise a family, for they have so many enemies that they have small chance to do so. But this sparrow displayed unusual prudence; the nest was placed where no creature would be likely to walk—on the slope of the terrace and under cover of a tuft of long grass and many thorny rosebushes. I found two other nests in the ground near the house, but they were unprotected, and the eggs disappeared from one and the unfledged birds from the other.

I think young sparrows must be very nervous and sensitive to touch, for, looking into a nest one day and seeing the little birds perfectly motionless, with heads down out of sight, I doubted if they were living and laid my finger on them to see if they would move, when suddenly up came four heads like "Jack in a box," and they immediately sprang out of the nest. I feared this was a premature coming out, and repented my curiosity; but thought the best thing I could do was to leave them to the parents, who came with anxious outcries. The nest was well hidden in the dense foliage of a hemlock hedge, and it was only by observing the mother bird enter it that I had discovered it.

We have but few English sparrows here. I sometimes see half a dozen of them with other sparrows picking hayseed or meal which I throw out to them in winter. I have never seen one of them molest a native, but I have seen the song sparrow drive off the English. Then came the fox sparrow and drove off the song sparrow. Probably the English sparrow is not so bold when not with large numbers of its kind. The fox sparrow is the largest and brightest-colored of the sparrows. Two years ago several of them came into my yard one day and remained several hours; their favorite place was near the grapevines, where they scratched like hens among the dry leaves; they are about the color of the red thrush or thrasher.

The hen bird or chipping sparrow, although usually more familiar and approachable than any other bird, is more timid in regard to her nest than the song sparrow or robin. Last year one built in a branch over the steps, but deserted it because we one day had occasion to go up and down those steps more than usual, and I have never known another to build so near as that. At the same time a robin had a nest lower down and as near the steps, which she did not leave.

I see some queer antics among sparrows. Looking out through the open door one day I saw a song sparrow on the concrete walk sitting on her tail, which was turned under her. Something seemed to be wrong there. She was picking at the tail feathers, and either the tail would not stay under her or else she was too uncomfortable to sit still more than a moment at a time. The tail seemed to be continually getting away from her. She went through these gymnastics many times. Finally a white-throated sparrow came on to the walk and began imitating her, whereat she flew at him and drove him away. At another time I saw one on a fence, trying to scratch her ear and keep her balance, but she did not succeed in giving more than one hasty scratch at a time. I have seen young sparrows dancing near the river hedge. At my approach they slid under the bushes like rats.

I think the most beautiful song of the song sparrow is the one which begins with *ting, ting, ting*, like strokes on a sweet toned bell; then there is a peculiar charm to me in the *wheat, wheat*, those clear notes which we hear from the song sparrow early in the spring. Another very musical song of the sparrow, which I hear from my river hedge, is *twit, twit, twee twir; timm, timm, timm*; the third note prolonged and rising. It is said that the song sparrow always begins with three short notes, but I find in my notes of Aug. 5, "4 o'clock—beginning to rain—song sparrow, *tweee wheat, wheat, wheat.*" And on July 25, sitting in my wharf arbor, I heard the beautiful varied warbling of the song sparrows on opposite sides of the river, answering each other. The song was different from any I ever heard, and more beautiful, with rising and falling notes, and it was inimitable. Having seen in the *Audubon Magazine* a question of whether the song sparrow is found near water, I will add that on my estate, which is on the banks of the Nunketeset, song sparrows abound, even to the water's edge. I have found nests in the ground within a rod of it, and all the nests spoken of in this article are within a hundred feet of the river.

JULIA M. HOOPER.

STINGING SNAKES.

Editor Forest and Stream:

I was much gratified to find the welcome name of Miss Catherine C. Hopley appended to an article in a recent number of the FOREST AND STREAM, and could wish that the intervals between her contributions were shorter.

I have a mind to relate an experience I had with a real Simon pure stinging snake since I last wrote on that subject. My friend Walter Clark, to whom I showed Miss Hopley's decided negative of the stinging snake theory, declared that he would bring me the next one he saw.

Last winter was so mild in this country that snakes might be seen at almost any time during the season. Accordingly, one day in January last I came into my office and found a snake lying on the hearth, which I was told was left by Mr. Clark to convince me that such a thing as a stinging snake did exist, Miss Hopley to the contrary notwithstanding. Of course, I examined the reptile with a great degree of interest. And though I have had large experience with snakes, this one belonged to a species I had never before encountered.

The specimen was about four feet long and of slim proportions. The upper part was of a jetty, shining black, as before described; the under part was generally of a bright coral color, with irregular interruptions of a dark bluish color, extending from opposite sides in alternating patches, which did not reach entirely across except at a few points. The dentition consisted of the usual four rows of teeth in the upper mouth, common to most varieties of non-venomous snakes.

Now for the stinging part. The snake had been crushed, but there was still life enough to produce a quite active wriggling. I set a poker on his tail and he immediately began to throw it about in a manner quite suggestive of the use of a sting. I thought I saw for an instant a sting thrust rapidly out and withdrawn, but persistent efforts for some twenty minutes failed to discover it again. I then cut off an inch of the tail and dissected it. I subjected it to microscopic examination, but there was no sting to be found. The vertebrate processes extended quite to the extremity of the tail in diminishing size, and I split them open to fully discover the structural arrangement. There was absolutely no sting and no place for one.

When I told Clark the result of my examination he said: "Well, I was certain I saw a sting run out and back very quick; it must have been a shadow." Mr. Clark is a man of more than average intelligence and fair education, and yet he has been fully convinced for years past that this snake possessed a sting, and that he had repeatedly seen the sting; all because it bore the reputation of being a stinging snake upon the testimony of negroes. This shows the small value of non-expert testimony, especially where snakes are concerned. COAHOMA.

CLARKSDALE, Miss.

HABITS OF ELK.

Editor Forest and Stream:

In the review of the "Big Game of North America," in your issue of Aug. 14, you call attention to certain misstatements, about the habits of elk, in my article: "Elk Hunting in the Olympic Mountains."

In that sketch I described the habits of the elk in that locality, and in that locality only. Between Gray's Harbor and Neah Bay occurs the heaviest rainfall in the United States, 128in. annually. The mountains that border the shore are very precipitous and abrupt, and are covered with a dense growth of giant firs. Around the roots of these trees grows a continuous impenetrable thicket of young firs, and the ground beneath them is covered with a thick carpet of spongy moss.

From the 15th of October until the 1st of February the rain on the coast is almost continual, and when it is raining on the shore it is snowing in the mountains. The snow is not such as falls in the Rockies, dry and sifting, but is wet and clinging, and rests in fantastic festoons and wreaths on the branches of the firs. When a storm wind sweeps over the mountains, the snow will be shaken from the boughs of the great firs and will be caught on the branches of the bushes beneath. The moss beneath these bushes constitutes the food of the elk. When browsing upon it his antlers continually dislodge the great masses of snow that lodged in the bushes, so that during this season he is ever coated with snow. Instinct, bred of the experience of countless generations of elk, causes him to know that his antlers, brushing the snow from the branches, is the one sure cause of much of his discomfort. The instinct of comfort causes him to assist Nature to remove his antlers, by rubbing them against a tree, weeks before they would naturally fall off.

Still continuing on horns, I base my statement on the microbes and parasites in the velvet on the views and opinions of many intelligent prospectors who have spent many summers in these mountains, and whom elk meat furnished with the means of existence. These prospectors carry a magnifying glass of great power, in order to detect traces of mineral in the specimens they may examine. They also have examined the velvet on the horns through these glasses, as I have, and on these facts do I depart from the accepted traditions, with the honest conviction that the statement is true, and the naturalist of the future will prove that I was justified in doing so.

Concerning the statement about the elk leading instead of driving his harem, I give as a reason that the elk trails in the Olympic Mountains are very narrow, and wind along the edge of deep cañons and precipitous cliffs. Cougars and wolves are very numerous, and often lie in wait on the edge of the trail. Should the cows or calves be in the lead the appearance of the cougar or wolf would be the signal of a panic, and the leader driving from behind would cause a jam, and the result would be that some would be crowded over the rocks into the cañon below, where the wolves could feast on them at leisure. When the bull is in the lead, it is an evil day for the animal that tries to bar his path.

In regard to elk feeding at dawn instead of night, I give as a reason the intense darkness that pervades this cloud-ridden, mist-hidden region, as well as the rugged and abrupt formation of these mountains in the localities that the elk frequent. It takes remarkably good eyesight to avoid falling over the cliffs, and to guard against the attacks of the large carnivores, even in the day time.

In explanation of killing an apparently large number of elk, I will state that the Makah and Quillayute Indians claimed this region as their exclusive hunting ground. The only landing places between Quillayute and Neah Bay are Atchewan and Osette. At that time both these villages were under control of petty chiefs, and as there was no other approach to these hunting grounds, except by canoe, they would exact a tribute on all the meat, and half the antlers, from the sportsman. But at that time elk were found in large bands, as they were seldom molested, for the region was, at that date, almost unexplored and unknown, so the sportsman could kill any number desired.

I do not offer this explanation to vindicate myself. If I have committed a fault worthy of censure in departing from accepted traditions, and advancing facts that I believe to be true, I accept the censure, knowing at some future time science shall investigate and substantiate the statements that I have made. W. A. PERRY.

CLEARBROOK, Wash., Aug. 28.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLABROUGH 12, May 1, '90.
COLT 12, July 25, '89.
COLT 10 and 12, Oct. 24, '89.
FOLSOM 10 and 12, Sept. 28, '89.
FRANCOTTE 12, Dec. 12, '89.
GREENER 12, Aug. 1, '89.
GREENER 10, Sept. 12-19, '89.
HOLLIS 10, Nov. 7, '89.
LEFEVER 12, March 13, '90.
PARKER 10, hammer, June 6, '89.
PARKER 12, hammerless, June 6, '89.
REMINGTON 16, May 30, '89.
REMINGTON 12, Dec 5, '89, Feb 6, '90
REMINGTON 10, Dec. 26, '89.
SCOTT 10, Sept. 5, '89.
L. C. SMITH 12, Oct. 10, '89.
WHITNEY SAFETY 12, M'ch 6, '90.
WINCHESTER 10 & 12, Oct. 3, '89.

BOSTON NOTES.

BOSTON, Mass., Sept. 8.—Henry T. Brown, of Walter Brown's Son & Co., in the Boston wool trade, is about starting for the Upper Dam, Richardson Lake, Me., from which point the fishing is reported remarkably good. Or at least they have already had several days of good fishing at that point, with a record of an 8lbs. trout, a 6lbs., a 6¾lbs., and a good score of smaller fish. Mr. Brown is a lover of the rod and reel, inherited from his father. Walter Brown was for years known as an enthusiastic sportsman. He was an artist as well, and a picture from his brush of a conquered trout, with the fly in his jaw, has scarcely ever been excelled by the trout artists of this country.

Mark Hollingsworth, also an artist, is to start for the Upper Dam in a few days. It was his brush that executed the trout and fish basket piece that adorns the mantel in the hotel office at the Upper Dam. George Blood, an engineer of the Boston Fire Department, in the Charlestown district, is spending his vacation at the Rangeley Lakes. Generally, the vacation season is over, and the sportsmen who have a little more time to spare prefer to wait till the last of September in order to get a taste of shooting as well as fishing.

W. T. Farley, of Farley, Harvey & Co., of the Boston dry goods trade, has returned from his month in the Adirondacks. Mrs. Farley was also with him this time and had the pleasure of being in the boat when her better half shot a deer. They spent the month of August in the Upper Saranac Region. Again he brings out a deer story and the truth of it is beyond question, for the same circumstance has happened three times this season. It is one thing to run deer with dogs, and they are celebrated for this sort of sport in the Adirondack region, but when it comes to running deer with a narrow-gauge railway train that is another thing. Perhaps the New York game laws, as soon as they are codified, will show how such running of deer is illegal. But at present they will continue to shoot deer from the trains on the Adirondack Railroad, which runs from the settlement up to Tupper Lake. Last week, as Mr. Farley was on his way home, down the road, the engineer saw a deer ahead on the track. He was running at good speed, and the deer, as deer will do when frightened, took the smoothest path offered and begun running ahead of the engine. The baggage car was signalled, where there are usually a number of guns and sportsmen. This time a couple of hunters went ahead and the speed of the engine was increased till the deer found that he must jump the track. This he soon did, and in the stumble he made in turning so suddenly an opportunity was offered the hunters to fire. One of them hit the deer in the throat and it fell. The train was stopped and the deer taken aboard. Mr. Farley says that this story can be vouched for by all on the train. SPECIAL.

BAY-SNIPE ON THE CAROLINA COAST.

ONE of the best days of baybird shooting we have had this season was at the Martin's Point Gun Club on Monday last, Aug. 25. We have spent many pleasant days there since July 1, and some of the bags made were very large, but on this day the sport was fine. Your correspondent killed fifty graybacks over decoys in thirty minutes with one gun. Our bag for the day counted up 610 yellowlegs and graybacks or dowitchers to four guns. But three guns really did all the killing, one of the party being ill, could not shoot and only killed forty snipe. The parties participating were Alex. Hunter and W. E. Valk, of Washington, D. C., Geo. W. Taylor and J. B. White, Norfolk, Va.

Bay-snipe shooting is fast becoming very popular, especially where one can have such sport as this. We drove to our blinds about one-half mile from the club house at daylight, when it was cool and pleasant, shot until 8 o'clock, when we returned with about thirty yellowlegs, which at this place equal in flavor, we think, any bird in America. After a nap through the middle of the day, we load up our cartridges and amuse ourselves in various ways until about 4 o'clock, when we return to our blinds and shoot until sunset. One of the big advantages in this locality is that we do not have to wait for high tides or low tides. The ponds are fresh water and the shooting is good every hour in the day.

Golden plovers have not yet arrived, but we expect them with the first little storm from the east. We shall go down with some New York friends next week, and will write you the result thereof. YELLOWLEG.

GAME IN MEXICO.

AS the sportsman crosses the Rio Grande at Laredo, Texas, on the Mexican National Railroad, his first view of Mexico will not impress him favorably, as no prospect of game will be seen for the first hundred miles. The country is almost barren, with stunted cactus and sage brush, and now and then a few scattered musquit trees, gnarled and stunted for want of water. Now and then a chapparrel cock will dart out of the way of the train at race horse speed, or perhaps a jack rabbit will hop lazily out of the way.

The first hunting ground is Morales. Here the country is broken with deep cañons and high peaks. A fine stream crosses the track near the station, and for miles on either side groves of piñon trees grow high up the hillsides. The piñon is a variety of pine which sheds its nuts in abundance, the sweetest and richest of all nuts, and the best turkey feed. Here the sportsman can tarry for a few days and enjoy turkey shooting to his heart's content, as they are very plentiful. The natives have no guns, and very few hunters have ever been in the locality. There are a few quail at this point, but not in sufficient numbers to justify the trouble.

When the turkeys are hunted and killed to the sportsman's satisfaction—and he will soon be satisfied, for he can kill all he wants and more in a couple of days—he had better take the train and proceed to Saltillo, which is the end of the first division. A lovely place, with its running streams, fountains, orchards and gardens. A stop here over night at a good hotel, kept by an American, and you are ready to take the train for Carneras, the summit of the mountain, a distance of twenty miles. In going from Saltillo to Carneras you pass directly through the famous battle field of Buena Vista, where General Tyler fought a lot of half-famished school boys from Chapultepec, and won by a "scratch," if it could be called winning. As you proceed up this heavy grade and around the great horseshoe, you will see covey after covey of quail, with their jaunty white plumes elevated, scampering off to a safe distance or sunning themselves at easy gunshot from the track. If you can withstand the temptation to jump off the train, and wait till it stops at Carneras, you will be in the land of quail and deer, such as few localities can boast of. The blue grass grows in great tufts knee high; and here the quail will lie well, and there is no cactus to injure a dog. There are ponds in every direction surrounded by long grass; and morning and evening, when the quail come for water, one can shoot till his gun gets hot. They are a fine bird, in coloring much like a California quail—blue on the back and wings, and pale gray, mottled with white and russet, on the breast. Their flesh is dark, like the prairie chicken, but delicate and of fine flavor. They are not so plump and round as a Bob White, but much larger. The plume on their head can be raised and lowered at will; and on the old cocks it grows sometimes to an inch in length, snow white. Where the ground is bare they will not take wing readily, but run with surprising speed until they find suitable cover. They are chary of taking wing, but when they do, they fly like a bullet, and it takes a hard shot to bring them down.

There are high peaks on every side, and rich valleys and tablelands for miles and miles, where the deer graze lazily, almost undisturbed—the most beautiful of all deer. In color they are like the white-tailed deer of the Northern States, but small, and as symmetrical as a gazelle. It is rarely that they weigh over 100lbs. In the latter part of September, when they are "in the blue" (as the old hunter terms it, that is when their winter coat is scarcely ¼in. long and presents a bluish appearance), they are as fat and sleak as mules and keep in good condition till February. The ex-Governor of Coahuila, Don Jose Maria Garga Galan, is something of a hunter. His home is in Saltillo. He keeps some fine hounds and is always ready to take a hunt, and has killed several Mexican lions in this vicinity.

About the middle of August the upland plover arrive in countless thousands and stay till about the first of November. They grow as fat as butter and are fine eating, but afford little sport. The best way to hunt them is on horseback. If one cares to shoot jack rabbits he can have his fill. They bother a bird dog very much. There never was a dog that would not run them, no matter how well trained. A jack will jump up in front of his nose and go off with a hop and a skip, with his ears elevated and, to all appearance, one hind leg broken. Your dog will take after him sure, and get within five feet of him, he knows the dog can't catch him and keeps just far enough away to taunt him. Turn a greyhound loose and it would surprise you to see the change; Mr. Jack will lay his ears down, set his broken leg and, instead of his high gallop, will assume a gait of business. Instead of the great big thing he looked to be he will resemble a common walking stick more than anything else. If your dog is a good one and can stand a four-mile run at a rattling pace, he will turn him. If he has wind enough left to repeat he will doubtless catch him. It must be remembered, and I mention this fact to ease the mind of sportsmen owning good dogs, that there are good jack rabbits as well as good greyhounds, and there are some that no dog can catch.

If the sportsman wishes to remain here for any length of time he can make Saltillo his headquarters, whence he can reach the hunting ground in an hour, leaving at 6 A. M. and returning at 7 P. M. He can hire for a bit a day a sandal-footed native, who cannot lift 50lbs. off the ground, but who will carry all that five men can put on his back. You cannot make him understand much, even if you talk Spanish; but as a necessity he will do in place of a burro.

South of San Luis Potosi, on the line of the National Railroad from Jaral to San Maguil, is the very paradise for ducks and geese. For sixty miles along this rich valley it is like one great grain field. Barley and wheat are sown and harvested every day from October to May. On this the ducks, geese and brant feed the whole winter through. Adjacent to the ponds and irrigating ditches they can be knocked up like snipe—the prettiest shooting in the world.

The Tampeco branch of the Mexican Central, which was opened to travel last May, and which runs from San Luis Potosi to Tampeco, has opened up one of the greatest hunting resorts in the world for deer, turkeys, bear, mountain lions and tigers, to say nothing of the wild hogs, lynx and civet cats and big gray wolves. The road crosses the Sierre Madre range, and a wilder region cannot be conceived. After the road crosses the mountain and emerges from the great cañon, the country is comparatively flat and swampy. Every pond and stream is girdled with a thick growth of bamboo, a famous hiding place for bruin. The great palm and cypress trees, which lift their heads high above the dense undergrowth of swamp oak and vines, are homes for millions of parrots. The woodduck hatches in the deserted nests dug out by the parrots and woodpeckers. The bears have plenty to eat the year round, and do not lie dormant, as is their custom in the North in the winter. There are pecans, acorns and fruit, grapes, plums, and better still, tuñes, the fruit of the cactus. The species of cactus known as the prickly pear on the northern prairies grows into a great tree in Mexico; and around the disc of every leaf is a row of fruit as large as goose eggs, food for bird, beast and human. The natives put the tuñes in a sack and roll them to free them of the thorns with which they are covered. Old bruin rolls them between his tough paws and eats to repletion. He is not to blame, for they are very good.

There is a doubt in many people's minds in the United States as to the existence of tigers in Mexico. There is a mounted specimen in the museum in the City of Mexico, which was captured on the line of this branch. The writer has never seen one alive, but has seen several green hides brought in by the Indians. It should be remembered, however, that he has never lost any tigers. If any of the sportsmen of the North care to take a hunt in Mexico I feel sure they will be richly repaid for the time and expense. The strange customs of the people and the habits of game are so different from in the United States. Many trophies can be gathered up worth a great deal to the hunter and naturalist; and for fine climate and health this is exceeded by no place on earth. No sultry sun, no chilly winds, a continual ideal September the whole year round and the purest air mortel ever breathed.

MEJICANO.

A SOUTHERN TEXAS GAME COUNTRY.

M., THE Junior and the Scribe arrived on Nov. 10, 1886, at Rio Grande City, a small town on the left bank of the Rio Grande River, about 98 miles, as the crow flies, from its mouth. Having heard of the fine sport to be had all along the lower Rio Grande River, we had decided to spend one month following its course overland in easy stages and to get all the shooting we could possibly crowd in that time. At Rio Grande City we remained three days. We were told that the surrounding country was fairly alive with quail, and hiring a conveyance for a day for the small sum of $1 Mexican money, or about 82 cents American currency, we set out about 7 A. M., taking our dogs and 100 rounds of ammunition each. We had hardly left town when M.'s pointer drew on a bunch of weeds and pointed. The driver called our attention to the dog; we dismounted, and when we came within about 20yds. a large covey of "Bob Whites" rose; our guns spoke and we dropped three birds. We had not hunted over more than about five miles of ground when our ammunition gave out and returning to town about noon we counted 164 birds, whereupon M. exclaimed: "What glorious shooting. What is the use of going further? This beats anything I ever dreamed of. There is nothing like quail shooting over a good dog. Just think of a couple of market butchers getting in here and taking pot shots; they would flood the New Orleans and St. Louis markets in two days' shooting." Arrived in town our driver asked whether he could not take us some other day to a lagoon about nine miles northwest of town, where we would find ducks very plentiful. Being eager to interview the ducks we arranged for the team for the following morning at daybreak. We spent the evening visiting Fort Ringgold, adjoining Rio Grande, a military post garrisoned by two companies of infantry and one company of cavalry. The post is nicely laid out, the buildings are substantial, and taking ice machine, waterworks and saw mill in consideration, is as modern as possible. The grounds are kept scrupulously clean, and the contrast between them and the filthy town is so great that we dreaded to return to our lodgings.

Although our team was on hand promptly, it was some time after sunrise next morning (Nov. 12) when we got into our conveyance. We reached the lagoon at about 8:30. While we were filling our pockets with ammunition a ragged boy drew near, and our driver engaged him in conversation, ascertaining that the little fellow knew a favorite feeding ground, where he had seen a large number of ducks that morning. He was willing to act as our guide, and to sharpen his wits I gave him a quarter. Our little guide led the way through thick chapparal and high rushes, over flooded swampy ground, and after following him with difficulty for about a mile, a noise like distant breakers struck our ear. Continuing our tramp the noise became louder and more distinct, and our hearts began to thump when we distinctly distinguished that it was the calling of a large number of ducks of nearly all—to us—known varieties. Meanwhile we had been conducted to a piece of high ground, and right before us, not more than 200yds. distant, through some live oak timber, we saw a many-colored mass of wildfowl literally covering a small pond of open water, surrounded on three sides by a thick canebrake. We enjoyed the strange spectacle for some time, and decided to try and get within easy range and let drive into that living mass. About 200yds. to our right the chapparal was very thick, and ran on the edge of the canebrake up to the water's edge; we retraced our steps, and after getting below the high ground out of sight, reached the thicket without disturbing the ducks. Our dogs we left tied in charge of our guide with instructions not to fetch them up until we would call. We then began the hand and knee act, and after tearing our lower garments in many places and pricking our hands and shins, we managed to get within about 30yds. unperceived. After resting a few moments we rose simultaneously and fired one barrel each between wind and water and the other barrel when the mass took to wing, and at least two of us got in two more shots before all got out of reach. When the smoke cleared away we noticed our guide and both of our dogs in the pond, and all our calling did not induce either to come to shore and give us a show for some more slaughter. The dogs were frantic in their efforts to overtake winged and wounded ducks and could not be gotten down to their retrieving work for some time; our boy, however, went at the matter in hand in a business way, showing that he was well broken and knew what species were most valued. He waded about and carefully selected among the killed, bringing to shore on his first trip nine canvasbacks and one mallard drake. When our dogs calmed down they assisted, and in about thirty minutes all dead and badly crippled ones were brought in, fifty-one all told; twenty-nine green and blue-winged teal, eleven of a species called down there cornduck, turkey brown and very large, nine canvasbacks and two mallards. It was not 11 o'clock, and we decided to take our fowl to the wagon, ride part of the way to town, then send the team home and hunt in the remainder of the way. When we left the wagon, about two miles from town, we took twenty-five cartridges each and brought down forty-two birds between us. I never saw dogs get down to business as ours did on this second day, and I was so taken up with their action and style that my companions discounted me as far as the shooting was concerned.

After returning to town we set to work separating our camping outfit with a view of shipping some necessary articles of wearing apparel, bedding and our saddle kits by steamer to Brownsville, and succeeded that same evening in hiring a light covered spring wagon and four horses to take us to the same place, in such drives as we might desire to make, for a consideration of $3 Mexican money per day, and forage for man and beast, the team to be ready to start at 8 o'clock A. M. on Nov. 14, thus having a day to purchase some extra supplies, load ammunition, and gather whatever information we could pick up concerning the best camping grounds. Because it is generally omitted, I will detail cost of our trip as I go along. I therefore specify here expenses during our stay at Rio Grande City, viz.:

1 cool room with two clean beds and otherwise fairly well furnished and attendance, $1 per day	$ 4 00
Meals in Mexican restaurant (*à la carte*), well prepared, clean but not choice and of limited variety	10 00
Hire of vehicle 2 days at $1 per day	2 00
Expenses for 4 men 4 days, Mexican money	$16 00

In our currency $13.12, or one man, 4 days, $3.28.

Pedro, our driver, brought the team around promptly at the stipulated hour; he was a bright-looked fellow of about twenty-eight years of ago, who proved to be honest, handy, willing to assist in anything, and of a very cheerful disposition. We got our traps and ourselves aboard, and although we had enjoyed some fine shooting during our stay at Rio Grande City, we all were as glad as school boys to be on the move again. The ponies were sprightly little animals, and we traveled at a gait that a party pressed for time would have to pay in the North Woods $20 a day for. The road is very hard and smooth, the country covered with thick chapparal and every imaginable species of cactus, the thickets appearing at intervals absolutely impenetrable. Here and there we passed small openings from thirty to about one hundred and fifty acres, and I noticed that they were grazed down to the roots by either sheep or goats; of ranch cattle we saw but few, and ponies and goats appeared to be the only stock raised to any extent. A drive of about one and one-half hours brought us to a small settlement situated on the high bank of a large lagoon. Pedro told us that there were quite a number of ducks and any quantity of quail waiting to be hunted, and that the right man hunting the low hills to the left of the road would be almost sure to get a shot at a deer toward evening.

We went into camp in a nice open spot in some live-oak timber, pitched our tent and, after gathering a good quantity of fire wood, I introduced Pedro to the contents of the grub-box and our battery *de cuisine*, told him to help himself whenever he felt hungry, and not to expect us back till about dusk. We took some cold meat, bread and claret aboard, shipped our artillery, and agreed to hunt according to the following programme: The Junior was to take the hills; M., who is a botanical crank, was to explore the woods; and the Scribe was given to understand that the party needed just about one-half dozen teal for next breakfast. Until that day I had never known game of any kind to be disgustingly plentiful, but leaving camp with a view of shooting sufficient ducks for one meal, I ordered my dog to heel, and followed the lagoon on its highest bank. I flushed large coveys of quail all along at such short intervals that I had to fasten to my pointer with a suspender, and often to drag him along forcibly, when he would wind and try to point quail from the trail. After following the lagoon for a distance of about a mile, I noticed some ducks on the opposite bank about 200yds. from me. They were too large for teal, and walking in open sight until I came directly opposite them, I clapped my hands to induce them to take to wing, they glanced in my direction and resumed their meditative and aggravating pastime of sunning themselves. Thus dared, I let a charge of No. 6 drive at them, killing two and winging a third one; the rest rose clumsily, circled around twice, and would have dropped in around their dead kindred had I not sent my dog in to retrieve. He brought the three birds, which proved to be large brown cornducks, as fat as butter. Having all we could use for breakfast I retraced my steps toward camp, where I found M. fast asleep in his hammock and our Mexican factotum busily engaged preparing dinner. I pitched in, and in less time than it would take to make out a bill of fare we were served, and carefully selecting and setting aside the most unsavory morsels for the Junior, whom we did not expect for several hours, we acquitted ourselves of our task with hunters' appetites.

After dinner we crawled up in our hammock for a smoke, and were undoubtedly fast asleep when a Comanche war whoop roused us from our meditations. The Junior had returned, devoured all the delicacies we had set aside for his dinner, and was clamoring for more in such strong terms that I rose and promised to prepare supper in a jiffy. He told us that he had jumped one doe, seen two more deer without coming to shot, and then exhibited the pelt of a large bob-tailed wildcat, the only game he had slain. After supper we got in comfortable positions to enjoy a smoke and decide on our next camp. We were told that we would have a three-hours' drive to Havanna (all these places are stock ranches, with store and school house), where we would find no hunting we cared for except quail. Further down, at Peditos or Lomita, however, deer, turkey and ducks were plentiful. Leaving the decision with Pedro, we told him to select the best hunting ground within twenty miles for our next camp, and to be ready for an early start.

MUX.

[TO BE CONCLUDED.]

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

CHICAGO AND THE WEST.

CHICAGO, Ill., Sept. 4.—The people who want to find the John Wilkinson Co. after the 15th will have to seek no longer in the lower regions of State street, but up about 269 State, I believe it is, where the firm will move at that date. They will have more room there, and will be nearer the center of the business.

As is well known, the Jenney & Graham Gun Co. used to be next door neighbor to the Wilkinson Co., but last spring they came up to 103 Madison street, where they have a whole house of their own, with floors for different lines of work. They are very well settled now and have the room they needed, for their gun trade and specialties in other lines of sports have made big growth lately. They are very well known in the West and get a heavy mail trade, being seemingly as popular in the Rocky Mountains as here, although it is not of record that Mr. Jenney gives the boys out there as many guns to shoot for as he does here.

I was in at the new store the other day, talking to John Gillespie, and John was mad. He showed me a piece of a broken gun stock, about half of the lower end of the stock.

"Now, some darn fool out in Wyoming," said he, "has sent in this piece of a gun and wants us to make him a new gun stock. Nothing to go by but this chip, and if we don't make him a stock just long enough, and with just drop enough, he'll kick and threaten to ruin our trade. Some men don't know enough to pound sand."

All sorts of cranks in the world of field sports. A great many of these cranks send in from all over the country to get John Gillespie to load their shells. They think he spits on the wads and gives them a magic charm, but John tells me he doesn't, but just uses his little loading machine. Black powder shells he will not load for anybody, but confines himself to wood and Schultze. He got a few cans of the E. C. powder, but has never had occasion to open them, for that powder don't seem to go out West. "They can buy loaded shells in black powder now good enough for anybody," says John. "I ain't got no time for that, and I wish I didn't know how to load a blame shell. Duck season's coming on now. Killed eight myself on English Lake Club grounds on opening day. Some of the boys got as high as fifteen or twenty, all woodducks. Rather shoot ducks than load shells. Blame cranks, they always want the most shells when the shooting is the best." That such is life, I reckon a good many of the rest of us have discovered.

This centralization of the sporting goods trade is better understood by a Chicagoan than anybody else. It is beyond doubt true that Spalding moved into 108 Madison street and the Jenney & Graham Gun Co. into 103 Madison street, and the Wilkinson Co. as close to it as they could get, all because Billy Mussey's place is at 106 Madison. Billy runs a palatial hall where the boys play marbles on tables, and here every shooter or fisher of Chicago is certain to be found at one hour or another of the day. For this reason the walls and ceilings of the room have assumed a dark blue color. I presume there are more lies told there than in all the rest of Chicago, and that is saying a great deal. Billy himself religiously celebrates every opening day of the year in Indiana and Illinois, and he is to-day just back from Mak-saw-ba marsh with the astonishing bag of two ducks and four snipe. But then that's a good many if you look at it one way.

Our chicken season draws on apace, and the fall fever is beginning to stir in the blood. Mr. Mussey and myself are going to try again for access to the preserved ground where we had our great sport with the October chickens last fall, and if we succeed, something will be heard to drop out this way. Billy has got his new yellow boots fixed so they won't skin his heel, and he has been heard to announce that if he gets on that flyway again in the evening, and sees a flock of those old roosters coming, he is going to begin shooting as soon as he first sees them coming, so he won't shoot behind them. But our fate is in the hands of Mr. Hicks, who owns the land.

Mr. M. C. Morris, of Baltimore, Md., is in the city for a while. He has never seen a prairie chicken and wants to get one. It would be a pleasure to see him nearly step on a full-grown one, in the grass, as sometimes happens, and odds that he wouldn't know whether he had shot at a chicken or a dynamo.

Dick Turtle has made two woodcock trips to the Kankakee, bagging 48 on one trip and 70 odd on the other. On the latter trip he floated about 60 miles down the river, starting away above Water Valley and coming down.

Sept. 5.—Messrs. J. T. Nevin, of the Pittsburgh *Leader*, Mr. J. Cunningham of the same paper, Mr. John White, a well-known attorney of that city, and their friends, Messrs. C. A. Atwell and C. T. Harbaugh, also of Pittsburgh, are in town to-day on their way home from a chicken hunt in Nebraska. They were out near Geneva of that State, and in ten days only got about 50 birds. They say the birds were very wild and scarce. Illegal shooting had cleaned them out. The law was laughed at, and shooting has been going on ever since July. Nebraska has the game warden system.

Sept. 6.—More than a year ago reference was made to the proposed drainage of the Kankakee marshes of Indiana, by means of a cut through the great natural rock dam which it thought to be the cause of the vast system of back water. To-day a morning paper of this city has the following on its editorial page:

"The contract has been let for the removal of the rock ledge in the Kankakee River at Momence, and it is probable that within a year a million acres of fertile land, now spoiled with swamp water, will be open to the sun and ready for the plowshare. While the stretch of naturally fertile land which is to be redeemed lies mostly within the limits of Indiana it is tributary to Chicago. Some persons have claimed that the removal of this limestone uplift in the Kankakee would increase the spring floods in the Illinois and do damage which the Chicago Drainage Trustees would be called on by the farmers to make good. It has been alleged also that immense quantities of silt would be carried down stream, would be deposited in the Illinois, and add to the difficulties of its navigation. But on consideration there seems no good reason to expect any of these misfortunes. All that the small rock cut will do practically will be to drain off the swamp water. As the 'cut' will be a rock one and cannot be enlarged by the flowing waters, there need be no more fears of silt than there will be from the waters of the Desplaines flowing through the deep rock cut which this city intends making southward from the Sag."

This question has two alternatives of interest to the sportsman. It is doubtful whether the cut through the rock will really drain all or very much of the great Kankakee marsh. The Kankakee to-day is a very swift stream, but the fact that it runs like a mill-tail when between its banks does not seem to drain the marsh very thoroughly when the stream is at its lowest. Local rains seem to have much to do with the wetness of the marsh. Upon the other hand, if the attempt be as successful one as is contemplated, the marsh will be ruined forever, and thus one of the greatest natural features of this region be changed and soon forgotten. The Kankakee marsh is unique. It is historical. Without it, our chief sporting ground is gone, and this city is robbed of what can never be replaced, so far as the sportsmen are concerned. Mak-saw-ba, Cumberland, English Lake, Water Valley—how would it sound to have all those names shorn of their sporting interest? We will wait. If the worst comes to the worst the marsh owners, like the Mak-saw-bas, who have title to a goodly acreage, will find their stock increased in value over a hundred fold, and their land a rare good investment. E. HOUGH.

THE NORTH LOUP VALLEY.

NORTH LOUP, Nebraska.—To my eyes, no other valley in the wide West compares with this. It is situated in the central part of Nebraska, and of the three Loup valleys it is the most fertile and beautiful.

Picture to yourself a level valley, covered with green pastures and waving fields of corn, dotted with comfortable farm houses; in the middle of the valley a swiftly-running river, 300ft. in width, joined by numerous creeks coming from the low hills on each side; along this river many patches of heavy timber and willow thickets. It has been only eighteen years since the first settler came into this part of the valley, yet now it is pretty well settled up, and the primitive "sod house" has given way to the more substantial frame structure. Most of the farmers have groves of timber, and are also beginning to raise fruit.

Game of several kinds is found here. Fish abound in the river and creeks. In the fall and spring ducks and geese by the thousands come into the valley to feed in the cornfields and along the river and creeks. It is no trouble to find them, and many times during a half day's hunt as many as 1,000 geese, and ducks without number, have been seen. Prairie chickens, quail and several varieties of snipe are here in numbers. The season by law opens Sept. 1, but the law is not obeyed, and the young are killed before they can hardly fly. Despite this reckless killing there seems to be as many as ever here. Rabbits are not scarce. There are some jack rabbits, but they are hard to get. Cotton-tails are quite plentiful and easy to kill. Coyotes also are numerous and increasing in numbers. Further up the valley deer and other large game is found. Trapping is carried on to some extent, and muskrat and mink are caught in good quantities and beavers are not unknown.

Fishing has been good this summer and a great many fish have been caught, some of which were of good size. The principal kinds are catfish, whitefish and bass. Pike are coming in lately some, and a few have been taken. One was recently caught weighing 4lbs. These are mostly found in the river, while in the creeks are small fish of several other varieties. Of those caught in the river, catfish are the largest and most abundant. Some have been caught this summer weighing as high as 4½lbs., and from that down to 1lb. Whitefish and bass have been taken weighing 2 or 3lbs. All kinds seem to be more plentiful than for several years back. Recently the writer and another fisherman fished by moonlight and caught nearly fifty fish. C. J. D.

A GREAT FOX COUNTRY.—Jersey City, Sept. 5.—*Editor Forest and Stream:* Indeed it was an odd train of circumstances that brought forth the letter of Mr. A. L. Perkins, of Walden, Vermont; and I think I must be the one he refers to as a "famous fox trapper," for I well remember him and the good old hills of that Green Mountain town; and that my success was all I could ask in that line. The season he speaks of was a remarkable one for fox trapping; they seemed to be looking for me as much as I was for them. It was one of those years that all trappers experience when game is plenty and takes to bait readily; but in this I think the fox is the most changeable. I have seen trapping seasons when I knew foxes were plenty, and yet it was difficult to trap them, requiring the utmost care and perserverance, not that it does not require this at all times, but some years to a greater degree than others. He calls me a fiend, but this may be far fetched, yet I think if I had all the foxes together that I ever caught and should set their tails on fire, there would be a great commotion and perhaps a conflagration. I have three foxes in a large cage at my back, and they are quite tame, as the word goes, but a fox is a great deal like an Indian, return him to his native haunts after months of training and he is as wild as ever. Thanks Mr. Editor, for your notice of last week, that I wanted to learn of a "fox country," for from the number of letters I have received it must be a "fox country" from Maine to the Gulf of Mexico, and proves to me the great circulation of your splendid paper.—DAPHNE.

CALIFORNIA QUAIL.—Macomb, Ill., Sept. 4.—*Editor Forest and Stream:* I see by your valuable journal that the Massachuseits Association is about to introduce the California quail into that State, and perhaps my experience may be worth something to this club. About twelve years ago I sent to California and got four dozen of these quail and turned them loose in the month of April about three miles from this town. They seemed to be perfectly contented and not very wild. The males could be heard every morning singing, and the females would come near to the house and would nest in the garden under a hill of potatoes or in a bunch of weeds. They were often seen during the summer with fifteen to twenty of the young brood following one female, and the males would keep up their song. About the first of October the singing stopped, and the first of November we took our dogs and hunted the country all over and over, thinking we might find them, but our work was in vain. We have never seen nor heard of these birds since. Instinct taught them they could not stand the climate and therefore they emigrated to a more genial clime. I do not wish to discourage the sportsmen of Massachusetts, but in my opinion they will make a failure with these birds. —W. O. BLAISDELL.

HACKENSACK RAIL ALL GONE.—Hackensack, Sept. 3. —*Editor Forest and Stream:* The first day of the rail season was not a success on the Hackensack River. In fact the rail shooting is about played out there, and for several years it has been very poor. I went out at daylight on the first with my spaniel to see what show there was; but the paths tracked down through the grass told the story. The ground had been thoroughly gone over by poachers. I only saw one bird. This is the usual experience of conscientious sportsmen. The poacher sneaks out a few days before the law is up and gets the cream of the shooting. No wonder people club together and buy up shooting and fishing privileges. It is the only way that a business man can be sure of a little sport. When the poaching loafer is warned off or arrested for trespass he raises a terrible howl about the selfishness of people who want to shut out the "poor sportsmen."—WAKEMAN HOLBERTON. P. S.—I have a magnificent specimen of woodland caribou from Newfoundland on exhibition if any one wishes to see it.—W. H.

NEW JERSEY.—Hornerstown, Sept. 8.—The prospect for game in this section during the coming season seems to be remarkably good. Quail are more abundant than at any time during a number of years past; the coveys are numerous and uncommonly large, but as yet many of the birds are less than half grown, denoting that the earlier broods were either small or that numbers of them were destroyed by the heavy spring rains; but if nothing happens the birds will be of a good size when the gunning season commences in November. Partridges, so far as we have seen and have learned, are rather more numerous than in former years. Of rabbits, owing to last winter being warm and open, the number appears to be unlimited. In many fields one can scarcely move in any direction without starting them up. So taking it altogether, the chances here this fall for an excellent gunning season are as good as the most sanguine sportsman could wish for.—A. L. L.

TENNESSEE QUAIL.—Chattanooga, Sept. 3.—Quail are plentiful this season, judging from the information of farmers; and a few of us who keep on the good side of them expect nice sport when the season opens. Moccasin Bend, Lookout Valley and Chattanooga Valley, between Lookout Mountain and Missionary Ridge, all afford fair quail shooting. We are glad to note an increasing tendency to observe our game laws, which seem to be reasonable. No shooting yet, although lots of birds are large enough. The law is more respected than its enforcement feared.—G. E. S.

BOOK OF THE GAME LAWS.—The first number of the *Book of the Game Laws* will be issued about Oct. 1 from this office. We have undertaken the publication of this periodical in response to constant calls for a trustworthy compendium of the game and fish laws. The FOREST AND STREAM enjoys peculiar advantages for conducting this work in a satisfactory way. We shall make the *Book of the Game Laws* the authority in its field. Send for prospectus.

SNIPE ON LONG ISLAND.—"The Cedars," Oakdale, Sept. 1.—While crossing the meadow at 4 o'clock this morning to fix out for bay snipe shooting, I flushed four English snipe. The wind at sunrise being in the wrong quarter, N.W., and no birds, I picked up and beat the meadow for the English snipe, but succeeded in flushing but one more. Bay snipe shooting has been a failure here the past summer.—ALFRED A. FRASER.

MECHANICSBURG, Pa., Sept. 5.—The prospects for an abundance of quail and rabbit shooting were never brighter than at present. Reports from the outlying districts say that small game has not been so plenty for several years.—MINNIE MINGO.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

FISHING IN MINNESOTA.

WHAT angler read the "Bass Number" recently published by FOREST AND STREAM without gratification, who without being instructed, and what one did not enjoy again in recollection his many personal exploits with rod and line?

Next to actual experience I delight in reading of the pleasures of brothers of the craft, rejoice with them when they take a "whopper," weep when the "whopper" just at the critical moment tears out the hook, and in fact can almost in imagination impersonate the scribe and finish the perusal with only less satisfaction from the reading than he enjoyed from actual experiment.

Although my experience with *Micropterus salmoides* has been less extensive than that of many I can yet bear witness to his game disposition and fighting proclivities, and though there are perhaps others which excel him in these points the angler who has enjoyed a good morning's sport with this species will not feel disposed to grumble at any lack of combativeness.

My first knowledge of black bass fishing was acquired when a small boy in a large mill pond near one of the less pretentious towns of Iowa.

The bass in that locality were very fastidious as to their diet and seldom could be coaxed to take anything but live minnows; frogs, spoon hooks and flies were often tried, but failed to allure them; as to the fly, perhaps from inexperience in manipulating, but I incline more to the belief that it was simply from lack of inclination for that variety of bait.

How well memory retains each favorite spot for fishing, the overhanging bank, the old stumps and logs lying in the water, one log in particular, which lay within a few feet of the place where the water entered the mill-race, from under which was almost daily scored the first catch in the morning, and, singular to relate, seldom more than one.

My last experience with *Micropterus salmoides* was while on a summer vacation in the lake region of Minnesota, the first object in view being to regain health, broken by too constant confinement within the limits of the smoky city, and was limited principally to Schilling's Lake, a beautiful little sheet of water about three-quarters of a mile in length and a half mile in breadth, almost entirely hemmed in by trees, and situated near the diminutive village of New Auburn, Sibley county. Neither before nor since my visist was it much resorted to by anglers, or farmers, for the alleged reason that the fish were all frozen out, in regard to which statement being somewhat skeptical, the wise policy of a personal investigation was adopted and the assertion disproved with little difficulty.

The lake was very well stocked with black bass and some pickerel, the smallest bass caught in the whole season, with one exception, not weighing under 1¼lbs., the largest not over 3lbs. 10oz., the smallest pickerel not under 6lbs., the largest not more than 8lbs., so that both bass and pickerel ran very even as to size, although in game qualities the bass is far superior.

The first attempt at fishing was made upon a cloudy day in early June, with just sufficient wind to slightly agitate the leaden surface of the water without making it difficult to row, the writer seated in the stern of the boat at one end of about 50yds. of small braided silk line, at the other end of which was a spoon. We had made a half circuit of the lake and were coming with the wind down the center, the oarsman skeptical, the writer hopeful, feeling between the finger and thumb that pleasant sensation which the spoon, revolving rapidly and swiftly through the water, produces, when a quick pull, the line veers around to the left, a sudden leap into the air and a black bass, in our eyes a monster, is exposed to view. A taut line is kept upon the prize, and the fun proceeds, until after many rushes and struggles he is drawn close, lifted into the boat and exhibited in triumph to the oarsman with some inquiry as to whether he did not believe that when the lake froze up solid at least one fish escaped, to which in the presence of *prima facie* evidence he assented without argument. The spoon was again cast out; we rowed to the foot of the lake, and proceeding around up the other side, came again to the head, and started down the center, when, as the boat neared the place where we were rewarded by the previous strike, there came suddenly a mighty tug, the line "swished" wildly back and forth through the water, and after a savage contest for perhaps five minutes, which several times seemed about to be decided in favor of the combatant at the other end, a pickerel was at last coaxed up to the side of the boat, seized by the gills and lifted struggling over the side, when he proceeded to try and drown us with about an inch of water, which was in the bottom, the spoon dropping from his mouth in the effort. Fairly exultant with our good luck, we again cast forth the spoon and rowed up, down, and around the lake, feeling several times jerks at the line, but at no time getting a strike, and remarking what good luck we had when rowing through the scattering weeds, that the hooks did not catch, until at last, concluding there were no more fish in the humor of biting, our course was steered for home, only to find when the bank was neared and the spoon drawn in that it was minus the hooks, which we found upon investigation to have remained in the pickerel's throat. This explained to us why the line was several times so mysteriously jerked, also the immunity we enjoyed from the weeds; but our success was so great not only in catching two good fish, but also in demonstrating that there were plenty where they came from, we were not disposed to "cuss" our luck. So taking our way to the house, the scales were brought out and the bass was found to weigh just 3lbs. 1oz., the pickerel exactly 7lbs.

The greater part of my fishing in that lake was with the rod, as I could not often get any one to row. Small frogs were found to be the killing bait, which, after sundown, were easily caught in a marsh lying between the lake and the house, and placed in a can with plenty of water, for use on the following morning. The necessity of giving them plenty of water was learned from experience, as the first frogs caught were placed in a can without water, and in the morning found shrunk to about two thirds of life size, and very dead. They were hooked through the back for still-fishing, through the mouth for trolling. The fish would also take minnows, but not nearly so freely as frogs; dead bait of any description they would seldom touch, which revealed the cause from which the farmers in the vicinity concluded that there were no fish in the lake, as their ideal bait was beefsteak, liver, fat pork, or, in short, almost anything that would hang on their hooks, except such live bait as the fish would take. The only time they would bite freely, except on cloudy days, seemed to be from daylight until about 7 o'clock A. M., when the sun made it too bright for them. Between those hours it was no hard matter to get a string weighing from 20 to 30lbs. of as nice fish as any one could desire, and sufficient to keep the neighbors well supplied.

Adjoining Schilling's Lake lies another lake of the same name as the village on which it borders, and the two lakes have this peculiarity, that the first named is always clear, but the last muddy. Moreover, in the one last mentioned there actually seemed, as far as I was able to determine from the most approved methods of angling of which I was cognizant, to be no fish but "cats" and sunfish. The two lakes are at one part separated by a strip of land not more that 100yds. in width.

After a summer gloriously spent in fishing and seeking health, and meeting in both pursuits with equally gratifying results, the writer returned home with the firm resolve that it should not be the last spent among the lakes of Minnesota.

"Bless'd silent groves, O may you be
Forever mirth's best nursery!
May pure contents
Forever pitch their tents
Upon these downs, these meads, these rocks, these mountains,
And peace still slumber by these purling fountains;
Which we may every year
Meet, when we come a fishing here."

MIRATOR.

NEW NAME FOR THE CROAKER.—Dr. H. M. Smith, of Washington, D. C., informs us that the croaker (*Micropogon undulatus*) is invariably called grumbler by the negroes of the lower Potomac River region.

CHICAGO AND THE WEST.

CHICAGO, Ill., Sept. 14.—Mr. J. M. Clark and Mr. Geo. Morell are just back from a ten days' mascallonge trip in the Manitowish country, where they have had great sport. They caught in all fifty-five mascallonge, over 600lbs. of fish in all, and a number that weighed 20lbs. or just under, as determined by the scales. None ran over 20lbs. They caught fifteen mascallonge in two hours one afternoon. Many of these must have been small, as they were an hour and a quarter in landing one fish they struck, an 18lbs. one.

Messrs. Clark and Morell went to Trout Lake via Woodruff on the M. L. S. & W., and at Trout Lake they got a boat and a guide, the latter being the old resident guide, Wm. McArthur, probably the best posted man in that country on the fishing waters and thoroughfares. They did not take the north trail to Boulder and the lakes above Trout Lake and so through the upper fork of the Manitowish River, but went west of Trout Lake on the south fork of the Manitowish. Either way, the whole country is a network of wonderful lakes and streams. They passed through Rice, Alder, Manitowish, Star, Island, Stone, Spider, Mud, Clear and Rest lakes and their connecting streams, and finally striking the main Manitowish, came out where it crosses the railway, and thence shipped home. They found good fishing pretty much all along, and the fish seemed to be running in the river, but they thought the last half of September would have been a better time. In Clear Lake they found a water which McArthur said they were the second boat to visit. It was reached by a thoroughfare from Stone Lake, a little reedy passage known to almost no one of that region.

Of course, the bulk of the fish caught had to be returned at once to the water, only a very small portion being brought down to Chicago. That is a great trouble with that country and that sort of fishing; one hardly knows what to do with so much fish.

There are one or two interesting features about this trip, which may well be emphasized for the use of other anglers. No hand lines were used, as indeed they never should be used by any one. All the fish were caught on rod and reel, and Mr. Clark took several by casting and on his own bass rod. The first few fish were killed after the fashion I mentioned once before in these columns, the guide at once towing the fish for deep water. After that, I am glad to say, the anglers stopped the boat, went back to the fish which the reel could not pull from their place, and so killed their fish fair on the rod. This I have said is what I wanted to do on my mascallonge and will do the next time, and it is just what any angler should do. This business of towing a mascallonge around and killing him with the oars is all wrong, and it ought to be stopped.

On advice of a friend who had studied this fishing, Messrs. Clark and Morell din not use the No. 8 spoon, but the No. 6. Neither lost a single spoon, and every fish was killed on the No. 6. Much to their credit, too, be it said, they took off the gangs from the spoon and used a single hook, an 8° Sprout, ringed. On this they used the "tongue," or gullet of the mascallonge. Readers contemplating a trip should note this, as Mr. Clark trolled a whole day with the ordinary Skinner without a rise, while Mr. Morrell, using the "tongue," killed three fish out of the same boat. After that the single hook "tongue" were used altogether. It is possible that the fish get used to seeing the same old sort of spoon and become educated, if that can be said for such wild waters as these. I am glad that the day of the single hook has begun. The triangle gang never did seem quite right, for it don't give the fish a show. I remember I once wrote to Mr. Skinner and told him I had a notion to try a spoon with a single hook. If this falls under his eye I hope he will debate the question of offering the public some spoons rigged with only one hook. The spoons used by Messrs. Clark and Morrell were gold, half red on the inside. We thought last spring that silver and red was better. And so it goes. There seems variety enough in mascallonge fishing. These gentlemen are to be congratulated on the style in which they fished and the success with which they met. For the sake of others who would like to go up, it may be mentioned that their guide's address is Wm. McArthur, Minocqua, Wis., marked "Forward to Trout Lake." McArthur lives at the lake.

Mr. J. O. Blake, one of the head hustlers of Spaldings', starts soon on an interesting Western trip with Mr. Geo. J. Charlton, assistant general passenger agent of the Chicago & Alton. Both gentlemen will take their wives, and will travel on a scale of railroad luxury and grandeur. The trip will cover Colorado, Salt Lakes, etc., and the return will be via Northern Pacific, including the National Park. Some folks are lucky, but no one is objecting to the luck in this case, and the hope is general that the trip may be pleasant throughout.

E. HOUGH.

ANGLING NOTES.

AS a rule a first-class angler has first-class tackle and keeps it in the best of order. One can always tell an old hand at a glance. His rods and reels are in good shape, and while he does not carry a fishing tackle shop along with him he always has just what he needs and plenty of it. If people would only take the trouble to read the FOREST AND STREAM and pay a little attention to the practical directions that appear from time to time in its columns, they would pick up a deal of useful information that would tell when they reached the stream. It is folly to suppose that it is only necessary to have fine tackle to be able to catch fish. In fact, this has comparatively litttle to do with it. An expert is able to do very good fishing with a poor outfit, but it adds very much to his pleasure and comfort to have everything right. The best of tackle will, through neglect, soon become no better than the poorest. A well-made rod, whether split-bamboo or wood, will last with proper care, at least, ten seasons, but we have seen the very best that money could buy, ruined by one season's careless handling.

One of the principal causes of deterioration in rods comes from the neglect to straighten the joints after severe work. The best of rods will take a slight set after a hard day's fishing, particularly if the fish run heavy. Before putting the pieces away each joint should be carefully looked over and bent back as straight as possible, then whiped clean and dry and put back into its case. If this is neglected the set will be still greater after the next day's fishing, and finally it will grow so crooked to become almost worthless. Neither should the rod allowed to remain together too long. At least every t or three days this straightening process should be g through with. It does not take five minutes to do t and the angler will find himself amply repaid for it. sportsmen would give one-tenth part of the care to tl rods that they bestow on their guns, they would have more pleasure and profit out of them. It is a good p to go over the rod with an oily rag before going out the rain, and it is very important not to leave the rod long without revarnishing. Once in two years is al as often as it will be found necessary.

Mr. E. H. Sanford has been so fortunate as to capt a 50-pound striped bass at Narragansett Pier. We beli this is the first big bass killed at that place this seas Newport has so far carried off the honors in that line.

It is a disgrace to the New York Association for Protection of Game, and also to every sportsman in N York city, that such restaurants as Delmonico's, Brunswick and others should serve game out of sea year after year without being punished. Of the sn who encourage this state of affairs by ordering game of season we have no words to express our feeli Game Warden Willett Kidd has been after some of people, and we hope they will be brought up with a ro turn.

DR. BACHMAN'S ROD.—The Chattanooga, Tenn., *Ti* of Aug. 31, gives the report of a graceful incident: of the most pleasant treats yet enjoyed by Rev. J. Bachman, D.D., who is preparing to leave on a jour to the Holy Land, occurred last evening at the Cham of Commerce. As a fisher of fish, as well as "fishe man," Dr. Bachman is renowned in this section, an now has fishing tackle with which he may tackle river Jordan to his heart's content. When Dr. Bachi was ushered into the Chamber of Commerce, ostens to look at a guide to London, he was met by a delega of friends. Major Chas. D. McGuffey, who headed delegation, presented the doctor with a costly jointed ing rod, tackle, etc., and read the following neat brief letter from the donors: *To Dr. Bachman:* * * * "That you may, in the classic Orient, not forget recreations of our Western continent, we beg to hand herewith, as a parting gift from some of your legio friends, this fishing-rod and tackle, with which an Am can fisherman may show the denizens of the old w the skill of our artisans as well as the prowess of disciples of Izaak Walton. In this community anyth you may vouch for, even a fishing story, will pass curr but you may be captured by the insatiable reporter your stories given in print where irreverent strangers smile incredulously. As a safeguard in such event, are glad to know that you can have the corroboratio the comrade of your journey, Mr. John C. Griffiss, a gentleman so versatile that while building up and sustain the reputation of one of our foremost business men financiers, he could yet become familiar with fish circles, from the bass of northern Michigan to stingarees and turtles of the Georgia coast and the ha of the Florida alligators; could sustain a membershi both the Chattanooga fishing clubs, and win from lamented gentleman whose name the General Mc Club bears, the admiring comment: 'That fine-dre gentleman; he can fall overboard oftener, go down de and come up wetter than any man I ever knew.' W such a comrade to vouch for your fish stories, they n fear no discount, even among strangers. Jesting ap our friend, when you throw your line in classic or sac waters, when your eyes see no land to bound the Atlantic, when your feet tread the storied soil of Eur or your brow is fanned by the breezes of the Mediterran or the sultry zephyrs of the Nile, or while you war among the hallowed scenes of the Holy Land, may feel ever how warmly our heart's best wishes follow y Dr. Bachman replied that he had always found he and strength in fishing, as he stood on the shore and the fly or gave the minnow. He said he looked forw with pleasant anticipations to the day when he will st where the great fisher of men stood, and view the sac scenes of the Holy Land.

LAKE CHAMPLAIN "SWAGOS."—Sept. 8.—In your issu Aug. 31, I see a very interesting article, "A Few Rema on Bass," by Dexter. He says: "Frequently I have s a native hook a fish, and heard him call out 'sw (meaning, I suppose, Oswego or large-mouth bass) be he had seen the fish at all." I have fished in that n charming body of water for 20 years, have taken ou good many black bass, but in all that time I have ne seen or caught an Oswego. Will Dexter kindly state what portions of the lake the Oswego are found, or w found, for I want to steer clear of such places and s to my old haunts, where only the small-mouths (tl grand fighters) are found and known.—H. N. F.

THREE OF A KIND.—Many years ago in western C necticut I snared a good fat pike with a wire loop, was somewhat surprised upon cutting him open to a smaller pike in its stomach. Noticing that the sec pike was also plump and apparently well fed I made incision into its belly, and my astonishment was gre increased to find that it had likewise made a meal of of its brethren. There was a scarcity of food in stream and the pike were necessarily driven to wh sale cannibalism.—J. E. B.

MECHANICSBURG, Pa., Sept. 14.—The bass fishing not been the "howling success" that was anticipate the opening of the season, on account of the high muddy condition of the streams. Only one string of importance was caught, and that by the village exp Doc Hade, seventeen in number, one weighing 5lbs., a which were taken on a fly.—MINNIE MINGO.

POMPANO IN LONG ISLAND WATERS.—Mr. E. R. V bur, of this city, took in the Great South Bay of L Island, last week, a young specimen of the ovate p pano (*Trachynotus ovatus*). This is a rare fish in th waters. It is one of many unusual specimens caught the northern coast this year.

IE CLUBS OF THE ST. CLAIR FLATS.

III.—THE ST. CLAIR FISHING AND SHOOTING CLUB.

NCE upon a time, and not so very long ago, as cycles and æons go (so says a late issue of a Chicago daily), western end of Lake Erie marked the furthermost it of those waters of the Great Lakes which went ward through the St. Lawrence. There was then no Clair River, there was no Detroit River, and there e no St. Clair Flats. All the water of that region t north instead of east, passed through the Mackinac its, down Lake Michigan, over the ten-feet sand ridge ch now divides the lake from the Des Plaines Valley, so on, through the Illinois, down the Mississippi into Gulf.

earlier articles, descriptive of the Chicago duck s, mention has been made of the peculiar Calumet on, how it seems only recently divided from the main , and how lost and aimlessly its so-called rivers, ly even now only creeks trickling along the bottom he lake bed, wander around, flowing first one way th en the other, as high water or a high wind on the m ay dictate. It has also been remarked how inti- e a connection there is between the Calumet region the Des Plaines region, and how the "Sag," or the eder ," fairly connects the two. "Au-sag-inoski" the Indian name for it was, which not very many people w. This connecting trickle of water, which was called the Calumet Canal, we are told, but which is for the most part provokingly just too deep for a e hunter to wade in hip boots, wanders through a marsh, close up to the top of the divide. It used to into the canal. All these places have received com- t as good game localities close to Chicago.

hen the eastern straits broke through, and the waters lichigan, Superior and Huron, in obedience to some ghty mandate se reason or whose we cannot formu- began to journey ward through the Lawrence instead vestward through Mississippi, the us Calumet duck nds, and the yet famous St. Clair grounds were ably formed at and the same time he receding of the rs. Behold the l of sympathy and touch of human rest which con- s these two local-

ut we shall see this ular connecting ad grow yet more ular and more ng. We shall see pointing arrows g this thread, ch mark alike the of the waters and tread of the years, ersed upon them- es and pointing in opposite direction. shall see gray- ed old Father Time wide-handed Na- herself meekly re- e their steps and ow back along a path they have forgotten, a new er trail marked out solely by the hand of man. And n the St. Clair Flats and the Calumet Marshes will be more intimately related.

he city of Chicago as yet pumps her drainage water r the divide. Larger facilities of the sort have been ded, and it has long been the talk that Chicago must mately cut through the low "Divide," and make a er whose source should be in Lake Michigan, and ose mouth should lie in the valley of the Des Plaines. thin the next few years this will doubtless be done. n a river, of which the present fearful streams of the cago River will be a part, will flow from the lake th and west, at least 150ft. wide, at least 18ft. deep.

he subtraction of such a stream will make some nges along the lake levels, and this will undoubtedly end to the St. Clair Flats. It was questioned by some his would not affect certain riparian rights or certain mmercial necessities to the point of commanding an erdiction, but the engineers say that there will be a ering of only a few inches at the flats, hardly enough be perceptible, and that if the big boats do scrape a le on the bottom, somewhere in getting through the s, all that will be necessary will be to build a few les or so of wing dams and thus throw a yet greater d of water through the channel of the St. Clair. icago, wonder-daring, nature-changing, lake-compell- , generously promises that she will deal better with country of the flats than it did with her own country, l will not reduce the St. Clair River to a miserable rsh trickle, as the St. Clair did with her Sag. The utifully clear blue waters of the St. Clair shall still nd eastward to the sea, unhindered and unhurt by the iled flood of the river made by man, although the rse of the latter shall be that first planned by nature. Verily, this is a great and wondrous time. Let not our arts be troubled. Shall not man, who changes and tores the course of the seas, some time be able to find ans to restore and support the wild creatures which e in and upon those seas? Already the outposts of that vement sit in light and graceful fortification alike ng the St. Clair and the Calumet. Let not the men of ab St. Clair be troubled. Years hence, and hundreds years, let us hope, their strong castle by the stream ll sit at the head of the river, from its windows shin- an influence as beneficent, in its way, as the light t streams from the tower near by, with which it daily iches hands and nightly interchanges greeting.

As I was saying, it was a mighty good duck boat, this e that belonged to "No. 11," and it took only a few oments to drop down to the end of St. Clair Club dock. r, D. A. Whitney, the urbane steward, who presides over the practical workings of the club *ménage* during the open season, received the inquisitive visitor with ready courtesy and hospitality, and cheerfully volunteered the assistance which made possible the writing of our little story.

The St. Clair Fishing and Shooting organization is the oldest organization on the flats. It was founded in 1869, and may therefore be said to have reached its full majority, and at the same time to be lawfully the head of the family of clubs. A glance at the illustration will show, in a way more or less imperfect, since no black and white engraving can present either the harmony of color or the actual effect of the full perspectives, that the buildings of the club are very considerable in extent and architecturally very noteworthy. The main building is very happy in its conception, being simple, strong and comfortable looking to a degree. You may look long and far and you will not find a club building which will impress you better. But this is modern. Look beyond the main building, at the left hand corner, and you may see a glimpse of the building which, or a part of which, was the original home of the club. The first building was a small frame house, only 18×30ft. in size, with no dock at all. First one addition was made to this, and then a second, until it had fourteen rooms, at which point it was thought that the height of all reasonable architectural dreams had been reached. This old structure was formerly up on the dock, after the latter was built, but was in course of time moved back. Behind the main club house there are now so many bath houses, boat houses, etc., that the place looks somewhat like the quarters on an old plantation. Some of the larger of these connect with the main building, and just how far it is from front to back of St. Clair Club house is something no one knows. The present club house, or the main building which is so known, was erected four years ago, and after it was finished had cost over $27,000. It is 200ft. in front, and about 200ft. from front to back. In front of it lies 355ft. of dock. The passenger boats can tie up almost at the front door, and the great steamers of the lake pass constantly by, to and fro, only a few yards distant from the wide verandas. Further on, across the channel, lies the line of rushes on the Canadian side.

ST. CLAIR FISHING AND SHOOTING CLUB.

The front door of St. Clair house is a grand wide affair, solid and well ornamented in stained glasses. Within that, there appears a vista of highly waxed floors and hard-oil finish in pine, bright and cheerful, which stretches across a noble hall, a long parlor and observation room to the right and up a wide and stately staircase which admits no insinuation of a difference between upstairs and down. The arrangement of this lower floor is superb. Fine as this club house is in its exterior, it is only at its best within. The long halls and the gracious expanse of easeful room which stretches away from them leave an impression of sheer magnificence. The finish in the natural grain of the wood, the immense fire-place, and the shining waxed floors heighten all this, and the effect is further continued by the quiet elegance of the furnishings. I do not know who had in hand the decoration of this interior, but it was certainly no upholsterer. There is a great table in the center of the observation room, and this is well loaded with books and periodicals. Upon the walls are the admirable field scenes of the Detroit artist, Mr. Hopkins, who certainly is that rare creature at once a sportsman and an artist. There are a few well mounted birds about the office and halls, and there is a valuable painting by Hopkins, a marine, in the ladies' parlor, upon the other side of the entrance hall. Nothing is overdone, and all is well done. The colors of this interior do not swear at one another, and there is not anything in the whole effect to cause for one that involuntary twitching of the shoulder blades which sometimes warns an unconvinced reason that something is wrong. For instance, I suppose Mrs. Whitney might have red silk curtains at the windows that front from the office on the water, or she might have maroon, or a screaming blue of some sort or other; but she doesn't. She has just exactly the amount, kind and quality of blue in her silk window curtains, which serve to make them a comfort and not a query. Everything else is just so. You can go into St. Clair Club house and have perfect comfort with your shoulder blades. Moreover, Mrs. Whitney took me through the big dining-room, and through the big kitchen, and through the pantries, and through so many other rooms, further and further back, and to one side or the other that my head swam, and I pledge my word and honor it was the same all the way through, and the most superciliously clean place I ever saw. I would as soon be struck by lightning as to look at one of those dishpans again, and as for the silver, it was bright-shining as the sun. The world lost a great house-keeper when Mrs. Whitney married, although her husband and St. Clair Club gained one by the same token. Mr. and Mrs. Whitney have been in this present position for 9 years, and they ought to be there about 99 more.

The steward's office is railed off just to the left of the entrance, and with his formidable keyboard and set of books looks something like a hotel office. A good deal of system is necessary in conducting an establishment as large as this, for sometimes seventy-five or one hundred persons will be on hand daily in the summer, or even more if there is a grand ball or unusually large fish supper on hand. There are eighty-nine bed-rooms on the second floor. Any overflow beyond this is taken up by the extra house down at the end of the dock, which is devoted entirely to sleeping purposes. It should be borne in mind that this is a very large as well as very wealthy club. Its membership includes what we may, I suppose, call the aristocracy of Michigan, although I do not like the word, nor suppose the club does. You are liable to go in there and fall down over a Senator fixing his fishing rod, in almost any corner, and a postmaster-general isn't any more than aces high. The Hon. Russell A. Alger, whose name the breezes which sigh through the lumber regions whisper in connection with the White House; the Hon. Don M. Dickinson, ex-postmaster-general, Senator McMillan, of Michigan, and a number of other guns too big to be fired from the shoulder, all belong to this old and select sporting organization, but so far as I could learn they get treated just as well as anybody else and are not held responsible.

It should not be supposed that this club is devoted altogether to social or summer resort purposes, or to such dissipations as dancing, or eating fried perch all night. Doubtless during the heated season many Detroiters avail themselves of the privilege of taking the afternoon boat simply for a cool ride up to the club house, and for the pleasure of an evening there, without any fishing or shooting; but there are many ardent anglers and hard-working shooters in this body, and much good and genuine sportsmen's work is done. Of preserves the club has none, but the boats of its members lie out as long and as far in the flight as any, and go as far for bass. These clubs are all equal in this regard, as has been mentioned. It was something in the way of news to learn that neither the shooting nor the fishing lies very close to the made ground, rather long journeys being required for either. The question may be asked, Why were the buildings, then, placed where they are? This was done so that the big boats, which have to stick to the channel, could get up to the building sites, before and after building. From this "made ground," where all the club houses stand, the smaller boats take out the seekers after sport. For instance, the best bass fishing is now ten, twelve, or even fifteen miles or more from the club houses, away over on the Canadian side, among the channels where, much as the jealous "Canadian Club" may object, they cannot prohibit the club men from fishing. (No member of the St. Clair Club, however, has ever hunted on the Canada Club's preserves, or fished across the Canada line until the opening of the season, which is later for Canada than in Michigan.)

For such journeys as are necessary or pleasant among the fishing grounds or to and from the city, there are owned by members of the St. Clair Club a number of steam yachts, some of them of a very high grade of excellence. The Vita, belonging to Mr. M. S. Smith, Mr. Alger's partner, I saw in the docks of the Detroit Boat Works, down at the city, undergoing a refitting, and if I am not mistaken it was the Idler also that I saw there. The latter boat had undergone a complete rebuilding, her lines being materially changed. Idler is owned by Senator McMillan. Both Idler and Vita are grand boats, among the best of their class on fresh waters. Then there is the Dawn, owned by Mr. John S. Newberry, and reputed to be the fastest little craft on the lakes. Dawn is a thing of beauty. You could almost pick up her slender, shining hull under your arm and walk off with it, yet her noiseless engines can send her twenty miles an hour. The Truant is owned by Mr. Truman H. Newberry. The Magna belongs to Mr. W. K. Parcher, and Louise to Mr. H. C. Hart. The Lillie is the property of Mr. A. E. Brush, and the May Lily of Mr. Geo. B. Hill. Pastime and Lurline belong to the Messrs. Walker. There are twelve club boats for general touring purposes, and about sixty-five small boats scattered around among the numerous boat houses.

The typical boat, if we may so speak, among the various sorts used upon the St. Clair Flats, is a good stiff skiff, clinker built, about 16 to 18ft. long, with provisions for stepping a mast well forward. On a journey of ten miles or upward the sail is an esteemed ally to the oar. Most of the bass fishing is done from such boats as these. The methods of this fishing will be described later on. The typical rod, if such a thing may be where all kinds of bass rods are brought and used, is a single-piece cane, about 8ft. long. This makes a stiffish but springy rod, which not even the bait caster always despises, for much of the fishing for the small-mouths is deep water work, as it is in Lake Erie about the islands,

The typical duck boat is much like that belonging to "No. 11," and used on the journey along the club houses, double-ended and decked, but rather lower. What they call the "lying-out boat," from which their open water shooting at bluebills and the other deep-water ducks is done, is very flat and low on the water, almost sneak boat build, for it must be both boat and blind. Variations from this model are made according to the fancy of the individual shooter. In this open water shooting the gunner lies upon his back in the boat, his decoys being arranged, of course, as for blind shooting. There is often a very considerable sea on, and it requires practice to learn how to shoot ducks from a swaying boat in this way, as many a fair marsh shot has discovered upon trying it. It is cold, rough work lying out in a small boat all day, and it requires the fullest quota of duck-hunter hardihood. There are some of these stubborn and stiff-necked fellows among the members of the St. Clair Fishing and Shooting Club, and some good bags were made this past season, during which, by the way, the ducks are said to have been more plentiful than for many years past.

But, after all, to wander through the luxurious abode of this great and wealthy organization, and to note the provisions for more than ease and comfort, could give one no hint of duck boats, of leaden skies or stormy winds. One could hardly imagine hip boots and corduroys or canvas creaking and dripping along these elegant halls. Far more fitting to all this seemed the thought of warm days, and gentle winds, and skies blue as the river that rolls by. Surely, in the great expanse of this observation room, which opens out upon the channel, there never could have gathered a group of men who talked gun pure and simple. Far more likely and fitly, so it seemed as we passed out, saying our farewells on the bright May morning, may the genius of the place, the goddess of all this sweetness and light, have been Celestine, who, herself gentle and beautiful as the morning, sat gazing out the great window, across the blue water, her lashes drooping over eyes that quite forgot the half-open book upon her lap. There be lotus plants among these wild rice beds. If there exist in these latter reflections anything to offend a sterner sportsman spirit than would seem to be implied herein, let the apology be that the visit was made in the late spring, after the duck season was over and before there was any fishing of a sort to attract the anglers. Everything about the big club house then looked very quiet, and pretty and restful.

The following is the membership of the St. Clair Fishing and Shooting Club: R. A. Alger, Geo. F. Ambrose, W. K. Anderson, W. O. Ashley, Darius N. Avery, Geo. E. Avery, John H. Avery, C. K. Backus, Hibbard Baker, W. L. Baker, Stephen Baldwin, Levi L. Barbour, E. T. Barnum, Thos. Berry, Geo. W. Bissell, A. G. Boynton, W. H. Brace, C. K. Brandon, H. H. Brown, of Cleveland, Ohio; W. E. Brown, A. E. Brush, C. H. Buhl, L. S. Butterfield, W. H. Burtenshaw, McD. R. Campau, Clarence Carpenter, S. G. Caskey, W. J. Chittenden, Wm. C. Colburn, H. C. Colburn, Olney B. Cook, A. W. Copland, Jerome Croul, C. A. Davison, H. M. Dean, J. N. Dean, Alex. Delano, Hamilton Dey, Don M. Dickinson, H. M. Duffield, Chas. Dupont, E. O. Durfee, Wm. M. Dwight, H. W. Dyar, James Edgar, James L. Edson, George W. Edwards, Wm. D. Edwards, Chas. Endicoit, Geo. Farwell, Jesse H. Farwell, Thos. Ferguson, D. M. Ferry, G. L. Field, James L. Fisher, C. T. Fletcher, E. H. Flinn, C. L. Freer, R. H. Fyfe, R. T. Gibbons, S. L. Gillett, of Boston, Mass.; R. Gillis, M. H. Godfrey, Bruce Goodfellow, Levi T. Griffin, Thos. Griffin, H. C. Hart, J. D. Hawks, F. W. Hayes, John A. Heames, C. J. Heath, F. J. Hecker, Geo. B. Hill, Chas. C. Hinchman, J. M. Hinchman, C. C. Hodges, D. C. Holbrook, William P. Holliday, Alfred Hooper, Geo. H. Hopkins, Wm. S. Hopkins, Henry Howard, of Port Huron, Mich.; R. R. Howard, Geo. S. Hosmer, N. J. Hubbel, Chas. B. Hull, E R. Hull, Wm. Hull, Albert Ives, Jr., Butler Ives, H. H. Jackson, H. L. Jenness, Fred Joy, H. B. Joy, James Joy, James F. Joy, C. V. Kasson, R. S. Keys, A. C. King, Frank E. Kirby, Geo. W. Latimer, E. L. Lewis, Wm. Livingstone, Jr., O. M. Locke, J. S. Lorimer, Eugene S. Lowe, G. W. Marshall, W. J. Mason, L. A. McCreary, Walter McFarland, A. C. McGraw, Fred G. McGray, Theo. A. McGraw, Thos. McGraw, Thos. S. McGraw, W. A. McGraw, James McGregor, J. P. McLaren, Donald McLean, James McMillan, George McMillan, Andrew McPherson, E. W. Meddaugh, Ira A. Metcalf, M. B. Mills, John B. Moloney, George F. Moore, Wm. V. Moore, Fred T. Moron, John V. Moran, W. D. Morton, J. B. Mulliken, S. R. Mumford, John F. Murray, E. E. Myers, James Nall, H. S. Newberry, J. S. Newberry, Thuman H. Newberry, H. L. O'Brien, N. C. O'Brien, R. C. Olin, R. B. Owen, W. K. Parcher, Geo. H. Parker, A. A. Patton, Geo. A. Patterson, W. S. Penfield, H. S. Pingree, Thos. Pitts, James E. Pittman, F. B. Preston, W. H. Prittie, W. E. Quimby, A. C. Raymond, James A. 175 MONROE STREET, Chicago.

THE YELLOWSTONE PARK AND DINING CAR ROUTE.—The Northern Pacific Railroad, stretching from the Great Lakes to the Pacific coast, with its elegant vestibuled service of dining cars and Pullman sleepers, not only affords business men, tourists and others a route of travel equal in every respect to any in the country, but renders accessible to sportsmen the only region in which can be found to-day the large game which was once so plentiful in all the West. In addition to the large game, the sportsman will find in the country along the line of the Northern Pacific Railroad such quantities of small game as is unknown in the East. This line, penetrating the Lake Park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green rivers, as well as lying in close proximity to the hunting grounds of the Big Horn, Snowy, Belt, Bitter Root, Rocky, Cœur D'Alene and Cascade Mountains, is unquestionably the sportsmen's route of America. The pamphlet, "Game Preserves of North America," together with other interesting publication, descriptive of the Yellowstone Park and Alaska tours, will be mailed free on application to Chas. S. Fee, G. P. & T. A., N. P. R. R., St. Paul, Minn.—*Adv.*

Fishculture.

THE CALICO BASS IN EUROPE.—Herr Max von dem Borne, of Berneuchen, Germany, has hit upon a very good method of making his people familiar with the fishes which are being acclimatized in Germany chiefly through his efforts and with the co-operation of the United States Fish Commission. Herr von dem Borne's plan is to issue neat pamphlets, usually containing a picture and a brief popular description of the species of which it treats. We have before us now such a paper upon the American calico bass or silver bass in Europe. On June 19 we noticed similar publications relating to our rock bass and channel catfish, the former of which contained an illustration of the subject. These articles are sold at a uniform price of thirty pfennige or about eight cents of our money. For the calico bass the German, French and English common names are given; also the scientific names as contained in several standard works on ichthyology, and a reference to the literature of the fish, particularly that relating to its artificial culture and its use as a game and food species. This is followed with a synopsis of its specific characters, an account of its original habitat, its food, size, table qualities, adaptability to pond culture and its game qualities (for a further account of which the author refers to FOREST AND STREAM of June 5, 1890), its breeding season, rate of growth and fertility. The account closes with a brief reference to its introduction into France and from France into Germany. Herr von dem Borne hopes soon to obtain a numerous progeny from the calico bass which he brought from France. He intends to keep the young in ponds to protect them from predaceous species until they are ready to spawn, and then to plant them in open waters, streams and lakes. A modification of this plan of popularizing the work of fishculture might advantageously be adopted by our State and national fish commissions.

COLORADO TROUT FOR EASTERN WATERS.—We have previously mentioned the proposed transfer of black-spotted trout from Colorado to eastern waters by the U. S. Fish Commission. This project has been carried out and the station at Wytheville, Virginia, now contains 2,000 fry hatched from eggs collected at Leadville, Colo. The young fish are large enough to feed and they are in a flourishing condition. There is every reason to believe that a goodly portion of them will be brought to maturity. The Superintendent of the Wytheville station, Mr. George Seagle, finds that this trout developed in the Wytheville water much faster than the rainbows, the embryo sac being absorbed in about twenty days bringing the fish into the feeding condition while the rainbows require about thirty-five days to reach the same stage of developement. This is one of the numerous varieties of the black spotted trout of the Rocky Mountain region, technicall yknown as *Salmo mykiss* or *purpuratus*. The extensive range of this trout, under climatic conditions which must be greatly varied, encourages the belief that it will readily adapt itself to the conditions existing in our eastern lakes and streams, suitable for trout life, and become a valuable addition to our rapidly increasing stock of noble fishes.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Sept. 23 to 26 —Third Dog Show of the London Kennel Club, at London, Ont. S. F. Glass, Secretary.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. H. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

WILMINGTON DOG SHOW.

THE late hour to which judging was continued on the first day of the Wilmington dog show necessarily confinished last week's report to the prize list only up to the 6 o'clock awards. The cause of the delay in making the awards was due to the late hour of starting, it being after 2 o'clock before everything was in readiness for Messrs. Glover and Mayhew to begin operations. Mr. F. R. Carswell explained this by saying that while he had to absent himself from the fair grounds on Monday afternoon, some one had taken his carpenters, and his judging inclosure, in place of being completed when he got back, had not been begun.

Mr. Carswell deserves the greatest possible credit for this show, which was entirely his own work throughout, from inception to termination. And while the entries were not very large, yet two hundred, with two other shows to buck against, is all that could be expected, and certainly for evenness of quality it was really a wonderful display.

There was a goodly delegation from Philadelphia at the ring side, while Mr. R. Leslie came all the way from Lynn, Mass., to put his pointer bitch, Belle Randolph, in the challenge class. Mr. Diffenderfer was also on hand from the city of the milk route.

MASTIFFS—(MR. MAYHEW).

Brother had an easy win in the dog class It is some time since we have seen him. and he certainly never looked in better condition. His small size will always be a drawback, but notwithstanding that we preferred him for the breed special to the bitch Lady Caution. The second dog was Lu Lu, plain in head and light in loin. Don. third, is also plain and had a badly lacerated leg, the accident happening in transit. Lady Caution, first in bitches, was well shown, but lacks head properties. The second was an immatured daughter of Beaufort. She is good in head and in time should be a winner.

ST. BERNARDS—(DR. GLOVER).

First to Arch Duke, unopposed. In-bred to Otho, he takes after him in head and front, being full of character. He fails in body and loin, but is a good mover. Blodwin won in bitches, but she was dead out of coat and bore little resemblance to the bitch that all but beat Nanon at Baltimore. In head her kennel companion Lakme is better, but her size is against her. Mr. Diffenderffer was also first and second in smooth-coated dogs with Lord Hector and Lord Clifton. The latter is dish-faced and his eyes are too wide apart, which spoils his character. In size he has the advantage. Queen Bess, first in bitches, was lucky to have no opposition. She is small and bad in coat.

NEWFOUNDLANDS—(MR. MAYHEW).

Mr. Mayhew tried to scale the fence when he saw a 300-pounder enter the ring with a curly-coated black dog. He finally mustered up courage to tender a red ribbon to the heavy-weight owner, which was indignantly refused. "What award did you make, Mr. Mayhew?" "Well, I offered him second, but he wouldn't have it."

GREAT DANES—(MR. MAYHEW).

Marco won well. A dog of great symmetry, his neck and shoulders being excellent. Has come on well since he was shown at Philadelphia last year. Pedro, second, lacks the quality of the winner. In the bitch class Irene might well have been sent out of the ring. She was a disgusting sight, the result of suckling. Flora, first, was well shown, but she is weak in face; rather throaty and carries her stern too gaily. Minca Mia is lippy, but otherwise about as good as anything in the class.

DEERHOUNDS—(DR. GLOVER).

Thora III. is typical, but far too small. Her pedigree, as catalogued, does not seem correct. Who was champion Robin, her sire?

POINTERS—(DR. GLOVER).

Brake, shown too light, was alone in the heavy challenge class, as was Queen Fan in the light division. In open dogs Tempest, looking soft and light, won from The Beau, a son of old Beaufort, whom he resembles in color. He is coarse and plain. Prince, third, is a black, and not a bad one in front, but he is "chucked up" in body and carries his stern over his back. In heavy bitches the well-known Belle Randolph easily won from Larnock Elsa, off in front and too long in the coupling. Pommery Sec beat Mr. Hyland's Ossining. Neither looked well. Spot Dash was third. These are all well knewn. Reserve was given Bing of Kippen, who generally gets a card when shown. In small bitches Merry Legs won from White Fawn. The former is far too small, but possesses fair quality, and White Fawn has a good head, but is heavy in shoulders. Princess Bang is weedy. The pointer special was won by Brake.

ENGLISH SETTERS—(DR. GLOVER).

Mr. Jester got first in open dogs with Dick Roy, not over good in head or front, but a strong, well-built dog. Punch, second, is snipy and bad in loin and body. Don Dell has few credentials for a show bench. The best of the English setters was the bitch Ruby, who won easily in her class. The puppies were poor, and altogether the breed was feebly represented.

IRISH SETTERS—(DR. GLOVER).

Larry S., first and alone in challenge class. Major, first in dogs, is strong in head, but is good in body, legs and feet. Don is coarse. Leda Glencho, first in bitches, was properly placed over her full sister Madge. Leda is good in head, nice size, good legs and feet. The puppies Trix and Mona do not look like training on into open class winners.

GORDON SETTERS—(DR. GLOVER).

With walks over for Roxie and King Item and only two in the open class one might ask what are the Gordon Setter Club members doing. Countess Roxie is so much better than Roxy Royal back of the shoulders that the decision was discounted long ere it was given. Puppy prizes were withheld.

AMERICAN FOXHOUNDS—(DR. GLOVER).

Brag was in miserable condition, but nevertheless could still beat his son Brag, Jr., in head, build and bone. The New York winner, Biz, won easily in bitches from Joy, also from Mr. Jester's kennels.

FIELD SPANIELS—(DR. GLOVER).

Daffodil is leggy, but beat Pasha in head, coat and condition.

COCKER SPANIELS—(DR. GLOVER).

Red Doc was placed over Toady Obo in dog class. Doc is chunky in head, ears set on badly, no neck and is not right in loin. Toady Obo might be straighter in front and is a trifle long for a cocker, but he has a grand outline, a good head, and was in the pink of condition. Waggles won the bitch prize in a canter from Hazel Obo. Waggles, like Toady Obo, was in splendid shape. She is just the right cocker size and build, but is a little wide in skull. The winning puppy, Banjo, is too much of a terrier in body. Waggles, second, is light of bone.

COLLIES—(MR. MAYHEW).

Challenge prize to Scotilla, unopposed. First in open dogs to Roslyn Wilkes, an easy win over Major Jum, who is a well built dog with good length of head, but his coat is open. Blair Athol, third, is soft in coat but good in head and character. Colonel Scot has seen his best day and his head is now very strong. He was well shown. Hempstead Zulu had no coat whatever. The well known Cora II. won in bitches from the now always smooth Jakyr Dean. Lady Moll was too fat but easily beat Iduna for third honors. In puppies there was no future flyer. Attila Wonder is small and weedy; Noble Wonder coarse and curly on loin; Rutland Pet too small.

BULLDOGS—(MR. MAYHEW).

Sykes was the best of the three by a long way, but he was in woeful condition, and first went to Bombardos, who stands on his forelegs, and they are too long. His skull is good, but his muzzle is weak, and he is not short enough in face. Derby Nancy is very moderate, long in face and not out at shoulders at all.

BULL-TERRIERS—(MR. MAYHEW).

This class was well handled, first going to Meg Merrilies, good head and front, good shoulders and nice outline. Chesset's Flyer is now cheeky and gone in front. White Stubbs still looks the puppy he always did. White Violet is another past number.

BASSET HOUNDS—(MR. MAYHEW).

The two bassets were not flyers by any means. Jocresse beat her litter brother easily. They are of the wrong type altogether. The winning dachshund, Waldmann I., had no opposition. He is thick in head and straight backed.

BEAGLES—(DR. GLOVER).

In the two classes the only good one was the bitch Floy. Of the dogs we preferred Rowdy II. to Mingo, who is one of the long back brigade.

FOX-TERRIERS—(MR. MAYHEW).

In the challenge class Blemton Rubicon beat Blemton Consequence. A sound decision. Both are too well known to need any description. Blemton Brawler won in open

dogs. He is a little on the large size, but Regent Brisk falls off so much when you get back of his shoulders that, smart little terrier as he is in front, he is bound to be put behind a fair all-round dog. General Grant was well shown, but he is now cheeky and is not good in coat. The bitches were a rather weak lot, and Tennis, about as good as anything, showed timidly till the judge had made up his mind, then she brightened up and threw her ears properly. Warren Jenny is good in shoulders and outline, but heavy in ears. Regent Edna was shown too fat. First in puppies went to a smart youngster in Blemton Valour. Very good in head and expression, but is hardly filled out yet. He quite outclassed Regent Reuben.

IRISH TERRIERS—(MR. MAYHEW).

Breda Tiney had no opposition, and was shown in good condition.

SKYE TERRIERS—(MR. MAYHEW).

Lovett had a bloodless victory, two clipped half-bred Yorkshires being dismissed without a notice of course.

BLACK AND TAN TERRIERS—(MR. MAYHEW).

The Rochelle Kennels' Dick had no difficulty in winning from Winnie, a very bad one, whose timidity reminded one of the late Mr. Travers's recommendation to "b-b-bury the rat."

YORKSHIRE TERRIERS—(MR. MAYHEW).

First, Prince, is not dark enough in blue, but his tan is good, as is his texture of coat. Lady K. is weak in both colors.

TOY TERRIERS—(MR. MAYHEW).

Tiney is much above the average of small black and tan terriers and showed as lively as a cricket. A little more length of head and she would be first-class. Dot lacks life and terrier smartness.

PUGS—(MR. MAYHEW).

Two poor bitches were shown. Nellie Bly (with wrong date of birth) was minus the coloring she showed at Boston. Daisy is weak in face and her color is not clear. Puppies poor.

TOY SPANIELS—(MR. MAYHEW.)

King Victor, the well known Blenheim, beat a weak-faced King Charles, Pansy by name.

MISCELLANEOUS—(MR. MAYHEW).

The smooth-coated Beauty, formerly shown by Mr. Carswell, won easily, though he was rather long in coat. Second to the Schipperke, Othello, and third to a black poodle of passable merit.

The following are additions to the prize list as given last week:

AMERICAN FOXHOUNDS.—*Dogs:* 1st and 2d, St. George Kennels' Brag and Brag, Jr. *Bitches:* 1st and 2d, St. George Kennels' Biz and Joy.

BEAGLES.—*Dogs:* 1st and 2d, J. P. Prentiss's Mingo and Rowdy II.; 3d, R. Blakely's Gunner. *Bitches:* 1st, Associated Fanciers' Floy; 2d, J. P. Prentiss's Bell.

FOX-TERRIERS.—*Puppies:* 1st, Blemton Kennels' Blemton Valour; 2d, Regent Kennels' Regent Reuben; 3d, L. & W. Rutherfurd's Warren Vain.

In cocker bitches Waggles beat Hazel Obo.

DETROIT DOG SHOW.

OUR report of the Detroit dog show has not yet come to hand. Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* 1st, C. C. Cook's Moses. *Bitches:* No entry.—OPEN—*Dogs:* 1st, Ayers & Powell's Edric; 2d, H. Falconer's Mode; 3d, C. C. Cook's Captain R. Reserve, Elizabeth Oesterreich's Prince Leo. Very high com., F. E. Fisher's Ashmont Tiger. High com., J. J. Lynn's Beaufoy. *Bitches:* 1st and 2d, C. C. Cook's Pharaoh Queen and Duchess of York; 3d, H. Falconer's Bess.—PUPPIES—*Dogs:* 1st, C. C. Cook's Captain R. *Bitches:* 1st and 2d, C. C. Cook's Duchess of York and Miss Beaufort; 3d, Tracy Bros.' Leo's Nell.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—No entry.—OPEN—*Dogs:* 1st, Pottersburg Kennels' Bruce; 2d, C. E. Waskeenan's Pioneer; 3d, Royal St. Bernard Kennels' Max. *Bitches:* 1st, Pottersburg Kennels' Phyllis.—PUPPIES—*Dogs:* No entries. *Bitches:* 1st, Alta Kennels' Santa Rosa; 2d, withheld; 3d, H. Falconer's Lute.—SMOOTH-COATED—CHALLENGE—*Dogs:* 1st, J. B. Lewis's Victor Joseph. *Bitches:* No entry.—OPEN—*Dogs:* 1st, W. H. Burtenshaw's Leon B. *Bitches:* 1st, Gramercy Kennels' Cleopatra.—PUPPIES—*Dogs:* 1st, W. H. Burtenshaw's Leon B.; 2d, W. C. Lautner's Pluto. *Bitches:* 1st, Alta Kennels' Keepsake.

BLOODHOUNDS.—No entry.

NEWFOUNDLANDS.—No entry.

GREAT DANES.—CHALLENGE—No entry.—OPEN—*Dogs:* 1st, H. G. Nichols's Melac; 2d, Wolverine Kennels' Favor. *Bitches:* 1st, Wolverine Kennels' Minca II.; 2d and 3d, H. C. Farnum's Francis and Duchess. PUPPIES—*Dogs:* 1st and 2d, Wolverine Kennels' Pasche II. and Brutus; 3d, C. Witherspoon's Captain. Very high com., C. H. Ruhl's Czar. *Bitches:* 1st and 2d withheld; 3d, H. C. Farnum's Gypsy.

DEERHOUNDS.—CHALLENGE—No entry.—OPEN—*Dogs:* No entry. *Bitches:* 1st, B. S. Dering's Nora.

GREYHOUNDS.—CHALLENGE—*Dogs:* 1st, Rockwood Greyhound Kennels' Master Rich. *Bitches:* 1st, Rockwood Greyhound Kennels' Miss Rare.—OPEN—*Dogs:* 1st, 2d and very high com., G. C. Taylor's Scavenger, Milo and Nibs; 3d, J. Hochheimer's Dash, Jr. *Bitches:* 1st, G. C. Taylor's Second Sight; 2d, C. W. Sarvis's Lady O'Livia.

POINTERS.—LARGE—CHALLENGE—*Dogs:* 1st Hempstead Farm Kennels' Robert le Diable. *Bitches:* 1st, Westminster Kennel Club's Lass of Bow.—OPEN—*Dogs:* 1st, Acme Kennels' Chief; 2d, Gillman & Barne's Lansdowne; 3d, Westminster Kennel Club's Westminster Drake. Very high com., Dr. J. W. Taylor's King Bow's Bow. *Bitches:* 1st, Westminster Kennel Club's Madstone; 2d and 3d, Detroit Kennel Club's Countess Lill and Ruby Croxteth.—SMALL—CHALLENGE—*Dogs:* 1st, Westminster Kennel Club's Naso of Kippen. *Bitches:* Westminster Kennel Club's Glauca.—OPEN—*Dogs:* 1st, B. Meissner's Bangstone; 2d, Kalamazoo Kennels' Wonderful Lad; 3d and very high com., Westminster Kennel Club's Westminster Glitter and Westminster Gladstone. *Bitches:* 1st, J. A. Heether's Fan N.; 2d, F. Wies's Karl; 3d, Westminster Kennel Club's Westminster Nan. Very high com., Grayburn Kennels' Flirtation. High com., J. E. Gill's Galena.—PUPPIES—*Dogs:* 1st and 2d, Westminster Kennel Club's Westminster Glitter and Westminster Gladstone. *Bitches:* 1st, Westminster Kennel Club's Westminster Nan; 2d, W. W. Sweeney's Lord Graphic's Trinket.

ENGLISH SETTERS.—CHALLENGE—*Dogs:* 1st, J. Shelley Hudson's Dad Wilson. *Bitches:* No entry.—OPEN—*Dogs:* 1st and 2d, J. E. Dager's Cincinnatus and Toledo Blade; 3d, reserve and very high com., J. Shelley Hudson's Dad Wilson's Boy, Dad Wilson, Jr., and Chickasaw II. Very high com., J. E. Patterson's Doncaster II. *Bitches:* 1st and 2d, J. Shelley Hudson's Bohemian Girl and Sunshine; 3d, Detroit Kennel Club's Victory. High com., A. J. Hiscox's Guess Gladstone.—PUPPIES—*Dogs:* 1st, H. Warui's Shelbark. *Bitches:* No entry.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, E. W. Clark, Jr.'s, Blarney. *Bitches:* 1st, W. L. Washington's Laura B.—OPEN—*Dogs:* 1st, W. L. Washington's Kildare; 2d, A. W. Stephenson's Chief II.; 3d, St. Cloud Kennels' Shanmore. *Bitches:* 1st, W. L. Washington's Winnie II.; 2d and very high com., L. N. Hilsendegen's Biddy Clare and Lalla Rookh; 3d, J. H. Dunnigan's Duchess of Avondale. High com., Gillman & Barnes's Miss Boots.—PUPPIES—*Dogs:* 1st, W. L. Washington's Darby III. *Bitches:* 1st, Seminole Kennels' Bonny Elcho.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st and 2d, S. G. Dixon's Leo B. and Field Marshall. *Bitches:* 1st, W. S. Hammel's Rose.—OPEN—*Dogs:* 1st, S. G. Dixon's Ivanhoe; 2d, withheld. High com., J. A. Heether's Sultan. *Bitches:* 1st, S. G. Dixon's Meadowthorpe Blossom.—PUPPIES—*Dogs:* 1st, R. J. Morrison's Fred. *Bitches:* No entry.

FOXHOUNDS.—ENGLISH—Only entry absent.—AMERICAN—CHALLENGE—*Dogs:* 1st, Cook Kennels' Brave. *Bitches:* No entry.—OPEN—*Dogs:* 1st, 2d, 3d, very high com. (3) and high com., Cook Kennels' Roderick, Dan, Drum II., Bill, Rover, Streak and Tuck. Reserve and high com., L. Bowser's Willie H. and Dick II. *Bitches:* 1st, 2d, 3d, very high com. (4) and high com. (3), Cook Kennels' Bernhardt, Francis, Fly, May Queen, Flying Kate, Jet, Croud II., Fanny, Vixen and Black Bess. Reserve, Detroit Kennel Club's Surprise. High com., Natural Gas Kennels' Lady Sport.—PUPPIES—*Dogs:* 1st, Cook Kennels' Bill. *Bitches:* No entry.

SHAGGY FOXHOUNDS.—OPEN—*Dogs:* 1st and 2d, A. B. Whitlock's Pierce and Bard. *Bitches:* 1st, 2d, 3d and very high com., A. B. Whitlock's Clara II, Patti, Modesty and Claude.

CHESAPEAKE BAY DOGS.—No entry.

IRISH WATER SPANIELS.—CHALLENGE—*Dogs:* 1st, B. F. Lewis's Patsey O'Connor. *Bitches:* No entry. OPEN—No entry.

CLUMBER SPANIELS.—No entry.

FIELD SPANIELS.—ANY COLOR.—CHALLENGE—1st, Woodstock Spaniel Kennels' Bridford Gladys. OPEN—*Dogs:* 1st, B. F. Lewis's Black Diamond; 2d and 3d, Woodstock Spaniel Kennel's Sampson and Napoleon. Very high com., Cook Kennel's Newton Abbot Farmer. High com., G. Connor's Don C. Com., A. G. Shafer's Don. *Bitches:* 1st and 3d, R. P. Keasby's Lady and Miss Ben d'Or; 2d, Woodstock Spaniel Kennel's Topsy.

COCKER SPANIELS.—ANY COLOR.—CHALLENGE—*Dogs:* 1st, Woodstock Spaniel Kennel's Rabbi. *Bitches:* No entry. OPEN—BLACK—*Dogs:* 1st, Woodstock Spaniel Kennels' Brock; 2d and high com., Detroit Kennel Club's Roy Obo and Black Obo; 3d, Dr. H. B. Nicol's Kildare; very high com., Miss Elsie M. Chope's Rex and A. W. Pancoast's Laddie O. *Bitches:* 1st and 2d, Geo. H. Bush's Bessy W. and Novel; 3d, F. F. Dole's Flossy W.; very high com., Woodstock Spaniel Kennel's Nina. OTHER THAN BLACK—OPEN—*Dogs:* 1st, Woodstock Spaniel Kennel's Bambo. *Bitches:* 1st, A. W. Pancoast's Trixey. PUPPIES—*Dogs:* 1st, Woodstock Spaniel Kennels' Bambo; 2d, A. W. Pancoast's Pippo; 3d and very high com., Detroit Kennel Club's George Obo and Judge Obo. *Bitches:* No entry.

COLLIES.—CHALLENGE—No entry.—OPEN—*Dogs:* 1st, Grampian Kennels' Bonnie Stewart; 2d, McEwen & Gibson's Langhan; 3d, Seminole Kennels' Roslyn Dandy. *Bitches:* 1st, McEwen & Gibson's Money Musk; 2d, withheld.—PUPPIES—*Dogs:* 1st, McEwen & Gibson's Drury; 2d, Grayburn Kennels' Lord Edward. *Bitches:* No entry.

POODLES.—*Dogs:* 1st and equal 2d, A. W. Purbeck's Dexter and Kava II.; equal 2d, Mrs. E. Chalmer's Bruca. *Bitches:* 1st and 2d, A. W. Purbeck's Nell and Cora. High com., Detroit Kennel Club's Grisette.

BULLDOGS.—CHALLENGE—*Dogs:* R. B. Sawyer's Harper. *Bitches:* No entry.—OPEN—*Dogs:* 1st, R. B. Sawyer's Carisbrook. *Bitches:* 1st, R. B. Sawyer's Dolly Tester; 2d, Woodward & Herrick's Duchess of Palmer.

BULL-TERRIERS.—CHALLENGE—*Dogs:* No entry. *Bitches:* 1st, F. F. Dole's Starlight.—OPEN—*Dogs:* 1st and 3d, F. F. Dole's Prince Bendigo and White Prince; 2d, Northfield Yorkshire Kennels' Wait for Me. *Bitches:* 1st, W. Mariner's Attraction; 2d and 3d, F. F. Dole's Grove Duchess and Miss Gladstone.

DACHSHUNDE.—*Dogs:* 1st, Joe Lewis's Feldmann K.; 2d, Gilman & Barnes's Duke II. Very high com., Oxford Kennels' Carl. *Bitches:* 1st, Joe Lewis's Lina L.; 2d, Gilman & Barnes's Duchess. Very high com., Alice T. Hurst's Taxey, and B. F. Lewis's Gill.

BEAGLES.—CHALLENGE—*Dogs:* 1st, H. Bennet's Little Duke. *Bitches:* No entry.—OPEN—*Dogs:* 1st, W. R. Wherry's Joe; 2d and very high com., Detroit Kennel Club's Bross and Rock; 3d, and very high com., Middleton Kennels' Princeps and Stormy. *Bitches:* 1st and reserve, Middleton Kennels' June M. and Yonnie W.; 2d and very high com., Hollywood Kennels' Pearl of Hollywood and Queen of Hollywood; 3d and com., Detroit Kennel Club's Romp and Racy. High com., A. V. Bradrick's Sanky.—PUPPIES—*Dogs:* 1st, Hollywood Kennels' Trueman. *Bitches:* No entry.

FOX-TERRIERS.—CHALLENGE—*Dogs:* 1st, Blemton Kennels' Lucifer. *Bitches:* 1st, Blemton Kennels' Diadem.—OPEN—*Dogs:* 1st and very high com., Woodale Kennels' Starken's Jack and Hillside Mix; 2d, Blemton Kennels' Blemton Victor II.; 3d, L. & W. Rutherfurd's Warren Sabre. *Bitches:* 1st, Oxford Kennels' Ebor Nettle; 2d, L. & W. Rutherfurd's Warren Jenney; 3d, Blemton Kennels' Blemton Enid.—PUPPIES—*Dogs:* 1st, Blemton Kennels' Blemton Victor II. *Bitches:* No entry.—WIRE-HAIRED—*Dogs:* 1st and 2d, Wentworth Kennels' Eskdale Broom and Wentworth Wonder. *Bitches:* 1st, Oxford Kennels' Nettie Topper.

IRISH TERRIERS.—CHALLENGE—1st, Lewis & Jarret's Burnside.—OPEN—1st, Northfield Yorkshire Kennels' Breda Bill.

SCOTCH TERRIERS.—*Dogs:* 1st, A. J. Hartzlor's Glencoe. *Bitches:* 1st, Swayne & Shoemaker's Meadowthorpe Glen Effie.

DANDIE DINMONT TERRIERS.—No entry.

SKYE TERRIERS.—1st, C. A. Shinn's Sir Stafford.

BLACK AND TAN TERRIERS.—CHALLENGE—*Dogs:* 1st, A. W. Smith's Buffalo General. *Bitches:* No entry.—OPEN—*Dogs:* 1st and very high com., Blake & Hebertson's Sir Wallace and Prince; 2d, Rochelle Kennels' The Senator. *Bitches:* 1st, J. H. Hawley's Rochelle Grit; 2d, Rochelle Kennels' Rochelle Nadjy. Reserve and very high com., Blake and Hebertson's Buttercup and Nanon.

YORKSHIRE TERRIERS.—*Dogs:* 1st and 2d, Northfield Yorkshire Kennels' Toons Royal and Fishpool Gem. *Bitches:* 1st and 2d, Northfield Yorkshire Kennels' Daisy and Venus.

TOY TERRIERS.—No entry.

PUGS.—CHALLENGE—*Dogs:* 1s, Dr. M. H. Cryer's Bob Ivy; 2d, Acme Kennels' Lord Nelson. *Bitches:* 1st, Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st, Eberhart Pug Kennels' Eberhart's Cashier; 2d, Sarah E. Davis's I. C. P. Sprake; 3d, J. J. Lynn's Chequasset Ruby. Very high com., Detroit Kennel Club's Duke. High com., Dr. M. H. Cryer's Climax. *Bitches:* 1st, Dr. M. H. Cryer's Cassina; 2d, Eberhart Pug Kennels' Lady Thurman.—PUPPIES—*Dogs:* 1st, Eberhart Pug Kennels' Banjo G.; 2d, F. C. Nims's Dave Day. *Bitches:* 1st, Eberhart Pug Kennels' Mabel E.; 2d, withheld. High com., Mabel Munger's Pansy.

KING CHARLES SPANIELS.—*Dogs:* 1st, A. Trebilcock's Toronto Charlie; 2d, H. Niemann's Bentrick. *Bitches:* 1st, H. Niemann's Jennie.

ITALIAN GREYHOUNDS.—1st and 2d, H. K. Gay's Wenona and Trix.

WHIPPETS.—1st, 2d and very high com., Campbell & Blake's Ben Bone, Nellie Gray and Maggie.

MISCELLANEOUS.—*Dogs:* 1st, Miss Rose M. Prince's Anno (Chihuahua). *Bitches:* 1st, F. J. Wakefield's Eyah (Chihuahua); 2d, Mrs. F. J. Wakefield's Pepity (Chihuahua).

DOGS OF THE DAY.

THE country folks complained of the ten cents charge to visit the dog department at Wilmington, and the show was thrown open on the second day, with the result that it was impossible to move between the benches. Some gentlemen who have loudly complimented Mr. Carswell on the work he did at Wilmington on the morning on the first day, seemed perfectly content to sit smoking cigarettes and watch him toiling. By the way, how comes this show to be described as the first at the Wilmington fair grounds? I have something more than a faint recollection of judging there last year.

Mr. A. C. Wilmerding has disposed of his brace of Clumbers to Mr. Jacob Moerlein of Cincinnati, O.

It is with much regret I have had to inform the officials of the Ottawa show, that I cannot judge there. Two race meetings were started here since I accepted the Ottawa invitation, and a trotting meeting is also down for the same week here. As these are in my particular line of duty, I have had to forego the long anticipated pleasure of a little relaxation across the border, and I can only envy my successor the pleasure I am sure is in store for him.

"Namquoit," in his notes from England queries a "par" of mine regarding some St. Bernard weights. I got them from an English exchange. He is kind enough to refer to something I said regarding Mr. Millais. I wrote still another which has most unaccountably not been noticed either by the *Fancier's Gazette* or its kennel director. I presume he is content to rest under the stigma of having asked me to betray a business confidence. Well, we will leave it so. J. W.

OTTAWA DOG SHOW SPECIAL.—*Editor Forest and Stream:* Will you please add to the list of special prizes of the Ottawa dog show, that a $5 special for best field spaniel, dog or bitch will be given.—THE BENCH SHOW COMMITTEE.

KINGSTON DOG SHOW.

KINGSTON, Ont., Sept. 5.—*Editor Forest and Stream:* The dog show held here this week was a very successful one, and one of the best little shows that I ever attended. The manager, Mr. Corbett, was the right man in the right place, and everything in connection with the show ran smoothly. The attendants were the best lot I ever saw. One pleasing feature of the show was a tastefully decorated room where visitors could wash, smoke, write, lounge and brag about their dogs to their heart's content. There were over 150 entries, with but half a dozen absentees, and the average quality was very good. Mr. Vail judged pointers and setters, Mr. Osborne collies, and Mr. Fellows the other classes. Following is a list of the

AWARDS.

MASTIFFS.—1st, Mount Royal Kennels' Lord Caution; 2d, C. Hamilton's Victoria.

ST. BERNARDS.—ROUGH-COATED—1st, Laidlaw & McBain's Benmore; 2d, P. Hart's Queen Vic. Very high com., A. B. Van Blaricom's Daisy May. *Puppies:* 1st, P. Hart's Queen Vic.

NEWFOUNDLANDS.—1st, J. A. Minnes's Czar; 2d and 3d, withheld. High com., W. Saulter's Duke.

FOXHOUNDS.—1st and very high com., M. Switzer's Trailer and Bell; 2d, high com. and com., A. R. Milne's Leo, Dash and Dot.

GREYHOUNDS.—CHALLENGE—*Dogs:* 1st, H. W. Huntington's Balkis. *Bitches:* 1st, H. W. Huntington's Cassandra.—OPEN—*Dogs:* 1st, Mount Royal Kennels' Elcho; 2d, A. P. Thompson's Volunteer. High com., C. L. Curtis's Sancho and E. C. Hill's Jupiter. *Bitches:* 1st, A. W. Bates's Galatea; 2d, H. P. Thompson's Lady Langtry. Very high com., C. L. Curtis's Flora. High com., W. G. Young's Fanny M.

BEAGLES.—*Dogs:* 1st and 2d, Hornell-Harmony Kennels' Royal Krueger and Whisker. *Bitches:* 1st and 2d, Hornell-Harmony Kennels' Una and Elf; 3d, Elora Kennels' Elora Blue Bell. *Puppies:* 1st, Hornell-Harmony Kennels' Ava W.

ENGLISH SETTERS.—*Dogs:* 1st, C. H. Corbett's Grouse; 2d and ver, high com., C. A. Stone's Forest Fred and Forest Spot. *Bitches:* 1st and 3d, C. A. Stone's Forest Nettie and Gladys; 2d, Mount Royal Kennels' Nellie Dale. Very high com., W. C. Darby's Lady Rose. *Puppies:* 1st, withheld; 2d, R. E. Kent's Ruby K.

IRISH SETTERS.—*Dogs:* 1st and 2d, A. W. Pearsall's Redstone and Jack Malone; 3d, M. Flynn, Jr.'s O'Donovan Rossa. Very high com., J. B. Walkem's Jack. *Bitches:* 1st and 3d, A. W. Pearsall's Lillie Ban and Bell Ida; 2d and high com., M. Flynn, Jr.'s Molly Glendyne and Sedan. Reserve, J. Quill's Kerry Gow. *Puppies:* 1st, Toronto Irish Setter Kennel Club's Phil Sheridan; 2d, M. Flynn, Jr.'s L'smore.

GORDON SETTERS.—*Dogs:* 1st, C. A. Gibbs's Clyde. *Bitches:* 1st, Mount Royal Kennels' Hilda.

POINTERS.—*Dogs:* Absent. *Bitches:* 1st, Mount Royal Kennels' Devon Nell.

IRISH WATER SPANIELS.—*Dogs:* 1st, W. C. Doty's Major. *Bitches:* 1st, T. A. Carson's Floss. *Puppies:* 1st, T. A. Carson's Duck II.

CLUMBER SPANIELS.—*Dogs:* 1st, Bate & Geddes' Boss II.; 2d, C. B. Smart's Darby. *Bitches:* 1st, Bate & Geddes' Brownie: 2d, W. G. Young's Belle of Ottawa. *Puppies:* 1st, W. G. Young's Belle of Ottawa; 2d, J. B. Smart's Darby; 3d, H. Kent's Our Joan.

FIELD SPANIELS.—W. G. McCullagh's Gipsey Queen; 2d, J. B. Walkem's Sport.

COCKER SPANIELS.—CHALLENGE—1st, Brant Cocker Kennels' Mike.—OPEN—BLACK—*Dogs:* 1st, G. Bell's King of Obos; 2d and equal 3d, P. G. Keyes's Obo, Jr. and Bob Obo; equal 3d, L. G. Mitchener's Dona. Very high com., Brant Cocker Kennels' Ipswich Boy. *Bitches:* 1st G. P. Keyes' Finey Obo; 2d and high com., Brant Cocker Kennels' Busy and Dora; equal 3d, G. Bill's Black Fly and L. G. Mitchener's Black Vic. Very high com., W. G. McCullagh's Vic and L. G. Mitchener's Uno.—OTHER THAN BLACK—*Dogs:* 1st, G. Bell's Crosley; 2d, Brant Cocker Kennels' Dunn. *Bitches:* 1st, G. Bell's Little Red Riding Hood; 2d, T. J. Fitzsimmon's Mollie; 3d, Mount Royal Kennels' Blondie G. Very high com., Brant Cocker Kennels' Zetta. *Puppies:* 1st, Corktown Cocker Kennels' Dot Smirle; equal 2d, Brant Cocker Kennels' Ula and Fatima. Very high com., P. G. Keyes's Rideau Rollie and R. J. Gowdey's Leo.

COLLIES.—*Dogs:* 1st, Mrs. Andrew Pattullo's Sir John; 2d and 3d, McEwen & Gibson's Bute and Norman. *Bitches:* 1st and 2d, J. D. Duncan's Floss and Flora; 3d, McEwen & Gibson's Manilla. *Puppies:* 1st, McEwen & Gibson's Norman; equal 2d, J. D. Duncan's Flo and Reality. Very high com., G. S. Oldrieve's Gadie.

BULL-TERRIERS.—1st, W. Cooch's Count Dick.

FOX-TERRIERS.—*Dogs:* 1st, H. P. Thompson's Zigzag; 2d, G. W. Prescott's Punch; 3d, G. Bell's Sly Boots. Very high com., A. W. Garrett's Stanley. *Bitches:* 1st, P. G. Keyes's Clytie; 2d, J. G. Mitchener's Carlton Vic; equal 3d, G. W. Prescott's Judy and G. Bell's Overshoes. Very high com., W. Lee's Vic. High com., W. C. Kent's Flip and G. Oldrieve's Dudley Slave. *Puppies:* 1st, H. P. Thompson's Pickle; 2d and high com., G. W. Prescott's Punch and Judy; 3d, G. Bell's Sly Boots. Very high com., Dr. C. V. Clark's Belvoir Bacchus. High com., G. S. Oldrieve's Daisy.

HARD-HAIRED TERRIERS.—1, J. C. Daniels's Fan; 2d, withheld.

BLACK AND TAN TERRIERS.—1st and 2d, A. Geddes's Vortex and Squaw.

TOY SPANIELS.—1st, 2d and 3d, E. Bradford's Prince, Spot and Juliet.

PUGS.—1st, withheld; 2d and very high com., A. G. H. Luxton's Jewell and Nigger; 3d, J. B. Walkem's Budge.

MISCELLANEOUS.—Equal 1st, A. E. Elmer's Garry and J. Roedler's Lord; 2d, E. Thornton's Fritz. Very high com., S. McCullagh's Lena II.

KINGSTON.

IRISH SETTER IMPORTATION.—Fall River, Mass., Sept. 5.—*Editor Forest and Stream:* I received on Sept. 2 by the Iowa of the Warren line, the Irish setter Inchiquin, whose purchase from the Rev. Robert O'Callaghan, Rochester, Kent, Eng., I recently wrote you of. Inchiquin is by Shandon II. out of Iona, and is worthy of his ancestry, as he is indeed a magnificent specimen of his breed. From my correspondence with Mr. O'Callaghan I had made up my mind that I should see a good dog in Inchiquin, but he far exceeds my expectations, and in the opinion of several good judges of the breed is fit to compete with the best in America. In describing him Mr. O'Callaghan writes me: "He is in my opinion, a very handsome dog, and sure to win here; he has a grand head of the correct type, good bone and muscle, and his color is also good, he is full of life and quality, and his style in the field is perfect, he is an Irish setter all over, and of the purest blood." For the benefit of your many readers, who are lovers of the reds, I send his measurements: 23½in. at shoulder, 28in. girth of chest, 9¼in. from tip of nose to occiput, 38in. from tip of nose to set on of tail, 14in. length of tail; muzzle deep, head dome shaped, eyes hazel, neck long, shoulders well placed and loin strong. He seems devoted to hunting and shows great style, carries his tail beautifully, with a merry lashing of his flag. In fact I am more than pleased with him, and feel that Mr. O'Callaghan has sent me a dog that is fully up to his description in every particular, and I shall take great pleasure in embracing the first good opportunity of letting my brother fanciers see him on the bench.—JOHN J. SCANLAN.

DANBURY SHOW.—New York, Sept. 4.—*Editor Forest and Stream:* In reply to the many inquiries received from intending exhibitors, and for the general information of the public, I desire to give notice through your columns, that the wins at the forthcoming bench show to be held at Danbury, Conn., will not be recognized, the Connecticut State Kennel Club, under whose auspices the Danbury show was held last year, having in the mean time ceased to be a member of the American Kennel Club.—A. P. VREDENBUGH, Secretary.

HAYFEVER sufferers send 5c. stamp for sample of Peshall's Remedy, GEO. L. WILMS, Jersey City, N. J. Regular size, 75c.—*Adv.*

A COON RACKET ON SKITCHAWANY MOUNTAIN

I WAS going to my work one noon, and was just turning the corner of the main street when, glancing up the road, I saw a team of two horses driven by a Frenchman—old Black Pete he was called. In the wagon, which was covered, and a large one, was his wife with a whole family of children. He was bound for his winter home in Connecticut. In the spring he goes to Canada, and while on the road he is ready to whack up a horse trade, dog, or anything else that he can make a dollar on. Tied to the axle were six or eight dogs of all kinds, curs and mongrels, and among them was a brindle hound, a perfect beauty and the only brindle hound I ever saw. His ears were long and thin and I did not think he was over three years old. I motioned to Pete to stop, and as he hauled up I asked him how much he asked for a little poodle next to the wheel. "Twenty dollars; and a fine one, a fine one, nothing like him for a pet, owned by one of the richest men in Canada." How much for that lop-eared dog next to him? "Oh!" exclaimed Pete, "that is the greatest coon dog that ever lived, and I got him in Canada for a man in Connecticut. He is one good one, and I ask $25 for him and would not take a cent less." I bought that hound finally for $5, took him home and tied him to a box next to my foxhound and they were soon fast friends. That night I took him out for a walk, and I felt highly elated over my purchase, and resolved that before many nights had come and gone I would see whether he was "one of the best coon dogs ever owned in Canada," or not.

There was a friend of mine who wanted to go, and the third evening after buying him, about 7 o'clock, we started out. About a mile up the road lived an old coon hunter by the name of Furgerson, who had a notorious coon dog, part hound and part mastiff, and he was a good one; no coon could get away from him, and when he once got hold of a coon, it was all up with him. We had sent word to old Furg, and he was waiting for us. He slung his six-foot gun over his shoulders with his climbers, and we struck out for Skitchawany Mountain

It was a beautiful evening in September. The bright moon was just climbing the distant hills, while the glint and gleam of the lights in the farmhouses on the meadows could be seen for miles up the fertile valley of the Connecticut River. A dense fog hung low over the river, but beyond toward the mountains it was clear and frosty. We were soon in Vermont, and following about a mile up the road that runs along the base of the mountains we struck out to the left, and on the edge of a fifteen-acre cornfield we slipped the dogs and they sprang forward with a yell, but I don't think they had struck any scent. We had just got up under the mountain, when old Furg's Bluch opened off to the north about forty rods on a hot trail, and was soon joined by Brindle, and they were soon making it hot for something, for they were tearing around under the mountain at a great rate

Old Furg lit his lantern, and rounding a spur of the mountain we found them at a stand on a thick knoll of hemlocks. They were barking furiously as we got up to them, and were leaping up and trying to tear the branches off a hemlock which run up about forty feet high. "We have got him," says old Furg, "sure." The tree being easy to climb, I volunteered to go up and knock him off and let the hounds kill him. Up I started with a stout club in my hand, while old Ferg held his lantern as high as he could, while I tore through the thick branches of the hemlock, ready to knock the stuffing out of any coon that ever lived. I had got up about 15ft., when bang went Furg's blunderbuss, and I thought I was a dead man sure. A monster cat fell into my arms and I let go. I could not hold on; my strength was all gone and I thought my right ear was shot completely away. I struck the ground all in a heap. The cat bounded away, and old Bluch fastened on to my shoulder, and I was badly shaken up before old Furg and Damon could beat him off. They helped me to my feet and felt me over and pronounced me all right, but a close call. Taking a swallow of rattlesnake poison annihilator, we struck out. My head swam and began to ache, and I staggered along like a drunken man.

It seems that when I struck the ground, the cat, which was unhurt, bounded down the side of the mountain with Brindle close on to her. She struck out for the nearest farmhouse, about 200 rods away, and the farmer's hired man told me a few days after in the village that he was just going out to fodder the cattle when he heard the hound coming. The door to the house was open and a cat shot across the threshold, while a streak of dog not a foot behind dashed after, right into the kitchen. The farmer's wife was just straining the milk, and she fell over in a dead faint. The old farmer grabbed a chair and made a lunge at the hound, which was tearing around the room after the cat, and he knocked it into splinters, and pandemonium reigned before Brindle gave up, and soon joined us on the side of the mountain.

We then struck north, and followed along the base of the mountain, and had gone about a mile, when both hounds gave tongue out on the meadow, a half mile distant. We sat down and awaited results. They soon got into an immense cornfield; and I never heard such music from two dogs in my life. We could hear the hills of corn go down before them in their frantic endeavors to get hold of him, for they were right on to him; and it seemed as though they would pick him up before he could make the mountain; and it was a race for life. It was one continuous yell, and I was surprised at the way my new dog held his own with Furg's old Bluch. They raced him around the cornfield for about fifteen minutes, and then he swung for the mountains away to the north of us, and they finally came to a stand at the foot of a monster white pine, all of 90ft. high, with not a limb to be seen short of 70 or 80ft., and the top spread out like an umbrella. All was now excitement. Our good hounds were tearing off great chunks of bark in their eagerness, and were baying furiously. "Build up a roaring fire," shouted old Furg, as he commenced to strap on his climbers; and we had a fire going, and it lit up the side of the mountain for rods around.

We were right in the vicinity of a rattlesnake den, where numbers had been killed through the summer; and every stick that I tore out of the leaves, I expected would turn out to be a six-foot rattler. But we were prepared for such an emergency; and about that time would just as soon have bearded the rattlesnake in his den as not.

Furg had got his climbers strapped on and his gun loaded and strapped on his back; and he started up while we held our now crazy hounds back, thinking they would pull him down. He grasped the huge trunk around and drove a climber in, and started upward. He was a long time going up, and after reaching the first limb he swung himself over it, and looking down at us with his one eye (the other he always said he lost in a grizzly bear fight in the wilds of Maine), he told us to stoke her up. We piled on the wood until the flames shot up to an immense height, and old Furg disappeared in the ranches. "Look out, I see him," came from up between the heavens and the earth; and bang goes his Krupp. The hounds sprang away from the butt of the tree, and with open jaws and eyes bulging out, and looking upward for the expected coon, they stop their baying for a moment. But no coon came down. "I missed him," cried Furg. "Keep a good fire agoing," and in a few moments he sang out, and a bright flash shot through the treetop, followed by a roar that would have done credit to a twenty-foot Columbiad. The hounds sprang back again and gazed upward. The coon shot through the air like a ball. Both hounds saw him in the glare of our fire; and, shades of Aunt Isaac! he fell right into the flames, and the dogs were on him in an instant.

The fire flew in every direction. The yells of the wounded coon, the yelps and howls of the dogs, and old Furg a yelling up among the clouds, must have made the old farmers along the river think the evil one himself was having a night of it on the precipices as of old. The air was full of flying limbs all ablaze. Damon and I jumped back for our lives, yelling at the dogs; but soon a howling streak of fire shot down among the rocks, and another went off to the left and disappeared from view. Old Furg was soon down; and he commenced to tear around for both coon and dogs. Neither could be found; but I finally found old Bluch out on the meadow, rolling in the wet grass; and my dog came to us in about half an hour. They were burned in spots all over; their feet were terribly blistered; and they rolled and licked themselves for an hour or more.

We began to look for the coon. The fire had gone down; and we finally found him in a crevice in the rocks close to the fire, still alive but his hair was all burned off. We killed him; and found that one of his legs was shot away and hung by a piece of skin.

Our dogs were all used up, and we concluded to turn homeward. We weighed the coon, and he weighed 26lbs. Old Furg wanted to keep my dog a few days and hunt him. I let him have him; and that was the last I ever saw of him, for old Furg came to me a few days after and told me he had sold both dogs to parties down country. I just about got my money back; and I guess the man got him in Connecticut that Black Pete got him for in the fall.

G. R. CUSHING.

CHARLESTOWN, N. H.

DOG TALK FROM ENGLAND.

LONDON, England.—I notice Manhattan's remarks in the *Canine World* of Aug. 29 *re* the bull-terrier White Wonder. I think from my notes regarding the dog, that I mailed a fortnight since, that there cannot be the slightest doubt that he was deaf from birth, and that affair at Boston was as I stated at the time "the greatest farce on record." Show committees seem to think that any man who can write V. S. after his name will give as good satisfaction at a show as Dr. Glover or Dr. Sewall. A few such lessons as the Boston show committee have received in 1888 and 1889 ought to teach them a thing or two.

Welsh and Irish terriers are looking up here. The more I see of them the more I wonder why they are not more popular in America, they are very hardy, grand rabbit dogs, and quite a number are used for hunting partridge and other game, they are also very intelligent and tractable.

At the Crystal Palace show to be held next month, there will be 24 judges. In short a specialty judging list. This is as it should be; the idea that one man can judge all classes and give satisfaction is well enough for an agricultural show, but it will not go down much longer at our Kennel Club shows. The judges best known in the States are Mr. F. B. Craven for bloodhounds, Mr. J. S. Pybus-Sellon for bull dogs, Mr. G. S. Lowe for pointers, Mr. C. Houlker for pugs, Mr. A. J. Gosling for St. Bernards and Messrs A. H. Clarke and A. Maxwell for fox-terriers.

On the 29th and 30th of August there were six dog shows held in this little country of England (little only as regards area).

Smothered dogs en route from bench shows are not unknown to Englishmen as well as Americans. Mr. Lowe's pointer was returned by the Tunbridge Wells show committee in a hamper too small for him with the usual result. Mr. Lowe claims £100 damages.

According to the *Stock-Keeper* at the French Gordon Setter Club's field trials next month, all competing dogs must have been whelped and reared in France, have a pedigree and belong to French owners.

In the same paper I notice that Mr. Ellis is offering the services of that most excellent bulldog Ch. Grabber, free to breeders, on the payment of a small fee to the kennel man. Methinks I hear of the like in America, "Wal, I guess not."

The latest phase of the hydrophobia scare is a man at Bridgton, Eng., that was recently bitten by a spider. The doctors say his symptoms are very similar to hydrophobia. the *Stock-Keeper* proposes to muzzle all spiders hereafter.

By the way, I wonder if friend Wade is seriously ill. For the first time in six months (I had almost said years), I have picked up four papers published in one week and not found a single article from his pen.

NAMQUOIT.

A VOTE OF THANKS.—*Editor Forest and Stream:* Kindly allow me space in your kennel department to thank Mr. Frank A. Carswell, Supt. of the bench show held at Wilmington, Del., Sept. 2 to 5, for the way my pointer dog Brake looked when he was returned home. There are so many always finding fault, a word in praise may not be amiss. Brake was sent from here Monday and after winning first and special for the best pointer in the show, arrived home Saturday A. M. in splendid condition. This being the first time I have ever shown him, without having some one in charge of him, his condition when he arrived was highly gratifying. —STANTON W. PENTZ.

INDIANA FIELD TRIALS.—*Editor Forest and Stream:* The Indiana Kennel Club will again hold its field trials at Brikell. This decision was reached by the club, after repeated overtures by the good people of Bicknell. By making this change the expenses will be materially reduced, consequently the purses will be enlarged accordingly. The club in making the change feels that it has acted wisely in the interest of its patrons.—P. T. MADISON (Indianapolis, Ind).

THE IRISH SETTER CLUB SPECIALS.—The Irish Setter Club of America have offered two specials of $125 and $75 for the best two Irish setters entered and run at the field trials of the Eastern Field Trials Club in November. No special entry is required. All dogs entered in the Derby or All-Aged Stake are eligible. It is to be hoped that owners of this breed will enter their dogs and make this event an interesting one.

EASTERN FIELD TRIALS CLUB.—At a meeting of the Board of Governors held at the office of Mr. F. R. Hitchcock on Tuesday, Sept. 9, the names of Messrs. H. Hulman, Jr., Terre Haute, Ind., and A. D. Lewis, Hempstead, N. Y., were proposed for membership. Reports from the grounds of the club at Otterburn Springs state that birds are well grown for the time of year, and are very plentiful.

TORONTO DOG SHOW.—Toronto, Sept. 8.—*Editor Forest and Stream:* The entries for the Industrial Exhibition Association Grand International bench show of dogs from Sept. 15 to 19, closed with some 500 entries comprising, the grandest dogs on this continent. The buildings are completed, and everything is in good shape for the show.—C. A. STONE, Sec'y and Supt.

IRISH SETTER IMPORTATION.—The Kildare Kennel Pittsburg, Pa., have recently purchased in England the Irish setter dog Torc. He was whelped Jan. 15, 1884 and is by Cocksure and out of Grannaile. He is own brother to the well known field trial winner Mac's Little Nell and has done some winning at English shows. He should prove a valuable acquisition to the Kildare Kennel.

SOUTHERN FIELD TRIALS CLUB DERBY.—There are 78 entries for the Derby of the Southern Field Trials Club. The list came to hand too late for publication this week.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

Forest Lass. Pepper Dandie Dimmont terrier bitch, whelped Oct. 28, 1888, by Old Jock out of Gypsy Queen, by J. H. Naylor, Mt. Forest, Ill., to Wm. E. Hoff, Chattanooga, Tenn.

Pride of Leader. Pepper Dandie Dinmont terrier bitch, whelped Aug. 20, 1882, by Shem out of Little Welcome, by J. H. Naylor, Mt. Forest, Ill., to W. E. Hoff, Chattanooga, Tenn.

Rosaline. Pepper Dandie Dinmont terrier bitch, whelped March, 1887, by Badger out of Jennie Lee, by J. H. Naylor, Mt. Forest, Ill., to Wm. E. Hoff, Chattanooga, Tenn.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE CANADIAN WIMBLEDON.

OTTAWA, Sept. 1.—The twenty-third annual matches of the Dominion Rifle Association commenced this morning. As early as 7 o'clock riflemen residing down town were wending their way toward the banks of the Rideau, while the dwellers in tents on the brow of the hill were astir long before that hour. The flag on the pole in the rear of the targets was anxiously scanned and a moment sufficed to show the riflemen that a right wind was blowing. Later on in the morning a number had learned to their cost that the wind was stronger than they had supposed, as to hit the target the allowance of the full tar was necessary. Added to this the wind was inclined to be tricky. Otherwise the day was a splendid one for the marksmen. The light was good and old Sol shone out splendidly. The work of the meeting was commenced at 8:30 by the opening of all the targets for extra series shooting, and at 9:15 the actual matches commenced with firing in the bankers' match, in which the "green" shots alone participated. The result of the Nursery showed that some good men are coming up and that the average of the shooting was better than last year, when 17s took prizes, while no fewer than ten 18s were counted out to-day.

In the Macdougall match some surprising variations of fortune took place. Competitors who left the 400yds. butts with excellent scores went to pieces completely at the longer range through miscalculation as to the force of the wind. The popular "Jack" Crean, of the Q. O. R., came within a point of being top man and for a long time it seemed as if he were to hold the cup for the next twelve months. The honor, however, fell to Private J. F. Abbott, of the 59th battalion, Cornwall, and a "nurseryman" at that, his score being 45 out of a possible 50. Private Abbott was one of the last men to shoot at the 600yds. range, and his score upset the chances of the Toronto man.

The Gzowski and British Challenge Shield matches took up the whole of the afternoon, and the light was getting poor as the last teams were finishing. During the day there was a large gathering of interested spectators on the range, among them being Sir A. P. Caron, Minister of Militia, and Mr. H. A. Ward, M.P. Hon. G. A. Kirkpatrick, president of the Association, is expected here to-morrow. The new system of squading the men cannot be said to have been a great success, but after this morning's experience it is expected that matters will run more smoothly. Last year there were 416 competitors; the number this year will likely be greater.

The Bankers' Prize—Nursery—Open to members of the Association who have not at any time previous to prize meeting of the D. R. A. won a prize of $8 or upward; range, 500yds.; 5 rounds; Snider rifles; position, any, with head to target; highest possible score, 25;

Trooper W H Eaton, King's (N B) Cav.....24
Lieut W Revell, 22d Batt.....24
Capt W H Hill, 57th 23
Capt R M Dennistoun, 57th..23

Staff-Sergt Cleveland, 54th....40
Lieut Weller, R M C.....40
Capt Adams, H G A.....40

The first annual meeting of the Rifle League of Canada was held this evening, Mayor Mason in the chair. There was a large attendance. The secretary's report stated that there were 52 teams and 800 competitors in the league matches. A reference to the "phenomenal shooting" drew forth loud cheers and laughter. Capt. Russell, of the 45th, made 101 out of a possible 105. Capt. Bruce presented the treasurer's report, showing receipts for $475 and a balance on hand of 24 cents. Sir Adolphe Caron, who was present, presented the prizes. Lieut. Healy accepted the trophy, a magnificent specimen of the silversmith's handiwork, on behalf of the 54th, Windsor Mills, Que., nine. Very handsome silver cups were presented to the following corps: 13th, 53d, 45th Bowmanville, 45th Lindsay, Halifax G. A., 96th, 21st, 12th and 63d. The winners of badges also came forward and received their prizes. Sir Adolphe Caron made a speech in excellent taste, in which he gave credit to Col. Fred. Denison, of Toronto, and Col. O'Brien for their efforts in getting free ammunition for the League. He announced he would give a prize for next year's matches. He dwelt on the importance of the matches and humorously remarked that as a public man he sometimes required good marksmen to protect him. Sir Adolphe closed by promising free ammunition next year. Col. Powell, the popular and efficient adjutant-general, made some encouraging remarks. Resolutions of thanks were passed to the officers of the League, to the Government and to the *Militia Gazette*, whose editor, Mr. J. D. Taylor, responded in a speech which went to the hearts, and, he trusted, to the pockets, of the militiamen present. Major Weston touched a tender spot when he stated that in future care should be taken to have the scores properly checked and verified. This suggestion met with loud approval. The following officers were elected: Pres., Lieut.-Col. Hon. J. M. Gibson, Hamilton; Vice-Presidents, Lieut.-Col. Anderson, Ottawa, and Major Delamere, Queen's Own, Toronto. Secretary Pringle and Treasurer Bruce were re-elected, and Mr. Crooks was appointed assistant secretary.

OTTAWA, Sept. 2.—The weather vouchsafed for the second day's matches of the Dominion Rifle Association, though cheerless and objectionable to the average citizen, was somewhat in favor with the marksmen on the rifle range. The sky was dull to a degree, and ever and anon a sort of Scotch mist descended, sufficiently copious to keep everything in a damp and clammy condition. The atmosphere was so motionless that the powder smoke evinced a tendency to hang over the range, and almost the only complaint heard was that this "reek," as a Scotch competitor termed it, prevented, in some cases, a clear view of the targets. The range did not look so lively as on the first day, there being few or no visitors; and the competitors who were not actively engaged in shooting stayed in their tents and swapped lies as to the great scores they had made during the practice season and in the Rifle League season.

The scores in the Gzowski and the British Challenge Shield matches, which came off yesterday but the result of which was not made known last night, were posted early to-day, and showed that in the first named match first and second places were taken by the two Ottawa corps, the Governor-General's Foot Guards and the 43d Batt. The former apparently beats the latter by one point. The result is not cheerfully accepted by the 43d team, for the reason that the tickets of the match were taken away by Capt. W. E. Hodgins and kept by him over night. That was the reason the score could not be made up last night. The 43d men are inclined to reject the finding because Capt. Hodgins is an officer of the Foot Guards. Of course Capt. Hodgins is incapable of tampering with the tickets, but under the circumstances it is unfortunate that he should, by his action, have left any room for doubt, and in a certain degree destroyed the conclusiveness of the match.

The following were the results in the Gzowski and British Challenge Shield matches, fired yesterday.

The Gzowski match—Open to one section of 5 efficient men from any corps of the active militia of Canada; to the section making the highest aggregate score in the following stages: skirmishing, 20 rounds, from about 450yds. to 100yds., advancing and retiring, any military position; volley firing, 5 rounds at 300yds., kneeling; independent firing, 5 rounds at 150yds., standing, at targets exposed to view for limited periods:

	Skirm.	Vol.	Ind. Tot.
Cup and $50, Gov.-General F. G., Ottawa..270	81	80—431
$40, 43d Batt., Ottawa.....285	61	84—430
35, Q. O. R., Toronto. 264	93	69—426
30, 10th R. G., Toronto.....228	60	74—362
25, 13th Hamilton. 206	67	75—348
20, 6th Fus., Montreal.....212	51	78—341

Next in order—12th York Rangers, Toronto, 331; 8th Royal Rifles, Quebec, 330; Halifax Garrison Artillery, 325; 57th Peterborough, 319; 3d Vic. Rifles, Montreal, 307; Montreal Garrison Artillery, 305; B. C. Garrison Artillery, 297; 5th Royal Scots, Montreal, 296; 21st Essex, 270; "B" Company, I.S.C., St. John, P. Q., 263; 53d Sherbrooke, 239.

This match was won last year by the Ottawa Guards with 422 points, so it will be seen that the shooting was remarkably good to-day.

The British Challenge Shield—The shield presented by the Auxiliary Forces of Great Britain to the active militia of Canada, with $100 added by the D.R.A.; teams of 4 efficient men; skirmishing, 20 rounds, from about 100yds. to about 450yds., standing, kneeling or prone, at the discretion of the firer; advancing or retiring under the order of the officer appointed to the command of all the sections; target exposed 15 seconds:

	Hits.	Score.
Shield and $40, 10th R. G., Toronto.....54		214
$30, 5th Royal Scots, Montreal.....47		200
20, 8th Royal Rifles, Quebec. 44		198
10, Q O.R., Toronto, 1st team.....43		190
Montreal Garrison Artillery.....42		190
Governor-General's F. G., 1st team.....41		185
6th Fusiliers, Montreal.....42		174
G.G.F.G., Ottawa, 2d team.....42		174
13th Hamilton, 2d team.....41		171
57th Peterborough 38		170
Halifax Garrison Artillery.....42		168
3d Vics, Montreal.....38		165

Number of competing corps, 23.

This shield was won last year by the 10th Royal Grenadiers, of Toronto, with 280 points.

The fourth place is subject to confirmation by the Executive, the score of the Q. O. R. team and that of the Montreal Garrison Artillery being a tie so far as the number of points recorded is concerned.

The Manufacturers' Match—Ranges 500yds., rounds 7, rifle Snider, 74 prizes of the total value of $585:

Pvt W R Pringle, QOR.....31
Pvt J Mullin, GGFG.....20
Pvt C Taschereau, 9th Batt...20
Pvt W Huston, 95th.....20
Pvt Sweet, 91st 20
Pvt W Mitchell, RG 20
Bomb C Gardiner, MGA.....20
Pvt D Sinclair, 45th.....20
Pvt A Robertson, 28th.....20
Sergt J Drysdale, MGA.....20
Corp O Baird, Charlottetown Engineers 20
Sergt R Graham, 20th.....20
Corp R Busmare, 3d 20
Lieut Flowers, HGA.....20
Pvt J D Chipman, 71st 20
Corp W H Meadows, QOR ...20
Pvt J Davison, QOR 20
Lieut M Hope, 3d Vics.....20
Capt T E Robson, 26th. 20
Lieut Blackmore, 63d.....20
Sergt J J Bell, MGA.....20
Color-Sergt Heron, 63d.....20
Pvt G McKenzie, 21st.....20

Number of entreis, 28. In the case of ties the highest scores at 600yds. determines the tie. The first team prize was won last year by the 6th Fusiliers with 159 points.

Individual prizes:

Pvt. J. E. Hutchinson, 43d....64
Color-Sergt. E. Pratt, 6th Fus. 62
Pvt. Matthews, 79th.....61
Sergt. Hall, 79th 60
Pvt. McDiarmid, 90th 60

Capt. McMicking, 44th 59
Pvt. Beach, 45th 59
Sergt. Mumford, 63d.....58
Major Thomas, 54th.....58
Major Sam Hughes, 45th.....58
Staff-Sergt. McVittie, R. G....58
Sergt. Pink, 43d.....58
Sergt. Rolston, 20th 58
Sergt. Dent, 10th Royal Gren..58
Sergt. Ogg, 1st B. F. A. 58

This evening the annual meeting of the competitors was held at the drill hall. Hon. G. A. Kirkpatrick, M.P., president, was in the chair, supported by Lieut.-Cols. Bacon and White. Captain Adam, of Hamilton, offered a resolution, seconded by Capt. Adams, of Halifax, recommending that the extra series be abolished and sighting shots introduced. After a discussion, however, and on a vote this motion was replaced by one retaining the extra series, but also introducing sighting shots at a charge. A resolution was adopted in favor of further restricting the qualification for the nursery match entries. On motion of Maj. Weston, it was resolved to apply to the Department of Militia for a reduction in the price of ammunition supplied to the D. R. A. Capt. Bogers, of Ottawa, moved that in future the aggregate that decides the Bisley team shall be altogether from the Martini matches, which should be increased. He said that capital shots with the Snider were usually poor shots in England with the Martini. This change could be made, he thought, without hurting the feelings of the Minister of Militia, who armed the forces with the beautiful Snider. Capt. Bishop, in seconding, said the motion reflected a general feeling. At Bisley they met the pick of the Martini men of the world, and it was folly to send men over there not versed in the use of the Martini. Capt. McNachtan, of Cobourg, said that so long as the forces in Canada were armed with the Snider it would be unfair to make this change. President Kirkpatrick strongly opposed the resolution, which would exclude the mass of our volunteers from competing for the chief prize of the D. R. A. meeting. Moreover, as soon as the new rifle in England was adopted for the force the Martini would disappear. A dozen or so voted for the motion and about two dozen against it, so it was lost. The meeting then adjourned.

OTTAWA, Sept. 3.—Gay is the great appropriate adjective to apply to the appearance of the Rideau range to-day. The President, Mr. Geo. A. Kirkpatrick, M. P., and Mrs. Kirkpatrick held an "At Home" in the Council tent in the afternoon. Scores of ladies and gentlemen paid their respects to the genial president and his charming wife, and partook of their hospitalities. The band of the Governor-General's Foot Guards filled the air with strains of music, and indeed the whole aspect of the place was that of a *place aux dames* rather than a *champ de mars*. The ladies were there in great numbers, and the lovely weather induced them to stay until the last shot was fired. It would not be surprising to find that toward the close of the day the shooting showed a decided inferiority, for one could not expect the marksmen to continue making bullseyes while they were making sheep's eyes at the fair promenaders who had so suddenly developed an interest in the competition and competitors.

A slight change must be made in yesterday's table of the result in the Minister of Militia's match. It appears that the Ottawa Rifle Club took part in the contest, but did not put in their tickets till this morning. On examination it turned out that they had taken second place. This puts the Queen's Our Own Rifles out of the list of prize winners in that match.

Standing match—Open to members of the association. Range, 200yds.; rounds, 7; rifle, Snider; position, standing, with one elbow clear of the body and left hand and wrist clear of the trigger guard:

Capt Gray, GGFG.....33
Sergt Harrison, D of WR.....31
Staff-Sergt Ogg, 1st BFA.. ...31
Sergt Morris, 13th.....30
Pvt Fllis, 43d.....30
Capt Binmore, 3d.....30

Twelve 26s were counted out.

Dominion of Canada match: Ranges, 200, 500 and 600yds.; 7 rounds at each range; Snider rifle; position, at 200yds., standing or kneeling; at 500yds., any, with head to target; at 600yds., any. The team prizes to be awarded to the five highest aggregate scores by any five previously named members from the cadets of the Royal Military College, from the Schools of Cavalry, Artillery and Infantry; from any regiment, squadron or troop of cavalry, field battery or brigade, or field or garrison artillery; from any corps of engineers, battalion or independent company of the active militia; or of the same denomination of the force of Her Majesty's regular army or navy stationed in Canada, provided that they all are members of the Dominion Rifle Association:

Badge and $60, 47th Batt.. ..387
$40, 63d Batt.....384
$40, G G F G. ... .380
$30, 59th Batt.....378
$20, 6th Fusiliers.....373

Next in order were the 23d Batt., 372; 10th R. G., 371; Halifax Garrison Artillery, 370; 8th, 367; 43d, 367; 13th, 364.

Individual prizes:

Staff-Sergt Grayburn, 91st... 86

Pvt Kambery, 5th 220
Pvt Mathieson, 79th.....219
Staff-Sergt Mitchell, 90th....218
Pvt Mullin, GGFG 218

OTTAWA, Sept. 4.—Another day's excellent weather greeted the marksmen on the Rideau range as they went to the butts in the Rideau match sharp at 8:30 this morning. The match was concluded on time, and the Ouimet match was at once started. Everything looked as if the work of the meeting was to be disposed of before dark, notwithstanding that a large programme had yet to be got through with. After the Ouimet match was concluded, about noon, and when negotiations were under way for starting the Governor-General's match, it was found that several ties had to be shot off before the hundred in the grand aggregate could be completed. No less than six had to fire for last place on the grand aggregate, while some others had to fire for a place in the prize list. This being done, it was found that Sergt. Graeburn, of the 90th, and Pvt. McVittie, of the 12th, a young lad and son of the veteran Scotch shot of that name, had for the second time tied for the last position of the prize list. Graeburn secured it, but the youth is well up in the aggregate, and has yet a chance to win the Governor-General's prize and go to Bisley besides. By the time all these delays were shot off it was well into the afternoon, and it was found impossible to get through with the work to-day, and the council wisely decided to postpone further shooting until to morrow. Experience now goes to show that all the matches cannot be crowded into four days. The following are to-day's scores:

Rideau match, open to members of the association, 500yds., 7 rounds:

Maillene, GGFG 35
Capt Rogers, 43d.....34
Pvt Moodle.....34
Lieut Healy 34
Sergt Swaine, 47th 33
Pvt Hutcheson, 43d.....33
Staff-Sergt Goodwin, 13th.....33
Staff-Sergt Clarke, 53d..... 33
Staff-Sergt Simpson, 12th.....33
Pvt Beach, 45th.....33
Staff-Sergt Harris, HGA.....33

Twenty-nine 30s were counted out.

Ouimet match, open to members of association, Martini-Henry rifles, 600yds., 10 rounds:

Corp Carroll, GGGG 49
Pvt Windon, 45th.....47
Pvt Abbott, 59th.....46
Capt McMicking, 44th.....45
Sgaff-Sergt Ashall, QOR.....45
Capt Jamieson, 43d.....45
Pvt Chipman, 71st.....45

Lansdowne Aggregate.—Challenge cup presented by His Excellency Lord Lansdowne, late Governor-General of Canada. Open to teams composed of 5 members of any affiliated rifle association whose names have been given to the secretary before Monday, Sept. 1, and vouched for as having been members thereof on or before July 1, 1890; to be awarded to those teams the scores of whose members in the Manufacturers', Minister of Militia, Standing, Rideau and Ouimet matches collectively, shall be the highest:

Royal Grenadiers.....841
Sherbrooke R A 840
Queen's Own Rifles.....839
Ottawa Rifle Club.....838
43d Batallon.....827

Bankers' Prize Fund, grand aggregate, to be awarded to competitors who have made the highest aggregate scores in the following matches: Macdougall, Manufacturers', Minister of Militia, Dominion, Standing, Rideau and Ouimet:

Pvt Ellis, G G F G 304
Pvt Hutchinson, 43d.....301
Sergt Ogg, 1st B F A 290
Capt McMicking, 44th.....299
Staff-Sergt Mitchell, R G 297
Lieut Wilson, 33d.....292

Sergt Horsey, 45th.....289

OTTAWA, Sept. 5.—The plum of the Dominion Rifle Association meet, the Governor-General's prize, consisting of a special badge and $250, goes to Winnipeg. Staff-Sergt. C. N. Mitchell, of the 90th, and one of the four famous Mitchell brothers, being the lucky man. Capt. McMicking, of the 44th, takes the second prize of $150, and Pvt. Watters, of the 6th Fusiliers, the third prize of $100.

Firing in the Governor-General's match commenced at 8:30, the weather being favorable, although there was a strong right breeze blowing. Several of the competitors came back from the 500yds. range with scores of over 60, and when the final stage had been shot it was found that the three riflemen named above and Sergt. Harp, of the Q.O.R., had tied at 93 points for the money prizes. The men had, therefore, to shoot off, a decision being arrived at by the aggregate score in five rounds at the 600yds. range and then by firing single shots until decided. When the four men took their positions at the targets there were hundreds of spectators behind the ropes. Mitchell fired first and scored a bullseye. McMicking followed with an inner, Watters with a magpie, and Harp with an outer. Their respective scores, shot for shot, are here given:

Mitchell.....55552—22
Watters.....35450—17
McMicking.....44342—17
Harp.....25324—16

Mitchell, Watters and McMicking in their fifth shots failed to notice that the wind had freshened, with the result that two of them only scored outers, while Watters was carried entirely off the target. On his last shot Watters had the chance of tieing with Mitchell for first money, but missed his chance. Harp did better with his last bullet than the others, but he had to be content with fourth place. McMicking and Watters had then to shoot off ties for second money, one shot each deciding the question according to the rule. McMicking scored five and Watters three points. Mitchell received a hearty round of applause for his efforts. The provincial match concluded the twenty-third annual meeting of the association.

The following are the scores posted to-day:

His Excellency the Governor-General's prize, value $500, to be competed for by the 100 highest scores in the grand aggregate match. Ranges 200, 500 and 600yds; rounds, 7 at each range; Martini-Henry rifles; position, at 200yds., standing or kneeling, at 500yds., any with head to target, and at 600yds. any.

Special badge and $250, Staff-Sergt Mitchell, 90th.....93
Badge and $150, Capt McMicking, 44th Batt.....93
Badge and $100, Sergt Watters, 6th Fusiliers.....93

Winners of badges only:

Staff-Sergt Harp, QOR 93
Pvt Hutchinson, 43d.....92
Sergt Hall, 79th.....91
Capt Hartt, St John RC.....90
Staff-Sergt Mitchell, 10th RG.....90
Staff-Sergt Goodwin, 73d.....89
Capt Mulligan, Durham Field Battery.....88

The Bisley team for 1891 will be selected from the following competitors in the order as they stand, the executive committee reserving to itself the right to pass over any competitor for cause. The scores given are those made in the grand aggregate, the Governor-General's and the London Merchants' Cup combined:

Pvt Hutchinson, 43d 480
Capt Milligan, 32d.....472

Capt. McMicking, 44th.....35
Lieut. Robertson, 20th.....34
Pvt. Matheson, 79th.....33

Corporal Armstrong, who won first place in the above match, says he never fired a revolver before in his life, and the one he used belonged to another party.

NEWARK, N. J., Sept. 5.—At the meeting of the directors of the Newark Shooting Society to-night, it was decided to hold the King shoot on Thursday, Sept. 25. The following committee was appointed to secure prizes from the members and friends: J. Coppersmith, F. C. Watts, F. A. Freiensehner, H. Scheiener, C. H. Townsend, C. Mink, Jr., J. Bauder, A. Seitz. The programme will comprise a members' shoot for the "1890 King Medal," and for prizes contributed by members and friends: shooting on the point target open to all, with a division of money among the holders of tickets for red, white and blue flags, and a shoot for the ladies for a prize given by the society and others contributed. Each lady who shoots will be required to give a prize. The ladies' shoot is in charge of William Schmauder and Ferd. J. Herpers, Jr.

GERMAN MARKSMEN.

THE champion target shot of the world, Gus Zimmerman, of New York, returned home on the Hamburg liner Columbia, arriving Sept. 5. He came with his gun, his trunk full of medals and trophies, in good health and with his usual joyous smile. His companions were Alexander Stein, Herman Weber and Messrs. Waldsmith and Meyer, all of the Independent New York Schuetzen Corps. There was a crowd at the pier in Hoboken to meet him, and they made the welcome a ringing one. The Leutzow Company, of which the champion is the captain, was there in force under the leadership of Gus Ringler. Charles Doppler, George Zitzman and John Flacklan. From Hoboken the champion was escorted over to the Bull's Head Tavern, of which he is proprietor, at Third avenue and Twenty-fourth street, and there he held a reception all day and all the evening. His breast was covered with medals of gold, silver and bronze. On a sideboard was packed vases, cups, pitchers, goblets and statuettes of gold, silver, ivory, Dresden ware and glass. "These are not all," said the happy, modest and handsome prize winner. "There are a lot more that have not come to me yet, but are on their way over."

"How many did you win altogether?" was asked.

"I can't tell you yet. Not until they all come to hand and I look over my list, but I think there are a few more than fifty."

Zimmerman won a prize in every match in which he entered, and the first prize in every contest of importance that he took part in, and he took his chances in every match he was allowed to enter. He broke the record of scores a dozen times. In some of the contests he competed against from 5,000 to 7,000 trained marksmen.

It was June last that the German-American representatives of the New York Shooting Corps to the number of 300 left for Germany to take part in the annual shooting festivities in the Fatherland. Mr. Zimmerman, with seventy others, represented the Independent New York Schuetzen Corps. At Berlin they were wined and dined and were led in a procession of honor Unter den Linden and before the Castle to the Town Hall. They were even tendered a reception by Prince Bismarck himself at Friedrichsruh.

The Americans competed at Berlin, Hamburg, Bremen, Neustadt, Bingen, Frauenfeld, Hanover and other places, and acquitted themselves with honor at all. The pre-eminent marksman was in almost every case Gustave Zimmermann. He is specially proud of a beer set of Dresden ware—a pitcher, a dozen silver-mounted mugs and salver—presented to him by A. M. Simon, United States Consul at Hanover, as a prize as the best American marksman.

A cup of silver and gold was another trophy from Hanover won for the highest individual score during the meeting. In winning this Capt. Zimmermann broke the best record ever made in Germany at 200yds. and 328yds., off-hand shooting.

He broke the record in another match at Hanover with a score of 75 out of 100 in 50 shots at 328yds., the highest count for each shot being but 2. In the same kind of a match at Berlin he broke his own record.

Of his eighteen or twenty medals he is, perhaps, proudest of the one captured in Switzerland. He was the only American entered and had 7,000 or 8,000 to contend against. The medal is of solid gold, big and heavy as a half dozen gold eagles rolled together.

At Hanover he won the star of honor for the highest score at 328yds.

Zimmermann's first shooting was in the shooting festival at Bremen on June 15, 17 and 22. He won first prize on the target of honor, two handsome vases, inlaid with gold and silver; also a cup as first prize in the fast-firing contest, second prize on the 328yds. field target, and first prize on the point target.

At Hanover, an important meeting, Zimmermann captured on the target of honor the prize given by the American Consul, a handsome pitcher, with mugs and tray of exquisite Delft ware, embellished by engravings and a silver shield, and bearing an appropriate inscription. He also won first prize given by the Hanover Schuetzen Gesellschaft. On the point target Zimmermann scored 75 points in 50 shots, the man next to him having only 58. A fine gold cup, a picture given by the Eidgenössische Schuetzen Gesellschaft of Switzerland, and the first star also went to Zimmermann on the same target.

From Hanover Zimmermann went to Hamburg, but was too late to take part in the Independent Team match. From Hamburg the Independents went to Berlin, the objective point of the German excursion. On the first day he won the first cup on the point target, and on the second day first cup in the field. On Tuesday, July 8, in the quick-firing contest, Zimmerman did not draw for place as the other marksmen did, but was awarded 54 as his number. When the cannon gave the signal Zimmermann noticed that his target had been sent up, and fired. On his fourth shot his target broke down. Upon the information given by a member of the Berlin Shooting Committee the New York champion was enabled to secure another target after two minutes' delay. He had scored 7 red flags, or 14 points, in 20 shots. When he wished to cool his gun, as his paraphernalia was still at his old stand, he had to go himself and carry his necessary implements to his new shooting ground, thus losing valuable time. The sixth cup was awarded to Zimmerman on this target. Other prizes won at Berlin were a cup in the shape of what is called in Germany a "humpen," given by the Muenchner Kindl'r Brewing Company, of Munich, on the 300 metre field-ring target, and prizes on all the other field and point targets. In the serial shooting Zimmerman not only surprised the German shooters, but his American confrères as well. He put up a score never equalled in Berlin, namely, 49 points in 50 shots at 196yds. He received only the first cash prize on this target, the honor prizes, including a valuable gold medal, being awarded to members of the German Schuetzen Bund only. Pistol shooting had never been a principal point in Zimmerman's marksmanship, still he managed to capture thirteenth prize, beating among others some of the American experts.

At Bingen Zimmermann again showed his superiority in serial shooting by taking first prize on his forty-fifth shot. Other prizes won by him were first prize on the target of honor and second prize on the master target.

In Neustadt Zimmermann won the first set of spoons and forks on the point (196yds.) target; also the first gold badge on the target of honor; a very handsome tea service on the championship or master target, with 51 out of the possible 60, and on the 328yds. field target won the second prize, a handsome coffee kokal.

Gustave, or "Gus" Zimmermann, as he is more familiarly known, is a fine-looking man of 36 years of age. He is 5ft. 7in. in height, stocky build, and weighs about 208lbs. He was born in Baden, Germany, and came to America in 1870. He commenced rifle-shooting about ten years ago in the shooting-galleries about town, and soon became an expert. He came into public prominence about two years ago in a three-hour bullseye match at Morrisania Schuetzen Park, and again last year as the winner of the Tiffany Cup at Creedmoor, and the $1,000 piano at the German Hospital Fair. He went to Germany three years ago to participate in the Schuetzen festivals of that country, but was attacked with rheumatism on his way over. Though a cripple for the time being, he boldly entered several contests, and came away with fifteen prizes. He generally uses a Ballard rifle in his target shooting, but for quick firing prefers a Winchester.

Capt. Zimmerman said that the balance of the American rifle shots would arrive on the Fulda, which left Bremen Aug. 30.

Among the American teams represented by the returning voyagers are the Independents, the Bull's Head and the German-American Schuetzen Corps of this city.

The shots who came with Zimmerman went at once to their homes.

All of them were more or less successful, and their marksmanship was generally superior to their European competitors.

The returned sharpshooters were disinclined to talk about the reported troubles among the American sharpshooters while in Berlin, due it was said to jealousy.

They said they were too glad to get home to think of the bickerings while they were away, and were bound to enjoy their reception first.

Laurel-crowned and justly proud of their victories won in a foreign land, the twenty-nine members of the New York Central Schuetzen Corps, under the command of Capt. George Sieburg, arrived Sept. 8 on the steamer Fulda. The voyage from Bremen, which the steamer left on Aug. 30, was favored by good weather and a smooth sea.

"Yes," said the Captain, "our trip has been a memorable one, indeed. We shall never forget our pleasures and our honors. However, we are glad to get home again, as are also our wives and our daughters. The time has passed quickly for us, and our journey was, in fact, a continued ovation. It did not end until we left the German shore in Bremerhaven. The Schuetzen companies in Bremen and Bremerhaven tendered us a reception on the day of our departure, and sent us with a 'Godspeed' on our journey home.

"It is impossible to give an account of our journey in a few words. It would require a volume to tell all we saw. The Americans were treated with especial courtesy, from the day they arrived in Germany. We left New York on June 3, and have been gone, therefore, a little more than three months. After leaving Bremen we went to Hanover, where we took part in the shooting matches. We then spent a few days visiting our old friends and respective homes in the Fatherland. We arrived in Berlin for the great international Schuetzenfest on July 2 and remained until July 13.

"The festival was one of the greatest and most interesting of the kind ever held. More than 6,000 marksmen gathered in Germany's capital. Fully 300 of these were from America. Berlin was not prepared, in fact, for such a large attendance. It was difficult for us to get proper accommodations. Berlin, you know, is a great city, but it is a dead one when compared with New York. The soldiers and military display, the trees along the famous Unter den Linden, the insignia of imperialism, lend it a certain charm and splendor; but it seems still and village-like after the rush and push of this city.

"We were successful in an unusual degree at the matches. We succeeded in gaining fifteen prizes, which we have brought home in proof of what American marksmen can do when pitted against their kind on the other side of the sea. Our trip after leaving Berlin was full of interest to all of us. Especially did we enjoy our stay in Munich and our visit to Oberammergau to witness the Passion Play. We went to all of the principal cities in the southern part of Germany, and took the trip up the Rhine as a matter of course. We divided into separate parties at Cologne on July 27. The following month, until Aug. 27 we spent in various ways, coming together again to attend the banquet in the famous Rathskeller of Bremen on Aug. 29. The reception and banquet were given by the Bremen Schuetzen Verein."

ZETTLER CLUB.

THE seventeenth annual shooting festival of the Zettler Rifle Club, which closed on the 8th, was one of the most interesting and successful meetings in the club's history. There were many noted marksmen present from neighboring States, and nearly all the crack rifle teams and clubs of New York and Brooklyn were well represented. The principal events, with the prize winners in each, were as follows:

Target of Honor:

M Dorrier	24	20	24—68	J H Bernius	24 19 19—62
John Hecking	22	20	24—66	C G Zettler	21 18 22—61
Chas Kohlmetz	14	25	25—64	G W Downs	21 18 20—59
R R Busse	22	23	19—64	L Flach	23 21 15—59
J A Bergen	19	21	24—64	F C Ross	19 20 20—59
J Coppersmith	22	19	21—62		

Judges' Target:

A J Christen	21	20	21—62	C W Horney	20 15 16—51

Ring Target, ¾in. German ring target:

R Busse	8½	F Steinbach	25	C G Zettler	28½
J Coppersmith	19½	A Stahl	25	B Zettler	29¾
H Holges	22	M Dorrier	27	G Walz	33
G Klingenhofer	24	I J Lyons	27½	F Ross	36

Ring Target, best five shots:

S J Lyons	31	L Flach	22	B Zettler	18
O G Zettler	30	H Holges	19		

Ladies' Contest:

Mrs C C Wissel	40	Mrs Kellar	36	Miss B Downs	36
Miss Baumgart	38	Mrs B Walther	35	Mrs Steinbach	34
Mrs C G Zettler	36				

Cash prizes were given in all the contests which were on the 200yds. range. Sergt. T. J. Dolan, champion rifle shot of the National Guard, has put up $25 in gold, to be constituted a first prize in a reporters' match, which is to be shot at Creedmoor Saturday afternoon, and which is open to all regularly accredited reporters for New York and Brooklyn newspapers. An entrance fee of $1 will be charged, the aggregate of which will constitute a second prize, to go to the second man. The range will be 200yds. and each man will have 10 shots.

BOSTON, Sept. 6.—The regular weekly shoot of the Massachusetts Association was held to-day at its range under very unfavorable weather conditions, and with a few exceptions the scores were not up to the usual standard. The attendance was good. Lieut. W. G. Hussey won the silver and gold and the silver military medals. Following are the best scores finished to-day, 200yds., standard American target:

All Comers' Rest Match.

J Francis	115	A S Hunt	105	M R Barter	100
S Wilder	109	M T Day	103	R F Lawrence	97
F Daniels	106	S T George	101	W Drew	87
F W Chester	106				

All Comers' Off-Hand Match.

S O Merville	74	77 Grains	72	A N Mann	64
M T Dry	74	A S Hunt	68	M R Barter	72
D R Bale	73	W Drew	66		

Military Match.

F F Hanscomb	40	O T Prescott	35	G Belcher	33
E L Fitzhenry	39	J Durward	35	A S Field	32
G H Nason	37				

TORONTO, Aug. 30.—On account of a difference of opinion existing between the Orillia and Bradford Rifle Clubs as to their shooting qualities, Joseph Neilly, of Bradford, issued a challenge to shoot any one or more of the Orillia Club for $25 per man. The challenge was accepted by four of the Orillia shooters, and the event came off last Saturday on the Barrie Junior Rifle Range, Mr. Neilly winning three matches out of four. The score:

First Match.				Third Match.			
	100yds.	200yds.	T'l		100yds.	200yds.	T'l
J Neilly	43	36	82	F J Delaney	41	38	79
W W Wood	42	40	82	J Neilly	46	36	82

Wood won at longe range.

Second Match.				Fourth Match.			
J Neilly	46	49	95	W Hammond	47	32	79
G E Whiten	43	39	82	J Neilly	49	38	87

J. Neilly made an average of 86½; Orillia four men made an average of 80½. The match was shot under the rules of the Off-hand Rifle Association. J. W. Crossley, of King City, acted as referee.

ST. LOUIS, Mo., Sept. 6.—The St. Louis Pistol Club began operations on a new tournament last Wednesday. A small crowd took part, but the scores made are very creditable. The medal, which is a handsome bauble of gold valued at $15, was won for the first time by Sam Dorman, who scored 93 out of a possible 100: For all shooting the club uses a 12½yds. standard American target. The score:

S G Dorman	8	8	10	10	10	10	9	8	10	10	93
E Mohrstadt	8	10	9	8	10	10	9	7	9	9	89
A McBean	8	8	10	8	5	10	9	8	10	9	85
A E Bengel	7	10	7	8	6	8	9	7	7	10	83
M Billmeyer	9	10	9	9	8	8	8	0	8	5	83
M Summerfield	6	8	8	9	8	8	10	8	8	8	81
F A Fodde	8	7	10	10	6	7	7	7	9	10	81
H Stussel	9	6	5	8	6	10	9	9	5	7	74

Officers of the Pistol Club are making arrangements for holding a picnic shortly, the main feature of which will be sweepstake shooting for prizes. A number of valuable prizes have been donated already, and the prospects are that the affair will be a grand success. The date for holding the picnic has not been set yet, but will take place in the near future.—UNSER FRITZ.

ZETTLER CLUB.—The regular monthly meeting of the Zettler Rifle Club, held on Tuesday evening, Sept. 2, at their headquarters, 331 Bowery, was unusually well attended, even some of the Newark members, notably Mr. J. Coppersmith, being present. Mr. Bernard Walther, the president of the club, was warmly welcomed by his fellow members and occupied the chair for the first time in four months. The shooting committee, consisting of Messrs. Boyken, C. G. Zettler, Holges, Steinbach and Ross, reported progress, and the programme for the annual prize shoot of the club was approved. The contests, which, with the exception of the target of honor, are open to all comers, were set for Sept. 7 and 8, at Wissel's Cypress Hill Park, L. I. Nearly $400 have been guaranteed by the club in prizes and premiums on the ring and point targets, open to all, and $100 has been donated, besides a large number of useful and valuable individual prizes on the target of honor. The club also gives two prizes to be shot for by the judges and invited guests.

NEW YORK, Sept. 4.—The Empire Rifle Club held its opening meeting at the headquarters, 12 St. Mark's place, yesterday. It was decided to hold bi-weekly shoots at the gallery, during the season, on the 100ft. range of the German-American Shooting Society. A gentleman formerly prominently connected with rifle shooting will give two valuable medals for the season's competition. After the transaction of the usual routine business the meeting was adjourned and the young members tendered a reception to the ladies, among whom were Mrs. C. G. Zettler, Sr., Mrs. Martin, Miss Sophie Martin and Miss Grace Van Arden. After the serving of refreshments dancing was the order of the evening and was continued until a late hour.

MARION, N. J., Sept. 3.—The weekly shoot of the Marion Rifle Club, of Jersey City, on their range at Marion, N. J. to-day, was not as well attended as usual, owing to the fact that the Marions held their annual prize shoot only two days before. Eight members took part in the contest and put up fairly good scores. The weather conditions were favorable until the latter part of the match, when the wind began to veer considerably. The results: Two hundred yards, off-hand, 25-ring target, 12-inch black, 3in. bulls-eye, ¾in. rings: L. P. Harsen 207, J. Speicher 192, J. Rebhan 192, Wm. Weber 189, J. Diehl 180; A. Braun 174, H. Hoersch 174, T. Stiff 156, out of a possible 250.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Sept. 9-11.—St. Paul Gun Club Tournament, Hamline, Minn. Professionals barred. F. D. Pononsby, Pres., St. Paul.

Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limberg, Sec'y.

Sept. 25-27.—Harrisburg, Pa.. Annual Fall Tournament, Harrisburg Shooting Association. Two days Keystones one day live birds. Programmes now ready. A. M. F. Worden, Sec'y, Box 468.

Sept. 30, Oct. 1-3.—Sixth Annual Tournament of the Middlesex Gun Club, at Plainfield, N. J. Two days targets, two days live birds. $1,000 guaranteed. Programmes ready for distribution Sept. 1.

SHOT MAKERS COMBINE.

ST. LOUIS, Aug. 30.—There are sixteen shot manufacturing concerns in the United States, and two of them are in St. Louis. A combination or trust has been formed, taking in all sixteen of the plants. Alexander Euston, president of the Collier Shot Tower Co., of this city, vice-president of the Linseed Oil Trust, and former trustee of the Lead Trust, arrived here from New York this morning and spent a good portion of the day in conference with Geo. W. Chadbourne, president of the St. Louis Tower Co., and other gentlemen connected with the lead industry.

Mr. Euston this evening admitted freely that the combination had been formed, and said there only remained a few finishing formalities to be gone through with, which will be settled at a meeting to be held in Chicago next Wednesday. The plan of the combination is the same as the lead trust. Every one of the sixteen concerns will surrender its individual existence and cancel its capital stock. Each will become a branch of the American Shot Tower Association, on a valuation fixed by a committee appointed three months ago, and which has completed this feature of the work.

A meeting was held in Chicago last week attended by John Farell, of Bailey, Farell & Co., Pittsburgh; A. E. Schmidt and E. A. Leroy, of the Leroy Shot Co. of New York; Alexander Euston, of the Collier Shot Co. of St. Louis; the two Blatchfords, of the Chicago Shot Tower Co., Chauncey Keep, of the Raymond Lead Co.; Chicago; F. A. Lawrence, of the Northwestern Shot Co., Omaha; Hugh Merin, of the Cincinnati Shot Tower Co., D. F. Boyce, of the Continental Co., Kansas City; Chas. Tatham, of Tatham Bros., New York; G. W. Chadbourne, of the St. Louis Shot Tower Co., W. T. Harvey, of the Merchants' Co., Baltimore; E. H. Murdock, of the Sportsmen's Shot Co., Cincinnati, and John McPhail, of Joseph Robertson & Co., Baltimore.

The Gulf Shot and Lead Co. of New Orleans, Thos. W. Sparks, of Philadelphia, and the Colwell Lead Co. were not represented, but they are in the trust. The association is incorporated in Illinois and has a capital stock of $8,000,000, with headquarters at Chicago. The President is John Farell, of Pittsburgh; Secretary, E. W. Loorne; Treasurer, E. A. Leroy. These facts were fully confirmed by Edward M. Flesh, secretary of the Collier Shot Co., and Col. Thos. Richeson, president of the Collier Lead Co. Both admitted unequivocally that the trust is formed for the purpose of regulating the output and controlling prices.

CHICAGO, Sept. 4.—The *Times* says the organization of the American Shot and Lead Company has been completed in this city. Mention of the plans of the company for obtaining control of the shot towers of the country was made several days ago. The capital stock is $3,000,000. One concern in each of the larger cities of the Union have been merged in the new company, and each has a representative in the Board of Directors chosen, which is as follows: Edward A. Leroy, of the Leroy Shot Works of New York, Walter T. Harvey, E. H. Murdock, Alexander Euston, Hugh Merrie, of the Merrie Shot Works of Cincinnati, Nathaniel H. Blatchford, of the Chicago Shot Works, Gideon W. Chadbourne, of the Collier Shot Tower Company of St. Louis, the largest concern of the kind in the country. John Farell, of Farell & Co., shot manufacturers of Pittsburgh, and Frank B. Lawrence.

The Northwestern Shot and Lead Company, of Omaha, is also in the purchase. The company has invested almost $3,000,000 in the manufacturing plants, and about $10,000,000 more will be required for the purchase of the stock in the hands of those who will dispose of their business to the new company. The company, it is asserted, is in no sense a trust, but the bona-fide purchaser of $3,000,000 worth of property, and the prospective purchase of about four times that amount. The aim of the company is principally at the shot business.

BROOKLYN.

BROOKLYN.—A team shoot to decide the Dexter Park championship for a trophy emblematic of the same, and to be known as the Dexter Park Championship Trophy, will be held on that popular shooting ground on Wednesday, Oct. 1. Invitations have been sent to the following New York and Long Island shooting organizations: Glenmore Rod and Gun Club, Parkway, Acme, Northside, Hillside, Falcon, Kings County, Manahan, and Crescent Gun Clubs, Long Island and Diana Sportsman's Clubs, all of Brooklyn; the First German Gun Club of New York, and the German, Jeanette, Emerald, and Algonquin Gun Clubs of this city.

The conditions are that the trophy shall become the absolute property of the club whose team makes the highest score; in case of ties, the teams shall shoot off at 3 birds each man. The teams shall consist of ten men each, and the entrance fee will be $10 per team. Entries will close Saturday, Sept. 20, when a committee consisting of a delegate from each club entered will select and purchase a trophy to the amount of the entrance money deposited. Five extra prizes of $30, $20, $15, $10 and $5 will be given to the five marksmen making the highest individual scores; possible ties will be shot off at 3 birds each man, then miss and out, the five shooters staying in longest to be entitled to the money.

The following rules will govern the shoot: The captains of the teams entered shall select a referee, whose decision shall be final, a judge who shall watch the position of the gun, and two official scorers. The captains shall draw for places, and only the officials and the contestants actually shooting in each round will be allowed to stay in the inclosure. Each man must shoot at 10 live birds from 5 traps, 25yds. rise for 12 and 27yds. for 10-bore guns, the gun to be held below the elbow until the bird is on the wing, both barrels allowed. Birds killed or shot on the ground will be "no bird" and the shooter will be entitled to another bird; only one man at a time will be allowed to gather birds. Only the captains of the competing teams can challenge birds for any reason, and Hurlingham rules shall be binding in all respects not before specified.

The probabilities are that at least ten of the invited clubs will participate, among them the Glenmore, Parkway, Acme, North Side, Jeannette, Emerald and the two German gun clubs. Shooting will begin at 9 A. M., and the meeting promises to be the success of the shooting season in the vicinity of New York.

Sept. 3.—The Fountain Gun Club, of Brooklyn, held a well-attended meeting at the Woodlawn Park traps to-day, and, as usual with this crack organization, the scores made were good, although the birds were, as a rule, fast flyers. J. E. Lake and Dr. Shiels tied for the club badge and first prize on clean scores of 7, Shiels winning in the shoot-off with 3 to 2. A very interesting sweepstakes at 3 live birds each man, ties miss and out, followed the regular event, the races in the ties being especially well contested. The scores:

Club shoot, 7 birds each man, club handicap, modified Hurlingham rules, 5 traps, 80yds. boundary: Lake, 23yds., 7; Beecham, 21yds., 3; Jones, 25yds., 5; Boetche, 21yds., 4; Blattmacher, 23yds., 5; Davenport, 25yds., 6; H. McLaughlin, 23yds., 5; Schwartz, 25yds., 5; Shiels, 25yds., 7; Wheeler, 23yds., 6; Allan, 23yds., 6.

Ties for the club badge and first prize, 2yds. additional handicap, 3 birds each man: J. E. Lake 2, Dr. Shiels 3.

Sweepstake at 3 live birds, 25yds. rise, club rules, 3 prizes: Shiels 3, Allan 3, Wheeler 3, Schwartz 2, Blankley 3, Boetche 0, Jones 1, Lake 1, McLaughlin 3, Schliemann 3, Davenport 2, Botty 3.

Shoot-off for first prize, miss and out: Blankley withdrew, Allan 0, McLaughlin 0, Botty 3, Wheeler 4, Shiels and Schliemann 7 each, div. first money.

Shoot-off for second money: Schwartz and Davenport divided after killing 7 straight each.

Lake and Jones div. third prize on the fifth round, each having killed 4 and missed none.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 280 pages, price $2.50. For sale by FOREST AND STREAM.

SPRINGFIELD TOURNAMENT.

THE Springfield (Mass.) Shooting Club held a very successful two days' shoot on Sept. 3 and 4. About 50 crack shots were in attendance and the scores made are high as a rule; 5 Keystone, 8 Ligowsky and 3 bluerock traps were used. A special feature of the shoot was the throwing of incomers in the Ligowsky events, 3 traps being placed in the field 60yds. from the shooter, and throwing a right and left cross quarterer, and a straight incomer. This was after M. F. Lindsley's idea of making shooting harder, and it succeeded well, besides breaking the monotony of the Keystone system. This unknown angle shooting has come to stay in this club. Among the shooters I can mention the following names: Bennett Bros. and F. Cowee, of Boston; W. C. Cady and Col. J. H. Ames, New London, Ct.; E. W. Tinker, Providence, R. I.; F. H. Griswold and S. B. Douglas, of Windsor Locks, Ct.; G. H. Hill, Meriden, Ct.; J. M. Johnson, Norwich, Ct.; Gilmore Hibbard, Chicopee; W. S. Chapin, Holyoke; R. B. Viets and B. North, of Berlin, Ct.; E. O. Goodwin, of East Hartford, Ct.; Allen Willey, Hartford; E. Decker, Wethersfield, Ct.; Root and Sterry, of Tolland, Ct.; T. P. Bill, of Middletown, Ct.; C. H. Burbridge and John Melrose, of Hartford, Ct.; J. W. Webb, of Willimantic, Ct.; W. N. Henry, Thompsonville, Ct.; D. C. Stevens, Forestville, Ct.; and Tucker, of Parker Gun Company.

No. 1, 5 Keystones, 16 and 18yds. rise, 4 moneys:

MILFORD, N. J.

MILFORD, N. J., Aug. 26.—Live birds, miss and out, $1 entrance, 21yds.:

Potts	2 Stryker	1 Hunt 0
Riggott	1 Rupell	0 Garry 0
Robinson	1 Smith	0

Second event, 3 birds, $3 entrance, 30yds., two moneys:

Riggott	3 Potts	2 Hunt 2
Smith	3 Rupell	2 Stryker 2
Robinson	2	

Ties shot off. Riggott won first, Robinson second money.

Third event, 4 birds, $3 entrance, three moneys:

Rupell	4 Smith	3 Hunt 2
Riggott	4 Stryker	3 Wagg 2
Potts	4 Robinson	3 Garry 1

Rupell first on shoot-off, Smith second on shoot-off, third div.

Event 4, 2 singles and 1 pair, $3, 3 moneys:

Riggott	4 Potts	3 Stryker 3
Wagg	4 Smith	3 Rupell 2

First div., second shot off and won by Potts.

Event 5, 3 birds, $2, 2 moneys:

Potts	3 Wagg	3 Stryker 2
Riggott	3 Rupell	2 Smith 2

Potts first on shoot off, Rupell second.

Event 6, 3 birds, $3, 2 moneys:

Riggott	3 Smith	2 Rupell 2
Wagg	3	

Riggott first on shoot off, Smith second.

Event 7, miss and out, $1, 30yds.:

Smith	11 Rupell	2 Riggott 0
Wagg	10	

Second Day, Aug. 27.—Event 1, $1 entrance, miss and out, one barrel, 25yds.:

J Smith	2 Rupell	0 Garry 0
M Fox	1 Gillmor	0 Hoffman 0
Riggott	1 Robinson	0

Event 2, 3 birds, $3 entrance, two moneys:

Smith	3 Warford	3 Apgar 3
Riggott	3 Ayres	3 Holjes 2
Fox	3 Hoffman	2 Rupell 2
Gillmor	3 Garner	2 Garry 1

Smith, Riggott and Ayres first on shoot-off, second div.

Event 3, 3 pairs, $3 entrance, three moneys, 26 and 24yds.:

Fox	6 Riggott	5 Holjes 4
Gillmor	5 Garner	5 Warford 4
Potts	5 Smith	4 Apgar 1
Ayres	5	

Fox first, Gillmor and Potts div. second on shoot-off, Smith third on shoot-off.

Event 4, 4 birds, $3, 3 moneys:

Riggott	4 Holjes	3 Apgar 2
Garner	4 Smith	3 Fox 2
Hoffman	4 Stryker	2 Garry 1
Potts	3	

First and second div., third shot off and won by Stryker.

Event 5, same as No. 4:

Apgar	4 Holjes	4 Gilmor 3
Riggott	4 Stryker	4 Ayres 2
Garner	4 Smith	3 Hoffman 2
Potts	4 Fox	3

Riggott and Garner div. first after shoot off, second shot off and div. by Smith and Fox, third div.

Event 6, $1, miss and out:

Riggott	3 Fox	1 Hoffman 0
Smith	2 Holges	0 Potts 0
Stryker	2	

No. 7, miss and out:

Riggott	9 Smith	2 Hoffman 1
Stryker	8 Fox	1 Holges 0
Potts	3	

No. 8, miss and out:

Fox	7 Holges	2 Smith 0
Riggott	6 Rupell	2

No. 9, miss and out:

Smith	12 Fox	11 Riggott 7

The shoot was under the management of M. H. Rupell, who had plenty of live birds on hand and many left over, as a larger gathering was looked for.

TOWANDA, Pa., Sept. 9.—Trap-shooting is growing in favor each month with our club members. One year ago it was difficult work to get out more than three or four members at our shoots. Now we generally have from ten to a dozen and all anxious for the contest. The club has purchased two badges, one for club members only, the other for all shooters in the county, to be contested for the first Friday in each month. The youngest member of the club, a slight-built, but quick and accurate shot with a breechloader, came off winner in both events. Score as follows, 4 traps, unknown angles, American Association rules:

First event, club badge, 25 single targets:

Dittrich	0101111110111001110111101—18
Snider	1010110011001110011011011—15
Montanye	1011111111111010111111111—21
Turner	1111011011001001000100000—11
Tyrrell	0101100101011100001111100l—13
Mace	0111010011101101101101110—16
Chamberlin	1010111010011000101001001—12
Frutchy	0111110110111011111010011—18
Laplant	1111110110111001000001110—14

Second event, county bange, 25 single targets:

Dittrich	1101011110011101110001101—16
Snider	1101110110000110111011101—16
Montanye	1011111011111010011101011—18
Turner	0111110010000000111000001—10
Tyrrell	0110111001011001110010111—15
Mace	0111010011000011011011111—14
Laplant	0010110010110100101010011—12
Hill	1010101010000101010011000—11
Worthing	1100111001101111001101110—16
Fanning	1101101101001111110011111—18

Montanye and Fanning tie. In shoot-off at 3 traps Montanye wins as follows: Montanye 111, Fanning 110.—W. F. DITTRICH, Sec'y.

WELLINGTON, Mass., Sept. 6.—The first contest in the merchandise match for September was shot to-day at the grounds of the Wellington Club. The conditions have been changed so that 30 birds are shot at instead of 20, 10 clays, 10 singles and 5 pairs standards. The scores in this match to-day were: Bennett 28, Beaudry 25, White, Gore and Sanborn 24, Melcher 23, Hooper and Bond 22, Cowee 21, Porter 20, Brackett 18.

HACKETTSTOWN.

HACKETTSTOWN, N. J.—The first tournament of the Gun Club took place Sept. 1 and 2; the first day at "graven images," the second at live birds. The weather was propitious, in fact all that could be desired. The attendance at targets was good, and at live birds unexpectedly small, as feathers invariably "draw" here. The scores and winnings follow. Reg. No. 1, 6 bluerocks:

Ties div.

This ended the tourney and also the day, for it was twilight by this time, and although the management had plenty of birds it was too dark to shoot. Hearty thanks are extended to all for favors and attendance. E. RICHTER, Sec'y.

MIDDLESEX GUN CLUB.—The programme for the sixth annual tournament of the Middlesex Gun Club is now ready, and presents an attractive list of events. The shoot is to last four days, commencing Tuesday, Sept. 30, and will comprise two days at bluerocks and two days at live pigeons. Over $1,000 is offered in guaranteed purses with all surplus added. The American Shooting Association will govern all contests, with the exception that in live bird matches the boundary will be 80yds. from the traps or field enclosure. For programme, etc., address W. Fred Quimby, 291 Broadway; T. H. Keller or Chas. Smith, Plainfield, N. J.

KEYPORT, N. J., Sept. 1.—The monthly shoot of the Midway Gun Club for a gold medal was won by James Lambertson, who killed 32 pigeons straight. James Bedle killed 12 and Charles Muirhead 5. In the sweepstakes of $2 entrance fee each the first money was won by James Van Brakle and James Bedle, who each killed 5 straight. The next was won by James Lambertson and Jake Applegate, who also killed 5 straight. A shoot for a purse of $25 at 10 pigeons between John Van Brakle and A. Holtznagle was won by Van Brakle, who killed 8, while Holtznagle killed 5.

WHITE PLAINS TOURNAMENT.

WHITE PLAINS, N. Y., Sept. 4.—First bluerock and live bird tournament of the White Plains Gun Club, held on the North End Driving Park, White Plains, N. Y., to-day.

On account of Mr. A. C. Dittmar's death on the first day of our shoot, Sept. 4, at 11 A. M., the boys did not show up as expected, and this also accounts for the poor scores of some of the intimate friends of Mr. Dittmar; the deceased being one of the most prominent shots in Westchester county, and one of the finest men we had around us.

Mr. M. F. Lindsley, Sup't of the American Wood Powder Co., was in no condition to shoot, as Mr. Dittmar and Lindsley were almost like brothers, and the latter would not have shot at all only on account of helping us out, there being such a poor crowd.

We all feel Mr. Dittmar's death greatly, and trust the next shoot we have will not be broken up so by such bad news we had on last Thursday.

Following are the scores in full for both days. American Shooting Association rules governed all contests:

Event No. 1, 10 bluerocks: Collins 7, H. Lawton 8, Smith 6, T. Ward 5. All ties div. 50, 30 and 20 per cent.

No. 2, 12 bluerocks: T. Bassford 6, Collins 9, Lyons 5, Halpin 5, T. Ward 8, W. Ward 9.

No. 3, 9 singles and 3 pairs bluerocks: Halpin 6, Smith 8, Lyons 9, Collins 13, W. Ward 12, T. Ward 9.

No. 4, 15 bluerocks: T. Ward 13, Lyons 7, Smith 11, Collins 14.

No. 5, 20 bluerocks: Collins 17, T. Ward 15, Lyons 14, Smith 15, W. Ward, 16, Thompson 10.

No. 6 at 12 bluerocks: T. Ward 9, Collins 10, Halpin 9, Smith 8, W. Ward 7.

No. 8, at 15 bluerocks: Collins 15, T. Ward 11, W. Ward 11, Smith 9, Sutton 7.

No. 9, at 12 bluerocks: Collins 10, Halpin 8, Smith 10, W. Ward 8, T. Ward 7.

No. 10, Jersey sweep, at 4 live birds: Collins 3, J. Thompson 4, Lyons 2, T. Ward 4, T. Bassford 2.

No. 11, same as No. 10: Collins 4, T. Ward 3, W. Ward 3.

No. 12, at 3 live birds: Collins 2, J. Thompson 3, T. Ward 3, T. Bassford 2, W. Ward 3.

No. 13, 15 bluerocks: Collins 14, T. Ward 10, W. Ward 10, Halpin 12.

No. 14, 10 bluerocks: T. Ward 9, Collins 7, W. Ward 7.

No. 15, 10 bluerocks: Collins 9, T. Ward 8.

Second Day, Sept. 5.

No. 1, 10 bluerocks: Collins 8, T. Ward 6, Austin 5, W. Ward 7.

No. 2, 12, bluerocks: T. Ward 10, Lindsley 8, Collins 10, W. Ward 9.

No. 3, 9 singles and 3 pairs: Lindsley 8, Collins 8, Welsh 7, T. Ward 10, Austin 6, Nichols 9.

No. 4, 15 bluerocks: Lindsley 13, Collins 9, T. Ward 14, Nicholls 11, W. Ward 9, Betti 9, Manley 11, G. Bassford 5.

No. 5, 15 bluerocks: Collins 14, T. Ward 15, Nicholls 9, Manley 12, G. Bassford 8.

No. 6, 5 bluerocks: Collins 14, Manley 10, Lindsley 8, W. Ward 11, Nicholls 13, Halpin 10, W. Ward 8.

No. 7, 10 bluerocks: Collins 9, T. Ward 8, Lindsley 6, Manley 8, Nicholls 9.

No. 8, Jersey sweep, 4 live bird:

Halpin	2020—2	T Bassford	2000—1

Perment	1110—3		

FOXHIDE.

DEATH OF ARTHUR C. DITTMAR.

ON Thursday morning last Arthur C. Dittmar, eldest son of the late Lieut. Carl Dittmar, died suddenly at his home in this city. Young Dittmar on Wednesday afternoon, Sept. 3, inhaled the fumes of some acids he was mixing in the nitre room of the works at Baychester. He did not feel any immediate bad effect from the breathing in of the acid vapors, but on his return home from the works late in the evening he had a sharp coughing spell. A physician was called. No specially serious symptoms were manifested until the next morning, when a sudden turn for the worse brought on death about 11 o'clock. The interment was on Sunday last in Woodlawn Cemetery, and the funeral, from his late residence No. 72 East 108th street, was attended by a very large throng of friends and admirers of the universally respected young man.

He was in his 28th year, but had already won for himself a name as a very clever chemist in the line of explosive compounds, and was a worthy successor as a scientist to his father, who, it will be remembered, was the inventor of Dualline, the high blasting preparation, and of the Dittmar wood powder, the first powder of its class introduced into this country, the predecessor of many of the smokeless powders now so much in vogue. Upon the death of Dittmar, Sr., some seven years ago, the young man, then scarcely out of his teens, took charge of the factory and carried on the business with credit and success, and the blasting powder output had a very high reputation in the trade. Arthur was an enthusiastic sportsman, an ardent yachtsman, a very quick field shot and an expert trap shot, and had won many matches both at live birds and at inanimate targets. He and Milt F. Lindsley, the popular trap shot, were fast friends and companions, and the sudden death of his boon comrade has completely upset the popular representative of the wood powder interest. At the funeral the floral tributes to the memory of the young business man and chemist were many and rich, and his sudden demise has been the text for many kind words of appreciative sorrow at every meeting of sportsmen and shooters since the news became known.

WHITE HAVEN, N. J., Sept. 5.—The Springfield team, which was billed to shoot a match with the White Haven Club to-day, duly arrived on the morning train and were escorted to the club grounds, where they indulged in sweepstake shooting till dinner time, and evidently saw nothing to take their appetites or courage away, for they came back quickly and called for the match. The White Haven boys were ready and the match began. The day was exceedingly warm and the shooters stripped for their work. Much to the surprise of every one, White Haven took the lead from the start and it looked as if the invincibles were to be beaten at last, and if Cramer and Bishop of the White Haven team had walked out with their last 7 straight they would have won the day; but when Dean, Cramer's running mate, broke all his birds, and Cramer knew he must, too, it took his nerve and he dropped his last four and lost the day for White Haven. Miller finished for Springfield with 7 more straight, and Bishop, now thoroughly demoralized, added three more 0s to White Haven's score and gave the match to Springfield by 6 birds. Cramer and Bishop can shoot, but they have not the nerve to hold them when everything depends on what they do. As it was, they tumbled and Springfield won and went home with the opinion that if White Haven had a little more nerve they would make somebody hustle. Following are the scores, 7 men on a side, 25 Keystones, unknown angles, Association rules. Jacob Pentz and S. K. Large official scorers. Return shoot some time in October at Claremont, N. J.:

White Haven Team.		Springfield Team.

Collins	1111—4	110—2	Money	1111—4	221—3
Hunt	2201—4	112—3	Wanda	0112—3	
Lindsley	1111—4	020—1			

Ties on first money shot out, 3 birds each.

BOSTON, Sept. 3.—More favorable weather conditions could not be desired than prevailed at the range to-day and several clean scores were made. Mr. Bowker was an easy winner in the diamond pin match. He also won the gold champion medal, which he will hold until the next shoot, when it will be contested for again. The following gives the winners and their scores in the main event of the day, the diamond pin match, at 20 single Keystone targets, Keystone system of firing, and 5 pairs standard targets:

	Keystones.	Standards.
Bowker	11111111001111111111—18	00 11 01 10 11—6—24
Hosmer	11110111010111111111—17	10 10 10 10 00—4—21
Parham	10111100111101111101—14	11 10 10 10 11—7—21
Brackett	11111111011001110111—16	10 10 10 10 00—4—20

Brickett	10011010010010110110—10	00 10 10 11 01—5—15

MILLERSBURG, Pa., Sept. 2.—The most exciting pigeon match that has come off here for years was shot to-day between Ike Thompson, of Tower City, and G. Wall Hepler, of Steelton. The birds were trapped and handled for each other; they were strong and quick on the wing. The match was for $100 a side, and with several side bets the stakes amounted to fully $1,000. There was a marked contrast between the contestants, Thompson being 6ft. 3in. in height and about 40 years old, while Hepler stands about 5ft. 7in. and is not quite 20 years of age, although he handles the gun with deadly precision, killing 13 birds in bound, 3 dead out of bounds, gun snapped on another, which might have won the match. Another match will be arranged. Match at five pigeons, 1 trap, 21yds. rise, 60yds. bound, one barrel, with gun below the elbow, snap to count miss:

Thompson	1101101011110110—13	Hepler	1101101011101011110—13

Canoeing.

RACING RULES AND STANDING SAILS.

FOR nearly five years the standing sail introduced by Mr. E. H. Barney on the Pocowsic has been a fruitful source of argument and discussion to American canoeists. Sufficient ink has been spilled to lay out a three mile race course on, and enough wind has been wasted in meetings and beside camp-fires in arguing the pros and cons of this weighty subject to sail an "unlimited" race. At one time about a year since the question of prohibiting all standing sails had got beyond the preliminary stage of general discussion, and was actually submitted to the executive committee of the American Canoe Association, receiving a negative vote. At that time opinions were greatly divided, many who were opposed to the standing rig on principle being at the same time against any prohibitory legislation, believing that the evil would in a short time correct itself.

With the negative vote of the executive committee the matter dropped, all discussion was at an end, and the subject was dismissed from the minds of canoeists. Not a word was heard during the first ten days of the meet, and it was with a shock of surprise and almost consternation that the news went through the camp at the close of a meeting of the executive committee that all standing sails had been summarily abolished after the present season.

The motion which was made by Ex.-Com. E. B. Edwards, present as proxy for Vice-Com. White, of the Northern Division, and seconded by Vice-Com. Brokaw, Atlantic Division, was as follows: "After the present season the regular sailing races of the American Canoe Association shall be confined to canoes whose sails can be readily lowered while afloat." The members present were Com. Stanton, Sec'y Dunnell, and Messrs Gage, Putnam, Brazer, Knappe, Jaques, Brokaw, Dorland, Haviland, and Edwards and Schuyler as proxies. Mr. French of the regatta committee was also present. No formal vote was taken, but after a long discussion the motion was declared carried.

The meeting was the usual one for the election of officers and any other business which might appear, and was held at headquarters, only the officers being present. The men in camp were gathered about the hospitable camp-fire of the Mohican C. C., awaiting the result of the election, with no idea that any other important matters were under consideration, and when at the end of the meeting the news went quickly around there was a buzz of excited comment among all who heard it. Some who were discussing other affairs, or had wandered off, did not hear of the new rule until next morning, but before the white flag had announced breakfast the whole camp was full of excitement over the matter. The drift of popular opinion was all one way, the action of the committee was dissapproved as hasty and sudden, even by the strongest opponents of the standing rig, while the friends of the rig were opposed both to the matter and the manner of the change. To any one who listened to the comments heard on every hand, it was clear that the sudden action of the committee had awakened a feeling of doubt and mistrust among canoeists which has attended no previous legislation of the Association, and that whatever the intrinsic merits of the case might be the mode of action had exerted a most undesirable influence.

Leaving for the time the question whether or not any legislation was necessary, the first point that presents itself is that up to this time all changes of rules in the Association have followed a definite course, partly by law, partly by custom. The early changes by which the constitution, by-laws and racing rules were perfected; the many changes which have proved necessary from year to year in the race programmes; the creation and subsequent abolition of races with limited sail and ballast; the development and final adoption of the Division scheme, have all gone through a course of open and public discussion; and we can recall no case in which a change of even secondary importance has been submitted to a vote of the executive committee without due notice of the same being given, informally but none the less positively, to all members of the Association.

It is true that such notice is not compulsory in the case of the racing rules, though it is with the constitution, but at the same time it has always been given, members knew in advance when any important matter was to come before the executive committee, and not only that but they were at liberty to be present at the meeting and listen to the discussion, though of course having no voice.

Further than this, the amendments to the racing rules have generally followed a well defined course, indicated, if not positively prescribed, by the rules. It is the positive duty of the regatta committee, at the expiration of their term of office, to make a report to the Association, and this report should embody the conclusions which they have drawn from the races at the meet, as well as all suggestions of changes in the rules. Acting on this report, the new executive committee is supposed to make such changes as it deems advisable. There is nothing to prevent the regatta committee from making a recommendation at any time, which the executive committee may act on, but few if any cases have arisen in which such a course was necessary.

In the present case there is not only no reason at all why the prohibition of standing sails should be hurried through without a word of warning and at a closed session of the committee, but every reason why so important a matter should be carried out in the regular course, and with the greatest deliberation and publicity. If the regatta or executive committee were desirous of restricting standing sails, the proper course of procedure would have been for the executive committee at the recent meeting to have put on record its opinion that such legislation was necessary, leaving it for the regatta committee to make as strong a recommendation as it deemed fit in its coming report. With these two opinions before it, the new executive committee when it meets in November would in all probability have made the change unless the sentiment of a large majority of canoeists was manifestly against it. There are many who are strongly opposed to any such restriction, and a certain amount of opposition is to be expected, but a due regard for the rights of all demands that such opposition shall be squarely and openly met, and not dodged by any sudden and unexpected action of the committee.

As it is now, a serious opposition has quickly grown up and taken shape in the form of a petition to the executive committee for the repeal of the new rule, among the signers being men who have never used or approved of the standing rig. It is a question whether any prohibition of this rig was necessary or desirable, but granting that it was, there were many who would oppose it in any case, and there will be more who will do so under the circumstances attending its adoption.

Had the matter been mooted about camp for a week, had the members present been aware that a question which all considered dead for the time was to be reopened, the feeling would have been entirely different, but as it was, with a change so radical and important in itself, and so utterly unexpected, coming out of the darkness and into the sudden blaze of the bright camp-fire, the moral effect so far as the respect and regard for the governing powers of the Association are concerned, was of the worst.

The regatta committee of last year, with the same chairman as now, carefully refrained, as all previous committees had done, from commenting in any way on standing rigs and sliding seats. What has caused this great and sudden change, why the committee should recommend in such a hurry the abolition of the standing rig, has not yet been made clear, and canoeists will look with more than usual interest for the report which will soon be forthcoming from the regatta committee. This report, by the way, which is called for under Chapter IX., Section 8 of the By-Laws, constitutes one of the most important duties of the regatta committee, and is, we regret to say, the one most neglected. It should contain not a mere statement of moneys expended and prizes given, but the committee is in a position to acquire most valuable experience and data concerning the development of racing and the changes which become necessary with almost every season.

Although the full discussion before the meeting has not been made public, in fact, no complete report was taken down, we understand that when the point was raised of the expediency of the proposed action the remark was made by one member that the executive committee possessed sole power in the matter, and that it could do what pleased it, in spite of all opposition. This, as it happens, is very true, the sole power to make changes, and to make them without previous notice, is vested in the executive committee, though we believe that this is the first, certainly the first case of any importance, where they have used it. As the rules now stand it is possible for the executive committee to meet just prior to the races at any camp and to pass a resolution that no standing seats shall be used, that all centerboards shall house within the canoe, or that drop rudders shall not be allowed. Of course, any such sudden and extreme legislation is not to be looked for, but if it should prove that any members of the executive committee are possessed of the idea that they are vested with supreme power, to be used without regard to the possible interests of the constituents whom they represent, a few amendments to the racing rules may be necessary. In any case there are two amendments to Rule XXII. which can do no harm and may sometimes prove useful. The rule now reads: "These rules may be amended by the executive committee on recommendation of the regatta committee." We would suggest in addition the clause now existing in the constitution, "Provided the amendment receive the votes of at least two-thirds of said committee, and has been published in general terms in the official organ of the A. C. A. at least two weeks before being voted upon, or by a writing signed by the commodore and two-thirds of the members of the executive committee after similar publication." In addition to this should be added; "No amendment shall be made in the period between May 1 and the meeting of the executive committee in October or November."

Such an organization as the American Canoe Association, whose strength lies partly in the encouragement and promotion of racing and at the same time in the judicious restriction of all over-development of the sport, has need of a capable, intelligent and strong

government, which must at times exert its power in the limitation of threatened abuses even though its action may be contrary to the ideas of many. Whether or no the present case comes under this category we propose to discuss next week; what we would emphasize just now is that in order to exercise this power at time, it is necessary that the governing body shall by its wise and conservative policy in the past, and by giving the greatest publicity to all its deliberations, possess the full confidence of every member of the Association. We have never agreed with the policy of past administrations in refusing to place any limits on features which promised to be objectionable in time; we have favored a stronger and more vigorous effort for the encouragement of the canoe for canoeing and the restriction of the racing machine; but it must be said that the result of all past legislation of the Association has been to foster a feeling of confidence on the part of the individual members, a feeling which has received its first check in the recent action of the executive committee.

THE PADDLING CHAMPIONSHIP.

MR. HARRY F. MACKENDRICK, of Galt, Ontario, the recent winner of the A. C. A. paddling trophy at the meet, has issued through the Toronto papers the following challenge:

Having won the championship paddling race at the recent A. C. A. meet, and having decided to retire from the aquatic arena, I wish, before doing so, to give an opportunity to any one who may wish to try conclusions with me in a paddling contest, and I hereby challenge any amateur in America (or for that matter the world), to paddle a one-mile race in best and best canoes within A. C. A. limits, this challenge to remain open for one week; the race to be paddled within three weeks from to-day on the Grand River at Galt.

Yours, etc., HARRY F. MACKENDRICK,
GALT, Aug. 28. Galt Canoe Club.

There is considerable rivalry between the paddlers of Toronto and Galt on the one hand and those of Montreal on the other, and Mr. MacKendrick attended the Northern Division meet, at the Lake of the Two Mountains, especially to meet some of the Eastern champions. The open paddling race, however, was called after Mr. MacKendrick had started in another race, so that he was prevented from entering it; and though he challenged the winners, his challenge was not accepted, and he was obliged to return without the chance to measure blades with them. Since then, his victory at the A. C. A. meet has made him the holder of the most important paddling prize of the year.

The above challenge has brought out the following reply from a well known racer, Mr. Johnson, of Toronto, who for some years has been one of the leading paddlers of the A. C. A.:

I will accept the challenge issued by Mr. H. F. MacKendrick to paddle any man in the world one mile in best-and-best A. C. A. canoes, but would prefer to have the race paddled on Toronto Bay in preference to the narrow and crooked Grand River at Galt. If Mr. MacKendrick objects to paddle on Toronto Bay I will toss him for choice of water. As I have just returned from a long trip through England, I would like to have the date of the race named by him postponed till the end of the month. Yours, etc., M. F. JOHNSON, Toronto C. C.

Mr. MacKendrick has replied as follows:

In reply to Mr. Johnson's acceptance of my challenge, I may state that I will be both willing and glad to paddle him a race, but it must be in Galt. The Grand River at this point is from 200 to 400yds. wide, and a very good mile course can be had either with a turn or straightaway. As Mr. Johnson wishes more time, I will postpone the date one week, hoping this will prove satisfactory to him. Yours, etc., HARRY F. MACKENDRICK, Galt C. C.

GALT, Sept. 2.

MOHICAN C. C. REGATTA, SEPT. 1.

THE Mohican C. C. held a very successful regatta on Labor Day at its down-river club house, about 40 members of the club being present with many guests. The new war canoe, built by the Ontario Canoe Co., arrived just in season and was employed in taking out the visitors. It is 30ft. long with 16 paddlers and will carry about 30 persons. The regatta included the following events:

No. 1, double-blade paddling: Cora, Max Bender, first; Turtle, A. T. Smith, second; Nocturn, W. C. Titus, third; Walula, C. V. Winnie, fourth; Ohm, G. G. Plyer, fifth; Racquett, J. C. Shaw; Ripple, S. Anable; Kanawa, H. S. Miller, did not finish.

No. 2, junior sailing race: Scud, W. S. Egerton, first; Turtle, A. T. Smith, second; Kanawa, W. S. Miller, third; Racquett, J. C. Shaw, fourth; Kay, W. Hackett, fifth; Cora, Max Bender, withdrew; Ohm, G. G. Plyer, capsized.

No. 3, unlimited sailing race: Thetis, W. A. Wheeler, first; Ohm, G. G. Plyer, second; Scud, W. S. Egerton, third; Turtle, A. T. Smith, fourth; Racquett, J. C. Shaw, fifth; Natalie, Ed. Sipple, sixth; Kanawa, H. S. Miller, seventh.

No. 4, single blade, tandem: Redskin, Wheeler and Titus, first; Nocturn, Winnie and Plyer, second; Doggie, Hackett and Anable, third; Flash, Bender and Smith, fouled.

No. 5, combined paddling and sailing: Thetis, W. A. Wheeler, first; Scud, W. C. Titus, second; Kanawa, H. S. Miller, third.

No. 6, hurry-scurry: Thetis, W. A. Wheeler, first; Racquett, J. C. Shaw, second; Ripple, S. Anable II., third; Kanawa, H. S. Miller, fourth.

No. 7, lance contest: Anable and Miller first, Wheeler and Winne second, Plyer and Shaw third, Bender and Smith fourth.

No. 8, half-mile swimming match against tide: Anable won.

No. 9, double-blade tandem paddling: Titus and Wheeler first, Bender and Smith second, Anable and Hackett third, Winne and Plyer fourth.

The prizes, 31 in number, were all flags made by ladies interested in the club; they will be presented at an entertainment to be given soon.

VESPER B. C.—The fall reception of the Vesper B. C., of Lowell, with the opening of the new canoe house and bowling alley, was held last evening; invitations were sent out widely among canoemen.

A. C. A. MEMBERSHIP.—Central Division: C. Vickerstaff Hine, Chicago.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

BEVERLY Y. C.

166TH REGATTA, THIRD CHAMPIONSHIP, MARBLEHEAD, AUG. 30.

THE day opened with a rattling S. easter, which promised a good race. Hornet and Kiowa were on hand early, the former with the bonnet off her jib.

About 1:30, however, a thunderstorm absolutely killed the wind, and start was delayed ten minutes to get air enough to move the boats. Finally they drifted over in a very faint S.S.E. air, course for first and second classes being a beat to S.E. Pig Breaker, then reach to Half-Way Rock and run home.

Saladin, Shark and Hawk started in second class; Wraith, Queen Mab and Sprite in second class. In first class Saladin led, Hawk second and Shark third as long as wind held; but coming home wind was very light and variable, ending light S.W., and Shark passed Hawk, wind going entirely as latter came in. Wraith led in second class, but as she reached Half-Way Rock got the wind N. W., or dead ahead, and when her time run out was but little by the Rock. Sprite started late and got becalmed outside. Queen Mab gave up race. Hornet had effectually scared all the third class sloops and had a walk over. Kiowa, Edith and Wanda were on hand in third class cats.

The start was a good one, first leg being a run to Bowditch, wind being only a breath, and a heavy sea rolling in; this suited narrow boats. Hornet got a good lead; Wanda passed Kiowa. Off Buoy 6 it breezed up a trifle. Kiowa passed Wanda and picked up on Hornet. Stake boat was rounded; Hornet, Kiowa, Wanda, with intervals of a second or two only, Edith a minute astern. From here it is a broad reach to Curtis Point, in a moderate air. Edith picked up on Wanda, Kiowa dropped them both badly, and Hornet gained on the lot, leading Kiowa 1min. 35sec. round the Rock, Wanda 4min. 45sec. and Edith 5min.

On the wind Kiowa picked up on Hornet, till as they came together latter had to tack on Kiowa's lee bow, latter having right of way, the other two being out of it all this time. Here, however, wind went entirely. Wanda got a fluke which put her ahead of the fleet. Edith, as usual, drifted ahead in a dead calm, while Kiowa went astern. After time limit had expired a N.W. breeze took them home. Race will be resailed in second and third classes next Friday. Result in first class:

	Length.	Actual.	Corrected.
Saladin, W. P. Fowle	38.07	3 14 45	3 13 54
Shark, C. A. Prince	38.03	3 22 35	3 21 32
Hawk, Gordon Dexter	38.03	3 23 55	3 23 22

Saladin wins. Judge, F. Elliot Cabot.

156TH REGATTA, SECOND OPEN RACE, MONUMENT BEACH, SEPT. 2.

This race was one of the best of the season, the day opened with a N.W. breeze, shifting to N.E. and dying out calm by noon, after which a S.W. air started in.

The start was delayed 15 minutes to allow becalmed boats to reach the line; during race wind steadily breezed up till they finished in a good wholesail breeze, outside boats being reefed.

In the sloop class Ramona started 1.34 ahead of Reliance and allowed her 8ls; Reliance did best to windward and took the lead, though the catboats held her to windward, running home Ramona gained and they came for the line neck and neck, Ramona being timed half a second ahead. Their course was 13¼ miles, being a beat round Pine's Buoy to Bow Bell's Buoy and a run home round Scraggy Neck Buoy.

The two larger cat classes beat round Pine's Buoy to Bird Island Light, reached across to Scraggy Neck Buoy and ran home, eleven miles.

Third class beat to Pines, reached across to Abiel's Ledge, ran home, then beat back to Pines and returned, eight miles.

Fourth class beat down to Pines and ran back twice round, five miles. Rip started with a foul bottom and poor sitting sail, the result being that Edith beat her fairly. In third class the first round was very close between Puzzle, Cayuse and Eina. Cayuse led at the turn but Puzzle had gained 26s.; while Eina had lost 8s. to Cayuse. Cayuse's sail was a disgrace to the boat, the whole thing being a big bag with a tight leach. Puzzle's sail, carrying half a dozen battens, did much better; both Eina and Cayuse were rigged with Hanley's pet idea of a brass eye screwed to the mast, to hold halliard blocks. Soon after rounding judges' boat Eina broke hers off, but having done it before had taken precaution to rig a stout rope as a preventer, and although delayed a good deal, swayed up her sail and kept on.

A minute or two later, however, Cayuse smashed hers, and the sail came down with a run, putting her out of the race.

In second class Mist used best judgment and started behind the others, getting advantage of the freshening breeze. Widgeon, who has done very well since she has been properly handled, winning four races out of five prior to this, took the lead; but Gymnote, whose alterations have evidently improved her, sailed very well and covered Widgeon all the way home.

First, second and third class boats finished very close together, giving judges plenty of work. Summary as follows:

	Length.	Elapsed.	Corrected.
SLOOP CLASS.			
Reliance, N. H. Emmons, B.Y.	35.05	2 33 18½	2 29 19½

Ulula, W. H. Winship, Onset	21.02	2 13 48	2 02 22
Cayuse, F. W. Sargent, B.Y.C.	22.09	Disabled.	
FOURTH CLASS.			
Edith, I. Chapman, B.Y.C	19.04	1 19 16	1 09 38
Rip, C. W. Jefferson, B.Y.C	19.00	1 19 59	1 10 14
Duckling, R. S. Hardy, B.Y.C	17.09	1 22 24	1 21 29
May, G. Van Rensselaer, Sip. Y. C.		Withdrew.	

Winners: Class 1, A. P. E. first, Dora second; Class 2, Mist first, Widgeon second, Mollie third; Class 3, Puzzle first, Eina second, Daisy third; Class 4, Edith first, Rip second; sloop class, Reliance. Judges, F. E. Cabot, A. H. Hardy, W. L. Jeffries.

Sept. 5.—The resail of the 167th race, third championship in second and third classes took place on Friday at Marblehead. The day opened with a strong southwester, shifting to W. by N. during the morning, and it looked as if the heavy weather boats would at last get a show, but just before start it petered out into a very light air, and when Hornet leading third class, was almost home, it came out S.W., making a beat for third class up the harbor, increasing Hornet's lead and letting second class lay their course home over what ought to have been a windward leg. Start in second class was very good between Sprite and Wraith. Queen Mab did not start, though present. Sprite soon took lead and held it, winning prize and championship.

In third class sloops, Hornet had a walkover; she lead Kiowa by a trifle at Bowditch Ledge, by 4m. 30s., doing some wonderful pointing on leg. At Selmans berth, the last buoy passed, she had about the same lead, but change of wind at end of race increased it very much, as she had much less beating to do than the others.

In cat class, on first leg Kiowa led Edith by a minute. Wanda just astern of Edith. On the beat to Curtis Kiowa increased her lead and Wanda passed Edith. Kiowa leading Wanda 2m. 50s. and Edith 5m. and 15s. at that point. Running out round buoys 7, 5 and D, Wanda gained on Edith and both on Kiowa, as latter ran into a calm. As it breezed up a little at the finish, Kiowa left them both, and Edith lost to Wanda, but picked up a few seconds by good handling on the line. Summary as follows:

	Length.	Actual.	Corrected.
SECOND CLASS.			
Sprite, H. P. Benson		2 29 45	2 20 40
Wraith, C. E. Hodges		2 38 58	2 28 23
THIRD CLASS CATS.			
Kiowa, W. A. & W. L. Jeffries	22.7	1 28 57	1 17 54
Wanda, R. C. Robbins	22.6	1 30 48	1 19 40
Edith, F. M. Wood	20.9	1 31 50	1 18 57
THIRD CLASS KEELS.			
Hornet, Com. Paine	26.4	1 20 6	1 12 24

Sprite, Kiowa and Hornet won prizes, Sprite and Hornet hold pennants. The 168th race advertised for Sept. 6, has been postponed to Sept. 20.

THE ST. LAWRENCE Y. C.

THE third race of the St. Lawrence Y. C. series was sailed on Aug. 30 over the usual course at Pointe Claire. The race was for first, second and third class boats, but only three yachts, each representing a different class, came to the starting line, and the race was therefore for the first class pennant. The start was as follows:

	Length.	Start.
Chaperon, E. S. Cloustan	29.05	4 22 20
Minnie A, C. Smart	25.06	4 22 25
Valda, G. H. Duggan	23.03	4 23 15

It was blowing hard from the west, making it a reach to the east buoy, a beat to the southwest buoy, another reach to the north buoy, a run back to the east buoy and a reach in. All the boats went across the line with two reefs in their mainsails, the two sloops had also a reef in each jib, but the cutter carried both jib and staysail. Minnie A. passed Chaperon before the buoy was reached, and at the buoy Valda took her place on the cutter's weather quarter, and went across her bows on the first tack. There was a short choppy sea that bothered the short boat a good deal, and she lost some time in getting a reef out of her jib, but she gained well on Chaperon and held Minnie so well that the latter had not saved her time on her when the buoy was reached. On the reach to the north buoy Valda shook out the three reefs she had gone to windward with, and as Minnie not only held on to her tacks too long, but held well up above the buoy, she lost badly. On the run Valda and Chaperon set both spinaker and clubtopsail, and both gained on Minnie, who was content with a spinaker. The reach to the finish line did not materially alter the position of the boats. The time was as follows:

	Start.	Finish.	Elapsed.	Corrected.
Valda	4 23 15	6 31 05	2 07 50	2 01 44
Minnie A	4 22 25	6 30 00	2 07 35	2 04 09
Chaperon	4 22 20	6 34 10	2 11 50	2 11 50

Valda won by 2m. 55s. corrected time. The position of the boats in the series is as follows: Lulu, two first prize first class pennants; Minnie A., two first prize second class pennants; Valda, two first prize third class pennants and one first prize first class pennant, and Pearl, one second prize third class pennant. There is still one race to be sailed, but it is not probable that it will alter the present standing of the winners, and therefore Lulu, Minnie and Valda are the winners of the trophies in their respective classes.

GOSSOON AND VENTURA.

THE first match of the series between Gossoon and Ventura in answer to the latter's challenge was sailed on Sept. 6, the course being 10 miles to windward, E. by S. from Marblehead Rock, and return. Ventura showed a new and larger suit of sails, while Goossoon had a new mainsail. The wind was very light, and when two-thirds of the windward work was finished rain fell heavily. Ventura was in the windward berth at the start, at 11:35 A. M. but got in a bad position and went outside the mark, putting her 1min. 43sec. astern of Gossoon, latter being handicapped 45sec. Gossoon gained steadily on the windward work, her lead being increased by the failure of the wind just after she turned the weather work, leaving Ventura still a long distance away. The times at the mark were:

Ventura ..... 2 37 28 Gossoon 2 18 25

Gossoon set her spinaker slowly and only carried it for about 3 miles, the wind drawing ahead. Ventura carried hers all the way home, the boom being well forward. The full times were:

	Start.	Elapsed.	Corrected.
Gossoon	11 35 43	4 14 05	5 39 05
Ventura	11 37 26	4 31 27	5 56 27

The second and final race was sailed on Monday, the course the 24-mile triangle from Marblehead Rock to the Graves and then around a mark boat off shore. The wind was light S.S.W. at the start, which was timed:

Gossoon ..... 10 55 44 Ventura 10 55 47

Both carried jackyarders and jibtopsails, Ventura being to windward. Gossoon soon worked out a good lead, but after a time the wind shifted to E., giving Ventura a great advantage, so that when they next met she was even with Gossoon. For the rest of the first leg it was a close battle, Ventura finally leading at the mark. The times were:

Ventura ..... 1 42 43 Gossoon 1 43 44

On the second leg balloon jibtopsails were carried, Gossoon picking up Ventura and passing her near second mark, the times at the Graves being:

Gossoon ..... 2 52 10 Ventura 2 52 39

On the last leg Gossoon gained, finishing with a lead of 2min. 05sec. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Gossoon	10 55 44	3 48 06	4 53 06	4 53 06
Ventura	10 55 47	3 50 11	4 55 11	4 53 55

Ventura called for a remeasurement, but it is not likely that she will gain anything. This ends the series, with Gossoon still champion.

LARCHMONT Y. C., SEPT. 6.

THE fall regatta of the Larchmont Y. C. on Saturday was a most disappointing failure, there being so little wind that the yachts did not finish until late at night. The starters were: Class 4, Clara and Jessica; Class 5, Liris, Mariquita and Minerva; Class 7, Sasqua, Volusia and Kathleen; Class 8, Brunhilde and Amazon; Class 11, Aura, Elfin and Mimette; Class 16, Zelica, Phyllis and Rival.

The usual courses of the club for these classes were sailed. The race was started at 1 P. M. with no wind, and although there was a light breeze for a time later on, it soon dropped. The winners were: Clara, Minerva, Kathleen, Amazon, Aura and Rival.

On Monday a special race was sailed in better weather, the entries being:

CLASS 1—40 TO 50FT. CORRECTED LENGTH.

	Cor. Length.	Allows.
Jessica, W. O. B. McDonough	49.68	
Liris, C. W. Wetmore et al	48.83	01 08
Mariquita, A. Belmont, Jr.	48.00	01 54
Minerva, J. L. Carroll, Jr.	45.61	05 25

CLASS 2—30 TO 40FT. CORRECTED LENGTH.

Volusia, J. M. Williams	37.53	Allows.
Kathleen, T. C. Zerega	37.44	00 11

The course was to windward and return, 12 miles, turning a mark off Cold Spring Harbor. The wind was light E. by W. Volusia did not turn up, so Kathleen could not start.

Shortly after the start Jessica broke her port spreader, losing a good deal of time before it was temporarily repaired. The start was timed:

Minerva ..... 11 13 57 Jessica 11 31 31
Mariquita ..... 11 14 27 Liris 11 15 23

Minerva quickly ran away from the fleet, having a long lead at the weather mark, which was timed:

Minerva ..... 1 42 38 Liris 2 01 30
Mariquita ..... 1 52 50 Jessica 2 03 20

Off the wind she added to her gain, winning very easily. The full times were:

	Start.	Finish.	Elapsed.	Corrected
Minerva	11 13 57	3 52 24	4 38 27	4 33 02
Mariquita	11 14 23	4 12 14	4 57 51	4 55 57
Liris	11 15 23	4 22 09	5 06 56	5 05 38
Jessica	11 14 31	4 25 15	5 10 42	5 10 42

Owing to Jessica's mishap and the fact that she was poorly sailed, the race was no test of her performance with the 40-footers.

MARINE AND FIELD CLUB REGATTA, SEPT. 3.

CONSIDERING the fate of most clubs this season, the Marine and Field Club, which is making a strong effort for the encouragement of racing in all sorts of sailing craft, was very lucky to secure a dozen actual starters in its fall regatta of Wednesday week. In addition to several good canoe races, this club has now attained the dignity of its second annual yacht race, and in spite of light weather and a small fleet the affair must be set down as a success. The race was sailed under the rules of the New York Y. C., and practically over the club's courses, save that the start and finish were off the handsome grounds of the Marine and Field Club at Bath Beach. The 70ft. class went around Sandy Hook Lightship, by way of Southwest Spit; the 46 and 40ft. classes turned the Scotland Lightship, and the smaller boats turned Buoy 5. The start was timed as follows:

Arrow, C. S. Osborn	12 26 45	Pastime, T. R. Meserole	12 28 24
Lakshmi, C. M'K. Loeser	12 26 54	Gunhilde, Messrs. Dedricksen	12 29 49
Penguin, G. E. Brightson	12 27 02	Sasqua, H. Andruss	12 31 26
Jessica, W. Macdonough	12 27-07	Madcap, W. B. Dickey	12 33 49
Polly, T. S. Arnold	12 27 37	Shamrock, J. R. Maxwell	12 36 11
Broncho, M. Hartley	12 28 18	Gracie, J. P. Earle	12 36 54

Only Shamrock and Gracie started in the 70ft. class. In the 46ft. class were, in addition to Com. Dickey's Madcap, the Ellsworth sloop Penguin, sailed by Capt. Joe Ellsworth, and the new Fife 20-rater, Jessica, the latter sailing her maiden race. The tide was ebbing and the wind light S.E., shifting later on to the west and falling very light, Shamrock soon led Gracie, keeping her lead all day. The times at Buoy 10 were:

Shamrock ..... 1 41 15 Penguin 1 46 35
Gracie ..... 1 45 40 Jessica 1 46 50

Penguin was the better sailed, but when outside the Hook Jessica went away from her on the wind, the times at the Scotland being:

Jessica ..... 2 47 35 Madcap 3 00 59
Penguin ..... 2 48 50 Rover 3 01 21
Polly ..... 2 50 36 Broncho 3 09 40
Sasqua 2 52 57

The others were timed at Sandy Hook Lightship: Shamrock 2:49:10, Gracie 2:51:20.

Coming in spinakers were set before a very light breeze, Jessica having only the masthead spinaker intended to keep her within the 20-rating class on the other side. Penguin passed her, finishing ahead by a few seconds, but giving Jessica the race on allowance. Jessica protested on the ground that Penguin was over the line before the gun, the protest being allowed by the committee. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
70FT. CLASS.				
Shamrock	12 36 00	5 00 58	4 24 59	4 24 58
Gracie	12 36 00	5 11 10	4 35 10	4 33 40
46FT. CLASS.				
Jessica	12 27 08	5 23 30	4 36 28	4 35 33
Rover	12 23 49	5 27 59	4 54 10	4 51 55
Madcap	12 27 09	5 38 25	5 11 16	5 08 20
Penguin	12 27 02	5 23 05	4 36 03	4 36 03
40FT. CLASS.				
Sasqua	12 31 26	5 18 40	4 47 14	4 46 46
Polly	12 27 37	5 27 40	5 00 03	5 00 03
Broncho	12 28 18	5 47 50	5 19 32	Not meas.
30FT. CLASS.				
Pastime	12 28 27	4 32 00	4 03 36	4 03 36
Arrow	12 26 45	4 59 04	4 32 19	4 35 10
CATBOAT CLASS.				
Gunhilde	12 29 49	4 14 00	3 44 11	Not meas.
Lakshmi	12 26 50	4 12 17	3 45 18	Not meas.

The judges were Messrs. S. Risk, W. C. Kerr and C. A. Deshon. The result in the smaller classes depends on the measurement of the boats.

MR. FIFE'S VISIT.

MR. WILL FIFE, JR., the designer of Clara, Minerva, Dragon, Yvonne, and many other fast yachts, arrived in New York on the City of Rome on Aug. 17, proceeding at once to Marblehead, where he sailed a couple of races on Minerva during the Corinthian series. On his return to New York he ran up to Oswego, joining his new Yama at that port on the morning of the race of the Oswego Y. C., in which Yama won her fifth successive first prize. He continued with her to Rochester, returning to New York on Aug. 28 and leaving two days later for home. Mr. Fife's visit was, of course, partly for business, and it is probable that he took several orders home with him, but it was also for recreation and for a look at the American boats, many of which are new since his first visit in 1887.

The great American interviewer, both amateur and professional, was out in full force to welcome him, but with rather poor success, as to the many questions that were fired at him point blank, whether he would build a yacht to challenge for the Cup, whether such a yacht would have a keel or a centerboard, and whether he could beat this, that or the other craft, he quietly but positively replied that such questions were not fair and he would not answer them.

Mr. Fife is a well built man of medium height, with broad shoulders and weighing about 189lbs. He has a frank, open face and pleasant manner, and when not plied with questions, had a good deal to say of yachting on the other side, especially of the new racing craft and the wonderful racing witnessed this season on the Clyde. One opinion at least he gave very freely and positively; after half an hour in Yama's cabin on the afternoon of the Oswego regatta, when the "Redoo" had been sung in most approved fashion, and with proper accompaniments, he remarked that the method of celebrating a victory on Lake Ontario was fully as moist and exhilarating as a similar ceremony on the Clyde.

The designer of Minerva is now in his thirty-third year, his father, with whom he is associated in the famous old yard at Fairlie, being nearly seventy. "Old Will Fife," the grandfather of the present Wm. Fife, Jr., and father of the elder Will Fife, was a yacht builder and ship owner many years since, his son, who succeeded him in the business, attaining well deserved fame as the builder of many staunch and speedy yachts, whose day has since gone by, Fiona, Neva, Condor, Moina, Neptune, Foxhound, Bloodhound, Coralie and the ill-fated Cythera. Young Mr. Fife designed his first yacht of any note in 1876, the Clio, a successful 5-tonner. Since then he has turned out a large number of fast racers, Neptune, Sleuth Hound, Ariel, Lenore, Erycina, Clara, Rival, Ulidia, Yvonne, Minerva, Uvira, Dragon, Windward, Encore, Oread, Woodcock and many steamers. In 1883 he took charge for a time of the Culzean Ship Building and Engineering Co.'s works at Maybole, building while there Clara and Bayadere. Afterward he returned to Fairlie, where he has built up a very successful practice in designing, as well as building.

While in this country he was outspoken in favor of a classification by corrected length, similar to the present British rules. In an interview with a reporter of the *Tribune* he also expressed himself as follows in regard to the conditions of the new deed of gift of the America's Cup:

"When asked regarding the possibility of another challenge for the America's Cup, Mr. Fife said: 'I do not believe that there will be another challenge for the America's Cup, as long as the New York Y. C. adheres to the present deed of gift. It is manifestly unfair. English yachts and English yacht builders could never get from the Americans those concessions which the Americans demand from the British. Under the present deed of gift, the challenging boat has to send to the New York Y. C. its four principal dimensions and give a ten months' notice. Now, if I have the four principal dimensions of a yacht given me and I have ten months in which to study those dimensions and in which to construct a yacht, I believe that I could build a yacht which would beat nine whose dimensions were sent me. At least I should have no hesitation in trying it. It is easy to be seen that under the present deed of gift the Americans have a great advantage. The challenging yacht is a fixed quantity that cannot be altered. The Americans know by the challenge almost exactly what sort of a yacht she is, in every particular. The problem which then confronts them is to build a yacht which shall be a little faster, no matter at what expense of other qualities. It is very much easier to improve upon than to originate. It is very much easier to build a boat which shall attain speed at the expense of other qualities, when the desired amount of speed is practically known, than it is to originate the perfect boat. I do not think the deed of gift is fair to British yachtsmen, and I do not believe there will be another challenge for the America's Cup as long as it is held under that deed.'"

LYNN Y. C. OPEN REGATTA, SEPT. 1.—The open regatta of the Lynn Y. C. was sailed on Monday of last week in a light N.W. wind, the courses being for second and third classes: From starting point to whistling buoy off Graves, leaving it on the starboard: to Winthrop spar buoy, leaving it on starboard; thence to flagboat off Grover's Cliff, leaving it on starboard; to and across line between judges' boat and stakeboat; 10 miles. For fourth and fifth classes, from starting point to Flip Rock Buoy, leaving it on starboard; thence to flagboat off Grover's Cliff on starboard; to buoy off Lobster Rocks on starboard, leaving Fish Weir on port; cross judges' line and repeat; 9 miles. The times were:

SECOND CLASS, CENTERBOARDS.

YORKVILLE Y. C. REGATTA, SEPT. 1.—The sixth annual regatta of the Yorkville Y.C. was started with 25 yachts on Labor Day, but the wind was too light to allow any yacht to cover the course, from Oak Point around the Gangway Buoy, within the time limit of six hours. The race will be re-sailed. On Sept. 4 the new club house at 102d street was formally opened.

SINKING OF A YACHT.—Just at daylight on Sept. 5, as the sloop yacht Magnet, of Roxbury, Mass., was passing through Long Island Sound, bound for New York, she was cut down by a large tug, which passed on without stopping. The yacht sank immediately, her crew escaping in a dory. The name of the tug has not yet been ascertained, but Mr. E. Burkhard, owner of the yacht, has offered a reward for it. The yacht was about 26ft. long.

SAPPHIRE.—Mr. John Stetson has sold his Burgess steam yacht Sapphire to Mr. Amzi L. Barker, of New York.

MASSACHUSETTS Y. C. OPEN REGATTA, SEPT. 4.—The open regatta of the Massachusetts Y. C. on Thursday was sailed in a very light breeze, making a drift at the finish, many of the yachts withdrawing. As the fleet had not been measured under the new rule of the club, only the elapsed times were given out, as follows:

FIRST CLASS.

Ten-mile course. First prize, $15; second prize, $8.

	Elapsed.
Almira, T. J. Young	2 10 43
White Fawn, A. E. Jones	2 09 50

Eureka, E. Rogers	20.06	withd'n.
Tom Cat, R. M. Bemer	19.01	withd'n.

SECOND CLASS.

Egeria, Francis Ware	20.01	1 07 38
Secret, E. F. Linton	22.06	1 09 30
Ideal, Frank Williams	22.00	1 13 09
Wraith, C. E. Hodges	22.03	1 13 23
Mist, E. L. Pond	22.07	withd'n.
Montezuma, C. E. Carey	22.01	withd'n.
Tyke, McBaith & McInness	19.10	withd'n.

THIRD CLASS.

Rocket, H. M. Faxon	16.02	1 02 54
Peri, Frank Driscoll	18.06	1 05 14
Psyche, Francis Gray	17.04	1 06 31
Flora Lee, C. D. Laning	16.10	1 07 28
Jack Daw, Hyde and Otis	18.06	1 07 35
Mirage, John Dearborn	17.05	1 08 30
Freak, George F. Mayberry	16.00	1 11 41
Florrie, W. H. Besarick	18.05	1 13 21
Scamp, H. M. Nute	16.04	1 13 13
Wildfire, H. C. Keith	17.03	1 15 15
Guenn, E. N. Hutton	17.06	1 17 51
Avis, J. H. Odell	18.07	withd'n.
Paradox, Louis M. Club	17.06	withd'n.

FOURTH CLASS.

Bessie, W. C. Cherrington	12.09	1 02 44
Nina, J. P. Bullard	14.10	1 04 26
Nellie, J. O. Leary	14.11	1 11 29

The judges were: J. P. Harris, chairman; Allen M. Davis, William H. Besarick, James S. Clark, Jr., Frank Driscoll and Walter P. Thayer.

BROOKLYN Y. C. FALL REGATTA, SEPT. 1.—The fall regatta of the Brooklyn Y. C., on Labor Day, was spoiled by the prevailing calm weather which vexed so many yacht sailors about New York. Only three classes succeeded in finishing their courses, the times being as follows:

CLASS B.

	Start.	Finish.	Corrected.
Mabel, A. C. Fitzgerald	12 07 15	5 59 10	5 54 14
Grace, Geo. P. Lyons	12 06 44	Withdrew.	
Gertrude, Wm. F. Everett	12 07 32	Withdrew.	
Alma, J. S. Hale	12 06 27	4 27 30	4 21 03

CLASS C.

Heming, Dr. E. F. Drayton	12 05 35	6 03 40	5 57 04
Manhattan, J. C. Egerton	12 07 03	5 58 53	5 52 50

CLASS F.

Alice, John Cottier	12 06 05	5 51 00	5 43 10
Faustina, R. C. Hopkins	12 05 34	5 41 00	5 35 26

CLASS 1.

Daisy, R. H. Woodman	11 58 08	Withdrew.
Vida, G. R. West	11 55 40	Withdrew.
Mamie, A. Wheelwright	11 57 17	Withdrew.
Irene, A. M. Lockhart	11 57 45	Withdrew.
Iroquois, E. H. Chandler	11 56 00	Withdrew.

CLASS 2.

Ray, G. R. Hawes	11 57 10	Withdrew.
Kildee, G. W. Neidlinger	11 59 23	Withdrew.
Seneca, J. P. Tribken	11 56 42	Withdrew.

CLASS 3.

Bess, M. J. Hanley & W. Murphy	11 59 20	Withdrew.
Mull, Com. B. F. Sutton	11 56 00	Withdrew.
Rosie, Dr. J. R. Latham	11 56 30	Withdrew.

Alma won in Class B, Manhattan in Class C, and Faustina in Class F. During the evening the club house was beautifully illuminated.

KNICKERBOCKER Y. C. FALL REGATTA, SEPT. 1.—Small entries and a light wind rather spoiled the fall regatta of the Knickerbocker Y. C. on Labor Day, only 9 yachts starting. There were two entries each in four classes, the fifth class having only one entry, the fast open boat Myra, which entered for the special prize for best elapsed time, winning by an hour and a half. The times are:

CLASS 1—CABIN SLOOPS 32FT. AND OVER.

	Length.	Start.	Finish.	Elapsed.
Sentinel, A. Droegmundt	32.09	10 49 20	. . .	. . .
Nyssa, Com. D. Rousseau	32.08	10 46 10	6 34 30	7 47 50

CLASS 2—CABIN SLOOPS OVER 25FT. AND UNDER 32FT.

Alice, A. N. Holden	31.11	10 46 10	4 38 00	5 52 30
Jessie, F. Gauss	26.05	10 46 10	6 38 00	7 41 50

CLASS 3—CABIN SLOOPS UNDER 25FT.

Nanita, Rear-Com. Coughtry	21.06	10 41 15	6 28 30	7 47 15
Marvel, J. Loeber	21.03	10 42 30	. . .	. . .

CLASS 3—CABIN CAT-RIGGED YACHTS.

Linda, E. S. Snyder	24.01	10 45 00	6 19 00	7 34 00
Ida B., H. Sturg	22.00	10 45 00	. . .	. . .

SPECIAL PRIZE.

Myra, G. K. Rosenquest	24.00½	10 41 13	3 02 41	4 21 29

Nyssa won in first class, Alice in second, Nanita in third and Linda in fourth.

CORINTHIAN Y. C. OF MARBLEHEAD.—The second championship regatta of the Corinthian Y. C. was sailed off Marblehead, on Sept. 1, in a light southwest wind. The times were:

FIRST CLASS, 30-FOOTERS.

	Elapsed.	Corrected.
Saladin, W. P. Fowle	2 20 44	2 18 35
Mignon, H. G. Babson	2 21 53	2 18 54
Shark, W. H. Waterhouse	2 22 55	. . .
Hawk, Gordon Dexter	2 23 29	2 21 02

SECOND CLASS.

Susie, W. W. Keith	3 14 54	. . .
Jone, J. S. Poyen	3 16 57	. . .

SPECIAL CLASS, CRUISING RIG.

Bon Bon, Van Nostrand	3 14 08	2 59 08
Gretchen, Merriam	3 15 17	3 00 17
Clytie	3 00 34	3 00 34
Orinda, Dr. W. H. Winslow	3 13 22	3 04 22

THIRD CLASS, CATS.

Wanda, R. C. Robbins	1 49 48	. . .
Edith, F. W. Wood	2 09 15	. . .

FOURTH CLASS.

Hornet, J. B. Paine	1 43 16	1 35 46
Kraken, Perry Chase	2 05 00	1 58 37

FIFTH CLASS.

Josephine, D. Follet	1 39 35	. . .

SPECIAL OPEN RACE, UNDER 16FT. WATERLINE.

Tantrum	1 16 10	1 14 33
Alpine	1 16 22	1 16 09
Banjo	1 26 21	1 20 24
Composite	1 20 50	1 20 50
Pansy	1 25 26	1 24 29
Mary	1 34 20	1 32 54
Vera	1 39 40	1 38 00
Reba	1 53 14	1 48 36
Comus	1 53 56	1 51 22
Milo	1 53 48	. . .
Estelle	1 54 20	. . .
Bessie	1 57 26	. . .
Oswa	Withdrew.	

Saladin thus wins the championship in first class and Susie in second class, Wanda in third class, Hornet in fourth class and Josephine in fifth class, each having won two legs. Saladin, Susie, Wanda and Hornet each got first prizes, and Mignon second prize. Bon Bon wins first prize of $20 in special class, Gretchen second, $10, and Clytie third, $5. In open race Tantrum wins first prize of $25, Alpine second, $15, Banjo third, $10, Composite fourth, $5, and Pansy fifth, $3. The judges were Daniel Appleton and L. L. Rhodes.

Rowing races for dories, double and singles, were held in the afternoon. In the single race Eldridge Graves defeated Arthur Frost. In the double race Chapman and Graves won. In the tab race H. Perry took first prize, Wright second, Taylor third. H. Perry also won the swimming match.

BRIDGEPORT BOATING ASSOCIATION, OPEN REGATTA, Sept. 1.—On Labor Day a very successful regatta was sailed by the Bridgeport Boating Association over a course 6 miles to leeward and return off Seaside Park. The wind was fresh N. W. The full times were:

CLASS A—CABIN SLOOPS, 27FT. AND UNDER.

	Start.	Finish.	Corrected.
Stranger	11 04 32	1 17 18	2 12 48
Arrow	11 03 40	1 19 40	2 13 15
Clytie	11 03 18	1 16 36	2 09 48
Hebe	11 03 29	1 14 48	2 39 00
Gitana	11 05 31	1 33 16	2 27 55

CLASS B—JIB AND MAINSAIL, 27FT. AND UNDER 32FT.

Amateur	11 03 47	1 00 40	1 56 53
Tern	11 04 02	1 09 14	2 05 54
Teal	11 03 03	1 20 00	1 56 57

CLASS D—JIB AND MAINSAIL, 21FT. AND UNDER 25FT.

Rival	11 04 44	1 08 19	2 03 35
Ramona	11 02 20	1 07 42	2 05 22

CLASS E—JIB AND MAINSAIL, UNDER 21FT.

Hornet	11 08 30	1 11 14	2 33 44

CLASS F—CATBOATS, 21FT. AND UNDER 25FT.

Alice	11 11 05	1 36 12	2 25 07
Ampere	11 11 19	Did not finish.	
Kate	11 11 39	1 41 14	2 29 29
Molly Pitcher	11 14 15	1 50 00	2 43 19
Coronet	11 10 49	1 48 38	3 36 53

CLASS G—CATBOATS, UNDER 21FT.

Go Softly	11 08 30	1 35 32	2 26 45
Wawa	11 10 00	1 35 37	2 35 37
Phyllis	11 09 15	1 22 27	2 12 44

The judges were Messrs. George Turney, W. A. Lewis and Thos. F. Vose.

PLEON Y. C., THIRD CHAMPIONSHIP, SEPT. 3.—The Pleon Y. C. race of Wednesday was sailed in a very light easterly breeze, the times being:

FIRST CLASS CENTERBOARDS.

	Elapsed.	Corrected.
Tantrum, J. T. Small	2 56 45	2 45 35

KEELS.

Composite, J. H. McIntire	3 15 00	3 04 29
Snail, A. G. Wood	3 21 12	3 05 39
Milo, E. Mason	3 28 20	3 15 39

SPECIAL CLASS.

Minna, I. H. Norris	2 20 50	2 11 19

SECOND CLASS.

Banjo, I. J. Taylor	1 57 10	1 48 12
Monmi, I. W. Dunlap	2 08 09	1 55 54
Sheila, W. Jackson	1 59 20	1 47 05
Midge, H. Jackson	2 03 30	1 49 45
Estelle, C. Pierce	2 06 04	1 53 18

Tantrum wins the Wood cup and the championship. Banjo wins the Palmer cup and the championship for second class. Composite wins a leg in the first class keels championship and, with Snail and Oswa, will sail-off for the championship of the class. Minna wins the championship in the special class.

HULL CORINTHIAN Y. C.—This club sailed a race on Aug 30 in a very light wind, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Secret, E. F. Linton	22.06	2 41 41	2 10 10
White Fawn, A. E. Jones	25.00	2 49 00	2 11 18
Adolphe, H. Moebes	22.04	Withdrew.	

SECOND CLASS.

Mabel, H. Rice	19.10	2 38 54	2 15 43
Madge, W. D. Lovell	19.11	2 40 21	2 17 14

FOURTH CLASS.

Flora Lee, C. D. Lanning	16.10	2 38 34	2 12 24
Rocket, H. M. Faxon	16.02	2 41 12	2 14 05
Freak, G. Mabel	16.00	2 52 16	2 22 07
Mabel D., C. E. North	16.11	2 50 48	2 23 43

FIFTH CLASS.

Billow, H. Brown	12.10	2 23 04	2 07 19
No. 2, Z. Cleverly	13.08	2 28 26	2 08 19
No. 1, S. S. Harrington	14.05	Withdrew.	

Judges: S. N. Bouve, C. V. Souther, H. O. Stetson, W. D. Shattuck and H. B. Wilson.

SOUTH BOSTON MOSQUITO FLEET OPEN REGATTA, SEPT. 1.—The open race of the South Boston Mosquito Fleet on Labor Day was sailed in an unsteady N. W. wind, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Nadine, D. Palmer	14.11	1 48 06	1 48 01
Nina, J. P. Bullard	14.11	1 48 41	1 48 36
Holy Smoke, A. L. Barry	14.06	2 02 55	2 02 22
Ruby, J. L. Putnam	14.11	Did not finish.	
Flossie, C. Smith	14.04	Did not finish.	
Nellie, J. O'Leary	14.11	Did not finish.	

SECOND CLASS.

Bessie, W. C. Cherrington	12.11	1 40 56	1 38 59
Skeeter, S. N. Small	12.11	2 11 53	2 09 36
Snag, J. E. Robinson, Jr.	12.03	2 13 58	2 10 57
Bunty, W. A. Cook	12.11	Did not finish.	

The judges were M. W. Rawson, W. H. Rawson, and Jas. F. Briggs.

FLEUR DE LYS.—On Aug. 30 the new Burgess schooner Fleur de Lys was launched at Bath, Me., where she was built for Mr. Geo. Trotter by John MacDonald. She is a wooden vessel, 108ft. over all, 86ft. l.w.l., 21ft. 9in. beam and 13ft. draft, a keel boat. She is intended for long cruises, her owner proposing to make a voyage around the world next year after a preliminary cruise in Southern waters this winter.

MONATIQUOT Y. C.—On Aug. 30 the final sail-off of the championship took place, the times being:

	Length.	Elapsed.	Corrected.
Diadem, L. A. Hayward	18.02	2 28 23	1 59 28
Eureka, E. B. Rogers	Withdrawn.		

Diadem takes the championship cup. The wind was very light and uneven, Diadem catching a puff that gave her a long lead, while Eureka was becalmed, finally withdrawing.

CORINTHIAN NAVY.—The Long Island Sound Squadron will hold a regatta at Greenwich, Conn., on Sept. 13. Open to all boats 23ft. l.w.l. and under. To be sailed under Corinthian Navy rules. Classification on length: Class A, over 20ft. and not over 23ft. l.w.l.; class B, over 17ft. and not over 20ft. l.w.l.; class C, over 14ft. and not over 17ft. l.w.l.; class D, 14ft. and under. Classification on type: Cabin sloops and cutters, catboats, yawls and periaugers. Open sloops, catboats, yawls, periaugers and canoe yawls, canoes, St. Lawrence River skiffs and rigged rowboats. The racing length for cabin boats is the l.w.l. and sail area, according to the following: $L.W.L+\sqrt{S.A.}\div 2$. The racing length for open boats is the length on the l.w.l. Crews shall be composed of amateurs and shall be limited as follows: Classes A and B, 3 men; class C, 2 men; class D, 1 man. The helmsman shall not be considered one of the crew. Ballast shall not be shifted and no outriggers or seats that extend beyond the beam of the boat shall be used. Prizes will be awarded in all classes where two or more boats start. The course will be triangular, 7 nautical miles, around Captain's Islands. The start will be at 1 P. M. precisely. One dollar entry fee will be charged all boats not enrolled in the Corinthian Navy. Entries will close Thursday Sept. 11, with the Secretary of the Squadron, F. B. Jones, 40 Wall street, New York.

A regular meeting of the association will be held at the Hotel Marlborough on Sept. 30.

The following are proposed for membership: W. Luttgen, M. J. Rooney, Byron Baldwin, Henry A. G. Way, B. A. L. Batzen, M. O'Day.

On Sept. 6 the fall regatta of the Staten Island Sound Squadron was sailed off Sewaren, N. J., over a 10-mile course, the wind being light at the start but freshening later. The times were:

CLASS A—CATBOATS OVER 18 AND LESS THAN 23FT.

	Length.	Elapsed.	Corrected.
Manhattan, A. T. Skerry, Jr	22.06	2 35 43	2 35 13
Nankit, T. W. Hawkins	22.10	2 34 20	2 33 10
Maggie E., Chas. Tice	22.00	Did not finish.	

CLASS B—CATBOATS OVER 12 AND LESS THAN 18FT.

Galawater, J. Spavin	16.03	Did not finish.	
Madge S., J. H. Stull	15.06	2 42 22	2 30 29
Dove, J. W. Elsworth	14.08	2 39 37	2 25 57
Bayonne, P. Van Buskirk	16.06	2 43 20	2 33 27
Dolly, Wm. Whittaker	12.00	Not taken.	
Gennett, W. Van Buskirk	12.00	Not taken.	

CLASS C—SLOOP YACHTS.

Emma M., M. Munday	21.04	Not taken.	
Kidney Cure, H. Watts	17.05¼	2 43 03	2 35 00
Just Woke Up, J. Philips	21.11	2 24 15	2 23 03

In Class A. Nankit won, with Manhattan second. In Class B. Dove won, with Madge S. second; and in Class C. Just Woke Up won, Kidney Cure second.

There was also a race for naphtha launches, the Amelia Victoria, length 27.6ft., owned by N. Luttgen, covering the 10-mile course in 1:21:55. Elsie, length 18.6ft., owned by S. Mershon, second, in 1:35:18. The judges were R. H. Desmond, Thomas Riddle, and Judge A. D. Brown.

ROYAL NOVA SCOTIA Y. S.—On Aug. 30 a race was sailed, open to all yachts of the squadron, for the United Banks challenge cup, under the following conditions: The yachts will be started from a markboat, anchored off Squadron Wharf, by the officers of the day, who will notify each yacht in succession when to start. Yachts will range alongside the markboat at 1:45 P. M., will receive warp lines and take up positions astern in the order of rating, the smallest being next to the markboat. On the word from the officers of the day each yacht in succession will haul up to the markboat and await the word to start. Yachts will be allowed spring lines, but must cast off on the word to start. Head sails are not to be set until the signal to start is given. Course No. 4.—Starting off the Squadron Wharf to Flag Buoy in Dartmouth Cove, thence to Point Pleasant Buoy, thence to Flag Buoy in Dartmouth Cove, thence to Point Pleasant Buoy, leaving these marks on starboard hand and finish off Squadron Wharf, $11\frac{3}{10}$ miles. Time limit, 4 hours. Weather, heavy rain. Wind, E.S.E., squally. Tide flowing:

	Rating.	Start.	Finish.
Mentor, cutter, C. Stayner	2.3	2 05 00	4 15 29
Daphne, sloop, F. H. Bell et al	2.6	Did not start.	
Etienne, sloop, J. E. Butler	2.8	2 07 12	4 09 51
Psyche, cutter, G. E. Weston et al	3	2 07 58	4 12 39
Calypso, sloop, H. V. Kent	3	2 07 58	4 13 14
Hildred, sloop, G. E. Francklyn, Jr	3.2	2 08 41	4 28 55
Minnehaha, sloop, A. T. Stikeman	3.5	2 09 39	4 22 05
Albatross, schooner, D. Crowan	3.6	Did not start.	
Wenonah, schooner, A. C. Jones et al	11	2 20 26	4 26 37
Uvira, cutter, Jas. Frazer	23	2 26 11	3 57 05

Winners: First, Uvira; second, Etienne; third, Psyche. The start was made in "Bermudian" fashion—the time allowance being allowed at the start. Officers of the Day—Messrs. F. A. Hamilton and W. H. Throop.

JESSICA.—The new 20-rater Jessica, the first of her class in our waters, has sailed two races, winning the first by a very small margin. The yacht she beat in her first race was the sloop Penguin, an Ellsworth boat that has raced but seldom and is little known, but is by far the best Ellsworth boat of her size, certainly a faster yacht she is not yet provided with, using the small spinaker in her first race. After sailing her against Dragon, Mr. Fife pronounced her as good as that famous 20, and if well sailed here she should make a very fair showing in the 46ft. class as it is now constituted, though it should be an easy matter to beat her in most racing weather with an American boat built fully up to date.

HULL Y. C., Sept. 6.—On Saturday the Hull Y. C. sailed a very good race in a hard rain, the times being:

THIRD CLASS—CENTERBOARDS.

	Length.	Elapsed.	Corrected.
Elite, E. B. Rogers	24.11	2 05 04	1 32 55
Moondyne, W. H. Shaw	24.08	2 12 58	1 40 52
White Fawn, A. E. Jones	Not measured.		
Almira, T. J. Young	Not measured.		
Secret, E. F. Linton	Not measured.		

KEELS.

Echo, E. L. Burwell	24.06	2 11 20	1 38 42
Swordfish, H. L. Johnson	24.07	2 15 24	1 42 32

FOURTH CLASS—CENTERBOARDS.

Madge, B. Pope	19.11	1 32 21	1 09 04
Mabel, H. L. Rice	19.10	1 32 35	1 09 24

FIFTH CLASS—CENTERBOARDS.

Rocket, H. M. Faxon	16.02	1 30 13	1 12 16
Wildfire, H. A. Keith	17.03	1 43 42	1 17 58

After the race it was discovered that Echo and Swordfish had each sailed a wrong course, so Echo started again and sailed the proper course. Judges: Messrs. John A. Stetson, J. B. Forsyth, W. S. Cary, B. W. Rowell, F. H. Brown, J. J. Souther, E. C. North, W. E. Sherriffs, J. R. Chadwick, C. S. Waldo, J. B. Field, L. S. Jordan.

PROVIDENCE CORINTHIAN Y. C. ANNUAL REGATTA, SEPT. 8.—Courses for classes 1, 2 and 3, 18½ miles; for class 4 11½ miles; weather fair, wind S.S.W., tide half flood.

CLASS 2.

	Length.	Elapsed.	Corrected.
Kelpie, C. F. James	30.10	3 55 45	3 55 45
Rhodia, H. C. Blair	29.03	3 39 45	3 37 14
Frolic, E. L. Anderson	25.01	3 42 28	2 32 25

CLASS 3.

Victor, E. V. Bowen	22.06	3 42 42	3 41 58
Afghan, Benj. Davis	22.09	3 47 35	3 46 27
White Wings, A. D. White	23.03	3 46 53	3 46 33
Gladys, John D. Peck	21.01	3 49 09	3 44 01

CLASS 4.

Arrow, Frank Bennett	17.04	3 09 43	3 09 43
Nemo, Arthur Lacey	17.04	2 59 00	2 59 00
Nettie, Wm. Carroll	16.10	3 02 13	3 01 11
Zara, J. W. Gladhill	16.03	2 52 58	2 50 39

Pennants for fastest actual time for classes 1, 2, 3 and 4, Kelpie and Zara. Regatta committee, Fred Griffith, F. W. Folsome and Chas. Herrmann. Judges, regatta committee.

ROCHESTER Y. C., WOLTERS CUP, Sept. 4.—On Thursday of last week the second race for the Wolters Cup was sailed, off Charlotte, over a triangular course of 13 miles. The wind was fresh but unsteady, going from S.W. to W. and N.E. during the race. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Velnette	2 35 00	4 58 30	2 23 30	2 18 13
Edith	2 35 00	5 01 30	2 26 30	2 26 30
Amelia	2 35 00	5 08 05	2 33 05	2 30 17
Ripple	2 35 00	5 21 00	2 46 00	2 46 00
Majel	2 35 00	Did not finish.		
Undine	2 35 00	Did not finish.		
Alta	2 35 00	Time not taken.		

Velnette has won the cup twice, so retains it, and the third race, set for to-day, will not be sailed.

QUEEN CITY Y. C.—On Aug. 30 the Queen City Y. C., of Toronto, sailed the first and second class race postponed from Aug. 9. There was a strong N.W. wind when the start was made at 2:45, the four starters carrying double-reefed mainsails and storm jibs. The times were:

	Class.	Finish.	Elapsed.	Corrected.
Widgeon	2d	4 33 30	1 48 30	1 44 00
Mischief	1st	4 32 15	1 47 15	1 46 00
Nellie G	1st	4 35 00	1 50 00	1 50 00
Ina	1st	4 37 15	1 52 15	1 50 15

A skiff race, for the *World* cup, was also sailed, only Elsie being ready at the start. Excelsior and Alliance came along 10m. later and started, but finally gave up, Eslie winning the cup, which she holds for the second year.

ST. LAWRENCE SAILING SKIFF CHAMPIONSHIP RACE.—A match race for the championship of the St. Lawrence River and $250, was sailed on Aug. 29, at Clayton, N. Y., between the racing skiffs Choctaw, of Gananoque, Ont., and Yankee Doodle, of Clayton. The course was twice around three buoys, a distance of fifteen miles. Race was called at 2:05, with a very light and fluky wind. The first three miles was a drifting match with Yankee Doodle leading, having had about 15s. the best of the start. It was soon evident that Choctaw was the best boat in this wind, and she passed Yankee Doodle and turned the first buoy with about a minute's lead. In starting for the home buoy Choctaw's crew showed the best judgment, fetching it easily in one long and one short tack, while Yankee Doodle had to make two long and one short tacks, and then was headed off at the buoy by a shift of wind, while Choctaw was footing it down the wind, increasing her lead very rapidly on the second round. Choctaw finished at 5:11:19, and Yankee Doodle at 5:30:41. Choctaw carried about 450sq. ft. and Yankee Doodle about 350. Choctaw is owned by Frank P. Jones, of Gananoque, and is an enlarged model of Ford Jones' sailing canoe Canuck. Yankee Doodle is owned by the St. Lawrence S. C. and S. L. C., of Clayton. She has a very fine immersed section, but an extremely full deck plan, which in the opinion of many is a detriment to her. Both boats have a great deal of deadrise and are at their best on the wind. S. G. Averell and A. R. Porte, of Ogdensburg acted as referee and starter. It is to be hoped that these boats can meet again in a match race, with a good wholesail breeze from the start to finish.

OHIO Y. C.—On Aug. 28, the handsome new house of the Ohio Y. C. at Presque Isle, near Toledo, was opened with appropriate ceremonies by Vice-Com. Hermann Krauser, Com. Ketchum being absent in the East. A pleasing incident of the evening's fun was the presentation of an elegant silver tea service to Mr. J. E. Gunckel, who as secretary of the club has done so much for its success. On the following day a reception and dance was held at the club house. The young club has one of the finest houses on fresh water, and promises to give a needed boom to yachting on Lake Erie.

BURNING OF A STEAMER.—On Aug. 28, a small passenger steamer, the Albert V. Benson, that was dignified by the name of yacht, was burned and sunk off Prince's Bay, Staten Island. The vessel was brought from the Hudson River, where she was built, some weeks since, to run as a passenger boat between Elm Park, Staten Island, and Elizabethport, being licensed to carry 50. She was about 60ft. long and of 20 tons. Some delay occurred in securing the history of her boiler for the inspectors, and she had not begun her regular trips, but was on a trial trip down Staten Island Sound and on Raritan Bay when a fire broke out, probably caused by the light pine deck being in too close proximity to the stack, which at times was very hot. The six persons on board saved themselves with difficulty, the engineer being helped out of the engine room by a passenger and having a very narrow escape. One boat was burned at the davits before it could be lowered, and the life raft shared a similar fate. The party escaped in a large rowboat which very fortunately had been launched a short time before the fire broke out, and was towing astern. The yacht burned until she sunk. She was owned by M. Buck, of Congers, Rockland Co., N. Y.

NEW YACHTS.—The building season promises to begin early this year and to be far livelier than last. Among the new yachts announced are a 46-footer for Mr. Belmont, owner of Mariquita, and a 40 or 46-footer for Mr. Thayer, owner of Pappoose. Both will be designed by Mr. Burgess and built by Lawley. Work has already begun on the Belmont boat, the spars being roughed out so as to secure a thorough drying. It is reported that the 30-footer designed last year by Mr. Gardner for Mr. Phillips, of Swampscott, will be built this fall by Mr. J. H. McIntyre on his composite system, and also that Mr. John B. Paine, after cleaning out the 25ft. class with Swordfish and the 20ft. class with Hornet, will build from his own design for the 30ft. class. Mr. Gardner has lately completed a design for a small steam yacht for Mr. Rutherford Stuyvesant, owner of Palmer, schr., and the yacht is now building at Wintringham's. She will be of wood, 61ft. over all, 60ft. l.w.l, 15ft. 3in. beam, 1ft. 6in. draft. Mr. Gardner is also at work on a design for a 25ft. racer for Mr. L. J. Boury, of the Seawanhaka and Atlantic clubs. It is now stated that the new Forbes steamer will be but 125 instead of 140ft. l.w.l.

LARCHMONT Y. C. CATBOAT RACE, Aug. 30.—The Larchmont Y. C., in addition to its annual oyster boat race sailed last month, and the fall regatta and special races of the present week, arranged a race for open boats which was sailed on Saturday week, but with rather poor success, the entries being so few in number. The course was four miles to leeward from Larchmont to Mattinnicock Buoy and return, two rounds, 16 miles. The only starters were Phyllis, W. Jones; Rival, E. S. Wheeler; and Zelica, H. G. Shreman. The wind was blowing heavily from N.W. when the race started at 12:34, Zelica, with full sail, crossed first, followed by Phyllis 6s. later, and then Rival 1m. 5ls. later still and with 1m. 43s handicap. The latter pair carried single reef each. Zelica covered the first leg in 44m. 24s., Phyllis in 44m. 46s., and Rival in 45m. 37s. The first mishaps occurred when the trio had gone a little way on the windward leg, Rival losing a man and waiting to pick him up, throwing her so far astern that she withdrew. Shortly after Zelica, carrying too much canvas and unable to reef, capsized and was taken in charge by the judges' boat, Dalzell. A fireman from the tug jumped overboard and made fast a line to the cat's masthead by which she was righted, her crew being cared for on the tug. She was bailed out and started for home in tow of a naphtha launch. Phyllis finished the course in 4h. 25m. 26s.

NEW YORK Y. C. FALL REGATTA.—The following notice was sent out on Sept. 6 in regard to the fall regatta of the New York Y. C., set for Saturday next: "As the list of probable starters is at present by no means as satisfactory as when the committee decided on having a fall regatta, they have decided that the races for the autumn cups will not be held. S. Nicholson Kane, William E. Iselin, Chester Griswold, Sec'y.

MANHATTAN ATHLETIC CLUB.—The new yachting department of the Manhattan Athletic Club, of New York, under the direction of Capt. J. C. Summers, will hold its first regatta on Saturday next, starting at 11 A. M. off Larchmont. It was at first intended to sail the races down the Bay, but as most of the yachts likely to enter are about Larchmont, the course has been changed, the Larchmont Y. C., with its usual courtesy, offering its aid. Prizes will be given in the 53, 40 and 30ft. classes.

MUCILAGE.—This fast cat, built by Hanley, of Monument Beach, and once owned by Mr. E. D. Morgan, has been purchased by Com. Gerry.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. H. D., Poughkeepsie.—Is there such a fish as fresh-water sheepshead? While in camp recently on Lake Champlain, two fish were caught weighing 5lbs. each that were called "sheepshead," and they certainly resembled the sea fish in almost every respect except edible qualities. They are quite common in the lake, and valued mainly for the two "lucky bones" found in the head. Ans. In is the fresh-water drum (*Haploidonotus grunniens*). It the Great Lakes it is kuown as sheepshead; in some parts of the South as thunder pumper. Look on page 370 of the "Industries."

G. A. B., Naponset, Mass.—Which of the various artificial baits would be best to use in New England waters during September and October for pickerel? Ans. Write to some reliable dealer, advertisements of whom you will find in this paper, stating the average size of the pickerel where you fish and he will offer you a choice of apparatus best suited for the locality. The phantom minnow is used in pickerel fishing and the artificial frog also. In trolling for this fish a good sized spoon should be used except among reeds and lily pads were smaller fish may be caught by skittering with a smaller spoon. Sometimes a piece of pork or strip of the white belly of a catfish, eel, or any other fish of suitable color will answer as well as a spoon.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

PRICE $2.50.

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES,

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

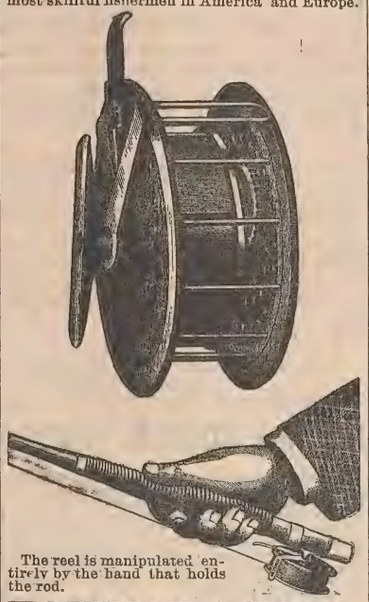
Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Killdeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
DAVIES & CO., 1 Finch Lane, Cornhill.

Canoe and Camp Cookery.

BY "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work Cloth, 98 pages. Price $1.00.



NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other reel.
FIFTH. It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

The New Whitmore Hammerless Shotgun and American Arms Co. New Safety Hammerless Revolver.

Guns 10 & 12-Gauge.

These arms are the latest and best firearms to-day on the market; have features which no other firearms possess. Ask your dealer to show them to you.

AMERICAN ARMS CO., 103 Milk Street, Boston, Mass.

Revolvers .32 & .38.

Merwin, Hulbert & Co.,

No. 26 West 23d Street, New York,

Opposite Fifth Avenue Hotel,

Have just issued a beautiful and comprehensive catalogue of 210 pages, 9x12 inches, on in and outdoor sports, including Lawn Tennis, Boats, Athletic Goods, Photographic Supplies, Cycles and Gun Goods. This book is handsomely illustrated with Sporting Scenes by well-known artists, and will be mailed free to any address on receipt of 10 cents to pay postage.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 18, 1890.

VOL. XXXV.—No. 9. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE CREEDMOOR MEETING.

THE success which came with the prize meeting at Creedmoor last week is sufficient answer to those who predicted an immediate collapse of the National Rifle Association as soon as the control of the range was turned over to the military authorities of the State. The Association retains the right to a ten-day meet each year, and it can make that gathering a success for all manner of shooters.

The good management this year is in almost an entire measure due to Secretary Shepherd, who acted as executive officer. He has what he considers a very fine edge in the running of a shoot. There is a certain knack of knowing just where to insist upon the exact letter of the rules and where to allow a little leeway, which makes the difference between a wrangling failure and a smooth and satisfactory success. The fact that the entire meeting went off without a single protest of any sort, that everybody went away convinced that they had won on their merits or lost for the want of them, is good proof that the management was excellent.

There are some points worthy of note in the results of the shooting. It will not do to blame too heavily the despised "gas pipe" where scores do not come out to the liking of our State guardsmen. The Remington State model arm with its .50 caliber may be a rather obsolete arm in the present rush for small-caliber weapons, but it is hardly fair to give it too black a character, when such scores as those made in picked competitions at Creedmoor go upon record. No rifle yet made will get a good score with a duffer manipulating it, but a clever shot with a very indifferent arm can roll up very respectable scores. It is the man and the machine together which unite in getting the high score; and the Remington arm in the hands of our militia will be the right arm in the right place for a long time to come yet. All the arguments about difficulty of carrying extra charge, and about the necessity for extra long-distance shooting, which are brought forward when urging the high velocity, small-bolt bullet arm now making in Europe, do not apply at all to our militia arm. It fires a big bullet, the very one to let fly into a mob of rioters, which is probably the only enemy the National Guard will ever have to meet when acting as a home guard. Let the men all along the line come up somewhere near in skill with teams sent to Creedmoor each year, and we should hear no more talk about refitting the guard with a new arm at a good round expense.

The difference between the Remington and the Springfield is not so great when each arm is given its best showing, and the regular army managers may well be on the lookout for something more modern. A regular army soldier should have in his hands the very best arm, one fully on a par with those in foreign use. The three points of rapidity of fire, length of range and accuracy must all be well covered, and then the points of lightness of arm and of ammunition come into consideration. If our army Springfield is so little different from the State Remington as these matches go to show, then it is time for somebody in the army board to look up a new arm.

The Creedmoor meeting had the usual run of marksman's weather, with plenty of rain, but the rifles endured the drip far better than they would have acted in a high gale, so only those who look upon a meeting as a sort of picnic outing had anything to complain of. The off-hand team match did not fill as it should have done. If all the off-hand clubs, whose members do so much talking and challenge writing, really wanted a grand comparative test of skill, this was the time and place. The shooting Zettlers were there, and being there of course carried off the honors.

The Hilton trophy goes to the National Capitol for a year and the District Guard has shown that in addition to being a very pretty appearing body it has some good shots in its ranks. With the shooting States of New York, New Jersey, Connecticut, Pennsylvania and Massachusetts all within arm's length of Creedmoor, it seems somewhat odd at least to have to record the trip of the Hilton trophy down to the bank of the Potomac.

THE POET'S LICENSE.

NOTE was made in these columns the other day of a poem entitled "The Yellow Hammer's Tap," contributed to a recent number of the *Century Magazine*, and remarkable for certain ornithological peculiarities. The poet among other things speaks of the season

> When brown wrens peer through rough-hewn rail
> And oft is heard the drum of quail.

For his drumming quail Mr. Oldham has been taken to task by the Chicago *Herald*, and his defense is characterized by a delicious ingenuousness. "My critic," says he, "thinks that I took too unwarranted a liberty with the quail, he maintaining that 'quails do not drum; partridges drum and quails whistle.' Well, in the South, where I live, we make the same distinction between a quail and a partridge as he might make between tweedledum and tweedledee. He would doubtless prefer the whistle of the tweedledum, while his nearest neighbor would probably have a decided leaning for the drum of the tweedledee. There may be a shade of scientific difference between the quail and the partridge, but substantially there is none."

The shade of scientific difference between the two birds may well enough be ignored, when the exigency of verse demands a rhyme for rail, and Mr. Oldham is quite right in estimating at its true worthlessness the suggestion of his captious critic that there is any natural obstacle to a quail's drumming. But if our poet should leave his pen for a day or two, and seek a practical lesson in the true scientific distinction between the two birds, he might find it without difficulty in an October ruffed grouse cover. If he has been accustomed to potting quail about Norfolk, he would find, when an old cock grouse rose on strong wings and put a dozen trees between itself and the poet-gunner, that the shade of scientific difference between the birds was something vastly more real than his fancy had ever pictured.

But it cannot be expected that the rhymesters shall always observe the dry facts of ornithology and other branches of natural history. If a poet must needs be an ornithologist and an ichthyologist, it is certain that much verse now printed in our magazines and other literary journals would never see the light. There was, for instance, the poem read by Rev. Dr. William Hayes Ward, at Woodstock, Conn., last July, on the South Fork Fishing Club. Our Fishculture columns have contained some discussions of the possibilities, failures and triumphs of trout culture; but Dr. Ward performed the feat of transforming the black bass, with which the Conemaugh Lake was stocked, into "silvern" and "golden" trout. And big fellows, too. For when a poet, sitting in his study, by the magic of his pen and ready flowing ink, sets about stocking a lake with trout, it is just as easy for him to fill it full of big fish as of fingerlings. Dr. Ward makes his club man fight the fish three-quarters of an hour, and then—

> The glory, the wonder, he lies on the sod,
> Six pounds and ten ounces, a fish that will break
> The record of fishing with fly and rod
> The largest trout in Conemaugh Lake.

And not only big fish, but a generous supply of them; for he tells us that "a million of trout are sporting about," "one-pounders, two-pounders, or three or four," and bigger ones, up to the "monsters that never rise to the hook." Surely, such a triumph of fishculture has not been achieved elsewhere, nor will its equal be chronicled until some other Fourth of July poet shall dip his pen in ink, and emulous of Dr. Ward's "fish story," "go him one better."

But after all, is it not curious that in this day of generally diffused intelligence, magazine editors and others should print poems which so manifestly mutilate the works of the Creator?

A LONG COMPANIONSHIP.—We find in the Kingfield, Me., *Reporter* note of a venerable trio of anglers, whose long companionship in annual camps is worthy of record. Messrs. T. C. Barrows and George W. Reed, of Montpelier, Vt., and E. S. Merrill, of Winchendon, Mass., aged respectively 71, 72, and 73 years, have been camping this summer at Blakesie Pond, on the Spencer waters, where they have had success with trout. The summer of 1890 made the forty-second successive year during which these three have camped and fished together. If Messrs. Barrows, Reed and Merrill are blessed with the vivid memories many anglers possess for incidents of their out-door life, they must indeed have a rare fund of incident and anecdote to rehearse to one another and live over again together in their chats about the camp-fire.

AN OHIO IDEA.—Dr. James A. Henshall, secretary of the Ohio Fish and Game Commission, is sending out a circular to farmers, sportsmen, fishermen and others, asking their opinion as to desirable close seasons for fish and game. He has prepared a list of the several species, giving the prevailing seasons as fixed by the present statutes, and asks those who receive the circular to write opposite each one the season during which it should be protected. In this way he hopes to get a concensus of opinion, which will make it possible to draft a law fairly reflecting public opinion. Persons interested, who may not receive the circular, may obtain copies by addressing Dr. Henshall, at 108 Broadway, Cincinnati.

PROFESSORS FORBES AND LINTON, whose exploration of the Yellowstone Park on behalf of the U. S. Fish Commission was mentioned in FOREST AND STREAM of July 31, have returned to their homes. They found greater wealth of invertebrates suitable for fish food on the plateau, now destitute of trout, than in the valley which contains native species. The streams cutting through the Cretaceous and Tertiary rocks are richer in aquatic insects, crustaceans, etc., than those penetrating the lavas of the lower elevations. Many new and interesting forms have been taken by these explorers, and there is no longer a doubt as to the feasibility of stocking the troutless waters with choice *Salmonidæ*.

SONG BIRDS have been more numerous and in greater variety in many localities this season than for many years before. If the bird hosts have been large it might be thought that there should be a corresponding decrease in insect hordes. But as a matter of fact, where there are the most birds there are also more than the usual supply of many species of insects.

THE NOTES ON THE WINNINISH in our angling columns to-day will be supplemented next week by a letter from Mr. Maxson with further details respecting the specimens referred to.

The Sportsman Tourist.

AT CLOSE QUARTERS.

A CANADIAN contributor, W. R. M., sends us this incident of a journey in the wilds:

The next morning at daylight, leaving our friends groping for gold in their mudhole, we tightened our knapsacks and compass in hand started through the woods in the direction of the settlement where we had left our horse. At noon we came out in an open glade, through which a large stream rushed, foaming to the sea. There we found an officer from the garrison at Halifax, accompanied by an Indian guide, busily engaged in whipping the stream. They had secured a fine basket of trout, some of them he assured us would weigh 3lbs. each. Wishing him good day we plunged into the woods. An hour's march through the dense undergrowth found us jaded and I plodded along in a sleepy way. Suddenly I was galvanized into life by hearing the savage bay of a hound, *Ow! Ow!* Nearer it came, until with a crashing of branches a large black bear sprang out into the trail in front of us. Startled at the sight of us he reared up on his hindlegs, a heavy trap dangling from one of his forefeet, and growled. One sight of his glistening teeth was enough, and Barron climbed up a tree with neatness and dispatch. Too frightened to follow his example I spasmodically brought the gun to my shoulder and poured a charge of small shot into the bear. This increased his rage and he plunged toward me. Turning to run I tripped and fell under a tree that had blown up by the roots. Seeing two stones on which it partly rested I crawled into the crevice, the bear making the dirt and bark fly in his efforts to get at me. I gave myself up for lost. After what seemed an eternity a noble hound came tearing through the brush. His appearance was followed by the crack of a rifle, and the bear, with a bullet through his head, plunged forward, throwing the dirt all over me in his dying struggles. The hunter, a fine looking Indian, assisted me out of the hole and without a smile gave directions that would bring us out near our team. I for one was glad to join it after two hours more hard travel.

CAMP LIFE ON THE MEDICINE.

"DINNER is ready!" That is a cry always attended to in camp.

And, behold us, seven hungry people, of all ages and both sexes, seated around the table covered with a clean red oilcloth, and beside each plate a Chinese napkin. This same table, by the way, is due to the constructiveness of our *chef* and is made of pine poles driven into the ground with crosspieces nailed on the top ends and covered with rough pine planks. The chairs around are made also on the ground by the same doughty hand and are formed on the camp-stool plan, only nailed together solidly with board backs and seats; and they are movable. Above stretches an awning, 18 or 20ft. long, covering the table and extending over the front of the largest tent—the dormitory of the matron of the establishment and her daughter M. She is the assistant *chef*, if indeed she is not entitled to the first place, for she is our baker. Off to the left a little distance, between two tall jack pines, is the fireplace, blazing and smoking away merrily. There is a huge pine back log cut from a fallen tree, where a little gopher has his domicile, and I regret to say, is gradually being dispossessed; and over two stout green sticks is laid a goodly pile of Norway poles and fat split pine. A hearth has been cut squarely in the black sandy turf of the slightly sloping spot, and over this, under the sticks, how the coals glow! Between the jack-pines has been nailed a strong green birch pole, and other smaller poles have been cut into hooks to hang pots and kettles over the fire. Reposing on some rocks is a Dutch oven, over which M. stoops and removes a crisp, flaky, just-browned-to-a-turn huckleberry pie; and now dinner will begin.

The *chef* has outdone himself to-day broiling and frying the brook trout, which by-the-by have been caught partly not a hundred yards away in Medicine Brook, running swift and clear as crystal, and cold as clear, under its fringe of alders and hazels at hand. See the crisp brown dainty, which the *chef* says weighed a pound and a half, as he took it all resplendent with its scarlet spots and vermilion fins, gay and gamy, from its cool, shadowy haunt in the brook! Surely no meat could be more delicious. There are blueberries cooked into sauce, and also uncooked, with all their delicate whity-blue bloom, in tin dishes on the table, and also red raspberry jam, much more highly flavored than any made from berries grown in gardens where the soil was richer and the air hotter and less pure. They grew on the hillside over the bridge, perhaps five minutes' walk out of camp, to be had for the picking. And M.'s fresh yeast bread, brewed and baked on the spot, eaten with the sauce of hunger which outdoor pine air gives in abundance, how good it is! See also her brown nutty fried cakes—ah! they are fit for the gods. Little Mark, of seven years of age, wishes he had the whole panful, or I can't read eyes.

To be sure, that same Dutch oven is as tricky as a mule, according to M.'s account. She says she can't calculate what it will do; and when she expects a neat brown crust, and puts her coals on top of the lid and rams them under the oven among the stones always the same way, it is just as likely to burn in little spots like smallpox pits as to behave properly. That is as regards pie, as Uncle Pumblechook might say. And she maintains that cake has the perversity of the evil one in it when that Dutch oven gets it. It either flobs over the edges in a hopeless gob, or rises in a burnt hill on one side, leaving the other sobby dough. And bread is much the same as cake, according to her. But I am bound to say all that seems to be in her eye largely; for to us superhungry mortals the most which comes from her hands is a toothsome success.

Then there are canned tomatoes and other tinned fare brought out with us, which makes our dinner something to be envied by the pale languid beings grilling in the nineties several hundred miles south, where we came from. When the dessert forks are dropped—we allow that much style along with the paper napkins as an innovation of our wild life along with the red squirrels, the chipmonk and gopher, the raven and the noisy jays, our camp neighbors—the table is in the identical condition Jack Sprat's was said to be. Nothing but empty dishes remain, yet everybody has had enough—even seven-year-old Mark and I arise heavily to go our several ways. To the matron and M. falls the duty of clearing up the feast and washing the dishes. Not a pretty task, for everything almost is blackened by the fat pine smoke—even our faces catch a share—and at last when the dish-pan is ready to be emptied, it looks more like ink than dish water, in spite of plenitudes of soap. But when the crock is washed from hands and wrists, and old kid gloves drawn on, we are ready to go blackberrying or blueberrying, for there are, as George says, "scads and oodles of them," and not far off. It is great fun to hunt the blueberries, which in many places are very large and the ground literally blue with them. Such a pretty fruit as it is, and so much prized by the people up here. They come long distances in wagons for them; and not many days pass in which some party does not go by our camp on the old military road passing near. The little red squirrels, too, hunt them; and often dispute your progress with much noisy chatter and scolding from some neighboring tree. Then too the whir of the partridge wings momentarily arrests you often, and I have counted nearly a dozen in a covey sometimes. They seem very tame, and will sit on a scrub oak limb quietly and look wonderingly at you. In fact all of the creatures up here—even the skunk, which nightly visits us, and we allow to go and come unchallenged—seem exceedingly tame and fearless.

We were told by a visitor that there are deer in these plains also, but none of us have spied them. There is so much life about though I do not doubt it in the least. One of our greatest luxuries is a copious spring, across the brook, but sufficiently near for convenience, its water being pure and soft and deliciously cool. Ice water would be a superfluity with such a spring accessible. The brook serves for cooking purposes, being nearer, and our washings are done on its grassy bank. We thought it quite sufficient for all purposes, and congratulated ourselves on the good fortune of having such cool pure water until the *chef*, who seems to be a perfect water witch about springs, discovered and dug out this one. Of course a rustic bridge of poles, usually called corduroy, was thrown over to facilitate reaching it. A few hundred yards away are very beautiful rapids and a miniature cataract.

It is delightful after dining, when the sun is hottest on our tents and over the almost treeless plains, to take a book or pen and paper and seek the deep shade cast by the Norways and tamaracks standing guard solemnly over the turmoil of these waters. I like to sit in the seat made beside the falls and look down its smooth, glassy, gliding plunge into the resounding chasm where it tumbles; or glance beyond over the headlong rush of the writhing rapids, winding under mossy cedar roots, over and around a miniature island, there to disappear in the "dim religious light," away who knows where? It is more than picturesque, this mossy dell between high wooded hillsides, with its many branching currents breaking into rapids here and there, and falling many times over granite rocks, so beautifully clear, yet breaking now and then into flour-like foam in the dim, cool, green-lighted shade; and through all and above all the soothing, full-voiced music of the waters.

M. and I took a walk lately when we discovered a lake. One of the advantages of our position is that we can safely take as long walks as we choose, not only with comfort but pleasure. On this occasion we followed the old military road to the north. Our progress was slow, for the golden rod was in such sunshiny profusion, the ox-eyed daisies and a small, pale, delicate wild sunflower so plentiful; the purple asters as thick as stars in November heavens; and there were so many scarlet berries glowing amid their green leaves on the ground—lovely crimson choke and sand cherries, and rose haws and other coral-like berries—how could two women help stopping to pick them? But the cool bracing wind thrilled us with energy like wine and literally compelled us to go on and "get the good of it." There is such a joy in a brisk walk against such a wind up here! You involuntarily fill your lungs with its pure deliciousness, throw out your chest and brace every muscle with the happy consciousness of life and motion. Away to our right, as we bowled along, we caught the gleam of broader water than little Medicine Brook and at once turned toward it. It proved to be quite a little lake and in it were myriads of beautiful white pond lilies. But alas! the sedgy margin forbade near approach and our beauties bloomed on untouched by us. What would we have given for a cluster of the odorous golden-centered bunches of snowy bloom!

We have ranged the plains from north to south for many miles, and while doing so shrunken muscles have filled out, pale cheeks have reddened with new blood, and sunburn, and eyes that looked sadly enough when they came, begin to glow with renewed vitality. And this is due in no small measure to those vigorous walks in the resinous pure air of these jack pine plains.

We have planned to make an excursion to the roaring falls of the Pesthigo River, five or six miles away. The three men of our party walked it not long ago, but M. and I must go with Van Keuren, the man who brought us out. The glowing accounts brought us of fine bold scenery and a fall of 60ft. have fired our imaginations, and we shall not be satisfied to "go out," as the phrase is here, without beholding it.

Our Chippewa and Pottowatomie neighbors, who camped a mile north of us, and who came so often singly or in pairs past camp, have gone, and I really miss the tinkling bells of their little ponies and the novelty of their brown faces. They were infinitely more picturesque and interesting, with always a dash of scarlet somewhere about their dress, than the squalid moss-backs of the country, who drag a miserable wagonload of women and tow-headed children along usually, and nearly always stall on the bit of bad road up the steep bank edging the plain above and beyond our camp.

I must not neglect to state that our little community is quite communal. There is a distinct division of duties, however, and each individual "goes at" and discharges his or her functions daily in an orderly and thorough manner. The *chef* fishes for trout, sometimes going miles and staying away for hours. I have before observed that the *chef* cooks his fish; and he frequently gets breakfast, making then most phenomenal flapjacks. Then, too, he partly prepares wood and brings up water. These, besides a general oversight, comprise his duties. G. loves to cut and bring in wood and helps M. bake, and both of us get dinner. It is the matron's part to see to the cosy beds and air the pillows and blankets, and she actually has a broom with which she keeps the sacred space set apart for domestic purposes clean of chips and trash. N. is general assistant in ordinary, and even little Mark goes to the spring for water and the butter and fish bucket. So, barring roughened hands and sunburned faces, we are a sight worth seeing in our little canvas hamlet, albeit our raiment might be fresher from the tailor and dressmaker, and perhaps the washerwoman also.

Before closing, let me state that we are in what is known as the Thunder River country, about fourteen miles west of Middle Inlet, an obscure station of the Milwaukee & Northern Railroad. From that point we were brought here by E. H. Van Keuren, who very plainly shows his Netherland origin both in looks and cleverness. He and his two good white horses take M. and me out next Thursday, and the canvas village by the brook will vanish. The skunk and the porcupine can enter in and possess the land they seem so much to covet; the silver-voiced wood thrush will whistle to silence in the dawn; the tents will have been folded, and some of us go forth in the wilderness to fish and hunt and some return to civilization.

AUGUST 17. MRS. M. E. BANTA.

TRAPPING DAYS.

IV.—THE PRESENTIMENT.

FOR a few years after the great massacre of 1862 the trapping grounds along the western plains of Minnesota and the eastern edge of Dakota were unoccupied by either race. Warlike expeditions of both whites and reds passed and repassed, but no one troubled the furred animals, and in consequence their numbers increased amazingly. When the writer joined the little band of venturesome trappers, who were beginning to encroach upon the debatable ground, the multitude of furred animals which swarmed everywhere along the shores of sloughs, lakes and streams, was a constant source of surprise; and the temptation to venture further and still further out into the wilderness, where the prow of the trapper's boat had never parted the wild rice or the rushes of the sloughs, was very great. As a consequence, while the fate of some was never known, others who returned in safety had adventures to relate, ranging all the way from laughable comedy to deepest tragedy.

One of my acquaintances, a tenderfoot from Pennsylvania, while trapping some twelve miles southeast of the big bend of the Des Moines River, found a silver watch on the prairie; and on looking around in the grass found a man's boot containing the bones of the leg and foot of the unfortunate wearer; and immediately the timid tenderfoot, taking alarm at the gruesome sight, bolted for home, and neither the entreaties nor the jeers of his partner were sufficient to move him again beyond the line of the settlements. Those who heard this story supposed that the victim of whom traces had thus been discovered must have been one Frost, a trapper who disappeared some years previously, and whose anxious partner, Friend, in a careful search for the missing man, found only his track in the sand of a lake shore alongside the moccasin track of an Indian who had evidently followed him.

A party of three trappers from Spirit Lake, Iowa, drove northwest to the east shore of Lake Okabena, and as night was approaching they stopped the team and began looking for a suitable camping ground for the night. As one of the party advanced some three hundred yards in front of the wagon, and neared the edge of a ravine, he heard just in front of him and apparently at the bottom of the ravine a low murmuring sound, as of human voices in low conversation, and knowing well that there were no white men ahead of his own party, he turned without standing upon the order of his going and hurried back to the wagon, where a few words of explanation fixed the attention of the whole party to the shortest route for home. As they turned the horses' heads toward home, all eyes were riveted upon the bank of the ravine behind, and the driver in his haste turned the horses around too quickly, the front wheel struck the scorch-iron of the wagon box, and one of the party who afterward related the adventure, remarked that he never heard so little a thing make so frightful a racket, adding that he could not have been worse scared had the savages really killed him. Immediately at the sound the head of an Indian appeared above the grass of the ridge next the ravine, and quickly disappeared. No further developments were waited for, but the frightened trappers retreated without drawing rein until the village was regained just before daylight. A party prepared for war returned next day in search of the Indians, but though their trail was followed for a long distance, at one point on which evidences were found that the savages had killed an elk but a few hours in advance of the coming of the party, all trace of the wretches was finally lost.

It may be asked why the trappers were not willing to meet the savages, man for man, on equal terms. To this it can be truthfully replied that they were, but that while the wants of the savage were bountifully supplied by the open hand of an entirely too generous Government, which enabled him to live in a state of luxury, of which before the coming of the white man he had no conception, the trapper belonged to the unfortunate race which, taxed to keep the Indians in idleness, was also obliged to provide for the wants of their own dependent ones; and at no time of his necessary daily toil in the pursuit of furred animals was he, or could he be, ready for war while loaded with the cares and the implements of necessary toil.

He was a man of too good sense to carry around with him the loaded revolver of the city rough and professional coward—the weapon which never did hit the right party—and his only weapons were the shotgun, used to kill furred animals, and his pocket knife used in skinning them. He understood perfectly that any wandering savage intent on murder, and armed with the gun issued to him by the United States Government, who should find one of his mink traps set on the shore of some lonely slough, had only to walk thirty yards to leeward of the trap and secret himself in the grass to get the easiest kind of a "drop" on him; and he went into such places in pursuit of necessary wealth for the same reason that the whaler braves the perils of the polar seas, and urged by the same motives that impel man, the creatures of wants and cares, to court danger and confront death everywhere.

When the writer first went out in search of trapping ground, in 1864, he traveled with an elder brother intent upon the same mission, and as all the country northwest of Spirit Lake, Iowa, was regarded as unsafe, and as small war parties of Sioux raided the frontier occasionally for

some years afterward, a sharp look-out was kept continually, and every precaution taken to prevent surprise. As did many others, we made a summer trip to examine the different localities and select a suitable trapping ground, in order that valuable time might not be wasted in such a search when the fur was "prime."

A preliminary trip, extending from the village to the shores of Graham Lake, thence southwest to Okabena and back, was made, and still we remained undecided and concluded to make another trip up the left bank of the Des Moines River, where at length, on the shores of Lost and Fish Lakes, the indications of fur seemed abundant enough to warrant us in selecting these lakes with their outlying sloughs as the scene of our coming toil; and well pleased with the outlook we camped for the night on the southeast shore of Fish Lake. While we planned for my brother to drive across the prairie to the eastward on the following morning to the town of Mankato, Min., for necessary supplies for the coming fall campaign, it was arranged that the writer should next day examine more thoroughly the scene of our future operations, and should leave abundant sign of our intention to claim the locality as a trapping ground, which would secure us from intrusion from others of the guild; and then camping alone on the river bank the following night he should proceed next day on foot back to the settlements.

It was a lovely evening, still and fair; and as the harvest moon slowly climbed the eastern sky the blankets were spread upon the grass a few rods distant from the wagon, while the horses, picketed near by, cropped the rich grass of the prairie, and all nature seemed breathed upon by the spirit of love and peace.

I remained seated by the camp-fire after my brother had retired to enjoy a smoke, and while seated alone in front of the cheerful blaze, I became gradually aware of a feeling of strange uneasiness and apprehension, for which I could find no warrant, and which seemed gradually to be deepening and growing more intense. Let me explain that I have not the slightest faith in nor sympathy for the whole vulgar trumpery of ghost or witchcraft business, and have no words emphatic enough to express my contempt for the whole wretched trash.

> Witch legends Ronald scorned; ghost, kelpie, wraith,
> And all the trumpery of vulgar faith!

Here, however, was a new sensation; a something so entirely different from anything ever before experienced that I was simply dazed; and rising to my feet I walked around the fire, glanced at the ponies peacefully gathering the green herbage and giving no indication of approaching danger, and finally, while still uneasy and utterly perplexed, I lay down by brother's side to sleep. Sleep was impossible. Rest I could not; and the thought of possible danger from wandering Sioux began to haunt me, although a moment's reflection upon the fact that we had just returned untroubled from an expedition to ground much nearer the Indian country, and far more exposed than the shore of the peaceful little lake on which we were now camped, seemed to render the suggestion an absurd one. Yet, still the possibility troubled me, and I reflected that while in accordance with my invariable custom when in the wilderness my own gun and ammunition were under the edge of my blanket, my brother's weapon lay in the wagon, while he himself believed in possible Sioux only when he saw them.

Ashamed to confess the growing apprehension which now fairly tortured me and forced me to address him, I shook him by the shoulder and asked him, "Where is your gun, Ike?"

"In the wagon," he sleepily answered.

"Why don't you put it under your bed and keep it dry? You'll want to shoot a duck or goose in the morning and your gun won't go because the cap is wet with dew. Go and get it and keep it by you."

"Let the gun alone," he rejoined crossly.

"Look here, Isaac," I persisted, "if you don't get your gun I will."

"What is the matter with you?" he answered, raising himself up on one elbow and staring into my face. "If you must have the gun here before you are satisfied, I suppose I can get it," he continued, rising up and getting the gun, which he placed under the edge of his blanket and again lay down to sleep.

Again I tried to compose myself to rest and still I found sleep impossible, while the feeling of dread of impending and nameless evil lessened not at all; and again I rose and scattered the brands of our decaying camp-fire, and tramped into the blackness of darkness the last spark of light.

Once more I retired to my bed, and soon the strange sensation lessened and passed gradually away, and was followed by the peaceful sleep enjoyed by the lover of the open air; and the morning dawned sweetly upon the silent prairie. After breakfast my brother departed for Mankato, and I wandered over the ground making the necessary signs; and camping alone on the river next night, walked down to the settlements the day following, wondering continually what could have caused the strange uneasiness, the like of which had never before (and has never since) agitated me.

Reaching the house of a friend, the first news I heard was the tale of blood just received from the settlements on Elm Creek (of which Fish Lake is the source), of the depredations of a war party of Sioux in search of scalps and horses, and which, on the very night of my troubled slumber on the shore of the lonely lake, had passed us by, and appeared next morning at the Elm Creek settlement, where a man and boy were murdered and several horses taken, which were never recovered.

My brother, returning from Mankato, told me that he had gone only about a mile after leaving me, when he came into a trail in the heavy dew, which came from the direction of the north shore of the lake upon which we had been encamped; and as it went in his direction he followed it for some miles before reaching the Mankato road, where he turned off more to the northward, and not until he had followed it for quite a distance did he find out what made it. Growing thirsty, he stopped at a small lake to get a drink, when he noticed that one of the party in front of him had at this point turned off on the same errand, and in the soft ground of the lake shore the small moccasin track was plainly seen, as was also the print of his hands and kees in the mud where he had kneeled to drink.

Whether or no the stamping out of the last embers of our camp-fire secured the slumberers of the lonely camp from the gaze of murderous eyes, I know not. One thing I know, that the sensation of that night, if ever again repeated, will not be suffered to pass unheeded.

Natural History.

BREEDING HABITS OF DARTERS.

Occasional Observations on the Fishes in the Aquaria of the U. S. Fish Commission.

DURING April and May a number of spawnings of the "tessellated" darter (*Boleosoma olmstedi*) and the rainbow darter (*Pœcilichthys cœruleus*) were observed. The eggs of the tessellated darter were deposited on the under surface of stones, or on the sides of them, where one leaned against the sides or back of the aquarium, or against another stone. The eggs were deposited in a single irregular layer over an area of about one by three inches. They were about the size and appearance, and were deposited in the same manner, as those of the common sunfish. The great activity and the brilliant coloration of the male, which is perhaps one of the most sober-hued of the darter family ordinarily, differing but little from the female, were very conspicuous.

The spawning was effected by passing up and down over the surface chosen until all the eggs were extruded and adhering to the stone. They undoubtedly pair, for although all the males would be in a state of great excitement and would endeavor to join in the operation they were invariably driven away by the successful male, who would dart at them furiously, with open mouth and fins quivering with excitement, the color increasing in intensity. The male guards the eggs during incubation, retaining the brilliant color until that duty is over. During this period his vigilance is incessant and every fish is driven from the vicinity of the nest.

The markings on the fins become at this period, on the males, very bright and distinct, and add more to its ornamental appearance than the brighter colorations do to other species. The nuptial coloration is a mingling of delicate and indefinable shades of blue and green, with bronze and iridescent effects, which, with the striking effect produced by the markings, make it at this time perhaps as beautiful as any of the family, if not so gorgeously colored.

The rainbow-darter, also called "blue darter," "soldier-fish," etc., is probably not found east of the Allegheny Mountains. It is one of the most highly colored species of the family. The prominent colors are red, yellow, orange, blue and green, arranged in conspicuous patches or regular patterns of the most striking character. These fish in the aquaria are from the vicinity of Cincinnati, Ohio, and Neosho, Mo., and correspond perfectly in color. They do not, however, wholly correspond with Jordan and Gilbert's description in Bulletin 16 of the U. S. National Museum, although more so than to any other species there described. Unless of another species it would indicate a very considerable degree of variability in the coloration. Jordan and Gilberts's color description is as follows: Males olivaceous, tessellated above, the spots running together into blotches; back without black lengthwise stripes, sides with about 12 indigo-blue bars running obliquely downwards and backwards, most distinct behind, separated by bright orange inter-spaces; caudal fin deep orange, edged with bright blue; anal fin orange, with deep blue in front and behind; soft dorsal chiefly orange, blue at base and tip; spinous dorsal crimson at base, then orange, with blue edgings; ventrals deep indigo; cheeks blue, throat and breast orange.

The specimens herein described differ considerably from this description in color, viz: Spinous dorsal, lower half deep brick red with a line of lemon color arranged in a series of arches on the membrane just above the back; a lemon-color line also at the upper margin of the dark brick red arranged in reverse order to the lower one; that is, with the concavity upward, the upper half of the fin being a very deep indigo blue. Soft dorsal an artistically arranged pattern of green, blue, yellow and light brick red, difficult to describe. Ventral and anal fins with broad band of pale blue (becoming deeper at times of greatest excitement) at base and tips, with broad central band of deepest indigo blue; pectoral fins transparent, yellow at base; caudal transparent, bordered with dusky and pale blue; a blue blotch across the nape; breast with small orange spot; a lemon-yellow dash around the throat. This species is more addicted to perching about on plants near the top of the water and its movements are very birdlike. In spawning frequently a place would be apparently selected among plants for the purpose, to which they would invariably return after chasing about the aquarium for some time. As with the tessellated darter, there was undoubtedly a mating, although usually two or three other males would be hovering near and frequently making rushes to join the female, in which they were invariably defeated and driven away by the chosen male. At times the spawning would take place among the pebbles on the bottom of the tank, the female dragging herself along in a quivering manner, the male pressing closely alongside of her, and other males following closely in the rear evidently bent on assisting in the fertilization of the eggs. All the fish not actually engaged in the spawning were evidently in a state of great excitement, and followed after, eating the eggs as fast as they were deposited. As the tessellated darters were much the larger the eggs could hardly have been protected from them, although many smaller fish, notably the four-spined stickleback, under like circumstances would attack anything without regard to size. It is probable that in a wholly natural condition the eggs are deposited on the under or protected sides of stones, where they would be more easily guarded. In fact in some cases the females would remove the sand from beneath a part of small stones on the bottom, and would remain ensconsed in the shelter thus made, but no spawning was observed in such situations by this species, the preference appearing to be for the denser masses of plants, high up, or among the pebbles on the bottom. That of the tessellated darter was wholly on the protected sides of stones, but their presence in the same tank may have interfered with the natural habits of the others.

The quick, jerky, energetic, climbing and darting movements of both species are much like those of squirrels, or of the nut-hatches.

BUFFALO CROSS BREEDS.—Oxford, Neb., Sept. 8.—*Editor Forest and Stream:* Gustave Cole, a ranchman who lives near this place, has four buffaloes in domestication. He has also one half-breed calf, dropped last spring, by a domestic cow. Cole has crossed the buffalo bull on 13 of his cows, in the last three years, but 12 of them died before calving. This must be owing to some individual characteristic of Cole's bull, for, if my memory serves me correctly, both Mr. Jones, of Garden City, Kan., and Mr. Bedson, of Manitoba, have been succesful in producing half-breeds from domestic cows. Am I not right?—G. O. SHIELDS. [Mr. Jones has successfully bred such crosses.]

SNAKE BITE.—Suncook, N. H., Sept. 3.—In late copies of your paper quite a number of correspondents have had their say in regard to a remedy for snake bite. The writer goes barefooted in the swamps and timber on fishing or hunting excursions, and in this way named protects his life from the venomous stings of snakes: He takes the cast-off skin of the rattlesnake or black snake and places the same in a little bag with some common soap, then washes himself all over, using the bag as a sponge. It acts as a vaccination against the poison and must be done yearly to secure full immunity against their poisonous fangs.—H. W.

Game Bag and Gun.

CARPENTER'S CAMP.

COLD, gray, bare Elk Creek Mountain stands a lonely sentinel in the heart of the great wilderness of central Colorado. Only the professional hunter has scaled its rugged sides or explored its black cañons. From afar the tie-choppers have seen it and have planned a trip for elk and deer before they commenced to float. But the journey has always been too long and the time too short. In the clefts of the rocks the snow lies deep and as it melts little streams trickle down through the mountain mahoganies, the piñon pines and the spruces. The rills unite. Here is Elk Creek, wild, pathless, and Soap Creek, along which winds the almost-forgetten Leadville trail, and here is that beautiful brook, unseen, unheard, unknown, save as it makes its last leap—graceful Chipeta Falls.

Under the spruces, under the willows, where the mimulus, the smilacina, the larkspur nod to the smiling waters, the Rio Grande trout, black-spotted and lithe, plays with his cousin *Salvelinus fontinalis*, the latter already becoming abundant in the waters where it has been introduced. Down the creek they swim into the deep, dashing Gunnison, swim and find the world too large, their cousins, the Utah trout, too fierce. So they return to the icy waters of the mountains. And the Utah trout chases the minnows and its smaller relatives, hunts helgramites and leaps at flies, swims down the Gunnison until that stream meets the Grand and then turns back. It, too, has a larger, a red-throated, cousin that here is called the salmon.

I am high up on Elk Creek Mountain, looking away to the south and west, and I follow the waters, though I see them not, for hundreds of miles through meadows and cañons to the muddy Colorado, and, as I close my eyes, I can see yet more. I can see through that mighty chasm that the river has cut for itself beyond the hot, barren plains of Yuma, past Guymar with its feverish swamps and Mazatlan with its silvery, Spanish chimes, out to the broad, purple Pacific. In fact, I rather believe that my astral body, that should have been locating bighorns or grizzlies while I slept, went wool-gathering amid the limes, the citrons and the orchids of the Spanish main. Is not that the way with all of us who love the rod and gun? Is it not the first premonition that we are growing old that we dream of that which is behind us? We anticipate, to be sure we do, but we realize that nothing can quite equal the pleasures of last year, of a decade, of a score of years ago. We live again our former lives, but without the hardships, the pains, the bitterness that they knew, and I am inclined to think that the sweetest part of life is that in which we travel to the sunset land.

All this by way of reverie while I wait for the sheep that are above, the elk that are below or the silver-tip that may be just the other side of that rock. Old! Who said anything about growing old? One breath of such air and I am good for miles of mountain climbing. Dim-eyed! I can see from the mountain of the Holy Cross far beyond the Ouray cliffs. For five hours I have been climbing. The rest of the party are somewhere about the mountain. Every moment I expect to hear the crack of a rifle. While I wait I would sleep, but I cannot. I can only doze. This icy mountain air beats upon me. Mountain air is never still.

How came we here? This takes me to the point from which I should have started. Last evening, as the new moon went below the hill, I was smoking the peace-pipe with Jack Carpenter. Jack is several years my junior, and thinks that what he does not know about trout fishing is not worth knowing. We had been together for two hours just before supper, he using fish eyes for bait and a bob, while I stuck to coachman and grizzly-king. Seeing that he was out of luck, I offered him the use of another outfit that I had left at the house, and as he mumbled his thanks I caught a word that sounded very much like "damphoolishness." Thereupon a slight coolness arose between us, which was not assuaged by my taking home eleven red-throated trout while he had but two to his credit. We were smoking when there was the clatter of hoofs down the Soap Creek trail, the splash at the ford, the stop to open the only gate on the ranch, and Jack's paternal was before us. He threw the loosened McCarty to his hopeful and made use of a few choice expressions known only to the vocabulary of a Western mountaineer. We knew that something was up and his deliberation was tantalizing. But patience had its own reward. The hunting knife came from his boot, the Climax from his hip pocket. Seating himself on a nail keg he thus began:

"Durn my skin, if this ain't the wust luck yit."

"So, pap?" said Jack, utterly forgetful of the buckskin mare.

"Thar's tew colts dead up to the head o' the cre-uck. Some blanked mounta-ain lion's killed 'em, an' one ain't been dead more'n tew hours."

"So, pap?"

"Shet up, dum ye. An' thar's six or seven ka-ows an' heifers layin' up thar; been eatin' that ar blue weed what the man last summer called h-h—. Gol durned hard luck, stranger, durned hard luck."

"Ya'as, Jeems, pretty tough on yer, but it's nuthin' to what yer mam an' me went thru' nigh on to forty years ago." The voice was that of the patriarch of the family. He had come to the door to get full particulars and to encourage his son to bear up under the weighty misfortune.

"Ef I could git up to Gunnison and git some strychnine I'd hev a lot of bar scalps and hides, but pizen ain't no good fur lions."

"So, pap!" This time the kid wanted to corroborate.

"Shet up, you lazy whelp. I'll break every bone in your —— —— ——." But the boy and the mare were making tracks for the corral, and before Jack returned, the Carpenters and I had made our plans for a hunt and trap for three or four days. I had come for trout and to me this was an unexpected pleasure, as I had not had a rifle in my hand for three years.

The Carpenters were born hunters. Half a century ago the old man hunted the black bear in the mountains of North Carolina. Thirty-five years ago, with his wife and the then youthful Jeems, he journeyed across the plains to Utah and embraced the Mormon faith. He intended to settle down on a little farm and raise hops, alfalfa and potatoes, go to meeting on Sundays and pay his tithing. But what was innate could not be entirely eradicated, so after a few years Jeems married, Mary Ann died and the old man gave his farm to the boy, shouldered his rifle and lived a life of solitude and strange adventure. Then Jack was born and Jeems began to desert his home and take long trips into the mountains, returning with plenty of pelts and hides, which when converted into shining double eagles, burned big holes in his pockets. The old man, they always called him "Pap," and I don't know that he had any other name, built a cabin on Soap Creek, and when the railroad was built Jeems and his wife joined him. The three men pretended to raise a little corn for the stock. The summers were so short and they planted it so late that it was always used for green fodder. The lonely woman did the housework and looked after the little vegetable patch, so different from the beautiful gardens she had known in Utah Valley. Jack should have helped her, but when he was not fishing he was up the creek after deer. Long after I wrapped my blankets about me and lay down in the haystack I nursed the strange stories that "Pap" had told and—

"Git up, you lazy cusses. Mam's done got breakfust nigh cooked an' you uns aint got life enough to git aout o' the sun."

Jeems was stretching matters a little, as it was yet gray dawn and "powerful" cold. But we were dressed in less time than it takes to tell it. Mrs. Carpenter's coffee and flapjacks were duly appreciated. The packing was a longer job. We took six horses. Three of them were pack animals, and poor Jack, being the youngest and toughest of the bipeds, had to walk. He might have had a pack saddle, but if his early experience was anything like mine any other locomotion would be preferable. The old man, in spite of his five-and-sixty years, was the most enthusiastic of the party and assured us that he was quite a boy again.

At 6 o'clock we started for the head of the creek, Jeems leading, I second, the old man next and Jack with the pack-train bringing up the rear. Slowly we wound across the pasture lot, as stony as any New England hillside, out into the natural meadow where the grasses were browning under the August sun, up into the narrow cañon. The trail was rough. It was never more than 10yds. from the brook. Sometimes it was fringed with willows, and our steeds would stumble over the holes of skunks, muskrats and similar varmint. Again it was among the aspens, and we saw where some brave stag last night had made his bed, and now we went under the cold dark spruces, and the black walls of rock on either side made it seem as though we had stepped both into winter and into night. The air was oppressively still, but the brook laughed on and the tops of the spruces reached away into the sunlight, and up there we could hear the squirrels chattering one to the other. About our feet were mouldy decaying logs, and there were bones of animals that had died by the sparkling water long before the white man invaded the primeval solitude. Side by side lay the cast-off antlers of the wapiti and the skull of the bear, and over and about them twined the purple vetch, and the bleaching skeletons were veiled in long-plumed clematis, and from the rotten logs soft mosses and more delicate lichens drew their life.

Thus far we had seen no animal life excepting a few song birds and the white tail of a hare that considerately got out of the way and allowed us to pass. But now I cast my eye up and on a brown limb, about 20ft. from the ground, sat a brown bird. I recognized the solitary male in an instant and wondered what he was doing in such a position at this time of day and season of the year. Still I did not study long. I had the only shotgun in the party, so I dismounted and handed the reins to the old man. An instant afterward there was a shot, and flash of feathers and a thud. The squirrels set up a chattering that must have been heard a mile. As usual Jack forgot his duties and ran forward to pick up the game which lay at my feet. "Humph!" said he, "it's nothing but one o' them ar brown sage hens."

"It's a typical dusky grouse," said I, but Jack was running frantically down the trail to stop one of his equine charges. As we rode along, he astride of the bedding, for his unusual exertions had been too much for him, I enlightened him as to the distinguishing marks of *Centrocercus* and *Dendragapus*. I am afraid my lesson was wasted, for, as I passed forward, I heard something about folks that are "too gol darned smart to call things by their right names."

At 9 o'clock we had come 14 miles. It had been a hard ride, but the hardest was yet before us. The cañon opened into a little park. There was an old beaver dam at this point and I begged for an hour's rest, upon which I knew Jeems had already determined. Packs were laid upon the ground, cinches loosened and we had an opportunity to stretch ourselves. Jeems said we were going too high up for fishing. Nevertheless I had put a few Nos. 8 and 6 hooks and a line in my pocket. A willow sapling and a grasshopper completed the outfit. The water was low and clear. Peering through the bushes I could see half a dozen little trout sunning themselves. The sapling stretched out over the stream. The grasshopper fluttered slowly toward the water. It never touched it. There was a flash, a splash, and an 8in. specimen lay quivering on the bank. Seven of his companions were strung beside him, when a shout gave notice that the cavalcade was ready to continue their peregrinations. The party supposed that I was sleeping and my trophies were greeted with a shout. Dinner was secured. For supper we must depend upon our rifles.

Oh, the misery of that two hours' climb! The cañon narrowed. The trees were left below, and there was nothing but the bare rocks and the water that separated them. We made our way up to the mesa and then beneath the hot sun, amid sage brush and scrub oaks, we straggled on, making a beeline for the peak, while the stream took a wide detour. At length it was over. We saw the green cañon line bending in our direction. Then we saw the opening where the poison larkspur grew and the slaughtered colt. The wind came from the snow banks. Elk Creek Mountain was above. The little brook was scarcely a yard wide. Under the pines we stopped, threw ourselves on the ground, drank long and deep of the icy waters, and then made camp. This was not a difficult task as the cabin was already built and provided with cooking utensils. The Carpenters used it on their hunting expeditions and on the annual "round up," though in this region they gathered in no other horses and cattle than their own. We knew our parts. Jack looked after the horses and transferred their loads to the cabin, Pap cleaned the fish and grouse, Jeems made the bread, while I built the fire, and manipulated the frying pan and coffee pot. Jack thought he was having an easy time, but the hour of retribution came after dinner, when I flatly declared that the dishes and utensils must be washed or I wouldn't eat another meal in camp, and Master Jack was unwillingly set to work. Then the three men started to build a bear trap, and I took my rifle and wandered up and around the mountain, out of sight and sound of my companions. So, by a circuitous route, as old Cæsar would say, I reached the spot at which I commenced this story.

There is a mystic subtle spell about these magnificent mountain distances that the dwellers by the seashore cannot appreciate. The foreground and its detail are lost to view, and there is a succession of heaped-up rolling of billows that spread away a hundred miles or more, green, gray, purple and blue, earth and skyline lost in space. How restful it is! I do not know how I took my eyes from the scene before me and looked down into the cañon below. A slowly moving streak of tawny gray arrested my attention. It was not more than 75yds. away, a *Lynx maculatus*, bent upon some death-dealing errand, for it crawled and crouched and now and again lifted its head to scent its quarry. My rifle was brought to bear upon it, but I would give it another 50yds. It stopped. The great tail switched nervously; the body trembled. I saw nothing but the great cat. There was a parting of the sarvice berries. A doe and half-grown fawn were on their feet and bounding up the opposite bank. The lion sprang. It would have been a moment's job for him to have caught them, but as he leaped I fired, aiming sufficiently high, as I thought, to catch him in mid-air. I was so interested in waiting to see his second leap that I forgot the deer until it was too late to secure them. The second jump was a long time coming, and I was about ready to descend from my shelf, when there was the most unearthly yowling and spitting down in the bushes. That beast acted exactly like a domestic cat in a fit. By and by he cooled down a little and walked this way and that in a most defiant manner, as though trying to find out what struck him. Fortunately he never learned, for as he stood there with his broad side to the mountain, sniffing and irresolute, a little less than 300 grains of lead got inside of his ribs and he dropped in his tracks. When I felt certain that he was quite dead I examined his head and found that the first ball had struck the base of the skull and glanced forward to the ear. It must have produced a temporary paralysis.

The Carpenters took no notice of my shots, so I wandered back to camp in a most exalted frame of mind and related the exploit. Jack thought that no one but a "tenderfoot" would have lost the deer; but I cared nothing for his insinuations. However, he was willing enough to go with me and secure the fur and head. Jeems was overjoyed, and declared that I might live with him a month and he would never charge me a cent for board.

But time was getting late. The sun was sloping to the west and venison must be procured; so the old man and Jeems started in one direction, while Jack and I took a pack horse and also our rifles and went back for the spoils of war. The horse snorted and plunged a little as he came to the carcass, but that was all we had for excitement. When once more at the hut, I stretched the skin and then made the fire and prepared to welcome the wanderers.

My hands were in the dough and Jack was watering the live stock, when a shot close by made me look up. There they were on the hill not a quarter of a mile away. The old man was coolly recharging the muzzleloader that he would not exchange for the finest express ever made, and Jeems was jumping down into a little arroya, from which he threw up the carcass of a yearling buck. It took but a minute to dress it and each bore a hind-quarter into camp.

We thought of dragging the remainder of the deer to where the dead cattle lay, but unless we dragged it along the trail that the bears were accustomed to take it would do no good. We were afterward glad that we let it alone. While I had been out on my lion hunt my partners had arranged a place of concealment near the cattle, and the bears were sure to be around between 8 and 10 o'clock. After supper we went to the ambuscade, and before dark I had a pretty fair idea of the ground. The cattle had come down to drink and had eaten the larkspur that is so common on moist uplands. Then they had wandered back toward the mesa, and as they reached the open and began to climb their strength failed. They were from thirty to fifty yards from the water, and two clumps of willows near the brook had been chosen as our posts. A little mound had been thrown up behind which two of us could lie, and if bruin charged he would probably go clear over us and into the water. The wind was in our favor. Each party could view the entire field. We had upward shots, and, as the ground about the cattle and along the bears' trail to the mountain had not been walked over, we believed that the whole family would come to the feast. Jack and his grandsire lay behind one bush, Jeems and I behind the other. We hardly dared whisper to each other, much less smoke; so I silently borrowed a mouthful of Climax. As I am not a chewist, it had the effect of producing a profuse perspiration and of keeping me quiet for at least an hour.

It was late twilight. In a couple of hours the moon would be gone. The only sounds were the rippling of the brook and the sigh of the night hawk. Jeems poked me with his elbow and laid his ear to the ground. There was a slow, heavy tread not over a quarter of a mile away. We got up and peered between the willows out upon the sidehill where the moonlight fell. There was a crackling of the sage brush, a sniffing of the air and a dark object came into view about 100yds. away. The other party had been warned to let the first shot come from us, and Jeems determined to await developments. Bear No. 1 advanced without hesitation to the first carcass, nosed it a little, and then made a critical inspection of the field, finally selecting his meat and commencing to eat. We would have fired, but, before he lay down to his task No. 2 appeared on the scene. We took them for young cinnamon. No. 1 growled and bristled up for a fight, and for a moment it seemed as though there would be a scrimmage, but No. 2 knew his rival and did not provoke him. He selected a carcass some distance away, and after taking a great bite would stand up for a second and look at No. 1, who, all unconcerned, was gorging himself at a great rate. He quartered toward us.

"Now is your chance," whispered Jeems. It was probable that Pap and Jack already had their rifles trained on No. 2 and were only waiting for us to give the signal. Jeems was ready in case my trembling hand failed to make a proper hit. He did not shoot. Bruin was only 40yds. away, and when he received the ball he just rose on his haunches, turned his head toward us and fell back. No. 2 started and evidently had made up his mind to emigrate, but a reminder from Jack, that broke his fore shoulder, induced him to hunt the cause of the disturbance. I wanted Jeems to settle his case, but my partner declared that bruin was "Pap's meat," so I was not surprised to see the old man step from cover, draw the angry brute's attention, and give him a good center shot that laid him out if it did not result in instant death.

Still they waited. I did not believe that we would see any more bears, but Jeems said that in the short hours before the moon sank we might get one that had not been alarmed by the shooting. I was woefully sleepy, and was dozing when there was another nudge in the side. I started to speak, when a sharp "hist" brought me to my senses. From the sage-brush came a crackling that indicated more than a single bear. The moon was just disappearing, and in another five minutes there would be nothing but starlight, which is not very satisfactory in a cañon. A great big hog came shuffling and grumbling into the foreground. No! It was a she-bear, and behind her were two lively cubs. We would not wait an instant longer than was necessary for this shot. What? Sure as fate she sees or smells the dead bear! Up the hill she turns and the cubs run squealing beside her. Crack! Crack! Pap and Jack have stopped her. Crack! Jeems drops one of the cubs, but this arouses all the fire in the mother. She is sore hit, but she saw the last flash and she makes for our cover. I blaze away but overshoot. Pop! pop! pop! Jeems is pumping lead over and about her as fast as he can work the lever, but all to no purpose. Jeems stands up. He cannot see her but he knows that she will be here in an instant. Crash? snap! The willows break like straws. A pair of angry eyes are on a level with ours. The hot breath is in our faces. Bang! Jeems jumps to one side, I took the other, but not in time to save my ankle from a horrible wrench as I pulled it away from the prostrate body of our dead foe. The second cub must have been uninjured, for we heard it making tracks for the mountains, and nothing but pitch darkness prevented our settiug out for him.

"Forty dollars bounty money, fifty dollars for hides, a lion and plenty of meat ain't such a bad day's work," quoth Jeems as we rolled ourselves in our blankets and lay down to pleasant dreams.

Any man who goes into the mountains to rest and there joins a hunting expedition will do considerable sleeping after he returns to his accustomed avocation. There is a strain of nervous excitement and of actual physical endurance that renders an extraordinary amount of sleep necessary, and yet four or five hours is all that the hunter can take. In fact I was inclined to grumble against Providence, as I was routed out a little after 4 o'clock the next morning and found a shimmer of ice over all the standing water and icicles on the twigs that overhung the brook. The plan was to get an elk or two at daybreak. The Carpenters had not yet begun to cure their winter supply of meat and they were the providers for the two nearest section houses and for a small settlement on the railroad. Pap was to stay in camp and have breakfast ready on our return.

Our route took us to where the deer was killed on the previous evening, and here we stopped, for the carcass was gone. It had been dragged away and we thought no more of elk hunting. The lion must have a lair near by or it would have cached what it did not eat instead of making a hard drag over the rocks. It would sleep during the greater part of the day, and would be especially sluggish when the sun first grew warm. Back to camp we went for breakfast and to hold a council of war and took the old man by surprise. However, we all turned in, and in twenty minutes were discussing the campaign over coffee and venison.

We might have made good use of a dog, but any of the Carpenters could follow a trail with the ease and accuracy of an Indian. It seemed likely that the lion had taken his meat into a split rock, as we knew of no cavern in the immediate vicinity. Therefore, two of us were to follow the trail and the others were to go round the head of the cañon, being guided in their movements by signals from below.

The scheme worked to perfection. Pap trailed the cunning feline as far as he could and then signalled Jeems, who peered over the edge of the crevice and saw, 50ft. below him, the lion sleeping beside the forequarters of a deer. It was an easy matter to take the great brute in the neck, severing the cervical vertebræ. Death was instantaneous.

Then the carcass was dragged out and skinned, and the remainder of the morning was devoted to skinning the bears and treating the hides to saltpetre. Two Newhouse traps, with log drags, were then set and baited, and hard work was over until the following morning.

After dinner the Carpenter crowd started on horseback

to look after their cattle. They took their rifles and expected to bring back some big game. I cut a willow and wandered down the brook for a mile or more. Here the stream meandered through a grassy little meadow, and the trout I caught were nothing but fingerlings. It reminded me of some fishing I once had on the South Williamstown side of old Graylock. That was before I had made the acquaintance of lancewood or split bamboo. I had fair success until a mink splashed into the water and swam past. On the homeward trip, while walking through some high grass, I had the misfortune to step into a big hole, and the result was a painful sprain. Getting back to the cabin was the hardest work I have done for many a day, and about six o'clock the rest of the party came in with two deer. They had seen no elk signs and thought that it would be impossible to secure any on this trip.

After supper, as we sat in front of the cabin, the head of a bighorn appeared on the opposite cliff. Jack was for stalking it, and then you ought to have heard the old man read the riot act. He knew from practical experience how fast the game was disappearing, and any needless slaughter or law breaking was, in his eyes, an unpardonable sin.

The following morning one of the traps was gone. I was too lame to accompany the party that followed the trail of the log, but before they could have marched more than half a mile, I heard eight shots fired in rapid succession. They brought back the hide of a silver-tip. This ended the hunting of the expedition. Five bear and two lion skins, with plenty of bear meat and venison, was packed down to the Gunnison, and my hunting trip was over. SHOSHONE.

MASSACHUSETTS GAME INTERESTS.

BOSTON, Mass. Sept. 12.—*Editor Forest and Stream:* At the first meeting of the Massachusetts Fish and Game Protective Association Vice Pres. Benj. C. Clark presided. The meeting was held at Young's Hotel, Boston, Thursday evening, Sept. 11. The open season on woodcock, quail and partridge begins on Sept. 15. Special action was taken to prevent any killing of these birds before that date, and as the association has gone to a good deal of expense and labor in restocking the State, it is hoped that the birds will not be disturbed until it is lawful to hunt them, thereby giving them all the chance possible to grow and increase, and encourage the association to continue its work of increasing our game birds.

Letters were read from the Mayor and several prominent citizens of Lynn, saying that if the association, when it receives its next shipment of birds, would furnish them a quantity of quail, pinnated grouse, sharp-tailed grouse and wild turkeys, they would plant them in the public park, of about 1,500 acres, in that city and provide a warden to protect them. This the association propose to do as soon as the birds can be procured.

Large numbers of these birds will be imported and distributed throughout the State as soon as the proper season arrives so they can be obtained.

Wild turkeys, which years ago were found in considerable numbers in the western part of Massachusetts, but which now are never seen, will be procured, as many as possible, and it is hoped that in a few years they will figure as one of the principal birds of the State.

The following gentlemen were elected members: Messrs. Sydney Harwood, M. W. Davidson, Holman K. Wheeler, Frederick S. Hodges and Percival Manchester.

RICHARD O. HARDING, Sec'y.

ADIRONDACK DEER HOUNDING.

Editor Forest and Stream:

In your issue of Aug. 28 is an article from a Washington, D. C., correspondent ("A. T."), which deserves, I think, more than a passing notice. It should be sustained and approved by every conscientious sportsman in the country to-day. His communication relates to the reprehensible practice of water-killing deer, and was brought out by his reading a description of deer slaughtering by a party in the Adirondack, which appeared in your issue of Aug. 7.

"A. T.'s" protest is timely and admirable, but to my thinking he does not cover all the ground. He says: "The season for hounding deer in the Adirondacks is rapidly approaching, and it is sad to think that men, otherwise human, should feel any degree of pleasure in taking the life of an animal whose legs are practically tied."

The laws of the State of New York permit the hounding of deer in the Adirondacks during a certain season, and many would-be sportsmen take advantage of it to the extent of slaughtering deer, which their lack of skill and patience would never bring to them in any other way. Now, the method is disreputable enough when pursued under the sanction of the law; but what can be said of those who openly do it in the close season? What stigma is too bad to apply to them?

From July 1 to 18 last I was located at a grand hotel on one of the St. Regis lakes, Franklin county, N. Y. This house was not one which a sportsman of ordinary means would be apt to visit. Not much. But it was filled with "money kings" and their families from all the States (New Yorkers predominating), and, Mr. Editor, though it shames me to write it, there was scarcely a pleasant night while I was in that house that I was not roused from my sleep by the "baying of hounds" and the crack of Winchesters. Was the law being violated, do you ask? Well, if I wanted further proof, I found it in meeting with the entrails of deer floating about the lakes during the day when I was out. It fairly made my blood boil with indignation to think of it.

This grand hotel and the camps about the three lakes represent a large part of the wealth, brains and political influence of the State of New York; how easy it would be for these men, if they chose, to stop this nefarious business.

But during my stay, to my knowledge, not a voice was raised against it, not a protest recorded. Why? Simply because I believe the wealthy are the most persistent law breakers in this direction. How very quickly a poor devil would be hunted down for such an infraction of the law.

In marked contrast to this, I call to my mind a snug little nook in northern New Hampshire where, on the Dead Diamond, Amasa Ward has established his camp. Owing to the conservative methods insisted upon by Amasa, deer have rapidly increased there in the last few years, and this season are more plenty than ever. No hounds for "Old Injun," and none would be tolerated an instant on his territory. Last October I visited him for the purpose of bagging my initial buck. I arrived in camp at a most inopportune time, the country had been deluged with rain for four days, the river was high, and the deer had retreated to the most inaccessible places. For six days Amasa and myself were indefatigable in our efforts, but no "nine-pronged antlers" rewarded our patience, and I was obliged to return without the much sought for trophy. And yet, I had a great deal more honest enthusiasm to express about that trip than I would if we had hounded a buck to water every day. J. W. B.

SOUTHBORO, Mass., Sept. 8.

CHICAGO AND THE WEST.

CHICAGO, Sept. 13.—Look out for Monday. It is opening day. Such of the chickens as have not already suffered will have to suffer now. The daily papers have all published their more or less glaring inconsisties. The *Tribune* of Aug. 28 in an interview with "a prominent sportsman" publishes the interesting news that Indiana is the only State in the Union that has no game law, and where a man can take his gun and go out and shoot anything he likes to; but even this grave and reverend authority falls into line to-morrow morning and will have a timely article on opening day. Thus history lingers with us.

Messrs. John Gillespie, Charlie Willard and Charlie Wilcox start to-night for Fox Lake for a little early air. Ed Howard writes down that snipe and teal are in in abundance, and they will probably have good fun. Charlie Wilcox has been fretting for some time. "Game laws are a nuisance," he says; "they only give the early shooters a chance, and hold back a genuine sportsman like me!" But he has stood it the legal limit.

On the opening of the duck season in Wisconsin, Messrs. C. E. Felton, J. O. Pierson, Ben. Dicks, Lee Hamline and P. F. Stone had some of the finest duck shooting ever known lately in this region. This was at their club marsh at Harrison, Wis., one of the most wonderful duck marshes of the West. In a day and a half the above gentlemen killed 327 ducks. About half were teal, the rest mallard, redhead and pintail. The redheads breed on that marsh a great deal. Mr. Stowe killed 71 ducks in half a day. Mr. Dicks killed 35 mallard and 25 teal in his shooting. To show what the shooting really was—it was not over decoys, but chiefly on flyways—I may cite the number of shots fired. Mr. Hamline fired 450 shells, and bagged 83 birds. Mr. Dicks fired 400 shells and bagged 60 birds. Of course some few of the shells were not actually fired at ducks. There was plenty of shooting, sure.

The late cold and snow to the north of us is expected to send down the teal this week. Ordinarily they are due about the 20th or 22d on the Kankakee. They are at Fox Lake now.

Messrs. T. Benton Leiter and Wm. Haskell were after chickens near Pulaski, Ia., week before last. They got a good many birds, but numbers of them were not well grown—a commentary on the Iowa law. They report quail very abundant there.

Charlie Strawn, of Jacksonville, says there are more quail this year in that region than for years past, and chickens also are fairly abundant.

John Schick, of Mt. Pulaski, Ill., told me early last summer that chickens were going to be abundant around there.

W. L. Shepard is lately back from Iowa where he went after chickens. He says he will never go there again.

Jo Card is back from Minnesota after chickens. He says it was no good. By the way, Mr. Card has just had the hard luck of losing his nicely broken dog. The cars ran over him at Mak-saw-ba and broke him all up.

Mr. John Howley and his friend Mr. Jones are back from their Minnesota trip. They went to Ortonville and report bags of 20 to 30 birds per day to two guns, which is certainly a plenty.

Mr. Ben Holmes, mayor of Kansas City, with Karl Quinnotte, Walter Hallowell and two others of that city, were out after chickens near Council Grove, Kansas, and they report rattling good shooting. So says a recent letter.

No reports of the legal Illinois crop of chickens are, of course, at this time obtainable.

A singular and interesting bit of news is the fact that a flock of 50 wild pigeons was seen in the Kankakee timber last week. If really protected, these birds would soon become plentiful again. Lake George Club had a crate of wild pigeons last week, but did not shoot them at the trap. E. HOUGH.

BOSTON GUNS AND RODS.

STILL the sportsmen are returning from their vacation trips and few days' outing. The rod and gun are becoming more and more the essentials of such trips. The camera is much desired, but the imperfections of the best "snap shot" outfits of the present day are so glaring that one is discouraged after one or two trials. A Boston merchant returned recently from an outing with a Kodak. He had industriously and carefully—as he thought—made his hundred exposures and was expecting great pleasure from his pictures. But the returns from the development were that not a single negative was made. The invention of an instantaneous camera that shall work even in cloudy weather and give fair results with a lens stopped down to sharpness is yet to be made, much as it is desired at the present time. Hence the sportsman must continue to be contented with rod and gun, unless he is willing to go to all the bother of a camera that sets up on a tripod, and to give time to making his exposures, as well as a great deal of actual skill and thought to the details of the work.

Mr. Ned Stearns, of the Boston *Herald* editorial staff, has lately returned from a vacation at Keasar's Falls, in Maine. He reports the pickerel fishing excellent below the falls, with good bass fishing in the vicinity. Partridges are plenty, but wild. They are closely hunted, for nearly every boy in the neighborhood has a gun and is a pretty fair shot. One needs a good dog to hunt grouse in that part of Maine, and a spaniel that will "put them up" and bark is preferred by the natives. Mr. Stearns was out one day with a mongrel dog that was good, and with a result of three partridges to his gun.

The members of the Inglewood Club, with its extensive preserves of fish and game in New Brunswick, are delighted with what they have got, so far as they have visited their own camps. Mr. H. P. Bridgham, the India street tobacco merchant, is at the club's preserves at the present time, and he writes glowing letters of fish and game. Mr. Samuel Shaw, of the Murdock Parlor Grate Co., has lately returned from a visit to the camps of the club. He is more pleased than ever with the prospects of pleasure in that region. Mr. Cobb, of Cobb & Easterbrook, well known brokers in Boston, has also just returned from a visit to the home of the club. Andrew S. Marsh, a commission merchant of 20 Lincoln street, has returned from quite an extended trip over the grounds of the club. He found the prospects of game, in the legal season, very good, with fishing good.

If is reported, on good authority, that Mr. Bayard Thayer, of Lancaster, Mass., and having an office in Boston, is having rare sport at his camps on Richardson Lake in Maine. Mr. Thayer, it will be remembered by those familiar with that region, purchased last year the celebrated Birch Lodge, at the head of the lake, once occupied by the defaulter Whittier. He went over to the Cranberry Bog the other day, and came across an old bear and a cub He succeeded in capturing the cub, and the wonder is that the enraged old bear did not capture the man; but he escaped. The next day, with guides, he went over to the scene of the struggle and set a trap. At last accounts no bear had been taken, however. Another gentleman hunting partridges in that section came upon a bear in the old logging road that he was following up. He had nothing but small shot in his gun, and was rather glad than otherwise to see the old bear make off.

The daily papers give an account of the appearing of a giant moose in the streets of the village of Vanceboro, on the Maine Central Railroad, the other day. They further state that a citizen of that town seized his gun and shot the moose dead. He was promptly prosecuted by the game wardens, but he paid his fine of $100 cheerfully, only allowing as little cost as possible to be made, and then was heard to say that he was willing to shoot another as fine a moose at that price. This story is doubtless untrue, in part at least, for in the first place the moose would be confiscated by the State, and would not be the property of the hunter at all, though he had paid the fine.

Mr. James L. Raybould, salesman for Hyde & Wheeler, 41 North Market street, Boston, has just returned from a vacation of four or five weeks in the home of his younger days in the northern part of New York. He was within a few miles of the Adirondack woods, and believes that he found fish and game more plenty than he would have done had he gone into the wilderness proper. He says that the running of railroad trains into the woods is making it too easy for hunters and fishermen to get there, and that the fish and game cannot long stand up against such invasion. His best record was thirty-eight trout in one day. The partridge shooting he found good. The deer are plenty. SPECIAL.

HINTS BY AN OLD-TIMER.

JERSEYVILLE, Ill.—*Editor Forest and Stream:* Is it or is it not a natural desire of the shooting fraternity in general, when they read their favorite sporting paper and glean from its well-filled pages the interesting articles written by its many able correspondents, to long to have their say also? I know that is the way I feel, and I doubt not that there are many who experience the same desire, especially those who, like myself, have handled the gun and dog for forty years.

Perhaps we cannot write so well, our language may not be as classical, our sentences not as rounded nor as pleasing to the ear as those of our more gifted brethren; but our ardor and enthusiasm are as great, if not greater, than some of those who have had fewer opportunities and consequently less experience than we have had. We concede to them all honor in the literary line; but when the cobwebs are brushed from the brain of an old-timer by one of the many articles he reads, the latent fires are again kindled, memory comes rushing along with hundreds of incidents of hunt and camp, then he concedes to the rising generation nothing. For his knowledge has been gained by experience, not by theory, and he longs to appeal to "his friend," the paper, to correct some of the errors he sees, but is deterred from so doing by the fear of being called an old fogy. Hence he says nothing, but as he reads he separates the facts from the theory and watches the game as it is brought down or joins in the laugh at the camp-fire. Old age may compel him to remain at home, but I doubt if old age will ever be able to blot from his memory the bright scenes of the past.

Many of these articles are written on grounds familiar to some of us old-timers, and as we read we see many familiar objects, and in imagination, at least, tramp the fields or lay low in the blind waiting for a shot.

"That reminds me." I consider Henry Kleinman's article on duck shooting, published in this paper, to be facts from end to end. As I read them I could almost hear the crack of the gun, if I couldn't smell the powder; and he hits the nail on the head when he says, "Keep still." And yet I do not know that an amateur could gain much information by reading his articles; it is only the old hand at the business who understands them.

I would like to add to his articles some advice for young hunters who may wish to shoot ducks in the timber when the water will permit you to wade.

Dress as near the color of the surroundings as possible, better be too light than too dark.

Select a suitable spot near some old snag without a top if possible, and take your place close to it and keep still, as the ducks are unable to distinguish between a stationary man and a stump.

A few years ago a friend and I were in the timber after mallards; we found a good place for the decoys and an old snag covered with vines where we could stand and shoot. The day was bright and clear, so that the decoys showed to good advantage. Flock after flock of ducks came for the decoys, almost within shot, and would then sheer off. This continued for about an hour, when I knew something was wrong. I then looked at my friend's gun, and found what I believed to be the cause, and asked him to go to a log that lay in a dense shade, about fifty yards away and sit down. Scarcely had he done so when a small bunch came nicely to the decoys, and the mystery was solved. It was the reflection of the sun from his gun. The best remedy I know of for this is to give the barrels a good coat of shellac. This prevents not only the glitter, but the rusting of the barrels as well, for the shellac is impervious to water. After the season is over you can

easily remove the coating by slightly warming the barrels and rubbing it off with alcohol and a rag.

The coming season, opening Nov. 1, promises to be one of the finest for quail that this part of Illinois has known for many a year, their name in legion.

Some of the farmers object to shooters coming on their lands, but if properly approached (that is recognize them as the owners of the land and ask their permission), very few will object.

And now, in conclusion, let me ask you to request of Kleinman, "Chasseur," and other writers on duck shooting to continue their interesting articles, as they amuse the young and make the old feel gay. KIZER.

CYCLONES ON TAP.—Says the Hartford *Courant*: The usual slaughter of young partridges has begun, and the game law is as usual falling into disrespect in regions where this sort of thing is tolerated. Where the Connecticut Association makes itself felt there is more regard for the statutes. Down in New Haven county they are printing a letter from Mr. A. C. Collins that reads as follows: "Sportsmen never shoot out of season. They leave the ranks of sportsmen the minute they shoot unlawfully and become—poachers. If your sportsmen wish the game and fish protected let them each contribute $1 to the association at Hartford and we will guarantee some prosecutions. But as long as sportsmen sit on the fence and yell game protection without lifting a hand (or a dollar from their pocket) to prevent the illegal work so long will the game law be broken. Within the past two years we have convicted fifty-one persons for violating the game and fish laws throughout the State. If the sportsmen wish to see some convictions let them chip in a dollar and we will attend to the rest. Gentle breezes will not stop poachers from getting in their work. We have several cyclones that we can turn out loose on them. Order your cyclone now.—A. C. COLLINS, Pres."

TEXAS GAME.—Fort Worth, Sept. 1.—Our chickens are now full grown, so I took a trip up the Fort Worth & Denver R. R. branch of the Union Pacific. At Henrietta, 100 miles from Fort Worth, I made the first hunt. Hunting over a portion of two miles west of town with two dogs, I killed 14 chickens in two hours. I found chickens in great numbers, but my dogs were too fat to keep it up. The next day I went to Iowa Park, 30 miles, and found good shooting. With a companion from Vernon we killed 20 brace, and our dogs were now down to work; next day we killed 63 brace, all young grouse. The next day we went into the Waggoner Pasture and killed to three guns 69 brace. Two years ago the grouse left this region and for some unknown reason did not return till this year. This region is well watered, and the people will let a stranger hunt all he wants. Quail and turkey abound, and after this date everybody will get good shooting.—ALMO.

OFF FOR A CAMPAIGN.—Dayton, Ohio, Sept. 16.—Three hunters, L. L. Brown, C. C. Harman and Charles McConnell, are preparing for an expedition by boat down the Ohio and Mississippi rivers to Hickman, Kentucky, thence across the country to Reel Foot Lake and Obine River, where they will shoot ducks and geese until January. The party is thoroughly equipped for roughing it, are experienced in woodcraft, and are going to the same territory where they camped last winter. In January they will move into Mississippi to hunt bear and deer, and to trap otter, coon, mink, beaver and wildcats, and will not come home until the middle of April.—BROWN.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

THE OLD STREAM.

WELL, here I am again, where I have wanted to be for so many years, on my way to the trout stream of my boyhood. They tell me that there are still some fish left in its waters. I only hope there may be, for I have come a long way to try them and I know there are no better trout in the world than those we used to catch in this stream. I ought to know this, too, for I have tried them in very many places.

Oh, you dear old stream! You have helped to educate me! You have helped to make me love nature. And they tell me you have made a man of me, too. How often I have seen you in my dreams, and thought over the pleasures that I have enjoyed along your borders.

But I am here now. And is this really you? Is this the "gulf" that once seemed so deep? And is that Snake Rock that once looked so high? And is this little brook coming in here really the Roarer. What a change. Why, I need not have brought my boots to cross here now. It looks as though I could even wade Frothy Hole.

And these rocks; have they grown out of the water in my absence? They look as though they had: and there is one with its head above the surface that I never saw before.

Yes, this must be the place where we always commenced our fishing—when we were out for more than half a day. It was just below that hill with its granite cap, and although the two small clearings that appeared to be crawling up its sides are overgrown with brush and only the ruins of Ned's house remains, still the hill is there the same.

But I will commence in the gulf, where I caught my first pounder (what joy it gave me), and fish down two miles or more to the dear old home of my childhood. Ah, but those who made it home to me have long since left this earth. Yes, and long since our name has been almost forgotten here.

Here goes, though. I will cast below the rocks that the naughty boys loved to call the Devil's Mouth. Why, a rise! I feel the young blood coursing through my veins again. And here comes a fish, I declare! But my! if the rocks have grown taller the fish have grown smaller, if this is a sample of them. Not six inches long. If we ever caught one here (and I have caught many) he was never under nine inches. I will try again; this one must go back. No luck. We will move a few steps down, where the water is smoother. My! what a lot of fish of some kind come for my flies. Now, one is hooked and they are fighting for the "dropper," I have two. What are they? The biggest "red fin" I ever saw and a "silver back" 4in. long. When I was a boy some fellows used these (only of smaller size) for bait fish. I try again and again, and every time I cast a minnow or "silver back" is hooked. The whole place seems alive with them; and as the flies come ashore a half bushel of "bait fish," it seems to me, follow them. I think to myself, "I was only occasionally in the past we would see one of these in this stream."

But I will go on to the pool. That was always a good place. Pool? Pool? Where has it gone, I wonder? Nothing but a creek, running through a bed of stones and gravel, about 50ft. long, by 20ft. wide. Longhole is next, if I remember. I come to the place, but there is no hole there. The stream runs close under the bank now. And the bank has no trees on it. I don't see a remnant of the old birch where I shot my first partridge, nor does it look as though there had ever been an otter or a mink caught in this neighborhood. Nothing but little gray birches here now, with a scattering pine or hemlock bush.

I have a rise, though from under the bank. And O, delight again, I have a fish nearly 10in. long. He is killed. But I must look at him. I lay him on my hand and mark his spots, and ask myself, "Can this really be a descendant of the trout I used to catch in my boyhood?"

Now there is nothing but boulders for some distance. They seem to have grown too in my absence. The stream that was always half way up their sides (and often overtopped them) is now almost lost as it trickles along down. But there is a nice place below. We used to call it Sugar Bush Pond. I will make my way to that. It is the place where Dave used to fix his set lines and bait them with minnows. He caught some large fish there, and then he would come boasting and trumping over us fellows. We found him out at last. We found the ends of his lines fastened under water out of sight. His fun was up then.

But this pond is as shrunken as the rest of the stream. No doubt it would have been more shrunken though had it been able to get lower. It could not do this, for on one side a projecting rock dammed it up and on the other a large boulder stood in the way. Everything that floated down was caught between these two points, and it was not swept away until the fall or spring freshets.

So I have a promising place to cast and the fly hardly touches the water before a trout is on. He is an eight-incher and the next cast brought me another of nearly ten. "I shall find plenty," I say to myself, "before I get down and have a basketful to carry home." But we shall see.

No more could be tempted from this hole, while minnows by the dozen pursue my flies as they come in. In the Sugar Bush itself there is very little change. The trees themselves did not seem to be much larger than I remembered them. This has been preserved, not so the stream.

I pass down and get not a rise. Here the woods had been cleared off for some distance, and there was a mass of stones and gravel spreading out for several yards below me. I hear a cow-bell tinkling on a place that was wild when I was a boy. Now I run into a brier patch near where the blackberries grew, and where we came to shoot partridges in those happy days. It was somewhere here where my dog once attempted to pick up a porcupine in his mouth, and a bee-tree stood not far from that rising. What hunting I have done over that swale and over that hill! Rabbits, partridges, squirrels, wild pigeons have all fallen to my gun here. Now I see only bare rocks and blueberry bushes, where once monarchs of the forest grew, and where we caught rabbits in the winter time is a sheep pasture now.

No more fish. "Stone Hole" is dried and the mouth of "Rocky Brook" and "Little Bend," "Log Pond," "Still Run" and "Shallow Hole" are no more. You would not think such good trouting places ever had an existence. But there goes a partridge just as of old, and a hen hawk screams far up those hills, and a bluejay is calling here. "It is easier to fish this stream now," I say to myself, "than when I remember it."

And now I come to a hole of which I have no recollection. There was no hole here when I was a boy. Ah! I see it has been made by first cutting the timber off of the land, then the earth washed down and the stream made its way into the bank and some brush and stuff got in, and this is the result. The place gives me another fish, and I have a rise which I fail to take. I look into the water here to learn its depth, and then I see thousands of minnows and some fish that I do not know. Maybe they are suckers, but there were none in the brook as I remember it.

On I go. I am coming to "Alder Run" now. It was a dreadful place to get through in the past. There was only one way of doing it. That was to wade the stream, and where the alders overlapped part them. There were fine fish in it, though, and many a one have I taken. I am here, but no alders now—only a meadow, cleared on both sides, and I can see the course of the stream. How fresh and green the grass looks!' "Here is a chance," I say, as a thrush springs from her nest in a spruce bush by my side, and the next moment a woodcock goes whistling away. It was near here that in the spring on quiet evenings they would mount high in the air and then twitter themselves round and round in circles as they came down, calling as a night hawk when they reached the ground. I regret to think, too, that once or twice in my life I was tempted to wait for them and shoot them when they came down.

But I reckoned without my host in regard to this nice meadow below me. It is a mass of bog-heads of the largest and most treacherous class. I have three falls before I get through it, and had it not been for my boots I would have been mud above my knees. I see several water snakes glide off into the stream as I go along, and in one of my falls I came near going in head first. It is hard to watch one's footing and flies at the same time. Two more trout are the quota it furnished to the basket.

Nearly a quarter of a mile of rapids after this, and little falls, and then the "still water." One more fish in this distance that I could keep, two that had to go back. Another partridge flies, a rabbit starts, and a ground squirrel scurries along over an old log; and tracing my way through a tangle of rocks and briers I am here, Change, change, change, more bog-meadow on one side and a growth of alders on the other; and down some two feet below the level a wide shallow brook where minnows are disporting themselves, with occasionally a small trout, that darts under the nearest bank. Only one fish went into my basket here (the smallest of the lot) in this place, where years ago I always caught my best fish. Kingfishers are passing up and down here all the time. I have seen two hover for a moment over some shallow pool and then dash down and secure a fish. I should think that such a place would be a paradise for kingfishers.

But I am nearly done now. When I get over the nearest fence I will be in the old place. Will try Brookmouth, if it be still there, and Duck Pond, and then to the cars. Two more reward my efforts, while minnows in abundance pursue my flies and hook themselves at their pleasure.

I have seen the old stream and am satisfied. It did not bring back my boyhood, nor did the recollections it inspired reward me for my trouble. It would, perhaps, have been better had I cherished its remembrance instead of trying to renew what can never be again.

I passed out of the old wood road below the house (the thrushes and white-throats singing as in evenings of old) saying to myself, "This is only a sample, I suppose, of many a New England trout stream, and I am but one of thousands, no doubt, who would fain revive the past."

STILLABOY.

EXPLODING HORN POUTS.

Editor Forest and Stream:

Mr. H. C. Jackson, of the dry goods firm of Jackson, Mandall & Daniel, has just returned from Poland Springs, Me. He did not do much fishing on this trip, but to illustrate the folly of pursuing fish and game to the last ditch, he tells a good story of his boyhood days, when he went a-fishing with a hook of his own manufacture and a line made up of the best piece of twine that he could find. At first his hook was made of a bent pin, but later he learned how to make a very good fish hook for those days. It was with a hook of his own manufacture that he used to catch horn pouts in the creek—not always to eat, for it was a country where fish were plenty in those days of a better quality than horn pouts. But the love of the sport made a fisherman of him, as it does many an active, intelligent boy, fit to be at the head of one of the most enterprising dry goods houses in the country in later years. The creek ran across the road under the little bridge. On the right hand side the wagons were driven down through the little stream and the thirsty horses were allowed to drink. The stone wall was just above, and over the wall was the deep pool where the horn pouts were taken, sometimes in goodly numbers. Finally there came a very dry season. The water dried up in the roadway where the horses watered, and day by day the water grew lower and lower in the pool in the bottom of the meadow over the wall. At last, in the haying time, the boy Jackson observed that there was scarcely a foot of water in the now very narrow creek. He wondered where all those horn pouts were. The hay rake was in his hand, and it was but the work of a moment to reach across the pool and draw it through the water, following the bottom. Several horn pouts were quickly jerked out and lay writhing in the sun. This was a novel way of fishing—with a hay rake. It may be novel to some of the trout jiggers, and they can take a rake with their kit this fall to use on the spawning beds, if the notion is worth anything. The Jackson boy was pleased with his success. He continued to jerk the fish out with quick movements of the rake till about every horn pout in the pool was on the bank. It took years to restore even the horn pout fishing to that pool. But they were taken. What was to be done with them? was the question. They were not wanted to eat. The terrible horns about the head of the pouts had frequently injured the hands of the boy when he had previously caught them, and now was a chance for revenge on the whole race. A live one was placed on a smooth stone. Another stone, as big as the boy could lift, was let fall on to the fish, when—bang! What a report! The bladder of the fish went off like a small cannon. Here was the sport. A new idea. Another and another followed with a satisfactory noise, and there was no further question as to the use that the raked-out horn pouts should be put to. Such is usually the case. The fish and game that are taken foolishly—in an unsportsmanlike manner—are generally not of the slightest use to the catchers, except it be to make a report. SPECIAL.

CHICAGO AND THE WEST.

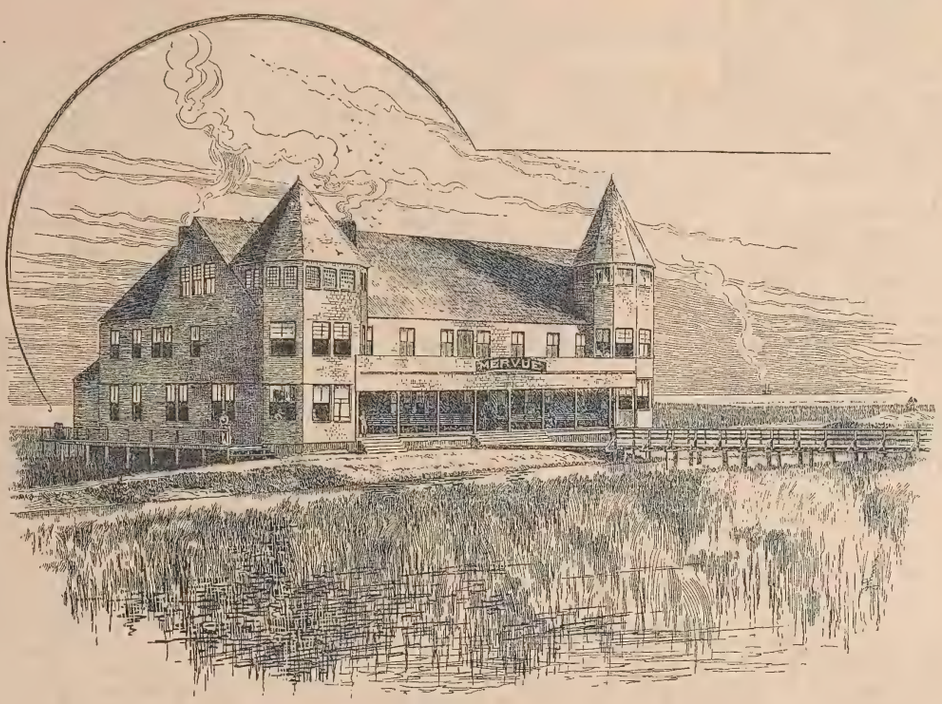
CHICAGO, Sept. 13.—Messrs. W. H. Bartlett, Arthur Orr and C. L. Williams, of Evanstown suburb, and Mr. A. C. Bartlett, of Peoria, all well known Board of Trade men here, are outfitting to-day for an extended trip to the Turtle Lake country of northern Wisconsin. They go over the Hurley Division of the Milwaukee, Lake Shore and Western Railway, and go in the chartered Pullman hunting car "Nimrod." They go in good shape and to a good country. It is not altogether clear what they intend to shoot at this season, but they certainly ought to get fine mascallonge fishing after the cold snap we have just had out here. They may get a few ducks, and could doubtless get deer in season. The character of their outfit may be inferred from the fact that to-day one of their party invested $160 in sporting material. They certainly should have a pleasant time in their chosen country.

Messrs. R. M. Bissell, A. V. Armour, H. N. Tuttle and R. W. Hamill, all of this city, start next week for a mascallonge trip, and may get over the Michigan line and get a deer. They go in at State Line station, taking boats there to the west, and striking into some country which they believe is not visited or known. Good fortune go with them. E. HOUGH.

THE JEANNOTTE.—Quebec, Aug. 20.—Lieut.-Governor Angers and his son caught 125lbs. of beautiful trout, in less than three hours, at the Jeannotte River last Monday. On Wednesday a party of three Americans caught about the same quantity, and on Thursday five members of the Orleans Fishing Club, who have leased the Jeannotte River, did also very well. The trout ranged from 2 to 4½lbs., specimens of which could be seen yesterday in the window at the Chinic Hardware Company.

MR. J. E. HARDER, of Clearfield, Pa., in this issue advertises for sale the patent of a combination breech-loading shotgun and rifle. Their factory and plant was destroyed by fire and they have not the necessary capital to push its sale.—*Adv.*

THE CLUBS OF THE ST. CLAIR FLATS.



IV.—THE MERVUE CLUB.

THE "made land" which follows on up the river from the St. Clair Club is often protected against the water by piling and planking. All along, following the great curve of the river, there is a nearly continuous string of cottages, cabins and summer "ranches," as they are locally called. First above the property of the St. Clair Club is the tasty private cottage of the Messrs. Ed. and F. W. Joys, of Detroit. Then there is a sort of combination cottage belonging to a Mr. Smith, from over Baltimore Bay way, and after that a vacant cottage of little consequence, and then the modest abode of Mr. Jas. H. Harsen, of Algonac. Beyond this are what is called the La Croix ranch and cabin with a sail-covered porch, and then one comes to one of those deep and narrow waterways made by the dredgers, running clear through the strip of made land from front to back and known as a "cut-off."

Over the cut-off is the long dock of the two-story frame hotel known as the "Arthur House." This is run by Arthur Humphreys, perhaps as good and well-known a pusher as any on the Flats. Here we found abundant evidence of practical sportsmanship. Mr. Humphreys took us up into the loft and showed us a magnificent fleet of decoys which he and his brother were just painting. All these decoys were made with flat bottoms. A round-bottom decoy is not liked on the Flats, and is not suitable for the shooting practiced there. Much of this is open water shooting, in more or less of a swell, and the old shooters say that a flat bottom decoy sits much more steadily than a rounded one. The latter wabbles in the chop, and does not look natural. Here we saw also what was a new idea to me, in the shape of a number of tremendous mallard decoys, as large as geese, and painted jet black all over. These, so our host informed us, were for use in the night or late dusk. I think most sportsmen will have little use for such decoys, for night shooting, or shooting on the marsh after sundown, is recognized as being without the legitimate limits of club practices, and in many States is against the law. The game ought to have some chance, and the night is all too short a time for that. At Mr. Humphreys's place we heard some bitter reflections upon the Canada club, who, it was said, upon the basis of an imaginary lease, were keeping the best duck grounds of the Flats closed against American shooters. This question we passed along until more information could be gathered on it.

At this point the wild rice marsh back of the made ground is quite dense and wide, and runs up almost through the strip to the channel. All through the rice we could see the mudhens working, and some of these, feerless from their freedom from molestation, swam up close along where our boat lay. There was a sort of saloon connected with the hotel, and this was built on piles, the front porch being 3 or 4ft. above the water. There were rice hens swimming around under the house, and Humphreys told us that a mallard lately built her nest and hatched a brood under the house. There is, of course, more or less nesting of wildfowl all over the Flats.

There is a stretch of shallow water, in the summer time grown up with wild rice, lying between the ship channel and the shore for a distance in here. But for the made land the marsh would be continuous here. But out of the low terra firma we now saw rising the solid and comfortable structure of the

THE MERVUE CLUB.

MERVUE.

The little duck boat slipped up over the shallow beach and received a hospitable hailing here, and Mr. R. M. Northwood, the club steward, did the honors and answered the questions.

The incorporated name of what is generally known as the Mervue Club is "The Michigan Fishing and Shooting Association." The idea of the club was conceived about three years ago by Mr. Chas. Bristol and Mr. Oscar Rasch, of Detroit, as the result of a pleasant fishing trip to the Flats. The club began with fifteen members, and $5,000 worth of stock was subscribed the first night. Soon thereafter 642ft. front of land was bought. 350ft. deep, and in July, 1889, the present building was erected.

"Mervue," as may be seen by the cut, is a spacious building, of a roomy and comfortable look. It is well arranged within, and provided with the usual reception room and hall, leading to the parlors, smoking room, dining room, etc. The thirty-six sleeping apartments are mostly on the second floor—a lot of them are necessary, for there have been 118 persons out at Mervue on one day, though not all remained over night. The third story, or attic, holds the servants' quarters, and was designed originally to have also the billiard and smoking rooms. The building is in every way suited to its purpose, and the club, whose membership is mostly made up of young men, most of them, perhaps, single men, may be very much congratulated upon their new home now that it is finished. This is the youngest and most youthful club of the Flats. The gentlemen will have a yet more tasteful and handsome place when they have completed their plans and improvements, which will include a filling in, smoothing down and putting in grass about 100ft. to the front at least, which will make a very nice lawn.

There are now in all over one hundred members of the Mervue Club, and its affairs may now be said to be in good, sound, flouri-hing condition financially, which may largely be attributed to the judicious taking into the club of some old business heads familiar with the planning and conduct of large enterprises. About $75 of the $100 share has now been paid in, the first payment being $25. The annual dues are $12. The steward is paid a salary, providing his own material and charging a specific amount per diem. Mr. Northwood, who succeeds Mr. Mackintosh in this office, is of experience in Canada hotels, and will doubtless make a success of the practical administration of the club.

Good boat houses were going up, and about two dozen boats were already owned by club members. There will be one yacht at least, that owned by Mr. Bowling.

I regret to say that the articles of incorporation of this club lay especial emphasis upon the fact that its purposes are "for social intercourse," but there are two clauses in the by-laws which many and many a club might do well to copy and follow:

Article VI.—Games.—Sec. 1. No games shall be played at the club house on Sunday, and no person shall bet on any game, or play for any stake upon the association's property at any time, under the penalty of expulsion of any member and the exclusion of any guest.

Article VII.—Wines and Liquors.—Sec. 1. There shall be no malt or spirituous liquors sold upon the premises.

The officers o Mervue Club are: F. F. Williams, President; W. J. Stapleton, Vice-President; J. W. Weisman, Secretary: S. J. Bowling, Treasurer. The board of directors are the above, ex-officio, and also Messrs. H. C. Corvs, Edward Sharp, J. F. McGregor and H. M. Leonard. The following is the latest obtained list of membership, but is not thought to be quite complete: Edgar Anderson, E. G. Arnold, Alex. Barr, John Barr, George Billing, J. W. Biglow, Wm. B. Bierce, C. W. Bristol, S. J. Bowling, D. D. Booth, Fred W. Brand, E. A. Broadwell, Geo. B. Burton, W. G. Burton, Jas. M. Buick, Dr. J. E. Clark, C. G. Chase, W. R. Campbell, John G. Craig, Fred Ekliff, John Eisman, E. D. Emmons, Chas. K. Foster, H. L. Gabell, Raynard Gabell, B. J. Gore, W. A. E. Gore, E. S. Greece, David W. Gray, Thos. F. Godfrey, C. E. Howell, Fred H. Hutaff, H. D. Heidt, R. R. Hodge, E. A. Heames, H. F Hollands, J. G. Hollands, John Hutchings, Thos. L. Hilton, J. W. Hanna, Windsor, Ont; H. H. Jackson, F. C. Jackson, Henry Kiesling, David C. Kay, A. G. Limbach, A. C. Leonard, H. M. Leonard, H. D. La Grange, Wm. G. Latimer, T. O. Leonard, Jr., Edw. F. Loud, Oscoda, Mich.; J. G. F. Macdonald, Dr. S. G. Miner, W. E. Moss, Chas. B. Marks, Jas. F. McGregor, W. H. McGregor, John McBride, Jr., A. W. McCloud, G. W. McAllister, Anthony T. McLogan, Eugene L. Nicol, B. M. Patterson, Alex. Paton, W. E. Parker, A. F. Peck, August Rasch, E. A. Rasch, F. A. Rasch, O. E. Rasch, Ed. H. Rhines, H. C. Rohns, C. E. Richmond, Shiloh Rickel, D. J. Robertson, A. W. Reckmeyer, F. G. Skinner, Otto Scherer, Irving R. Swan, Ed. Sharp, Enoch Smith, Louis Torrey, C. E. Thompson, J. A. Topping, G O. Thompson, John S. Thompson, F. A. Thompson, Chas. W. Warren, J. T. Whitehead, O. C. Wynn, G. W. Winterhalter, L. D. Wells, W. W. Wilcox, W. H. Wright, Jos. A. Yorston, A. T. Yorston.

E. HOUGH.

175 MONROE STREET, Chicago.

DELWARE RIVER BASS FISHING.—Under date of Sept. 7, Hon. Henry C. Ford writes that bass fishing has not been very good lately in the vicinity of Egypt Mills, Pike county, Pa., owing to the high water. He took sixteen bass on Sept. 5, ranging from 1lb. in 3lbs. in weight, and ten on the 6th, varying from 1lb. to 2¼lbs.

WINNINISH OF THE METABETCHOUAN.

IN our last issue we acknowledged the receipt of three perfect specimens of the winninish taken in the Metabetchauan River, Quebec, by Mr. C. C. Maxson, of Westerly, R. I., in answer to a request made through our columns Aug. 21. Mr. Maxson's letter announcing the shipment reads as follows:

"CHAMBORD JUNCTION, P. Q., Sept. 4, 1890.—*Editor Forest and Stream:* I noticed just before leaving home a request for a winninish, and in response to the same I have expressed to you this evening three fish of assorted sizes taken with some others this morning in the Metabetchouan River. You will notice a great difference in coloration between these and the fish from the Discharge. They are also heavier for their length."

The safe arrival of the specimens has already been referred to. The largest of the winninish is a 4lb. female, measuring 23in. in length. The ovaries are well developed, the eggs as they lie in the ovary averaging about six to the inch. From their appearance it is probable that the fish would have been ready to spawn early in the fall. The next in size is a very shapely male weighing 3lbs. 1oz., and measuring 19¾in. over all. The milt was approaching maturity, but the cartilaginous tip at the extreme end of the lower jaw is very small and is entirely received within the upper jaw. The smallest is also a male, 16½in. long and weighing 1lb. 12oz. At some future time we propose to publish a comparison between these winninish and the landlocked salmon of the Sebago Lake and Grand Lake Stream in Maine. We cannot see any difference between Mr. Maxson's specimen and the winninish sent by Mr. Dana from the Grand Discharge, near the foot of Lake St. John, and referred to in our columns Aug. 21. One noteworthy feature of the anatomy is the presence in the female of 86 cœcal appendages, or about 20 more than the average number in the Atlantic salmon; in the two males, however, the number of cœca is about normal, the larger having 68 and the smaller 65. The stomachs of each of these fish contained a few insects representing a moderate number of species, but as these have not yet been identified we defer commenting upon them for the present, merely remarking that all of the insects and insect larvæ are small. Mr. Dana informs us that it is a common thing to find winninish with their stomachs filled and distended with insects; he has frequently observed them feeding in the early morning. The big dorsal fin and most of the top of the body can be seen when the winninish rises into flecks or patches of foam and scoops up the insects, meanwhile moving around in a circle. The downward movement of the fish resembles the tumbling of a porpoise. Winninish may be seen breaking water in this way in all directions, and after a temporary disappearance the feeding fish may be looked for within a few feet of the spot from which it disappeared. The natural fly which was noticed as the one chiefly taken during the present season is a yellow-bodied species. From the fact that it is described as having "two long tails" we infer that it belongs to the *Ephemeridæ*.

We have made a preliminary comparison of Mr. Maxson's winninish with some Sebago salmon taken from Lake Sebago early in November, 1888. The Sebagos at that time were in the breeding condition and are large fish—one a female weighing 13lbs., and the other a male of 17lbs.—so that the basis of comparison is not very satisfactory, but we observe a few particulars to which we have previously called attention and which may prove to be important. The winninish of the Metabetchouan and the Grand Discharge has a heavier and longer upper jaw than the Sebago; the longest ray of its dorsal fin is about three-fifths the length of the head, while in the Sebago it is only one-half of this length. The adipose fin of the winninish is longer and slenderer than that of the Sebago, its base being less than one-half of its height, while in the Sebago the base is considerably more than one-half. The tail of the winninish is more deeply forked than that of the Sebago. It should be borne in mind, however, that all of these differences may be due to the differences in the size of the individuals compared. It is somewhat surprising to us that the insect-eating winninish should have the massive jaws which form one of its striking characteristics. Perhaps if we knew all about its feeding habits we would find that it preys at some time of the year upon other fishes.

Anglers will doubtless be interested to know the principal measurements of these winninish for comparison with their weights. The female measures 23in. from the tip of the snout to a line connecting the tips of the tail. The body is 5in. deep and 2¼in. thick. The head is 4¼in. long, the snout 1¼in., and the eye is one-sixth as long as the head. There are twenty-four rows of scales from the beginning of the dorsal fin to the lateral line, twenty-one rows from the beginning of the belly fin to the lateral line, and the lateral line pierces 123 scales. The weight of this fish when received was 4lbs.

The larger of the two males is 19¾in. long and weighs 3lbs. 1oz. Its depth is 4⅓in., thickness 2⅓in., length of head 4¼in., snout 1⅜in., eye ⅝in. A comparison of these

measurements will show that the male is deeper-bodied than the female. The smaller male is 16½in. long, weight 1lb. 12oz., greatest depth 3⅜in., thickness 1 1/16in, head 3½in. long, snout 1 1/16in. and eye ⅜in.

The colors of the female are as follows: Left side of the head with about 13 dark brown spots, the largest immediately behind the eye, from which it is separated by a space equal to the length of the eye. In shape this spot is circular and one-half as long as the eye. Most of the spots are on the gill cover. The sides of the body bear numerous ×-shaped and ××-shaped dark spots, the largest a little more than one-half as long as the eye. The large back fin is very indistinctly spotted. The fins are all rather dark, and also the membrane around the throat and the lower edge of the under jaw. Each scale has a narrow dusky margin, giving a generally dark appearance to the body. It may be well to state that the general coloration of this winninish is closely similar to that of an introduced landlocked salmon from Woodhull Lake, New York, and of a small salmon from the Merrimac River.

We trust that Mr. Maxson will tell us any facts that he may have collected as to the spawning season and spawning habits of the winninish, appearance and growth of the young, and in general anything bearing upon the little known life history of this peerless game fish.

ANGLING NOTES.

THE trout fly-fishing this season has been very peculiar; and to the observant angler it teaches quite a valuable lesson. When the ice first went out of the lakes last spring, many anglers left for the Maine and Adirondack waters expecting to get the cream of the speckled trout fishing; but they were disappointed, the cream did not rise, nor the fish either. The reasons for this were the early and constant rains and continual cold weather, in short, the absence of sunshine, for trout love sunshine in the early spring as much as any angler. Those who happened to be on hand a little later, when the water and temperature were right, had splendid sport. Last fall there was practically no fly-fishing in Maine until late in September, and none at all in the Adirondacks, because the weather was too warm. The first frost in the Adirondacks last year came on Sept. 21. This year the first white frost came on Aug. 16, and was followed by a week of cold, wet weather. This resulted in unusually fine fly-fishing. And it will undoubted continue so through September.

The lesson to be learned from this experience is that after a cold winter, warm weather and sunshine are necessary for good fly-fishing, but after the water has become warm on the surface from the summer sun, cold weather is necessary to bring the trout to the surface. Of course trout in rivers and brooks are not so much influenced by the changes in temperature. The surface of shaded running water does not become heated as it does in a lake. Yet even in rivers the fish often retire to cool spring holes in summer and long stretches of usual good water will be found deserted.

The weakfish still seem to be found in the rivers. Very good fishing is reported along the Hudson, particularly at Sing Sing. There has been considerable illegal netting there during the summer, but lately the poachers have been closely watched and the fish have had a chance to feed in the bay. One night's netting will destroy all chance of the anglers catching anything for the next two weeks.

A great many sportsmen who have devoted themselves to angling during the past five months are now turning their thoughts toward the dog and gun. In some sections ruffed grouse are in season, and though the leaves are too thick and the weather too warm for comfort, yet many are tempted to follow this royal bird into the mountains. But soon we shall have the crisp October weather, and it is to be hoped a flight of woodcock with it. Then the noisy, bustling spaniel will have a chance, and walking will be a pleasure and not a steam bath.

BARNEGAT BAY.—New York, Sept. 13.—I am just home from Forked River, Barnegat Bay. Five of us got on board about 8 o'clock in the morning and were on the ground by 9 o'clock. About 10 the weakfish came along, and inside of two hours we had 100 in the box. Then it slackened up a bit and I took my rod to pieces. The rest got a dozen of shedders (making five dozen in all), and the total catch counted up over 125 weakfish and 5 snappers. I brought 20 home, and at half-past 7 in the evening, cleaned and weather-dried, they reached a tilt of 25lbs. Expenses as follows: Fare $4, hotel $2, share of boat (at $5 and bait also at $5, a dollar a dozen) $2; total $8, for two hours' fishing and eight hours' riding on the rail. Still, fish are there and will be until the seasonable northeaster comes along. Forked River is the right place to go to, being right on the ground. The fishing is on the first ebb and lasts just about two hours. The day was ideal and delicious, and there were no snipe flying, though on our way out early in the morning we heard some guns banging away toward the lighthouse. Much talk of big bags, but inquiry disclosed that every oxeye was counted a bird. Great promise of quail, but weather against kingfish running.—GRAY JOHN.

LAKE ERIE WHITE BASS.—Dayton, O., Sept. 16.—A few years ago white bass were very plentiful in Lake Erie, but were attacked by a parasite that threatened extinction of this excellent table fish. Anglers, however, are now rejoicing at the reappearance of white bass in great numbers. The fish are small, but another season will be numerous and in size to afford great sport to anglers, for they are vigorous biters.—BROWN.

GIVE YOUR FRIENDS THE BENEFIT.—If you know a good thing tell it and let your friends have the benefit. Being of this opinion we quote the following from one of our exchanges: Lynch, Noble & Co., of the Freight and Baggage Transfer, of Cedar Rapids, Ia., in a press letter write: "We have used Humphreys' Veterinary Specifics two years, and we cannot speak too highly of them. In our judgment none that we have ever used can compare with them. One of our best horses was attacked with what the veterinary surgeons termed inflammation of the brain, and was given up to die, when these remedies cured him." Editorially we cheerfully give the above statement to our readers, in view of the fact that it is in harmony with what is appearing in every part of the country respecting these wonderful remedies.—*Baltimore (Md.) Farmer.*

Fisheulture.

NEW YORK FISH COMMISSION.

A MEETING of the Commission was called for last week at Saranac Inn, but only the President, Mr. Eugene G. Blackford; the Secretary, Mr. E. P. Doyle, and Mr. Henry Burden, of Troy, were present. Messrs. Sherman, Bowman and Joline were absent. A quorum was lacking and much business of importance was deferred. Mr. Blackford examined the Adirondack hatchery near by and lakes Brandon and Meacham; in the latter pickerel were found in such numbers as to threaten the destruction of the trout fishing unless the prompt measures already taken accomplish their extermination. The investigation of the hatchery showed it to be in first-rate working order, and in Lake Brandon the condition of things is highly promising for the permanence of successful fishing. In 1889 the Adirondack hatchery distributed 956,000 brook trout, 25,000 frostfish (*Coregonus quadrilateralis*) and 1,905,000 lake trout. One of the most insiduous and deadly enemies of trout eggs and fry in Meacham Lake is the miller's thumb (*Uranidea gracilis*), a small, but ubiquitous and unmitigated pest in the lake and its tributaries.

RAINBOW TROUT IN CARP PONDS.—The U. S. Commissioner of Fish and Fisheries, Col. M. McDonald, is in receipt of a letter from Herr Max von dem Borne, of Berneuchen, Germany, concerning his successful rearing of the rainbow trout in carp ponds. Herr von dem Borne considers this trout a great acquisition to German waters. He does not believe that it will destroy the small fishes as the pike does. In summer the water in his ponds sometimes reaches a temperature of from 77 to 80 deg. Fahrenheit, yet the rainbow trout continues to be healthy and grows very rapidly. It is, however, the only trout which thrives in waters of such warmth. By reference to FOREST AND STREAM, of July 17, it will be seen that Mr. W. P. Seal has kept the rainbow trout in water of 76 deg. Fahrenheit, but only by means of perfect aeration. In exchange for calico bass, crappie and sunfishes, which the U. S. Fish Commission will send to Herr von dem Borne, will be received 50,000 eggs of trout (*Salmo fario*) from different German rivers.

THE LEADVILLE TROUT STATION.—The U. S. Fish Commission station at Leadville, Col., is a very promising infant. Although less than six months have passed since the superintendent took charge of the establishment he announces a stock of 92,691 Eastern brook trout, measuring from 1½ to 2in., and in the very pink of condition, now ready for distribution. Native black-spotted trout fry ten days after hatching had not half absorbed the egg sac. The period of incubation was much prolonged by cold water and the embryonic growth is slow; 295 adults of these trout were collected in August in addition to 946 already on hand. Those taken in August will spawn next spring. Seventy-five brook trout will yield eggs this fall. A few California trout were gathered and 3,288 Loch Leven fry are at the station. The outlook for the future is very encouraging.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 15 to 19.—Second Annual International Dog Show of the Industial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Sept. 25 to 26.—Third Dog Show of the London Kennel Club, at London, Ont. S. F. Glass, Secretary.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer Superintendent.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 7.—Ninth Annual Field Trials of the Robins Island Club. W. L. Wellington, Secretary, Brooklyn, N. Y.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

DETROIT DOG SHOW.

[*Special Report.*]

THE second annual bench show of the Detroit Kennel Club was opened Tuesday, Sept. 2, and continued until Friday night, the show being held in connection with the Detroit International Fair and Exposition. The benching was of the old pattern and the feeding Spratts biscuit. The weather for the first two days being very warm, but Thursday a very heavy rainstorm came up, and when the show closed Friday night it rained very hard. Many of the dogs being taken away must have felt very uncomfortable, the fair grounds being about 4 miles from the center of the city. The attendance was very good, sometimes making it almost impossible to get around. No extra charge was made for admission. That the show was quite a drawing card could not be denied. H. E. Cook, of foxhound fame, did the superintending, and did well for a first attempt. The entries numbered 334, some of which were absent, and there were a few duplicate numbers. The numbering of the benches was very bad, being mixed up in all ways, making it difficult to find the dogs. The quality of dogs as a rule, with exception of well known kennels, were not up to the standard. Some of the dogs were not in healthy condition and mostly out of coat.

The judges were: Miss Anna Whitney, Lancaster, Mass., St. Bernards, Newfoundlands and pugs. Maj. J. M. Taylor, New York, setters, pointers, beagles, American foxhounds and Chesapeake Bay dogs. Mr. James Mortimer, Babylon, N., Y., mastiffs, great Danes, bulldogs, bull-terriers, fox-terriers, collies, greyhounds, deerhounds, wolfhounds, bloodhounds, English foxhounds and dachshunde. Dr. Chas. M. Nelles, Brantford, Ont., cocker and field spaniels. Mr. J. F. Kirke, Toronto, Can., black and tan terriers, Dandie Dinmont terriers, Irish terriers, Scotch terriers, Skye terriers, Irish water spaniels, King Charles spaniels, Blenheim spaniels, Clumber spaniels, poodles, Italian greyhounds and miscellaneous. Veterinarian, Samuel Brenton, Detroit, Mich.

MASTIFFS.

Mastiffs had eighteen entries in six classes. In challenge dogs Moses, not looking so well as we have seen him, was alone. In challenge bitches there were no entries. In open dogs first prize went to Edric, a good stamp of dog with plenty of bone; second to Mode, good in muzzle, but open in feet; third to Captain R. Prince Leo, reserve, is smutty in face, bad eyes and sour expression. Ashmont Tiger, good brindle color, well-carried ears, plain in head, got vhc., and Benfoy hc. In mastiff bitches, Pharaoh Queen, placed first, shows lots of quality, with a good head. Duchess of York won second, the third prize going to Bess, light behind and pinched in muzzle. There were only three entries in this class. In the dog puppy class Captain R., winner of third in the open class, was the only entry and was given first. Bitches had four entries, with Duchess of York, second in the open class, a clear winner; second went to Miss Beaufort, pinched in muzzle that may improve; third to Leo's Nell, only ordinary.

ST. BERNARDS.

Roughs were very poor, the winners being the best of the lot. There were no entries in the two challenge classes. In open dogs Bruce had an easy first, second prize going to Pioneer, good in legs and feet, body fair, cut away too much below the eyes. The third prize, Max, is no show dog. In bitches Phyllis, the only entry, won first. She was shown in bad form; good in body, but plain in head. Dog puppies had no entries, and only two entries were in the bitch class, first prize going to Alta Kennels' Santa Rosa, the third prize to Lute. In smooths champion Victor Joseph was alone in the challenge dog class, the bitch class having no entries. In open dogs, Leon B. shows too much haw, small in size, snipy; he was given first. There were only three entries, R. J. Sawyer's Mascot Royal being absent. The bitch class had five entries, and three of these were absent, all belonging to R. J. Sawyer, the prize going to Cleopatra, with good body and limbs; her head might be a little shorter; she shows lots of quality. In dog puppies, Leon B., first in open dogs, scored another win in this class, with Pluto second prize. Only three entries, with one absent, and in the bitch class two entries, one, Mascot Guard, being absent, the first prize going to Keepsake. The St. Bernards were a very poor class as a whole. I expected to see a better showing of this breed with Miss Whitney as judge.

BLOODHOUNDS

Had no entries and Newfoundlands the same.

GREAT DANES.

There were no entries in the challenge class, the open dog class bringing Melac and the newly imported Flavor together. The first prize was given to Melac. He is a grand upstanding dog and seems to improve right along. When fully matured he will make it warm for the best. Flavor, the second prize winner, is a nice taking dog, rather small size, too flat in ribs and light in thighs. In the other classes the Wolverine Kennels had most winners, the rest of the entries being poor.

DEERHOUNDS

were provided with four classes, but only one specimen put in an appearance, Nora. She is too small and lacks substance all through. She was given first.

GREYHOUNDS.

The winners are mostly well known. In challenge dogs Master Rich was alone, and in challenge bitches Miss Rare also had a walkover. In open dogs Scavenger had an easy win with the same owners' Milo second. The third prize was ordinary, Flyaway and Neverflunk being absent. In the bitch class first prize went to a nice bitch in Second Sight, Lady O'Livia receiving second. There were only two entries in the class.

SIBERIAN WOLFHOUNDS

had two classes with no entries.

POINTERS.

In challenge dogs, 55lbs. and over, Robert le Diable, well-known, had a walkover and Lass of Bow in the challenge bitch class had the same. Open dogs brought out a good one in Chief. His worst fault is in head and he is rather straight behind, good legs and feet. He won first, with Lansdowne second, not quite right in pastern and coarse in tail. Third went to Westminster Drake and vhc. to King Bow's Bow. In the bitch class Madstone, first prize, now shows age and might be better in condition. Countess Lill, second prize, is a fair sort. Ruby Croxteth was placed third. Only three entries in this class. In light-weight challenge dogs Westminster Kennel Club's champion Naso of Kippen was all alone. Glauca the same in bitches. In the light-weights Bangstone, having been transferred from the heavy-weight class, captured the blue ribbon. He is quite a taking dog; good head and front, but moves rather weak behind, second prize going to Wonderful Lad, too thick in skull, full in eye, sour expression, good body, legs and feet. Third prize went to Westminster Glitter. Westminster Gladstone, light in shoulder and too straight behind, got vhc. Detroit Kennel Club's King Bow's Dash was absent. In bitches first prize went to Fan N., a nice head, shown too fat and moves weak behind, second going to Karl, wide in front and feet might be better. Westminster Nan, third, is light below eyes, good in body and has lots of bone. Flirtation, skull too much domed, full in eyes, ears too high and light in bone, got vhc., Galena, flat in ribs and light in thighs, getting hc. In dog puppies Westminster Kennel Club captured first and second with Westminster Glitter and Gladsome, the only entries. In bitches Westminister Nan, the third prize winner in open class, won first, with Lord Graphic's Trinket second prize, only two entries in this class.

ENGLISH SETTERS.

In English setters challenge dogs, Dad Wilson was alone, and there were no entries in the bitch class. In the open classes J. Shelley Hudson and J. E. Dager had almost a clean sweep with their well-known winners.

IRISH SETTERS.

In challenge dogs ch. Blarney had the class to himself, and Laura B. the same in bitches. Open dogs brought out a new one in Kildare, good length of head, good color, might be better in fore-legs. Chief S., second prize winner, is coarse in head. Third prize went to Shanmore, too high on legs and light in thighs, good color, looks like a racer. In bitches Winnie II. won first prize. She was shown heavy in whelp. Another good bitch in Biddy Clare getting the second prize. Third prize went to Duchess of Avondale, long coupled, poor in head and too short in neck, and in poor condition. Lalla Rookh, a nice little bitch that might be better in ribs and feet, took vhc. In puppies there was only one entry in each class.

GORDON SETTERS

Brought out well-known winners, Dr. Dixon really having no competition.

FOXHOUNDS.

Six classes were provided for this type of hound, but there was only one entry and that was absent. In the American class H. E. Cook, of the Cook Kennels, made a very fine display of of about 20 entries, while A. B. Whitlock had on

exhibition a kennel of so-called shaggy foxhounds. He is about the only person having this type of hound.

CHESAPEAKES AND SPANIELS.

No entries, and Patsy O'Connor was alone in his glory to represent the Irish water spaniel display. Clumber spaniels had no entries. The display of field and cockers was very good and they were well handled by Mr. Nelles. Some were shown in bad condition, their skins needed attention. The awards gave general satisfaction, the winners are mostly well known.

COLLIES

were a very poor show. Very little competition, only seven entries in four classes. The winner in open dogs, Bonnie Stewart, is a rare, workmanlike dog with good body, coat, legs and feet. His worst fault is coarseness in skull and faulty in ears. Second went to Langhan, a nice type, third going to Roslyn Dandy, shown in bad coat. In bitches, Money Musk had it all to herself, and another of McEwen & Gibson's, Drury, was first in dog puppy class, Lord Edward getting second.

POODLES

were a good display, a grand-coated dog, Dextor, winning easy, equal second going to Kava II. and Bruce. In the bitch class Nell won first with Cora second, he going to Grisette.

BULLDOGS.

In challenge dogs, that good dog Harner was alone. He is a little short of wrinkle, but from back of head to tail it would be difficult to improve upon him. Bitches had no entries. In open dogs Carisbrook won first. He is rather straight in front, good in skull, and was shown in good condition. In bitches, Dolly Tester, good in head, not out enough at elbows, too high on leg, easily defeated the second prize winner Duchess of Palmer.

BULL-TERRIERS.

Challenge dogs had no entries. In bitches, Starlight, shown in good form, had a walkover. In open dogs first went to Prince Bendigo, light in eye, good head. Will improve. Wait for Me, late King of Hearts, had to be content with second. Third went to White Prince, good in body, a little short in head, and with lots of terrier character. In bitches, the well known Attraction won, a fine bitch, seems to be filling up in face and full in eye to what she was. Second prize went to Grove Duchess, well-ribbed, nice head, good eye and tail; at present a little coarse in coat. Third to Miss Gladstone III., black mark on eye, rather thick in head and out at shoulder.

DACHSHUNDE.

Feldmann K. had no trouble in winning. It will take a good one to beat him. Second went to Duke and vhc. to Carl. There were four entries in the bitch class, with Lina L. ahead of the class; the rest of no special merit. Second went to Duchess.

BEAGLES.

Little Duke was alone in the challenge class and there were no entries in the bitch class. In open dogs first went to Joe, a good sort, but might be shorter coupled. Second went to Brass, quite large enough and rather throaty. Third went to Princeps, a little wide in front. Stormy, vhc., is heavy in head. Detroit Kennel Club's Rock was also vhc. In the bitch class first went to June M., a nice type. Second to Pearl of Hollywood, with good body, legs and feet. Third to Romp, a good workmanlike hound. C. to Racy, a bad eye, and out of condition. Puppies had only one entry in the two classes.

FOX-TERRIERS.

Lucifer was alone in challenge dogs and Diadem in bitches; both are well known. In the open dog class a new face turned up in Starding's Jack, a good long-headed dog, but rather cheeky, best of legs and feet, shown a trifle fat, who easily beat Blemton Victor II., placed second, the third prize going to Wm. Sabre, plain in head, coarse in ears and nappy in coat, Hillside Mix getting vhc. In the bitch class Ebor Nettle deserved her blue ribbon, with Warren Jenny second, third going to Blemton Enid. The rest were of no special merit. In the puppy class Warren Drummer being absent left Blemton Victor a walk over.

IRISH TERRIERS.

In the challenge class Lewis and Jarret's Burnside was alone. In the open class Breda Bill, a good sort, skull rather broad for length of head, won first.

SCOTCH TERRILRS.

There was one entry only in the dog and one in the bitch class. Glencoe, winner in the dog class, is a good, strong dog, good in coat, body and legs. He is a little coarse in head and his eyes are too large. Meadowthorpe Glen Effie is of fair type. Her ears show too much fringe.

DANDIE DINMONTS.

There were no entries in this class.

SKYE TERRIERS.

The well-known Sir Stafford was first.

BLACK AND TAN TERRIERS.

Buffalo General in challenge dogs and the winners in the open classes are so well known they need no comment.

YORKSHIRE TERRIERS.

A few nice Yorkshires were shown by the Northfield Kennels.

PUGS.

In the challenge class Lord Nelson and Bob Ivy came together, the latter winning. It seems a difference of opinion. Bob may be a better size, while Nelson is a fine stamp of pug with a grand head. Bessie won first in the challenge bitch class. In the open class first went to Eberhart Cashier, with Sprake second, Chequasset Ruby third and Climax hc. This is another reverse, Sprake having beat Cashier at Chicago. They are both nice dogs. Duke was vhc. In the bitch class Cassina won first, with Lady Thurman second, a finely marked bitch and of nice size. In dog puppies Bango G., a promising youngster, was first, with Dave Day second. In bitches first went to Mabel E.

ITALIAN GREYHOUNDS.

Two fair hounds were shown, both too large in size; Wenona winning first, with Trix second.

WIRE-HAIRED FOX-TERRIERS.

Several workmanlike dogs were shown.

The English whippet classes were made up of Campbell & Blake's well-known Ben Boue, Nellie Gray and Maggie.

MISCELLANEOUS.

Anno and Eyah, Chihuahua dogs, won in these classes. Both are nice little dogs, but are broken in color.

A list of the awards was published last week. Following is a list of the

SPECIAL PRIZES.

Largest entry, H. E. Cook; second, Detroit Kennel Club. Largest display of sporting dogs, H. E. Cook; non-sporting, the same. Largest and best collection, condition and handling in the ring to be considered, B. F. Lewis. Kennel mastiffs, C. C. Cook; mastiff dog (pet) class, Edric. Best smooth-coated St. Bernard dog in en class, Leon B.; St. Bernard Club special for best American-ed St. Bernard bitch under 18mos., Santa Rosa; over 18mos., ecpatra. Kennel great Danes, Wolverine Kennels; greyhounds, C. C Taylor. Kennel pointers, Westminster Kennel Club; best lit-weight pointer, Naso of Kippen. Pointer Club special—st dog and bitch, Naso of Kippen and Lass of Bow. Kennel glish setters, J. Shelley Hudson; brace, the same; best head and l. Dad Wilson; bitch in open class, Bohemian Girl. Kennel sh setters, W. L. Washington; dog in open class, Kildare; bitch, innie II. Kennel Gordon setters, S. G. Dixon. Pack of ten American foxhounds (2), Cook Kennels; six shaggy foxhounds, A. B. Whitlock. Kennel field spaniels, Woodstock Spaniel Kennel; cocker spaniels, the same; cocker bitch in open class, Busy W. Best collie, Bonnie Stewart. Kennel poodles, Northfield Yorkshire Kennels. Best bulldog, Harper; bitch, Dolly Tester. Kennel bull-terriers, F. F. Dole; best, Attraction. Dachshund, Feldmann K. Kennel beagles, Middleton Kennels; pair, Detroit Kennel Club; best, Little Duke. Kennel fox-terriers, Blemton Kennels; Yorkshire terriers, Northfield Yorkshire Kennels; pugs, Dr. M. H. Cryer; best, Bob Ivy; litter of puppies, H. Warup's pointers.

SPECIAL.

SOUTHERN FIELD TRIALS CLUB DERBY.

THE entries for the third annual Derby of the Southern Field Trials Club number 78. There are 70 English setters, 2 Irish setters and 6 pointers.

ENGLISH SETTERS.

ALPHONSO S. (F. S. Ward), dog (Buckellew—Vic Vic).
ANDY (J. M. Avent), dog (Jean Val Jean—Sheena Van).
ATLANTA (L. W. Smith), dog (Jean Val Jean—Sheena Van).
BALLYHOO (D. E. Rose), bitch (Paul Gladstone—Bohemian Girl).
BANGALANG (E. F. Rochelle), dog (Quilp—Lexington).
BELLE STAR (F. F. Myles), bitch (Yazoo—Dimple).
BELL M. (J. W. Murnan), bitch (Gladstone's Boy—Flame).
BESSIE M. (E. M. Myer), bitch (Dan Bryson—Grace Bryson).
BLACK JACK (G. T. Hodgson), dog (Paul Gladstone—Bohemian Girl).
BLADE (C Tucker), dog (Toledo Blade—Sola C.).
BLANCHESS (C. W. Bocage), bitch (Dexter—Patti).
BINGO (Beringer & Co.), dog (Paul Gladstone—Bohemian Girl.
BOLD BIDDY (P. Lorillard, Jr.), bitch (Paul Gladstone—Belle of Stanton).
BUSTER (B. Ridgway), dog (King Noble—Cricket).
COMO SU MADRE (B. Crane), bitch (Roderigo—Maud).
COSETTE (W. W. Titus), bitch (Jean Val Jean—Sheena Van).
COYOTE (J. I. Case, Jr.), dog (King Noble—Cricket).
DAME DARBY (H. S. Bevan), bitch (Count Noble—Moonstone).
DAVE (J. A. McCargo), dog (Startle—Clio).
DAVE W. (G. T. Hodgson), dog (Gath's Mark—Daisy F.).
DILL (P. Lorillard, Jr.), dog (Toledo Blade—Dashing Lady).
DOLLY HILL (J. Shelley Hudson), bitch (Ben Hill—Dolly S.).
EDWIN BOOTH (M. R. Rogers), dog (Roderigo—Miss Llewellin).
EUGENE (C. Tucker), dog (Count Noble—Ruby's Girl).
FASHIONETTE (H. A. Renfroe), bitch (Dan Gladstone—Bonsolone).
FINGAL (J. E. Dager), dog (Toledo Blade—Lady G.).
FLORA (Dr. G. W. Ware), bitch (Gladstone's Boy—Clara).
FLORA GLADSTONE (E. M. Myer), bitch (Dan Bryson—Grace Bryson).
FOLLY (J. M. Avent), bitch (Roderigo—Bo-Peep).
FOX D. (J. H. Young), dog (Jack—Fannie).
GATHER (G. T. Hodgson), bitch (Gath's Mark—Daisy F.).
GOSSIP (P. H. O'Bannon), bitch (Roderigo—Belle of Piedmont).
GRADY (Dr. R. M. Smith), dog (Yazoo—Dimple).
IDA STEWART (M. F. Rogers), bitch (Marshall Ney—Miss Llewellin)
JEANETTE (H. S. Bevan), bitch (Jean Val Jean—Rowey B.).
JEAN'S BOY (H. S. Bevan), dog (Jean Val Jean—Rowey B.).
JENNIE MAY (J. M. Avent), bitch (Roderigo—Bo Peep).
JESSIE JAMES (F. F. Myles), dog (Yazoo—Dimple).
JOE BLACKBURN (J. W. Renfroe), dog (Nortier—Winnie D.).
JUBAL EARLY (J. E. Hart), dog (Roderigo—Daisy Fisher).
LELA (B. M. Stephenson), bitch (Tennessee Charlie—Maud).
LEMONES (J. E. Dager), dog (Toledo Blade—Lady G.).
LITTLE MINCH (B. M. Stephenson), dog (Roderigo—Florence Gladstone).
MARGUERITE (D. E. Rose), bitch (Gath's Hope—Sue J.).
MEMPHIS (P. H. Bryson), dog (Roderigo—Florence Gladstone).
NOBLE GLADSTONE (P. H. Bryson), dog (Count Noble—Girly Gladstone).
NOPRA (P. Lorillard, Jr.), bitch (Gath's Mark—Allie James).
OLIVETTE (H. Hulman), bitch (Count Noble—Ruby's Girl).
OUR PET (B. M. Stephenson), bitch (The Corsair—Tchula).
PAULA (P. Lorillard, Jr.), bitch (Paul Gladstone—Belle of Stanton).
PAUL BO (T. M. Brumby), dog (Paul Gladstone—Bohemian Girl).
PINK (J. A. McCargo), dog (Startle—Clio).
QUEEN VIC (J. I. Case, Jr.), bitch (King Noble—Queen Vashti).
RAYON (J. M. Avent), dog (Jean Val Jean—Sheena Van).
ROD'S BELLE (P. H. O'Bannon), bitch (Roderigo—Belle of Piedmont).
ROSA B. (H. S. Bevan), bitch (Jean Val Jean—Rowey B.).
RUPER (J. M. Avent), bitch (Roderigo—Bo Peep).
SAM R (G. P. Jones), dog (Dash Bryson—Daisy's Hope).
SINTRAM (P. Lorillard, Jr.), dog (Gath's Mark—Allie James).
TORY LIEUTENANT (F. R. Hitchcock), dog (Jean Val Jean—Princess Helen).
TORY REM (F. R. Hitchcock), dog (Roderigo—Belle of Bridgeport).
TRIXY (G. T. Hodgson), bitch (Gath's Mark—Daisy F.).
VANITY FAIR (W. Wilson), bitch (Roderigo—Pet Gladstone).
WHYTE B. (P. H. Bryson), dog (Roderigo—Florence Gladstone).
ZUC SERA (B. Crane), dog (Jean Val Jean—Little Gift).
UNNAMED (F. S. Ward), bitch (Buckellew—Vic Vic).
UNNAMED (J. M. Avent), dog (Jean Val Jean—Haidee).
UNNAMED (J. M. Avent), dog (Jean Val Jean—Haidee).
UNNAMED (T. H. Poindexter), bitch (Toledo Blade—Rhet).
UNNAMED (Whyte Bedford), dog (Roderigo—Florence Gladstone).

IRISH SETTERS.

RANCHO (F. H. Perry), dog (Claremont Patsy—Nino).
ROSE OF CLAREMONT (F. H. Perry), bitch (Claremont Patsy—Nino).

POINTERS.

HAYWARD (Lebanon Kennels), dog (Lebanon—Virginia).
LADY GAY SPANKER (Graphic Kennels), bitch (Rumor—Lady Norrish).
LEBANON'S BOY (Lebanon Kennels), dog (Lebanon—Penelope).
MISS RUMOR (Graphic Kennels), bitch (Rumor—Lady Norrish).
PENELOPE II. (Lebanon Kennels), bitch (Lebanon—Penelope).
RIDGEVIEW LASS (Graphic Kennels), bitch (Graphic—Frivolity).

FLEAS ON DOGS.—*Editor Forest and Stream*: Pretty long articles on this subject sometimes appear, I would make some brief suggestions. Watch the dog's condition in this regard. Some owners thoughtlessly allow their dogs to endure the torment of the little black pests, and an excellent reminder to stir up their sympathy would be about a hundred of the insects on themselves for a fortnight or so. They may be removed to-day, and next week make their appearance again. Insect powder is the very best thing I have tried. It should be good. There is much that is not effective, either because of adulteration or loss of strength by exposure to the air.—N. D. E.

DOG TALK FROM ENGLAND.

MR. E. H. MOORE, of Melrose, Mass., is still purchasing. I understand that he has been negotiating by wire for the St. Bernard bitch Altona, litter sister to the well known Alta Bella, by Alton out of Bellegarde. She is much like her illustrious sister, but not as good.

The *Canine World's* editorial columns are headed with an excellent illustration of the head of an English bloodhound. To my mind it is very appropriate. They seem to be on the scent of everything wrong in dogdom. The difficulty of getting this paper on the news stands in London and elsewhere has induced the proprietors to make a change of base, and hereafter the paper will be published from 158 Fleet street, London, E. C. They have come to beard the "lion" in his den.

Mr. Mercer's Clumber bitch Snow has failed to prove in whelp to Boaz and will doubtless remain in England and be bred to Cardinal or some other good one.

According to the *Stock-Keeper* the Crystal Palace show, to be held next October, will contain 300 classes; the prize money amounts to some $10,000, and no puppy classes will be provided, but there will be juvenile classes for dogs under 18 months. The Crystal Palace is the best place for a dog show that it was ever my lot to see. It double eclipses Madison Square Garden. A show of 2,000 dogs could be literally lost under that great glass roof.

Two more good ones have gone the way of all flesh this week—champion Lorne, the bulldog, and the well known bull-terrier Como.

The exhibition of English mastiffs, held by the Old English Mastiff Club, at Crystal Palace, Friday, Aug. 22, in honor of Dr. Derby, the secretary of the English Mastiff Club of America, was well worth a trip across the pond to any lover of that breed, and yet I must confess I was disappointed. The entries numbered 51, and comprised the cream of the breed, with a few exceptions. Father Van Doorne did not show Jack Thyr, or any of his good ones. Messrs. Taunton, Ralph, Rice, Cook, Dr. Turner, Capt. Piddock, Prince de Chandernagore, and Messrs. Andrew, Higgs, White, Mackinson, Pulbrook, Price, Woolmore, and Drs. Eadous and Slatter were the exhibitors. While the best of the dogs were being led about the rings for inspection we did a bit of judging on our own account, nor were we alone in the occupation, for every mastiff man was doing likewise, as well as "Thames Tattler," Mr Brown, "Senex," and a few others of like ilk. According to our bad judgment, the best dogs shown were Mr. Andrew's Schoolmaster, by ch. Hotspur out of Lady Dora. Same owner's President, by Montgomery out of Lady Florida, a puppy that at 14 months weighs 180lbs. and stands 33in., according to his owner, and, I must confess, he looks it. Mr. Norman Higgs's Chrysolite, by Commodore out of Christine. W. K. Taunton's ch. Hotspur, Carshalton, Prince Carshalton, Duke and Constable. Dr. J. Sidney Turner's Seabreeze is a rare stamp of bitch, by ch. Beaufort out of ch. Cambrian Princess, and has much of the character of her dam; same owner's Ayrshire, of the same litter, is also good, but I could not see anything in the young stock that would anywhere near equal Mr. Moore's youngsters by ch. Ilford Caution out of The Lady Dorothy or Coleus, I forget which. The display of cups and prizes consisted of two challenge cups, or, more properly speaking, ewers, very beautiful "cups" they are too, and the Westminister Kennel Club's challenge cup, won in '89 by Alonzo, and in '90 by Melrose Prince, for competition at the Crystal Palace show, also a plaster cast (life size) of the head of Mr. Taunton's Orlando, and numerous gold and silver medals. I noticed Mr. Moore sketching the group, looking at the dogs in the ring, consisting of Mr. Taunton and Drs. Rowe and Turner, and, if I am not mistaken, the *Stock-Keeper* or *Gazette* will be favored with the sketch in their next issue. Altogether it was a delightful afternoon, the dogs were benched under a tent out in the grounds in a charming spot, the weather bright, warm and pleasant, and, although there was no competition, I was impressed with feeling of good fellowship of the whole affair, and I hope to see the day that America will hold specialty shows of the same nature.

After receiving the dogs we took a stroll through the palace, and among the many beautiful places we visited, the Wurtemburg gallery will be long remembered. The specimens of birds and animals were remarkably well-mounted and arranged. We noticed a pair of Spanish pointers pointing a pair of partridges, a group of very fair dachshunde digging out a badger, another fighting a wildcat. One enormous boarhound fighting a gray wolf, the largest dog I ever saw, I think, and several groups of boarhounds and wild boars, many of the hounds being pure white.

As an illustration of how much more interest the English public take in the dog I have not seen anything more striking than the new departure of the Scottish Kennel Club. They will give three prizes in challenge classes at their next show. The Englishman's love for the dog is apparent everywhere. Every painting has a dog stuck in some corner, the display of photographs at every photographers contains a dog or two, every art store contains numerous prints of noted dogs, and every street of every town contains more or less of a small dog show.

Paris now supports a pointer club, a Gordon setter club and a setter club for English and Irish setters.

The *Stock-Keeper* gives another instance of the feeling of good fellowship existing between the two countries: "Some time ago Mr. Samuel Woodiwiss made a bet (if bet it could be called) that he would forfeit £10 to Mr. Jack Ellis if a certain bull bitch which had been served was not in whelp. We hear that the bitch is not in pup, and that Mr. Woodiwiss was anxious to 'cash up;' but as Mr. Ellis is not one of the sort who will take advantage of another, he refused to receive it, and it was decided eventually that the said £10 be given as a special prize in the joint names of Messrs. Jack Ellis and Samuel Woodiwiss. We hear, too, that upon Mr. Sprague's suggestion both gentlemen agreed that it should be given for the best bulldog or bull bitch owned by an exhibitor resident in America. Good business this, and a pretty compliment to our American friend."

Mr. James F. Hall's (Fairhill Kennels, Phila.) St. Bernard bitch Lady Lowden (Plinlimmon—Lady Linton) has missed to champion Pouf. She will not go back with Mr. Hall as I stated in a former note, but will be bred again to the same dog. Mr. Washington Hall, of Hawley, will keep her in the meantime.

While strolling out in the country the other day with Mr. Wm. Nixon, of Hanley, the former owner of champion King Victor and breeder of Victory, we called on Mr. A. B. Bailey, of Shooter's Hill, Loughton. Mr. Bailey is one of the oldest members and ablest supporters of the St. Bernard Club and a popular judge of that breed. Although I feel indebted to him for a very pleasant afternoon I was doubly pleased to meet the breeder of Juno, the dam of champion Bayard, and also Juno the granddam. In the pedigrees of the St. Bernards in America Bayard is a prominent feature. All St. Bernard men know that Bayard was by Bosco—Juno and Juno by Wonder—Juno In some pedigrees I have seen it is printed Hall's Juno. Such, however, are not correct

Bailey bred both, but sold the younger at 6 months of age. Mr. T. King bred Bavard and the pedigree should read:

Champion Bayard, 8,447. { Bosco..... { Bruno, 2,419. Silverhorn. } King's Juno. { Wonder. Bailey's Juno.

Mr. Bailey showed us a son of old champion Bayard—Buttercup, out of Chitterbob (champion Hector—Duchess). Although 10 years old he is as lively as a kitten, he could jump a five-barred gate, straight and strong and is apparently good for another 10 years. He also showed us some well-marked young stock of considerable quality. But he has long since given up showing, more's the pity, for there are not many men in England that have done more for the breed.

The *Fanciers' Gazette* states that Bena II., the dam of Sir Bedivere, is en route for the States. I fancy there is some mistake about that. Bena II. is a litter sister to Sir Bedivere, not the dam. The dam of Sir Bedivere is Bena. And as Bena should be heavy in whelp to Keeper at this time, I fancy it is Bena II. that has been shipped. NAMQUOIT.

DOGS OF THE DAY.

I AM still as fully convinced as I ever was that the A.K.C. should go beyond members' shows and recognize in some way winners at shows held under their rules. This is one plan followed by the English Kennel Club, which we might copy with advantage. It gives control of the dog shows in a very easy manner, without clogging the membership of the Kennel Club with a lot of societies which take no interest whatever in the club beyond having its protection.

Mr. Crowell writes from England that he is bringing with him quite a number of dogs, mainly St. Bernards, and in the published list he included Donna Silva. It may be that Mr. Crowell is bringing her over, but a day subsequent to that of his published letter an offer was made of Donna Silva to an American breeder and an acceptance of the offer was at once cabled. So, whether Mr. Crowell brings her on or not, she will undoubtedly come to America.

Another St. Bernard purchase for this country is the bitch Dart, a winner of several prizes and very favorably spoken of in the English reports. She was purchased on behalf of the Swiss Mountain Kennels, of Germantown, and has been bred to Lord Bute, whose claim to be the best St. Bernard in the world is not being disputed by any English exhibitor. I notice that Lord Bute seems to be the sire of quite a number of promising puppies, both for size and quality, and I think this importation should turn out well for the benefit of American breeders.

Still another St. Bernard importation is Lady Garnet, by champion Pouf out of Lady Arnslow, which Mr. William Dodd, of Savannah, has purchased from Mr. George Long, of Carlisle, Eng. She is a young bitch, and has only been shown in the novice and puppy classes, getting third at Glasgow and second at Hartlepool.

Mr. J. S. Bacon, of New York, has made one or two collie purchases while in England this summer. They include Clwyd Fan, winner of nine firsts, and in whelp to Edgbaston Fox. With her come two of her puppies by Metchley Wonder.

Mr. T. A. Howard, of Columbus, Ohio, advises me that he has just received a pug, Penrice, from England. He is now two years old and has won first at Brighton, Colchester and Chelmsford, and second Crystal Palace. He is a well-bred dog and only 13lbs. in weight. Ohio seems to be quite a pug country.

I had the pleasure to meet Dr. M. H. Cryer the other day, immediately upon his return from a six weeks' tour out West and back through Canada and the Eastern States. I asked him how the dogs were, and he said he had not had time to see them since he got home.

Quite a nice little premium list has been got up for a show in connection with the Cumberland County Fair, to be held at Carlisle, Sept. 30 to Oct. 3. There is a classification for twenty-six breeds, with one to three classes for each breed. Entry fee 50 cents, and the prizes run to $3 for first and $2 for second prize. Mr. John E. Steel, of Carlisle, is the Supt.

I notice that Mr. Vredenburgh has called attention to the fact that the Danbury show could not be recognized by the A. K. C. This I said in FOREST AND STREAM two weeks ago, when I drew attention to the show. Last year's show was held under the auspices of the now defunct Connecticut State Kennel Club, but Danbury has always got along very well without the A. K. C., and I suppose it doesn't see any important necessity for becoming a member. The fact is, I don't think these small fair shows ought to be recognized. Take Wilmington for instance, a very nice show of its class, but surely some distinction ought to be drawn between a win at Wilmington and one at Boston or New York.

I can congratulate the Ottawa dog show managers upon having secured the services of Mr. H. W. Lacy to judge there on Sept. 23. It was with a great deal of regret that I had to cancel my engagement to go there, and I quite envy Mr. Lacy the pleasure in store for him.

Dr. Glass, of Philadelphia, has bought from Messrs. Taylor & Brown the well known English setter Bob H. The probability is that the Doctor will enter him at the Philadelphia field trial meeting.

Mr. J. H. Winslow tells me he has lost two very nice pointer puppies by distemper, one out of Naso of Kippen and the other by Graphic. "But, will you believe it, the best one is still alive."

Mr. Marshall, the Newfoundland breeder of Troy, N. Y., has purchased from Joe Lewis, of Pittsburgh, two young pointers, Forest King II., son of Forest King, and Graph, by Graphic. To make up for their departure Mr. Lewis has purchased the dachshund Feldmann K. and Lina L. and one of their puppies. Their former owner was Mr. Carl Klocke, of Pittsburgh, who won quite a number of prizes with them.

The men who run beagles down in Jersey and about Philadelphia are quietly smiling over the National Beagle Club field trials. They don't say that the field trials will be a failure, but they want to know how in the world they are going to be a success.

"Uncle Dick" made quite a success of his judging at Kingston, Ont., so I am told by a well-known fancier who was there. I see they have had dreadful floods at Hornellsville, and I somehow fear that our friend will have suffered in the washout. If so, we will all have to give him a helping hand.

Dr. Foote has had something to say about the influence of a sea voyage on the return of the season in a bitch. I had no theory on the subject, but was simply stating my observations and groping for information. What Dr. Foote states does not change what I said at all. I started the subject by saying that a voyage to England sent a bitch back about three months, and very soon I came across cases of bitches coming from England which were not affected at all. Now Dr. Foote has two cases on hand which exactly coincide with that, and he accounts for the difference by saying that Meersbrook Maiden that went to England was a very sensitive bitch, and the one that came here was the reverse. I don't controvert what he says about his own dogs, but I am sure that in the case of my own bitches, Nesta and Mavis, they were both plain, stay-at-home, worry-about-nothing animals, and yet they were set back. Dr. Foote's theory does not hit my cases.

Mavis went to England twice, with the same result each time. The first time she was kept and bred to Sefton, sire of Metchley Wonder. The second time she was sent to Christopher, developed steamer surfeit, and Mr. Stretch, being a little doubtful about her trouble, took her to a man who should put A double S after his name in place of V. S., and he advised Mr. Stretch to send her away at once. She was sent back without my hearing of it till she had almost arrived, and did not suffer a double relapse, but came in about the time she would probably have done had she remained in England. I hope Dr. Foote will look the subject up a little more, it is his profession, not mine, and I am curious to know why a voyage to England has apparently a different effect from one to America.

Has any one observed any diminution in the size of litters, numerically, within the past few weeks? I have knowledge of five bitches, all bred within a few days of one another. Four of these were known good breeders, yet the result has been that two of these missed, one had three puppies and the other six, while the fifth—her first litter—had but two. The weather at the time they were bred was excessively warm and enervating. I was attending to the four cases specially mentioned, and in order to effect my purpose I had to take the dogs into a cool stable where they would not suffer from the heat. The two that missed were the first bred to the respective dogs, and the other two were services a day or two later

I have sold to the Rev. Chas. F. Kelly, D.D., of Towanda, Pa., the black, white and tan dog Prince Charlie, by Sefton out of Mavis. Now that he no longer belongs to me, I would like permission to state that he is a dog that should not be overlooked by breeders. His pedigree is of the very best, individually he is good, and I have seen good puppies from him. J. W.

TORONTO DOG SHOW.

THE dog show at this busy fair opened this afternoon, and by 2:30 P. M. Mr. Davidson commenced his work in the pointer ring, Mr. Oldham getting to the spaniels shortly afterward. As there are but two rings Mr. Mason is reserved as an attraction for Wednesday, and at that time he will judge all the non-sporting division. One would almost imagine himself in an American show, so many are the well-known faces I see around the ring. Among those I noticed were Geo. H. Bush, A. W. Smith, Frank Dole, Dr. Nelles, T. G. Davey, J. F. Kirk, Dr. Mills, W. A. Powers, Geo. Bell, J. G. Mitchener, J. Luckwell, Andrew Laidlaw, H. G. Charlesworth, C. S. Wixom, H. Jarrett, Ben Lewis, Jos Lewis, Geo. Thomas, C. A. Stone, up to his ears in work as superintendent, J. Massey, W. S. Jackson, Capt. C. Greville Harston and many other well-known dog men.

Enough praise cannot be given to the committee for the admirable building they have had erected by the Fair Association. Perfect ventilation, combined with ample room to bench seven or eight hundred dogs, and the several offices connected combining to make it one of the most attractive and well designed buildings I have ever seen for the purpose. The stalls are divided by wire partitions in gilt and black, and a noticeable feature is the ample space for each dog. The building has been built from a rough design evolved from the mighty brains of friends Davidson and Mason last year, when the unfortunate exhibitors waded round the show ankle deep in mud and other wretchedness. The feature of the show is the spaniel classes and a showing of cocker bitches I have never seen excelled. The greyhounds are a fine show, and the setters are not far behind. St. Bernard classes are also pretty well filled, and the absence of the Hempstead Kennel seems to have brought all the other fox-terrier kennels to the front.

AWARDS.

MASTIFFS.—*Dogs:* 1st, Minting Minor; 2d, Mode; 3d, Grimsby Caution. Very high com, Lord Caution. Com., Major. *Bitches:* 1st, Bessie B.; 2d, Bess; 3d, Ilford Bess. Very high com., Lady Belle. High com., Blondie. *Puppies:* 1st, Grimsby Caution; 2d, withheld.—NOVICE—*Dogs:* 2d, Grimsby Caution. *Bitches:* 1st, withheld; 2d, Ilford Bess.

ST. BERNARDS.—ROUGH—*Dogs:* 1st, Benmore; 2d, Monk; 3d, Lord Dalhousie. Reserve, Monarch. Very high com., Garibaldi, Bruce. High com., Leo, Duke, Chump. *Bitches:* 1st, Phyllis; 2d, Nora; 3d, Berna. *Puppies:* 1st, Ben Maider; 2d, Kildonan; 3d, Senator.—SMOOTH—CHALLENGE—1st, Victor Joseph.—OPEN—*Dogs:* 1st, Baronet. *Bitches:* 1st, Alpine Queen; 2d, Nellie.—NOVICE—1st, Nellie; 2d, Baronet.

NEWFOUNDLANDS.—1st, Major; 2d, Leo; 3d, Toby.

GREAT DANES.—*Dogs:* 1st, Melac; 2d, Lord; 3d, Bismarck. High com., Pollux. *Bitches:* 1st, Irene; 2d, Dudley Flora; 3d, Freda. High com., May.

DEERHOUNDS.—1st, Nora. No others.

GREYHOUNDS.—CHALLENGE—*Dogs:* 1st, Balkis; 2d, Highland Chief. *Bitches:* 1st, Cassandra.—OPEN—*Dogs:* 1st, Scavenger; 2d, Jolly Ranger; 3d, Sir Lancelot. Very high com., Apparition' Turk. High com., Sport, Charlie McGrath, Milo. *Bitches:* 1st' Second Sight; 2d, Grimsby Jess; 3d, Halloween. High com., Nell'

POINTERS.—CHALLENGE—No entries.—OPEN—OVER 55LBS.—*Dogs:* 1st, John R. Daniels' Lord Graphic; 2d, T. G. Davey's Westminster Drake; 3d, W. J. Danay's Shot.—OVER 50LBS.—*Bitches:* 1st, Mount Royal Kennels' Devon Nell; 2d, Thos. Thornton's Minnie-ha-ha; 3d, Burritt Her's Sport.—UNDER 55LBS.—*Dogs:* 1 t, J. and F. Mackie's Shot; 2d, W. G. Cassels' Snipe; 3d, J. Robertson's Hector; high com., John R. Daniels' Lord Graphic's Lad.—UNDER 50LBS.—*Bitches:* 1st, T. G. Davey's Fan N.; 2d, John R Daniels' Trinket S.; 3d, John E. Gill's Galena; very high com. H. M. Kipp's Nellie; high com., Charles Christie's Thornton's Duchess.—NOVICE—*Dogs and Bitches:* 1st, John E. Gill's Galena.—*Puppies:* 1st and 2d, John R. Daniels' Lord Graphic's Jem and Lord Graphic's Jean.

ENGLISH SETTERS.—CHALLENGE—*Dogs:* 1st, J. Shelley Hudson's Dad Wilson.—OPEN—*Dogs:* 1st, Cohannett Kennels' Kent II; 2d, Jos. Lewis's Tony Gladstone; 3d, J. Shelley Hudson's Chickasaw; reserve, Cohannett Kennels' Royal Kent; very high com., T. G. Davey's Locksley, Forest Kennels' Forest Fred; high com; Forest Kennels' Forest Sport, and J. Shelley Hudson's Dad Wilson's Boy; com., J. Scroggie's Toronto and Geo. Batterson's Roger Boy.—*Bitches:* 1st, J. Shelley Hudson's Bonemian Girl; 2d, A. G. Habbick's Genevieve; 3d, Chas. G. Winchell's Belle Gladstone; very high com., E. J. Walsh's Scottish Belle; high com., Forest Kennels' Forest Gladys and Forest Topsy; com., Forest Kennels' Forest Nettie and Mount Royal Kennels' Nellie Dale.—*Puppies:* 1st, T. G. Davey's Forest Heather; 2d, Samuel Steamland's George III.; 3d, Geo. C. Hore's Roger.—NOVICE—*Dogs and Bitches:* 1st, T. G. Davey's Forest Heather; 2d, J. Shelley Hudson's Chickasaw; 3d, Forest Kennels' Forest Fred.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, Geo. H. Covert's Dick; 2d, G. W. Clarke Jr.'s Blarney. *Bitches:* 1st, Kildare Kennels' Ruby Glenmore, Laura B. absent.—OPEN—*Dogs:* 1st, Max; 2d, Kildare; 3d, O'Donovan Rossa. High com., Paddy Sarsfield, Larry, Jack Malone, Red River, Glen Echo. Com., Bang Jerry. *Bitches:* 1st, Bell Ida; 2d, Buddy Clare; 3d, Jeanette. Very high com., Flavie, Kerry Gow, Glidella, Molly Glendyne. High com., Lilly Ban Sedan. Com., Kildare Ruby.—PUPPIES—*Dogs:* 1st, Elector; 2d, Parnell; 3d, Sport. Very high com., Mansfield. High com., Dan. *Bitches:* 1st, Nellie D.; 2d, Lalla Rookh.—NOVICE—1st, Kildare; 2d, Flora; 3d, Larry.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st, Leo B.; 2d, Field Marshall. *Bitches:* 1st, Rose.—OPEN—*Dogs:* 1st, Ivanhoe; 2d, Clyde. *Bitches:* 1st, Hilda; 2d, Bloom.

FOXHOUNDS.—*Dogs:* 1st, Genius; 2d, Bingo. *Bitches:* 1st, Vanity; 2d, Vexation; 3d, Nancy.

IRISH WATER SPANIELS.—CHALLENGE—1st, B. F. Lewis's Patsey O'Connor.—OPEN—1st, Jos. Lewis's Countess Bendigo; 2d and 3d, Jas. F.W. Ross's Handy Andy and Ochtwan Biddy. Very high com., Miss Nichol's Sancho.

CLUMBER SPANIELS.—CHALLENGE—1st, Bate & Geddes's Bromide.—OPEN—*Dogs:* 1st, G. R. Smart's Darby. *Bitches:* 1st, W. J. Young's Belle of Ottawa.

FIELD SPANIELS.—CHALLENGE—1st and 2d, Rosedale Kennels' champion Newton Abbott Laddie and Bridford Rube.—OPEN—*Dogs:* 1st, Rosedale Kennels' Beau; 2d, A. Laidlaw's Samson; 3d, B. F Lewis's Black Diamond. Very high com, Luckwell & Douglas's Faust. High com., A. Laidlaw's Napoleon and Rosedale Kennels' Black Knight. Com., P. J. Keating's Friday and J. Scully's Sweep. *Bitches:* 1st and 2d, R. P. Keasby's Lady and Miss Ben d'Or; 3d, W. G. McCullagh's Gipsy Queen.

COCKER SPANIELS.—NOT EXCEEDING 28LBS.—ANY COLOR—CHALLENGE—*Dogs:* 1st, Brant Cocker Kennels' Brantford Rad Jacket; 2d, Andrew Laidlaw's Rabbi. *Bitches:* 1st, Brant Cocker Kennels' Juno W.; 2d, J. W. Bunting's Sensation.—OPEN—BLACK—*Dogs:* 1st, Luckwell & Douglass's Black Duke; 2d, G. Bell's King of Obos; 3d, J. G. Mitchener's Dono. Reserve, Andrew Laidlaw's Brock. Very high com., P. G. Keyes's Bob Obo and J. W. Bunting's Pedro. High com., Rosedale Kennels' Rosedale Dandy. Com., James Harris's Fine Furs. *Bitches:* 1st, Geo. F. Bush's Novel; 2d, Geo. Bell's Idea; 3d, Geo. F. Bush's Bessy W. Reserve, Rosedale Kennels' Rose Busy. Very high com., Andrew Laidlaw's Nina. High com., J. G. Mitchener's Lady Obo. Frank F. Dole's Floss W., and Brant Cocker Kennels' Busy. Com., Luckwell & Douglass's Woodland Sally, George Bell's Perhaps and Chas. Searle's Topsy.—NOT OVER 28LBS.—ANY OTHER COLOR—*Dogs:* 1st, Andrew Laidlaw's Bambo; 2d, H. G. Charlesworth's Nugget; 3d, George Bell's Crosby. Very high com., M. W. Kennedy's Rondo. High com., H. G. Charlesworth's Roy. *Bitches:* 1st, Luckwell and Douglass' King Pharaon's Sister; 2d, Brant Cocker Kennels' Zetta; 3d, G. Bell's Little Red Riding Hood.—PUPPIES—*Dogs:* 1st, Andrew Laidlaw's Bambo; 2d, Rosedale Kennels' Rosedale Rover; 3d, H. G. Charlesworth's Myget. Very high com., Rosedale Kennels' Rosedale Bottles. High com., F. E. Curtis' Snob. *Bitches:* 1st, Geo. Bell's Idea; 2d, Andrew Laidlaw's Woodstock Minnie; 3d, Rosedale Kennels' Belle. Reserve, Geo. H. Bush's Smol. Very high com., Brant Cocker Kennels' Fatima.—NOVICE CLASS—*Dogs:* 1st, Martin O'Neill's Sport; 2d, P. G. Key's Bid an Rollo. *Bitches:* Geo. Bell's Idea; F. F. Dole's Flossie W.; J. G. Mitchener's Lady Obo. Very high com, Geo H. Bush's Smol. High com., Andrew Laidlaw's Woodstock Minnie; J. G. Mitchener's Black Vic.

COLLIES.—CHALLENGE—1st, Scotilla.—OPEN—*Dogs:* 1st, The Squire; 2d, Colonel Scot; 3d, Bute. Very high com., Mess High com., Sir John. Com., Ollie. *Bitches:* 1st, Manilla; 2d, Cora II; 3d, Nancy. Very high com., Floss. Com. Flo. *Puppies:* 1st, Roslyn Trefoil; 2d, Drury, 3d, Laddie. Very high com., Lassie.—NOVICE—1st, Roslyn Trefoil; 2d, Drury; 3d, Lady Florence.

BULLDOGS.—CHALLENGE—1st, Harper.—OPEN—*Dogs:* 1st, Carisbrooke. *Bitches:* 1st, Dolly Tester.

BULL-TERRIERS.—CHALLENGE—1st, Starlight.—OPEN—*Dogs:* 1st, White Prince; 2d, King of Hearts; 3d, Vic. High com., Tipperary. *Bitches:* 1st, Grove Duchess; 2d, Miss Gladstone.

DACHSHUNDE.—Divided 1st, Gill and Feldman.

BEAGLES.—CHALLENGE—*Dogs:* 1st, Royal Krueger. *Bitches:* 1st, Una.—OPEN—*Dogs:* 1st, Witch Hazel Prince; 2d, Drummer; 3d, Whisker. Very high com., Stormer. High com., Sinbad. *Bitches:* 1st, Elf; 2d, June M.; 3d, Stella. Very high com., Lilla. High com., Beauty.—UNDER 12IN.—1st, Alva W.

FOX-TERRIERS.—CHALLENGE—1st, Bacchanal.—OPEN—*Dogs:* 1st, Blemton Volunteer; 2d, Blemton Trump; 3d, Stardon's Jack. Reserve, Oriole Trap. Very high com., Zigzag Heckle. High com., Richmond Crack. Com., Rant. *Bitches:* 1st, Eva Nettle; 2d, Blemton Vice; 3d, Speck. Very high com., Ebor, Speedy, Bell, Mischief. High com., Brooklyn Vernon, Spot. Com., Rose, Dot, Judy.—NOVICE—*Dogs:* 1st, Moody; 2d, Punch. *Bitches:* 1st, Blemton Vic; 2d, Speck; 3d, Scollops. Reserve, Chp. Very high com., Dot, Spot, Judy, Oriole, Belle.

BLACK AND TAN TERRIERS.—CHALLENGE: 1st, Buffalo General.—OPEN—*Dogs:* 1st, Kaiser; 2d, Senator. 3d, Rochelle Scot. Very high com., Donovan. High com., Jack. *Bitches:* 1st, Broomfield Madge; 2d, Desdemona; 3d, Rochelle Nadjy. Very high com., Jenny. High com., Merry.

TOY SPANIELS.—1st, Toronto Charlie. *Bitches:* 1st, Ruby; 2d, Topsy.

Best collie, The Squire; best black and tan, Kaiser.

THE ENGLISH SETTER CLUB.

Editor Forest and Stream:

At the meeting of the executive committee of the English Setter Club, Sept. 9, the following important action was taken:

Moved, That inasmuch as the qualified members of the English Setter Club of America were accepted as members of this Club on payment of the membership fee of $5, and without payment of annual dues for 1890, we consider it but just that the dues for this year be remitted to all other members of the English Setter Club. Therefore be it

Resolved, That existing members be entitled to the remission of their annual dues for the year ending Dec. 31, 1890, and that all persons joining between this date and Jan. 1, 1891 be chargeable up to that date only, with the membership fee of $5, the intent of this action being to place all the membership in this respect on an equal basis to the close of the year, Dec. 31, 1890. PERCY P. OHL, Sec'y.

MR. A. CROWELL sailed from England Sept. 10 on the Canada with quite a string of dogs. Among the list is the schipperke bitch Cople Sophia, purchased last year for Mrs. J. W. Connelly, Dorchester, Mass.; she was bred Aug. 8 to Mr. G. R. Krehl's Drieska. Also the St. Bernard bitch Pleiad (Plinlimmon—Mascotte), purchased for Mr. W. S. Diffenderffer, Baltimore, Md. Mr. Crowell will bring for his own kennel the rough St. Bernard dog Victory (Lysander—Lady Pauline), the bitch La Purcelle (champion Save—Faultless), the bitch Prudence (Helvellyn—Zephyr), the bitch Republican Belle (Plinlimmon—Florentius) and the bitch Donna Silva (Duke of Wellington—Calypso). The last three are well known winners. He will also bring the smooth dog Belisarius (Bombastus—Topsy) and the bitch Nun Nicer (Austin Friar—Muri). Both have done some winning in England, and Mr. Crowell thinks that some of them at least will get into the money here.

BEAGLE FIELD TRIALS SPECIALS.—*Editor Forest and Stream:* Please publish the following donations for the National Beagle Club's field trials: Mr. W. Stewart Diffenderffer, Baltimore, Md., offers a suitable piece of silver valued at $20 for the dog or bitch, bred by a member of the National Beagle Club and owned by breeder, winning the greatest number of heats. Mr. F. W. Chapman, Melrose, Mass., offers a beautiful silver water set, valued at $25, for the dog or bitch having the best voice; donor not to compete. Mr. E. C. Barrett, Boston, Mass., offers a powerful pair of field glasses, valued at $20, for the dog or bitch doing the best trailing throughout the trials. More specials will be announced later.—F. W. CHAPMAN, Secretary (Boston, Mass., Sept. 13).

SALE OF MT. WASHINGTON KENNEL.—*Editor Forest and Stream:* Will you please state in your valued paper that I have disposed of all my interest in the Mt. Washington Kennel to Mr. Joseph Lewis, of Canonsburg, Pa., including champion Paul Gladstone and several other English setters. The kennel will be carried on under the old name by Mr. Lewis at Canonsburg, Pa., and I wish to state to the public that it gives me much pleasure to recommend Mr. Lewis to them, as my six years' experience with him was of the most pleasant nature, and I would not have severed my connection with him had I remained in the Eastern country.—S. L. BOGGS, Salt Lake City, Utah.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Master, Hustler, Tramp, Montrose, Zarine, Zilla and Zanita. By Eberhart Pug Kennels Cincinnati, O., for fawn pugs, four dogs and three bitches, whelped Aug. 5, 1890, by Spokane out of Lady Verne.

Tim Glendyne. By J. J. Scanlon, Fall River, Mass., for red Irish setter dog, whelped July 3, 1890, by Tim (Biz—Hazel) out of Ellis (Elcho, Jr.—Maggie H.).

Cubo and Eileen. By Wm. F. Murphy, New Haven, Conn., for black cocker spaniel dog and bitch, whelped July 9, 1890, by Dixie (champion Black Pete—Miss Nance) out of Cleopatra (champion Black Prince—Zona).

BRED.

☞ **Prepared Blanks sent free on application.**

Lady Thurman—John Bull. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Thurman (Santa Claus—Almah) to their John Bull (champion Loris—May Queen), Sept. 6

East Lake Virgie—John Bull. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch East Lake Virgie (champion Bradford Ruby—Puss B) to their John Bull (champion Loris—May Queen), Sept. 1.

Broomfield Madge—The Senator. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Broomfield Madge (Patrick—Queen) to their The Senator (Patrick—Pink), Aug. 26.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Lady Tippins. Dr. W. C. Johnson's (Frederick, Md.) collie bitch Lady Tippins, Sept. 9, seven (two dogs), by Chestnut Hill Kennels' The Squire.

Lady Thora. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Thora (Santa Claus—Almah), Sept. 6, five (three dogs), by their Bradford Ruby II (champion Bradford Ruby—Puss B)

Countess Sequa. H. S. Pitkin's (Hartford, Conn) St. Bernard bitch Countess Sequa (Everest—Sequa) Aug. 10, five (two dogs), by his Prince Barry (champion Merchant Prince—Bernie V.).

Tough. Corktown Cocker Kennels' (Ottawa, Ont.) cocker spaniel bitch Tough (Wildair—Belle), Aug. 28, four dogs, by Rideau Kennels' Bob Obo (champion Ooo—Farrow's Nellie).

Merry Duchess. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Merry Duchess (Young Royal—Juno), Sept. 9, three dogs, by his champion Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Prepared Blanks sent free on application.**

Bell. Black and tan foxhound bitch, whelped Sept. 1, 1880, by Driver out of Queen, by F. H. Hayes, Dexter, Me., to C. R. Williams, New Brunswick, N. J.

Dare Go—Dido B. whelp. Black and white ticked pointer bitch, whelped June 12, 1890, by Tell Kennels, Worcester, Mass., to Wm. H. Dennison, Norwich, Conn.

Prince Barry—Queen Miranda whelps. St. Bernards, whelped April 26, 1890, by H. S. Pitkin, Hartford, Conn., a dog each to Dr. M. N. Armstrong, Newton, N. J., and Miss E. E. Carlisle, New Britain, Conn., and a bitch each to E. Byrem, Harrisburg, Pa., and H. H. Phillips, Crystal Falls, Mich.

Polly and Romola. Black cocker spaniel bitches, whelped June 30, 1890, by Bob Obo out of Cleo, by Corktown Cocker Kennels, Ottawa, Ont., to R deau Kennels, same place.

Bounce. Black and white cocker spaniel dog, whelped June 19, 1890, by Bob Obo out of Tough, by Corktown Cocker Kennels, Ottawa, Ont., to W. H. Morgan, same place.

DEATHS.

Lady Thora. Pug bitch, whelped Dec. 26, 1887 (Santa Claus—Almah), owned by Eberhart Pug Kennels, Cincinnati, O., in parturition.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE CREEDMOOR MEETING.

THE eighteenth annual fall gathering of the National Rifle Association has filled Creedmoor with shooters during the past week. The meet was a success, though the weather was decidedly untoward during the few closing hours. The day to day narrative below is followed by the list of winners and the conditions of the matches.

Sept 9—The opening day of the eighteenth annual fall prize meeting of the National Rifle Association proved a treasure so far as the shooting men were concerned. In respect of light, wind, temperature, and atmospheric conditions generally, it was a perfect shooting day. Capt. John S. Shepherd had direction of affairs as executive officer of the meeting, the statistical department being run by Gen. Chas. F. Robbins and Sergt.-Major Jacob Manz, while the duties of range officers were discharged by Major Edward Duffy, Capt. Emil F. Christoffel and Capt. Jas. M. Maconnell, the surgeon being Major C. E. De La Vergne. The number of individuals competing in the several events was close upon 150, while the entrance fees paid in footed up $500, as against $190 on the first day of last year's meeting.

The Judd match, for military rifles, 7 shots at 200yds., open to all comers, was the first scheduled event of the day. It brought out a field of over a hundred entries and resulted in some really brilliant off-shoulder shooting. The match will be continued another day, and then the winners of the Judd trophy and 25 cash prizes offered by the Association will be announced. The shooters placing a mortgage upon these prizes, the first five of which are to be won on an aggregate of two scores, were as follows:

Judd match:			
J F Klein	34	A C White	32
C B Pratt	34	J M Stewart	32
A D etrich	34	J M Pollard	32
W D Huddleson	34	J J Mountjoy	32
H Hodges	33	John Corrie	32
T J Dolan	33	E J Cram	31
Frank Stuart	33	F L Graham	31
C H Gaus	31		
C E Gensch, Jr.	31		
J S Shepherd	31		
W W Young	31		
Alex Stein	31		
C T Hilliker	31		

The Wimbledon cup was taken by Major Gaus of the 3d Brigade with 141 in the possible 150, at 1000yds. Good scores were also run up in the Tiffany, all comers' military and the governor's matches.

Sept. 10.—A cloudy sky and heavy wind were the atmospherical conditions which greeted the marksmen on the Creedmoor ranges in the second day's contest of the National Rifle Association. The light was excellent; in fact better than if the sun had been shining, while the wind was anything but desirable. It blew across the range from right to left in fitful gusts, so that good marksmanship was out of the question. As a consequence, only a very few of the shooters were able to improve their scores of the day previous, and the majority of them confined their efforts to the matches which closed to-day, notably the Judd match. Thanks to the efforts of Mr. B. Walther, shooting in the Tiffany and pool matches will be continued until 6 o'clock each evening, weather permitting.

The Judd match, which began on Tuesday, closed with A. Dietrich, of New Jersey still in the lead; his score of 67 out of the possible 70 could not be beaten, and only four of the contestants were able to improve their previous scores with paying results. Thirty-one is the lowest score in this match to obtain a prize.

The principal event of the day was the long-range military match, 15 shots at 800 and 900yds., respectively. Sergt. Frank Stuart, of the Sixty-ninth Regiment, one of the best all-round marksmen in the national guard of this State, and who shot in the 1883 American team at Wimbledon, took first with 61 at 800 and 62 at 900yds. Among the six prize winners was the Pennsylvania crack, J. J. Mountjoy, the only man who used a Springfield instead of the usual military special rifle.

Gus Zimmermann arrived at the range during the afternoon and proceeded at once to the 200yds. range, where he began to demolish the canvas targets in the Tiffany and pool contests. As soon as he had his rifle properly sighted the New York sharpshooter got down to fine work. During the pool shooting Zimmermann scored five consecutive bullseyes, and in 50 shots, fired in ten strings of five each, he made the following scores: 43, 41, 43, 43, 50, 43, 45, 47, 44, 47, a total of 439 out of the possible 500. Mr. Zimmermann won the Tiffany cup last year, and is in first place for it now with 45, 47, 47, or 139 altogether. He intends to improve this score to-morrow, but even if he should fail the other contestants will find it hard work to overcome his lead. Mr. Case had an excellent chance so far, but spoiled it, and with it a good string of 5 shots by firing one shot on the wrong target.

Sept. 11.—To-day's rainy weather recalled the stormy days of last year at Creedmoor, L. I., and many were the stories told of that stormy meeting, but even the deluge of 1889 was not more disagreeable than the shooting in to-day's drizzle, bad light, and veering wind.

Major C. H. Gaus, Inspector of Rifle Practice, Third Brigade, N. G., S. N. Y., won the military championship of the United States in the President's Match with 106 points, two of which were the allowance for the use of the Remington 50-caliber State rifle, the highest total score with the Springfield (105) being made by J. M. Stewart, of Washington. The match was divided into two stages, and only the seventeen prize winners in the first stage were eligible for competition in the second stage.

The Bruney Walther team match was not as successful as anticipated, owing principally to the bad weather, which kept some of the out-of-town clubs away, among them the Newark Shooting Society and the Our Owns, of Newark.

The Zettler Rifle Club had three teams in the field, the Miller Rifle Club, of Hoboken, one, and the New York Rifle Club one, the same which opened the match on the day previous. The second New York team failed to materialize. The Zettler team No. 1 won the match easily with 139 points, their first score being 192 and their third 193. The New Yorks took second place, but could improve the previous day's results by only one point. The Zettler team No. 3 won third prize.

The inter-State long range match, which the Association has been trying to resurrect, did not take place, no entries having been received. It used to be one of the most interesting features of the annual meeting, and similar contests are very popular in England.

Shooting in the Tiffany match was more lively than on Thursday, owing principally to the presence of the New York sharpshooters. Gus Zimmermann improved his score by making 48, giving him a total of 187 points, although many good shots will be made to-morrow, it is hardly probable that any marksman will be able to wrest the victory and the cup from the genial Gus. Among other shooters who put up scores or bettered their old ones were Messrs. D. Miller, C. G Zettler, B. Zettler, J. A. Boyken, G Joiner G. Schlicht and G. Kleinbub.

In the Steward match W. G Flussey and W. L. Cash made the best scores; in the All-Comers F. Stewart, H. Lohmann, Jr., F. H. Lalor, D. N. Murphy and H. J. Mehard; in the Governor's match, S. B. Wetherald, J. F. Klein, A. G. Kuser.

The officers of the day were Capt. Gibson, Lieut. Smith, 71st Regiment; Lieut. Kraft, 23d Regiment; Capt. M Cauley, 12th Regiment, and Surgeon-Major Henry of the 12th Regiment.

Sept. 12.—This was National Guard day at Creedmoor, and the boys in blue who form the military force of the Empire State contested for the team Championship and trophy offered by the State of New York, valued at $300. The Twenty-third Regiment's team carried off the prize, with 487 points out of the possible 600. The Seventh Regiment shooters had a handsome lead at the 200yds., but they could not hold their own at the 500yds. The Twenty-third's boys won the championship in 1883, 1887 and 1888, while the wearers of the black-braided gray were victorious last year.

The two brigade matches followed. In the First Brigade contest the Seventh Regiment won with 506, while the Twelfth's team, which had been brought together chiefly through the efforts of Sergeant T. J Dolan, took second place. Only two regiments contested for superiority in the Second Brigade, the Twenty-third beating the Thirteenth by 40 points.

The wind, a regular fishtail, was worse than on any previous day, and the light was poor until after 10 o'clock. It was almost impossible to get proper elevation at the longer distances, and this explains the poor scores of some of the best shooters in the teams. The highest individual score, 46, was made by Sergeant Van Husen of the Twelfth Reg ment, with 21 at 200 and 25 at 500yds. Lieut. Pickett, Twenty-third Regiment, made the same score.

Very little shooting was done in the continuous contests. In the Governor's match Klein, Root and F. Stewart put up full scores of 35, and W. L. Cash 34. In the All-comers' Military, J. J. Mountjoy got two 45s, A. R. Kuser and A. E. Newman a 45, and Ch. Chirm and W. G. Flussey made 46 each.

The officers of the day were: Major Chauncey, Eighth Regiment; Major J. Crocker First Brigade staff; Lieut. Christoffel, Forty-second Regiment; Surgeon-Capt. Weston, Twenty-second Regiment.

To-morrow's matches will be the Hilton trophy match and the inter-State military match. The Tiffany, the Governor's, the all-comers' military, the Steward and the revolver matches will be concluded also with the finish of the meeting.

Sept. 13.—The National Rifle Association's annual meeting at Creedmoor came to an end to-day amid a downpour of rain, and the men who took part in the Hilton trophy and inter-State matches were thoroughly drenched before they had completed their scores. Taken all in all this meeting was rather more successful than that of last year, but the exceedingly unpropitious weather of the last three days undoubtedly kept large numbers of riflemen from attending and taking part in the matches.

Severe showers at intervals all day and strong winds in the morning and early afternoon made the shooting a difficult matter. The darkness in the afternoon interfered seriously with the 600yds. distances. Yet considering the day, some good records were made. The attendance was larger than on any other day during the week.

There was quite a large number of military and civic visitors from New Jersey, who seemed greatly interested in the contests for the Hilton trophy, and it was a great disappointment to them that their State representatives did not carry off the prize. Among those who were present were ex-Governor Green, Major E. J. Andrews, State Comptroller; Colonel John J. Toffey, State Treasurer; General R. W. Donnell, Quartermaster General; Riparian Commissioner R. R. Redding, Colonel Van Clieff, Colonel J. Kuser, of Newark; Colonel C. F. Loutrelle, Colonel G. G. Felton, Colonel J. C. Owens, Assistant Inspector General, and Lieutenant Colonel C. Y. Bamford.

The Washington, D. C., team carried off the Hilton trophy with a score of 1017, beating the New Jerseymen by 19 points. The New York team won the inter-State match with a score of 986. Sergeant Frank Stuart, of the Sixty-ninth regiment, won the first prize in the all-comers' military match, making an aggregate score at 200 and 500yds. of 141. The first prize in the Governor's match was won by Sergeant John F. Klein with 115 points at 500yds.

The record of the meeting stands as follows:

No. 1. Directors' Match—200yds., open only to directors of the N. R. A., 5 rounds, any military rifle, including specials. Won by Major Geo. Shorkley by a score of 23 out of a possible 25.

No. 2. Judd Match—Open to all comers, Remington 50-cal. State model, the United States, Springfield, or the Martini-Henry rifle, 7 rounds, the aggregate of two scores to count for the first five prizes:

A Dietrich	67	J M Pollard	32	A Stein	31

NEWARK.

NEWARK, N. J., Sept. 13.—Arrangements are completed for a 100 shot match, which will begin on the Clinton Rifle Range on Wednesday night next. The leading prizes will be two Wurfflein special gallery rifles, worth $25 each, and besides these 60 per cent. of the entrance money will be divided into five cash prizes. The entries will close when 20 contestants have entered, though each contestant will be allowed to shoot his re-entry score after the main entry list has closed. The entry fee will be $5 and the re-entry fee the same, each contestant being restricted to one re-entry. The target used will be the "Zettler 25-ring," with a 2in. bullseye. Over a dozen of the finest shots in New York and New Jersey have signified their intention to compete. Shooting will begin at 7:30 and 9:30, two men shooting at one time, and each shooter will be limited to 100 minutes. The match will be open on Monday, Wednesday and Friday nights until completed.

A scheme is on foot to form the Newark Shooting Society, Miller Rifle Club, Zettler Rifle Club, Harlem Rifle Club, Bullshead Rifle Club, Albig Rifle Club and the Williamsburg Schuetzen Gesellschaft into an "Inter-State League," for the purpose of running one or more big prize festivals each year on one or another of the outdoor ranges. In the arrangement of a festival of this character each club could pay a given amount to the guarantee fund to secure an immense prize list, and even if the festival should be a financial failure, the loss of each club would be a mere trifle. With each club financially interested each of their members could be depended upon to work hard for the success of the shoot. A meeting will be called for some time in October, when it is hoped that an organization may be perfected. Dr. J. A. Boyken and C. H. Townsend, of the Newark Shooting Society, are the projectors of the scheme, and Townsend has a fashion of getting there when he starts off on anything in the shooting line.

BOSTON, Sept. 13.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day at its range, with a good attendance of riflemen, also quite a number of the Press Rifle Club were out practicing for their fall shoot, which will be held at Walnut Hill about the middle of October. S. O. Merville won the bronze victory medal. Following are the best scores made, distance 200yds., standard American target:

(R.) ALL-COMERS BEST MATCH.

MERIDEN, Ct., Sept. 14.—*Editor Forest and Stream:* The Citizens' Rifle Club, of Meriden, will hold their fall prize shoot at their range Sept. 24. If stormy it will be postponed until the next fair day. Twenty cash prizes will be given, valued at $125. First, second and third prizes will be $20, $15 and $12. A number of special prizes will be given. Programmes of the match can be procured by writing to W. G. Hooker, Sec'y.

ST. LOUIS, Mo., Sept. 13.—A small crowd attended the last weekly shoot of the St. Louis Pistol Club. Sam Dorman made the top score of the ten members who participated, and won the medal. A 12½yd. standard American target is used for all shooting. The score:

Sam Dorman	9	10	10	8	9	10	10	10	6	8	—90
M Billmeyer	10	10	10	8	9	9	8	10	7	6	—87

UNSER FRITZ.

THIRD BRIGADE MEET.—Major Gaus, who did such good work at Creedmoor last week, is to be executive officer at Hensslaerwyck range when the Third Brigade Rifle Association has its thirteenth annual meet on Oct 2 and 3. This management means a well run meeting. The programme is a well arranged and liberal one, with six good matches for all styles of shooting.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Sept. 24-26.—South Side Gun Club Tournament, Watertown, N. Y. L. H. Prentice, Secretary.

Sept. 25-27.—Harrisburg, Pa., Annual Fall Tournament, Harrisburg Shooting Association. Two days Keystones one day live birds. Programmes now ready. A. M. F. Worden, Sec'y, Box 468.

Sept. 30, Oct. 1-3.—Sixth Annual Tournament of the Middlesex Gun Club, at Plainfield, N. J. Two days targets, two days live birds. $1,000 guaranteed. Programmes ready for distribution Sept. 1.

Oct. 14-16.—First Annual Tournament of the Boiling Spring Fishing and Gunning Club, at Rutherford, N. J. Sweepstake purses. Address P. A. Jeanneret.

BANDLE'S SIXTH ANNUAL.

CINCINNATI, O., Sept. 9.—Here we are again, gentlemen! The circus has traveled around thus far on the circuit. The animals will soon go into winter quarters now, and this is nearly the last chance to see this positively all-star aggregation in its dazzling feats of skill and kaleidoscopic evolutions of trained intelligence.

In other words, the gang has worked around as far as Cincinnati, and this time it is Al Bandle who is giving an imitation of a man running a tournament. Heikes, McDonald, Brascotten, Runle, Al Taylor, Charlie Budd, Billy Crosby, Harvey McMurchy, Paul North, McFee, Doc Vincent, Charlie Strawn—you could shut your eyes and bet your pile that every one of these would be here. And so they are, and a few others. The entries touched 21 at high water mark to-day. Al Bandle has seen them go twice and three times that on first days before this. He sat on a box and looked at the line. "What's the matter with it?" he asked. "I've done all I could for the boys. Why don't they come?" "It's the modern tournament system," returned the older ones of his friends; "the rapid-firing, big-score system, and don't you forget it."

"I believe it," said Al.

The writer came down from Chicago with Charlie Budd and took pleasure in a long talk with that veteran of the trap. "If Al gets 30 shooters," said Charlie, "he can't complain. The big shoots are all running light now. There is no money in them and no attendance except that of the old-timers. You didn't see me at Corry, did you? Not any. But I was at Keitsburg, Iowa, and a lot of other small shoots; and I tell you, the small shoots are the best. What do I think is hurting trap-shooting? Why, it's the rapid-firing system. The percentage eats the shooter up. The manufacturer and manager get it, but the shooter gets it in the neck. There's lots of trap-shooting going on over the country now, but it's in small clubs and State tournaments. This and the present tournament system are keeping the young shooters back. The days of good tournaments are gone. It's work to go to a shoot now. Do you know, I wouldn't have come down to Al's shoot at all this year, if I hadn't known that he wouldn't have any of this walk-around business in it. Al always sticks to the five or three-traps down system, so that the shooter don't know his bird. That's the best way. I'm tired out on this-walk-around system, and you can bet your sweet life our club out at Des Moines don't use any of it, not while I have any say about it. It may break a few more birds at the time, but she's stopping the breaking of plenty others later on. It don't make shooters and it don't make shooting."

And yet, when we got out on the grounds, there were two sets of traps, screened. "What's Al got the screens up for?" asked somebody. And then it transpired that Al. Bandle, the great and only Al., annual giver of the most conservative tournament of the whole circuit, had yielded to somebody's importunities, and proposed to run the walk-around system, only he used 5 traps instead of 10.

"The boys wanted it," said he. Now, who wanted it? Look over the lists at Corry, Detroit, and here, and you can find the

names of the men who wanted it. I confess, it makes me tired, and if I am so permitted by a continuance of health and editorial forbearance, I am, within the next five or ten years, going to make somebody else feel tired too, either of shooting in this absurd and babyish way, or of reading about it. In company with others, I have sat day after day, day after day, behind these lines of traps, and heard the bang, bang, bang, "dead, dead, dead," of this "system," until I am mortally weary of it. Not a thing to break the monotony. Not a bit of interest in any shot fired. Not a bit of fun in it. Nobody shooting for fun. Everybody making a business of it. Every shot netting the management, say five cents, if the shooter buys his shells (A). Bandle is charging five cents per bird, and is obliged to, to keep even), but every shot a nail in the coffin of the true theory of gunnery and good sport. Yes, and before long the managements will realize that each shot is a nail in the coffin of their own financial interests. Some one has to make the break. The time for the break has come, all the thinking shooters say that. Very well; this paper can be the first, and is the first, to kick over the traces which of late have found trap shooting too close and tight to pure business. If I understand sport, it means fun and not business, and if I understand the functions of a sportsman's paper, they are to further the fun, sport, skill, and to back the businesses devoted thereto. Now, let some one come out and give a tournament which shows some progressive thought, some enterprise, and, if necessary, some sand. The walk-around was good in its day. It did much to spread trap shooting, until it was taken hold of and worked to death by the experts. Let some management come out now and give the shooters a game in which skill, chance, nerve and calculation will be placed first, and machine shooting made impossible.

Let us see next year a shoot contrived on lines of modern and progressive thought. I believe this paper would send a man a thousand miles to see and study such a shoot. The shoots of today don't need much study. Corry shoot I liked because it showed a faint inkling of a desire to do something progressive. Why can not North, and Penrose, and McMurchy, and Budd, and Lindsley, and Heikes, and McDonald, and such men get together and get up an idea for a new sort of shoot, one which will not bore an innocent spectator to death? They can do it easily enough and it is time they did. There is no fun in sitting around and seeing these same fellows trying to rob each other year in and year out. I want to see somebody rob them. There are numbers of shooters who wouldn't mind trying that if they had the ghost of a show to do it. There is no fun to-day. I kick. Let us all kick, loudly, harmoniously, concertedly, until we have kicked all the hay out of this present bugbear of modern "tournaments," or robbing-bees.

Well, since Al. has fallen from grace and used the walk-around, we ought to expect to see the same old scores oughtn't we? That might be, except for the fact that the new bluerock trap, with the rigid-arm carries, is used. I think the management of the bluerock will agree with the shooters that this trap does not yet deliver its birds with quite the unvarying regularity of the old trap. There has not been much breakage or delay, but once in a while a bird would go out which was a regular "quail," as the boys call them. Even these little irregularities, the least bit out of the regular machine shooting line, has balked some of the shooters and cut down their averages. For that reason the fact of slight irregularity is hailed with pleasure, as one more proof of the theory forninst machine shootery. We have heard here of the dissolution of the Standard Target Co. injunction in the suit of the Peoria Target Co. Paul North thinks the Cleveland people will now get a rebearing and gain permission, with the Standards, to use the old pivoted carrier. The result of this fight is not yet, but it all goes into the assertion that this is a momentous year in target-shooting history.

Everything about the old grounds is about the same as usual. "Wick" is here, helping in the management, and so is Gus Dick. The same old lunch, Bandle is here, and the same old wait of an hour and a half before you can get anything to eat, and the same old coffee, warmed over, from last year—I thought last year it was as bad as coffee ever could be, but it wasn't; and the same old coop of Cincinnati live birds, and the same old street car, cleaving the deep, rich Cincinnati air at the rate of a mile and a half an hour. A critical observation leads me to believe that "Wick" is a trifle better looking this year than he was last. Al Bandle does not show much the more frost in his tar-colored forelock by reason of being a married man of late. But he has grown severe, very severe. He has been heard to tell the performer on the horizontal bar, who assuages thirst at 5 cents an assuage, that "if that feller Wick comes around here and wants any beer on the management, you make him pay or throw him out. That don't go no more now. We got to figger close this year and stop the leaks or we don't make no money, see?"

Nothing startling was done to-day, except that it looked as though it was going to rain, and didn't. Tee Kay was promised as an attraction, but his spirituelle form didn't materialize. Charlie Budd got the glory this time, running about 85 with only two misses. Charlie's late practice on the Iowa Grangers has done him good, and he is slowly recovering from his long siege of the "grip" and its attendant consequences. He telegraphed to Al to "hold the guarantees open till he got there." Al is still holding 'em open, and hoping for more crowd to-morrow. Ruble is here, I am pleased to state, but his shooting is impaired by the fact that he has grown color blind. He is unable to distinguish a colored person from a white one, or so at least the Fostoria boys say. The rank is to be preserved in uniform, Orderly Sergeant Weeks, from Newport barracks, appearing for some target practice. This was his first live-bird shoot, and the scores will show he did very well, for the only bird he missed fell dead out of bounds. Following are the scores:

Shoot No. 1, extra, 10 single bluerocks, entrance $1; 15 entries:

Heikes	1110111111—9	Taylor	1101011111—8
McDonald	1111110111—9	Crosby	1110111011—8
Benscotten	1111101911—8	Bandle	0111101111—8
Brigden	1101110111—8	Nemo	1011101111—8

Brigden	1101110111— 8		

McDonald, Budd, Benscotten and Spencer div. first, Bandle, Heikes and Ruble won second, Jack, Taylor, Brigden and McPhee div. third.

The grounds were now cleared for the live-bird shooting, in which much greater interest was manifested. The birds were about an average Cincinnati lot, with but few good ones. Nearly all had to be "flapped up," but once in a while a good one got out. It is still too warm here for strong birds, it is probable also that the coop provided is not well enough ventilated. Score:

Shoot No. 8, programme, 7 single live birds, $5, 21 entries:

Heikes	1110111—6	Jack	2211121—7
Benscotten	0110111—6	Cliff	0100021—3
McMurchy	1111211—7	Ruble	1121021—6
Budd	1212221—7	Vincent	2111111—7
Smith	1112011—6	North	1111111—7
Weeks	1112211—7	Scott	0101021—4

Allister	0	Benscotten	11112
Crosby	21111		

Bandle, McMurchy, Spencer, Crosby, Ruble, Wick, North and Benscotten div. $34.50.

It was now dusk, and the boys went to town over the dizzy curves of the grapevine street car route. At ten o'clock to-night, at this writing, rain is falling steadily and the prospect for a wet day to-morrow seems a certainty.

Wednesday, Second Day, Sept. 10.

The morning broke rainy. It rained dismally all the forenoon and more than half the afternoon. The grounds became sloppy, and the shooters crowded under the big shelter tents in wet and draggled bunches. Yet the top entry to-day, 53, was two names higher than that of yesterday. "Edwards," of Dayton, and Dr. Miller, of Amanda, were new comers to-day. It is now nearly certain that Al's shoot for this year is not to be a large one. Yet he told the writer to-day that in 1888, on Saturday, the sixth day of his shoot, he had 27 entries in a live-bird race, at $25 entrance, and in the same week had as high as 97 entries in a live-bird event, at $6.50 entrance. There has been more talk about such matters as these at this shoot than at any I have ever attended, certainly more than enough to warrant the position taken earlier in these columns. To get at the matter in the best possible form, I to-day went to numbers of the most prominent shooters here, and put to each the question:

"What do you think of the rapid-firing system, as affecting the success of modern tournaments?"

The following are the answers, condensed:

Al Bandle—"I believe the rapid-firing system should be abolished, and I am sorry now I started it here. It is the first and last time. I think it has hurt our shoots all over the country. I favor 5 traps, unknown to shooter. I think we must abolish the rapid-firing system, or it will abolish us."

Ed Taylor—"The rapid-firing system is no good on earth. It makes shooting easier, instead of more difficult. It is babying our shooters."

Harry McMurchy—"It is the worst thing we could do. We are going backward instead of forward. We are wanting easier instead of harder shooting. It ruins a man for field shooting. I like the five traps, unknown angles, much better.

Rolla Heikes—"I am in favor of almost any other system. I like the old five traps way the best. I don't like the Keystone professional rules."

W. S. McDonald—"It is too mechanical. It helps the management of a shoot, but it don't help the shooter."

J. M. Babcock (of Meadville, Pa.)—"It kills a club quicker than anything else, this rapid-firing system."

Dr. Miller (of Amanda, O.)—"It is no good and we ought to quit it. I favor unknown traps and angles."

T. E. Benson—"I prefer unknown angles; the harder they are the better for the shooter."

C. W. Budd—"The walk-around is destroying trap-shooting as fast as it can."

E. D. Edwards—"It is responsible for the falling off of attendance. It is breaking up shooting in the country."

Paul North (of the Cleveland Target Co.)—"It is as bad as anything could be. Our shooting interests are going to pieces under it. It looks good for the manufacturers, and I ought to favor it for that reason if anybody ought, but I believe that it would be much better in the long run if we should do away with it. It is killing off the crop of shooters, and that must be our goose of the golden eggs."

"Wick"—"It is a rotten system. It hurts shooting, and unfits a shooter for the field."

J. E. Whetstone (of Cincinnati)—"I am an old timer, and not in it to-day at all, but for myself I don't like this mechanical business. I prefer unknown angles."

J. N. Dupuy (of Ironton, O.)—"I have come down here just to watch this shoot. I shoot a good deal at the trap up home, but I am not shooting here. What is the use of my going in when Heikes, and Bandle, and Budd and all those fellows are in a race? I have no chance with them, and I can shoot cheaper and with more fun if I shoot somewhere else, and don't hand over my money to those fellows. I don't want any walk-around, thanks."

J. A. Ruble—"The walk-around system is the only system to shoot under. It makes the most money."

E. S. Benscotten—"It helps sell more birds and more shells. I don't think the system is at fault, but I think the angles are too easy. I would rather see five sets of three traps pulled by indicator. Am in favor of the walk-around."

Wm. Crosby—"The walk-around is the only system to run a shoot by. A shooter comes out to shoot, and he don't want to wait all day. I don't think this system to blame for our light attendances. I think we are having too many shoots all over the country. Stop all the shooting for two years, and I bet you there would be big tournaments then."

Thus it may be seen, that out of 17 shooters interrogated only 3 had any word of commendation for the system, which has of late been so general. Among these shooters are the majority of those who are most interested in shooting as many matches as possible and the representative of at least one big target company, whose interests might be thought to be favored by this system. It is plain that the paper which heads a crusade against this pernicious machine system will not be alone. The best and most prominent shooters of the country will be with it. How long shall the short-sighted business interests of tournament managers be allowed to thwart the actual wishes of the shooters? Among the men above named are the very ones who could best devise a better system. We may well wish that they and the few other thinking shooters of the circuit would form a little independent congress and declare rebellion; not an American Association, with skyscraping theories of reform and few facts to show as results, but a plain, horse-sense gathering of the practical shooters. A movement like that—a simple resolution of the shooters of the circuit—can save or help our trap-shooting, and nothing else can. It may seem startling when we say that 30 men are doing all the target shooting at the tournaments of the country; but do you follow back the scores, and if you can penetrate all the assumed names and the like, you will find this to be very nearly the truth. The managements are catering to these 30 men. They want these 30 machines to come and break so many birds at $30 a thousand. Well now, do you call that shooting, and do you call that sport and do you think that is what trap-shooting should be to-day? For my part, I know these men well enough. I want to see an occasional new face at the shoots. Do you call that an unfounded wish? Do you call it so, when more than 20 out of 30 circuit riders are right now, to-day, in this very column, echoing the same wish? If I were a tournament manager in this progressive country of America, I would take my pocketbook out of my eye for about five minures, and see if I couldn't find a way, even if it did cost a sacrifice of money at first, either to kill these 30 shooters or keep them from killing all the other shooters. The most ridiculous part of this whole business is, that it is not these 30 shooters who are at fault, so much as the managers who allow them to dictate, or who encourage them in the same old game so profitable to themselves. "Make your game, gentlemen," says the manager, "I don't want anything but the percentage; $1,600 a week is my per cent. Only about $30 or $40 a week for each shooter, besides his traveling expenses." Now, how long can shooters stand that? It is only those who have salaries and expense money given them for the purpose. Dig down into the history of your 30 machines, and you will find about half of them that are shooting under inducements. It is business for them. You and I must shoot for fun, but it is business for them. We bet on another man's game, and he takes our money without the least competition. Perhaps he is in a "combination" against our chance skill, which makes the percentage about five times as much more against us, if there are five circuit riders in the "divide." This, then, is trap-shooting to-day. The percentage of the management is against even the 30 shooters of the elect. They can't make any money under it. The percentage of the salaried shooters is against those who are not salaried. The percentage of the machine shooter is against the shooter for sport. The percentage of the "ring," or "divide," is against the single, square shooter. All four of the above percentages are against the young amateur who would like to shoot, but has too much sense to try under such circumstances. Here is your trap-shooting to-day. How do you like it? It is time for the independent congress of practical shooters. Let us hear from them. The managers will do just what they say, if they say it hard.

Such, in a measure, was the thought of the bedraggled crowd who gathered under the wet tents to-day at Al. Bandle's sixth annual, one of the best and most popular shoots of the circuit, and now reduced to a gathering of about 20 men, among whom not one introduction was necessary.

I ought here, while I think of it, to correct a misstatement made in the report for yesterday, already sent in. Al. is not charging 5 cents for birds, but 3. "It was 'Wick' who told you I was charging 5 cents, wasn't it?" asked he. "Well, he got rattled. It's 5 cents for beer. He was thinking of beer. Five cents for beer and 3 cents for birds, same old prices. Wick was thinking of beer." The wind blew, and the rain fell, and still the villains pursued her. Score:

Shoot No. 1, extra, 10 bluerocks, 23yds. rise, unknown angles, $1 entrance, 13 entries:

Bandle	0010000101—2	Benscotten	1111110111—9

Benscotten	111101111111110—13	Strawn	111111001110110—11
Scott	100010101010011— 8	Alkise	001111000111011—10
Vincent	111010111111010—11		

North won first alone; McDonald, Bandle and Budd div. second; McMurchy won third.

The grounds were now cleared for live birds, and amid a soaking rain the last shoot of the day began. The birds were wet and draggled and only with the utmost difficulty could be persuaded to fly. The affair appeared rather pitiable. When weather is such that birds fly with such reluctance, it is a question whether a match should be continued. Score:

Shoot No. 8. programme, 7 live birds, entrance $5, 15 entries:

Jack	2 11'20 6	Bandle	1011211—6
McDonald	0110101—4	Crosby	1212121—7
Spencer	2222221—7	Williams	0120220—4
Budd	1112111—7	North	1111011—6
McMurchy	1111111—7	Alkire	1111111—7
Smith	1111222—7	Stroble	1102200—4
Heikes	1221111—7	Ruble	2111210—6
Latshaw	1111211—7		

Spencer, Budd, McMurchy, Smith, Heikes, Latshaw, Crosby and Alkire div. first; Jack, Bandle and North div. second; McDonald, Williams and Stroble div. third.

In this shoot occurred an incident which should well be noticed, as characteristic of what tournament methods may be, with men of a certain class. North had missed his fifth bird, and when Ruble stepped to the score he turned and called back to North, "If I miss this bird you and I'll be in a good hole together. Let's stand in together on it, Paul." North very promptly told him to go ahead and hoe his own row, as he would not "stand in" with him under any circumstances. Ruble killed his bird. At the next and last round, however he saw there was still a better "divide" in the 6 hole than in the 7. He therefore stepped to the score with only one shell in his gun, waited till his bird was 50yds. away and deliberately shot behind it. This action was so rank that it drew down outspoken contempt on him. Where there is 25 cents up, however, John Ruble don't mind a little contempt. He clamored for a divide on second money. "No you don't" said Bandle and North, "we'll shoot you out now, or shoot the pot up, one or the other. We won't divide with you." There were now in this tie Jack, North, Bandle and Ruble. Each killed his bird till it came to Ruble, who got nervous, clipped the tail of a weak hopper, missed it again with second, and left the score, red as a turkey's neck, amid yells and screams of laughter. I do not know whether it is fashionable or not to report such things as these, but while I do continue to report shooting tournaments I shall continue to show up such methods and such men, and in the end perhaps do something toward either changing or driving out the one and the other from such gatherings. Any decent paper loves good sport, square shooting and square men. A performance like the above is not merely funny. It is disgraceful. If tournaments should continue to be openly marked with such blots, it would be time for the bulk of us to hunt other company. The time will come when such circuit workers will work less for "place," or will find few places where they will be allowed to work at all.

Let us have another incident that happened to-day: Benscotten, Ruble and McMurchy were in a tie. McMurchy was absent, getting some shells, and Ruble forgot that there were three in the tie. Benscotten called "pull" for No. 1 trap, but the bird didn't go where he expected it. Of course it is beneath the dignity of a tournament shooter to take a bird that is 6in. out of line. He might miss it. Benscotten thought it was No. 2 trap at had gone off and wanted another bird. At this Ruble lifted up his voice and wailed, and the bird was scored lost, which he waited pretty bad. And then M Murchy, who was still in the tie, stepped up and shot them both out! This was pretty rich, and the boys enjoyed it largely.

Such is a tournament to-day. Chivalrous, isn't it?

Thursday, Third Day, Sept. 11.

The boys were slow in getting together. It was about 11 o'clock when the shooting began. The day was cold and cloudy, and not unpleasant, only a light sprinkle of rain falling in the evening. The length of the races prevented the running off of many, only five matches being shot. Nothing of special interest transpired. Score:

Shoot No. 1, programme, at 15 bluerocks, $2 entrance, 24 entries:

Ruble, McDonald and North div. first, $40. Benscotten, McMurchy and Heikes div. second, $30. Vincent and Brigden div. third, $20. Crosby, Budd and Albert div. fourth, $10.

As usual, the live bird race was made the last event of the day. The birds to-day were in much better order and flew far more promptly. They were not hard birds in any sense of the word. The only man ever known to call Cincinnati birds good ones is "Wick," and he was never outside of Cincinnati. Score:

Shoot No. 5, programme, 7 live birds, entrance $6.50, $100 guaranteed, 25 entries:

Budd	2212111—7	Gunman	0112101—5
Bandle	1122211—7	Spencer	1112211—7
Heikes	1021111—6	Strawn	0121100—4
McMurchy	1121111—7	M Donald	2121210—6
Benscotten	2101112—6	North	111o110—5
Murphy	2122111—7	Willie	1110011—5
Kershaw	1221001—5	Stone	1020201—4
Frank	000o0121—3	Crosby	2111112—7
Bohemian	1111011—6	Vincent	2011112—6
Jack	1111010 5	Latshaw	1212221—7
Smoke	1o1122—6	Richardson	1021112—6
Hayes	001o124—5	Ruole	1112111—7
Smith	0022113—5		

o denotes fell dead out of bounds; 2 denotes use of second barrel.

Budd, Bandle, McMurchy, Murphy, Spencer, Crosby, Latshaw and Ruble div. first, $40; Heikes and Bohemian won second, $30; Smith, North and Willie div. third, $20; Strawn and Stone div. fourth, $10.

In this last race the unfortunate 6 men had to shoot out. One by one they fell out, until only Heikes and "Bohemian" were left in it, and they divided. "Bohemian" shot a very plucky tie and in good form. It took 12 birds to decide the tie to this point. Smith, North and Willie had to get 5 straight to decide in their tie.

There are no daily averages in this tournament. The management announce in their programme: "All of our guaranteed matches last year over-filled so well, we think it advisable to make 8 moneys of surplus ties this year." This money was to have been divided as follows: For best averages in all guaranteed matches, first 20 per cent., second 18 per cent., third 16 per cent., fourth 14 per cent., fifth 12 per cent., sixth 10 per cent., seventh 6 per cent., eighth 4 per cent. It is now almost certain, however, that the surplus will be so small as to leave next to nothing in the above division. To-day 25 entries was top notch, and this is the highest entry of the shoot.

Friday, Fourth Day, Sept. 12.

The day was cool, the sky being slightly overcast. No rain fell and it was a good shooting day. The attendance, however, showed no increase, 24 entries being high mark. Almost no Cincinnati shooters have participated in this year's shoot, and the country contingent has been very light. The reasons for this are apparent, as above indicated. Nothing of special interest transpired to-day. The live birds, owing to the brighter and clearer air, flew much better, but over 75 per cent. had to be scared up, very often by some one's running up within a few feet of the bird. This is a practice which should be discouraged, as it may result in accident, as the shooter is always disposed to take close chances and may not always see the other person in time as he swings on the bird. In one case to-day Paul North was trying to scare a bird up for Rolla Heikes. He was close to the bird as it rose. Heikes failed to stop the bird with his first barrel, and just at the point where he should have used his second, he found himself holding square on North, who had thrown himself on the ground. Heikes held his second, but missed the bird as it got in close to the dead line. Not all shooters might be so careful. If a bird will not fly without such inducements, it is poor fun to kill it anyhow.

The referee in most of the live-bird matches of this tournament has been the veteran Wm. Hall, once a prominent live-bird shot, but now retired on his laurels.

Usually at Al Bandle's shoot there are enough shooters on hand at the end of the week to make Saturday an attractive day at live bird events, chiefly individual or team matches. This year the shooters nearly all go home to-night, so that to-morrow will not be very much of a day. The tournament programme closes with to-day, and the boys disband to-night. Al may have a few live birds on his hands, but it is hoped not many, for no one who knows him would care to see him get the worst of it in any way. By the way, Al has a pigeon in his collection here which is a freak. It has two sets of legs perfectly distinct. The underneath pair are double d over, slightly deformed and smaller than the others, which are normal in every respect. The bird is apparently strong and healthy and will be put in a museum. Following are the scores of to-day:

Shoot No. 1, extra, 10 single bluerocks, $1, 8 entries, 2 moneys:

Vincent	0101111111— 8	Spencer	1111011111— 9

Budd won first. McMurchy won second. North won third.

Shoot No. 11, extra, 5 single bluerocks, entrance 50 cents:

Bandle	00000—0	Budd	10010—2
Vincent	10110—3	McMurchy	01100—2
McDonald	10101—3	North	10011—3
Heikes	11101—4		

One money, Heikes won.

Shoot No. 12, same conditions as above:

Bandle	10100—2	McDonald	00001—1
Vincent	01001—2	Benscotten	11011—4
Heikes	01011—3		

Two moneys. Benscotten won first; Heikes second.

It was now dusk. Ruble had stopped trying to show Al Bandle that he ought to award at least a little surplus money for averages, and had departed for the street car, where he doubtless tried to persuade the conductor that he was under ten years of age and therefore entitled to a 3-cent fare. Al had paid out the last purse and shaken hands with group after group of the boys as they started home. The sixth annual was over, for it is probable that only a few local shots will come out to-morrow. It would not be honest to report this shoot as a big and booming success, for it has not been. When Al Bandle can't give a shoot that is a big success something is wrong, and it isn't wrong with him. Therefore it may be repeated that it is time to look the state of affairs squarely in the face, and to see if something cannot be done to better it.

It may be interesting to present a novel bit of news, bearing upon the amounts of winning by some of the shooters. Billy Crosby shot all the week. He is usually held a very good shot. He lost $95 here this week. Paul North quit just $20 ahead of the game, but from this his hotel and traveling expenses must be deducted. Charlie Budd made about $40, Scott and McDonald about $25, and Rolla Heikes $50 or more. When Spencer went into the last live bird match he had just 60 cents left after paying his $6.50 entrance money. He won about $8, enough to get him home. A gentleman from South Bend, Ind., was not so fortunate. He had to borrow money of Rolla Heikes to get home. Roll wins their money, and then sends them back after a new supply.

The rigid arm bluerock trap had its first prominent test here, and was used exclusively throughout the shoot. It seemed practical, although not so regular a thrower as the old trap. It did not seem to break the birds in delivery often enough to delay matters to any extent, and the boys who kicked on its occasional quarterers are those who are used to having the bird thrown into the same hole every time. As stated earlier, this irregularity ought to be held a merit. Anything on earth for a little novelty in trap-shooting.

From here the boys scatter a good deal. McMurchy goes South to Georgia, Louisiana and Texas. He will shoot quail in Mississippi this fall. Budd goes at once to Iowa, and will start Monday next on a good big chicken hunt about 115 miles north of Des Moines, his home. Benscotten and Charlie Strawn will hunt chickens next week near the latter's home at Jacksonville, Ill. Rolla Heikes will shoot quail in northwestern Ohio this fall. Good luck to them all. They are an awful set of robbers, but a pretty decent set of fellows after all. They will all be at Al's shoot next year, and let us hope that something will have happened by that time.

E. HOUGH.

ST. LOUIS, Mo., Sept. 13.—The Oak Hill Gun Club turned the tables on the Comptons in the second team match of the series of three. The day was unfavorable for the shoot and small scores were made; 20 bluerock targets per man, A. S. A. rules;

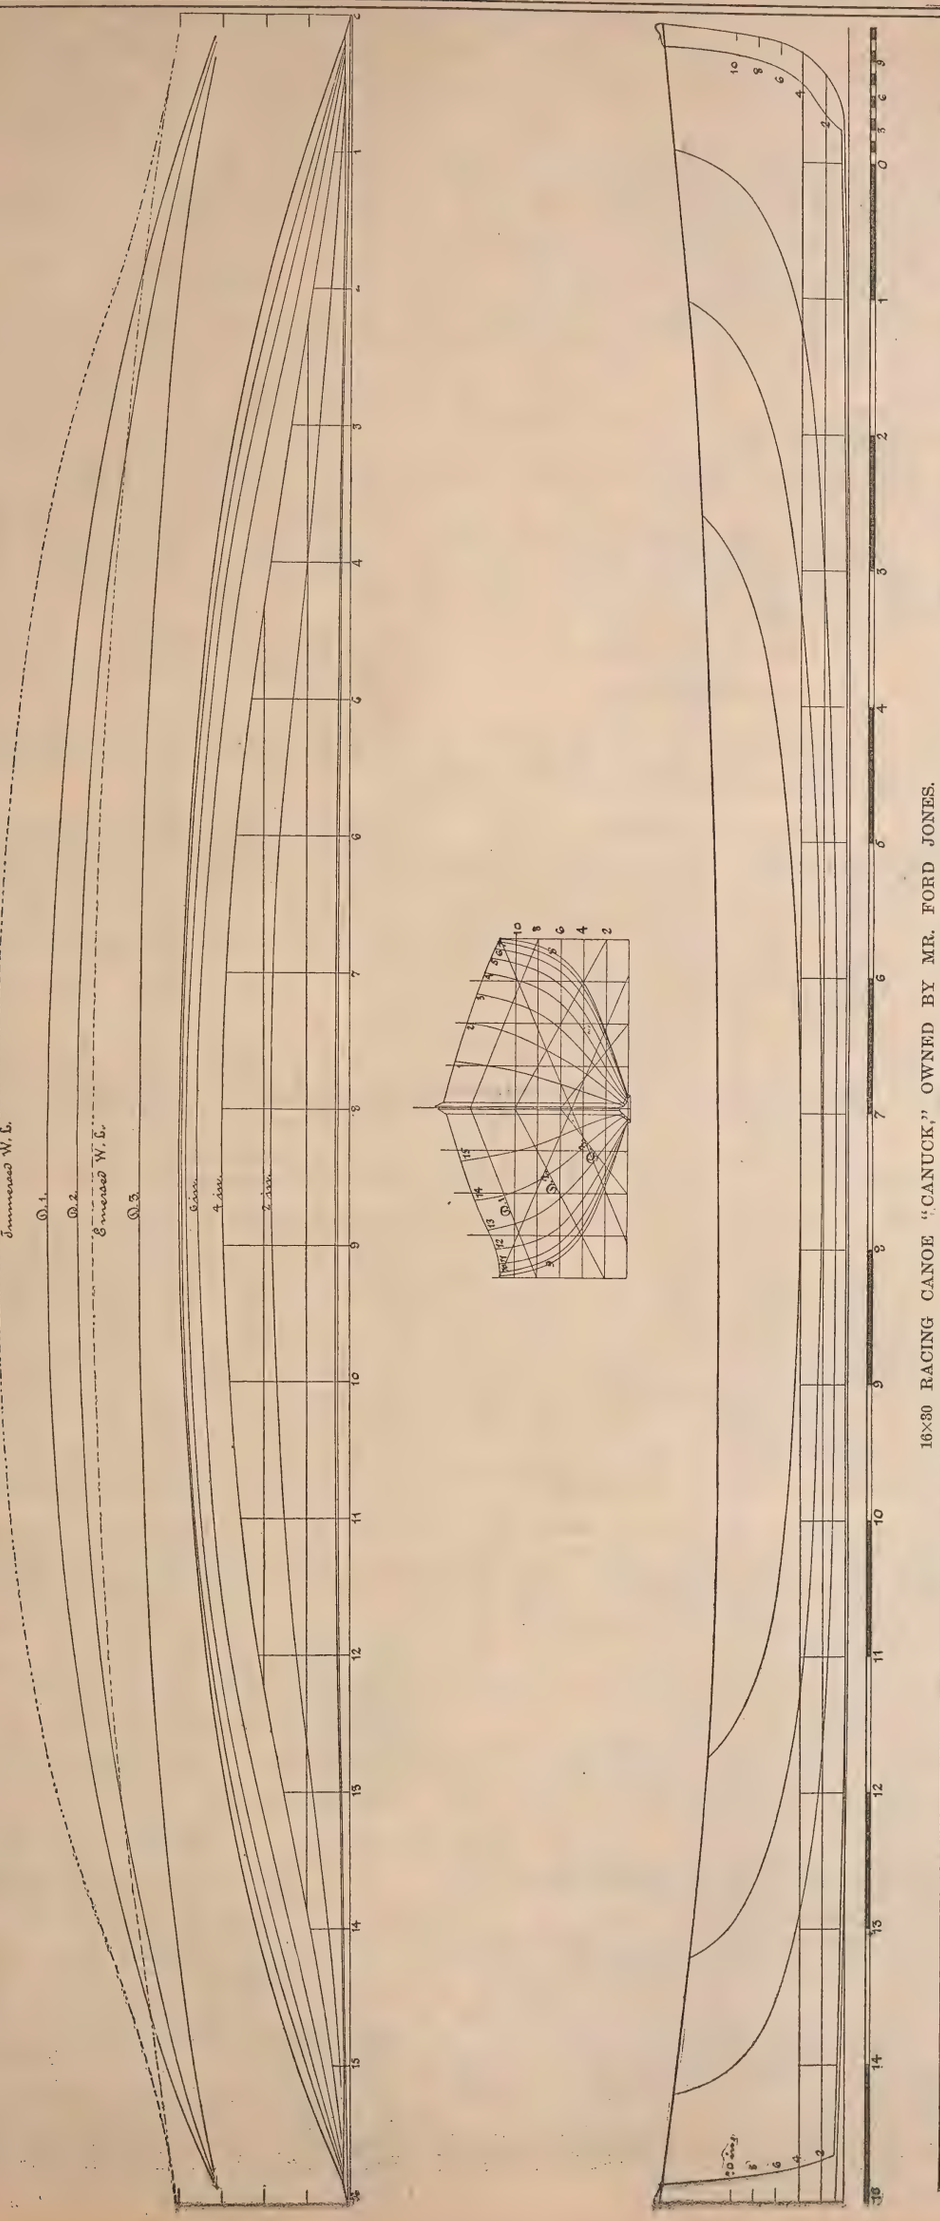
Oak Hills.		Comptons.	
C Thorp	17	Miltenberger	14
Schaefer	15	Soeffel	15
Thompson	13	Alexander	9
Soeham	9	Mohr	16
G Thorp	18	Mackwitz	12
Henshaw	16	Fox	14
W Twist	16—104	G Rawlings	15— 95

On Sept. 26, 27 and 28 the southern Illinois Sportsmen's Association will hold its tenth annual tournament at Belleville. The affair promises to be successful because there is an army of trap-shooters in the Territory from which to draw upon for a crowd. Inanimate targets will be used exclusively for all events and A S. A. rules will govern.

Canoeing.

CANUCK.

ALTHOUGH descended from an ancient and honorable family of boats, the modern decked canoe and its accompaniment, the double bladed paddle, are of quite modern origin, their first general introduction to boating men dating back hardly twenty-five years. The birthplace of the decked canoe and modern canoeing was in England, under the kindly ministrations of Capt. John MacGregor and Mr. W. Baden-Powell, the sport being imported into America about five years later. In the two great nations of either side of the Great Lakes and the St. Lawrence River, in which the canoe has since been so thoroughly naturalized, it found on its first arrival a widely different state of affairs. In the United States the canoe family was practically unknown save by a few hunters and fishermen, chiefly on the Northern borders; to the men who have since established canoeing in its modern sense, the cruisers, campers, paddlers and canoe sailors, the new craft came with all the charm of novelty added to a wide range of adaptability for all sorts of pleasure afloat. Its excellent sailing qualities, even in its first crude form, at once attracted attention; and as one improvement after another was rapidly made, the canoe in the course of years developed into a really serviceable sailing craft, though at the expense perhaps of general stability and especially of paddling qualities. It was too far removed from the light rowing boat on the one hand and the catboat on the other to meet with much opposition from either, and after some early prejudice against it was on grown it entered on a car er of increasing prosperity.



When however a year or so later the first decked canoes found their way to Canada they met with a very different and less cordial reception. The canoe was by no means the stranger that it was south of the St. Lawrence, but in the form of a light open craft with a single blade paddle it had been for years in almost universal use for cruising, camping, racing and hunting. It is no wonder that the native craft cast a jealous eye on its foreign cousin, and the latter had a hard course to paddle for a long time. The open Canadian canoe, with the light single blade that had always been its inseparable adjunct, was so admirably adapted to natural conditions and the prevailing tastes that the majority were blind to the merits of the decked craft with the double blade, and though in time the decked sailing canoe became very popular wherever suitable water was found, and the double blade, by dint of sturdy work at the A. C. A. meets proved that for speed it was superior to its forest rival; the developement of the sailing canoe has not been as rapid nor as complete as in the States.

Thus it has happened that after many years of racing the Canadians have taken the lead in the paddling races and their neighbors have carried off the sailing trophies. There have been some good Canadian sailors in fast boats, and some very fast American paddlers, and in the combined races the Canadians have won at times, but the great sailing prizes of the Meets have nearly all gone to the United States, just as the paddling prizes have gone to Canada. This year and last have however proved notable exceptions in that the principal sailing prize, the A. C. A. Trophy, has not only gone to the north side of the St. Lawrence, but has been won twice in succession by the same man and in the same canoe; something which has never been done before. The lines of the winning boat, Canuck, are given with this article, the sail plan and the detailed description being left for a future issue.

It will readily be seen that Canuck is of very different model from any of the famous canoes whose lines have been published at times in the FOREST AND STREAM, Vesper, Notus, Snake, Fly, Guenn, Vagabond, Sea Bee and many others; perhaps the nearest resemblance, though a purely accidental one, is to the canoe published in our issue of Jan. 16, 1890. As distinguished from the Canadian canoe on the one hand and the various British models on the other, she is of distinctively American model, being fitted, rigged and sailed after the fashion of the States, but at the same time she is a copy of none. As to design, she is the result of some successful collaborations between her owner, Mr. Ford Jones, of Brockville, on the St. Lawrence River, and her builder, Michel Sauvé, of the same place; though just how much of the credit is due to each we cannot say. Good as the boat is, a large share of her success is due to the very skilful handling of Mr. Jones, who may be put down as one of the best sailors on the St. Lawrence River or in the American Canoe Association.

Mr. Jones joined the A. C. A. in 1885, sailing at the meet in the canoe Irex in that year, and again in 1886. In 1887 he was much better boated in a new Sauvé canoe, Ramona, with large standing sails, coming in second to Pecowsic out of 34 starters in the limited race, third in the man-overboard race, and fifth in the trophy. In 1887 Mr. Jones sailed Ramona at Lake George, winning the man-overboard race and the limited sailing. Last year he brought to the meet the new Canuck, sailing her without a sliding seat, as he had the others, and winning the A. C. A. trophy, as well as second place in the sailing upset, and third place in the Pecowsic cup race. Added to this record, Mr. Jones in Canuck made the best attempt yet for the New York C. C. International cup; it being, in the opinion of most who witnessed the races a matter of wind and weather between him and the defender.

Mr. Jones is a young Canadian, a graduate of Trinity College, Toronto, in 1889, and now a law student. He has spent his life beside the St. Lawrence and has done a great deal of sailing in the St. Lawrence skiffs, but in his canoeing he has been at a disadvantage from being obliged to sail alone, with no good men against him to try his boats by, as the Brockville C. C. was only organized last year. He never enters a paddling or combined race, devoting

16×30 RACING CANOE "CANUCK," OWNED BY MR. FORD JONES.

himself entirely to sailing at the meets and on the river, but he is also an expert with the gun, the open canoe and the single blade, spending some time each spring and fall on hunting expeditions. He is now talking of giving up canoe racing for yachting on the St. Lawrence, having reached a point where he can with propriety follow the example of Messrs Gibson and Brokaw, who have retired on their laurels.

RACING RULES AND STANDING SAILS.

AS an exhibition of fine workmanship the fleet that was strung out along the beach at Jessup's Neck during the recent A. C. A. meet was far in advance of anything yet known in canoeing; from the canoes of the Vesper men at one end down to the fleet of the "married racers" on the beach at Squaw Point were more handsome canoes than have ever been brought together before in the whole history of canoeing. Lying unnoticed among the highly polished racers, with their clean lines and smooth bottoms of Spanish cedar or the beautiful white cedar of California, was a homely old canoe, a boat much the worse for age, but with a history, nevertheless, that carried us back to the beginning of organized canoeing in America, and that suggested some curious comparisons between the fleet of to-day and those of past periods.

This canoe was built in 1878, the date of a great awakening in American canoeing, when the seeds long planted began to give positive evidence of life and growth. She was, if we are not greatly mistaken, the first centerboard canoe, being fitted with a small trunk and a dagger board; and, further than this, she was the first canoe with the pointed, flaring roaming which has since become universal. She was built by George Rohr, of Harlem, a skillful shell builder long since dead, who sailed her a little himself; but it was not until 1880 that she was first publicly raced as the Wraith, by Mr. Wm. Whitlock. Later on she was sold to Mr. L. Q. Jones, of Hartford, and under the name of Venture she became one of the famous boats of the old racing days at Grindstone when Vaux owned the Dot and Gibson the Snake.

Looking at her, the work of one of the best men of the day, and certainly ahead of her times in many respects, one realizes fully the great advances that have been made in model and construction of late years, and the first conclusion is that the work of the American Canoe Association, whose rules and races have been the controlling factor of this advance, has been an unequivocal success. Unfortunately, however, the sight of the old boat brings back many memories, and suggests other points of comparison than model and finish, until, after a careful scrutiny of the new fleet in all its details, one may be left in honest doubt as to whether the many and great changes have been in advance or retrogression. Keen as the racing is now, it does not exceed that of five years since, the first year of the record, when the entries were proportionately as numerous, and the competition as close. The fleet of that year was made up of such canoes as Snake, Sea Bee, Day Dream, Nirvana, Sofronia (these five standing first on the original record of 1885), Thetis, Katrina, Marion B. Gueun No. 1, a fleet that would make but a sorry showing at first sight beside the racers of to-day. Whatever they were in speed and appearance, however, they possessed one substantial characteristic, they were canoes that had cruised, that could cruise, and that, apart from their work as racers, did good service for their owners in a dozen different ways.

From this point of view, and certainly it is a fair one, the new fleet, in all its glory of handsome lines and elaborate finish, makes but a poor showing; and it is no wonder that many of the more thoughtful and conservative members of the Association are ready to call a halt in further progress until it is known just where the end is likely to be. The canoes which came to the meet to race, and it is getting to be more and more the fashion to bring no canoe, or at most an open paddler unless a man comes to race, may be classed all under one head as racing machine, with a few strongly marked characteristics. There were some few that were fitted for the real work of canoeing and cruising, a few more that might be altered so as to be suitable for such work, and of the racers some possessed less of certain undesirable features than others, but the majority were of one type, whose leading features may be summed up as follows: A hull of good dimensions and model for ordinary canoeing work, though in some cases of rather light build; a sail plan that, whether with hoisting or fixed sails, is of extreme dimensions and often of exaggerated proportions; a cockpit that is now nothing more than a sitz bath and is rapidly contracting into merely a small copper foot bath; a centerboard that occupies the entire center of the canoe, that shows half its breadth above the deck when raised; and last of all a heavy sliding seat, of wood and metal, almost 4ft. long, on which the canoeist, save the mark, sits or even stands.

Such craft as this, expensive and delicate as they are, can be used for but one purpose, match racing. They must be launched tenderly from the club float or from the stage at the meet; some will not stand up under their spars without a man in them; no paddle is carried because there is little or no need to use it and there is no room below to stow it, not even a painter is made fast to the stem in most cases, as the canoe is never left afloat without a man in her. In the case of one canoe at the meet it was necessary first to lower the board and then screw down the sliding seat directly over it, so that the canoe was practically a keel craft for the time being, the lowered board preventing her from being launched from a sloping float or beach.

If such a craft is the outcome of half a dozen years of racing under the A. C. A. rules, is it not time that the rules were changed? With such an extreme to-day what may next year or the year after bring forth? Can canoeing flourish when such craft as these are the only ones recognized or encouraged by the organization which has assumed the responsibility of guiding and directing its future? It is such questions as these, questions which persist in presenting themselves to all who are interested in the success and development of canoeing, that have hurried some of the most earnest friends of the A. C. A. into the action which we condemned last week; and while we differ from them as to the means employed, we are heartily in sympathy with the spirit which animated them. That a great and increasing evil exists there can be no doubt, and the future welfare of canoeing, and especially of the A. C. A., demands an effort to remedy it; the question is whether the prohibition of standing sails is the proper and only step.

The policy of the Association up to the present time has been one of "*Laissez faire, laissez aller*," the various administrations declining positively to place any restrictions on new features, however undesirable they might promise to become in time. With this view we have always disagreed, holding that it was the duty of the governing powers, representing as a rule the oldest and most experienced element of the Association, to use the power given them in the control of the racing rules so as to prohibit or limit any dangerous or undesirable features, and to turn the whole influence of the rules and the racing toward the improvement of the canoes which gave a name and existence to canoeing, rather than to the development of a special type of racing machine. In accordance with this belief, and in view of the more rapid disappearance of cruising canoes and of cruising qualities in the racers each year, we advocated several years since some radical changes in the rules, one of the most important of which was the limitation of the standing rig. Then, when the standing rig was yet in its infancy and big plate boards were few in number, a change of the rules might have been made without serious injustice to any one, but that time has gone by, and the conditions have changed materially. There has come into existence a large and costly fleet, manned by the racing blood of the whole Association, a fleet so large that to legislate it out of existence would be unjust and impolitic, even if it were possible.

The danger of the standing rig *per se*, that was so eloquently set forth at the recent meeting, is so trivial as to be of no importance one way or the other compared with the many greater evils. The great trouble to-day is that the Association is doing absolutely nothing for the advancement of cruising, the improvement of cruising craft, and the invention of new and improved cruising and camping appliances; but such influence as it has, through the racing rules, is directed entirely to a craft that cannot by any possibility be used for cruising. Under such circumstances the abolition of the standing rig is a most absurd and inadequate measure; of itself it amounts to nothing, and if any substantial reform is to be accomplished, the executive committee must proceed to much more extreme measures. The development of the racing canoe, in other words, the crowding out of such craft as have made canoeing, and are used to-day by a large majority of canoeists in all parts of the world, by a racing machine, has gone on unrestricted until it is too late to stop it by any such halfway measures as the abolition of the standing rig.

Looking now at the special merits and demerits of the standing sail, it must be plain that the chief point urged against it at the meeting, its danger, amounts to nothing in itself; no such broad generalization as that the standing sail is dangerous and the hoisting sail safe, can be truly made. In sizes not over 40ft., and the inventor of the sail, Mr. E. H. Barney, has more than once said to us that somewhere near this was the practicable limit of such a rig, the danger is purely imaginary, the sails are small, light, simple, and may in case of emergency be easily unshipped, or if carried, can do little harm. The Pecowsic rig was safety itself compared with some rigs seen in the races, areas of 150ft., nominally lowering, but in practice utterly unmanageable in a violent squall or when any breakdown happens. It is true that a standing sail like

Canuck's, with an 18ft. mast in a 30in. canoe, is dangerous in the hands of any but an expert, but how much better would the huge hoisting rigs, with complicated gear, be in the same hands. If one is prohibited because it may lead some rash novice into trouble, what justice is there in allowing the other to go free. In one form no objection can be made to the standing sail; in the case of a mizen of 35ft. or so, it is simple, effective, and being within reach of the canoeist, may be unshipped at any time. So with standing sails of reasonable size for use in afternoon sailing, they may be slipped into the boat at a moment's notice when time is quite an object between business and supper.

When we favored the prohibition or limitation of these sails, it was with the idea that the best interests of canoeing, both cruising and racing, would be promoted by the perfection of a good reefing and lowering rig, and that such work was the immediate duty of the A. C. A. As it has proved, this same end has, to a great extent, been reached by accident; the combined record race, in which sails must be lowered or hoisted at each buoy, with similar conditions in some of the division regattas, have helped to encourage the lowering rig, and it is able to hold its own to-day in the races with the other. Only last week a racer who has used both through the season, and on a canoe best adapted for the standing rig, made the remark that all the races that he had won this season had been with a lowering rig. This being the state of affairs at present, it would seem that the lowering sail is not in need of any special protection, but is able to take care of itself unaided by any prohibition of its rival, a conclusion of the long dispute that must be far more satisfactory than the recent legislation. That the modern canoes are dangerous for any but experts, and not adapted for the ordinary purposes of canoeing, is a fact beyond dispute; but if it is to be remedied, it must be by far more sweeping measures than the prohibition of standing sails, and the executive committee will have a very heavy task on hand.

In considering any possible legislation which shall encourage the cruisable canoe, one important fact must be recognized—that the present racing class is too large in numbers and represents too many influential canoeists to be summarily legislated out of existence or even to be shorn of some of its most exaggerated features. If any work of this kind was to be done it should have been begun years ago, before the evil had assumed such great proportions; to-day it is too late for any interference with the racing fleet. One course, however, is left to the Association, a course that is perfectly practicable and that can provoke no opposition from the races. In the first place, the racing fleet must be left as free as it is to-day, no restrictions on standing rigs, sliding seats or big boards, and it must have a large share of the regular A. C. A races, including the trophy. Leaving it as it stands, the Association may lay down such regulations as may seem suitable for the encouragement of canoes fitted for other work than racing; canoes such as Snark, Vesper, Dolphin, Sea Bee, and scores of others, in which men can and will canoe. The details of the necessary restrictions we need not discuss now, they would perhaps include the prohibition of standing sails, a limit of length to the sliding seat, certain provisions for bulkheads, sleeping room and housing of centerboards, with requirements in the way of a practicable paddle and other efficient equipments. The mere presence of such a rule in the A. C. A. book would of itself do much good, and one or two races for this class of boat could certainly be arranged at each meet. There are now many canoeists who cannot or will not keep a special racing machine, and who at the same time are desirous of racing in such canoes as they keep for ordinary use, and with a little recognition and encouragement from the Association their numbers will increase.

So far as sailing canoes are concerned, Rule I. has outlived its period of usefulness, and even from a racing standpoint it might as well be thrown out of the book entirely. Of course, the extreme limits of length and breadth are observed—16ft.×30; but outside of them there is not a clause that either is not or cannot be easily evaded. Of what use is it to limit the drop of the centerboard to 18in. below garboard, when the length and breadth are absolutely free? Thus far the limits of depth—16in. below deck and 14in. keel, etc.—have not been exceeded, it is true; but why? Because with all former rigs there was nothing to be gained by it. Now, however, with the new sail plans that are coming in, there is a strong inducement to dodge the rule in another direction, and next season is likely to see some odd craft in canoe races. It would surprise some of the staunch believers in the present rules to see what a pretty little cutter yacht of 16×30 could be built to-day under Rule I. of the A. C. A., a craft drawing say 1ft. 8in. with board housed and 2ft. 6in. with it lowered. Just what such a mimature Minerva would do with Canuck, Fly or Wasp, is an open question; there would be greatly increased immersed surface on the one hand, but with the aid of some shot bags in the deep hull, a greatly enlarged sail plan. Such a boat, or one much like her, is not only a possibility but a probability for next season; should she come and prove successful, there would be no canoes to come to a meet, the "pot-bellied" cruisers have already disappeared, the racers would have to follow them to make room for the "yacht-canoe."

If such a boat is possible, which can be easily proved, what do the present rules amount to, they have done nothing for the all-around canoe, can they do any more for the racer? Another season will prove that a radical revision is necessary, and when it is made the basis of the rules must be a recognition of two classes, racing canoes and the all-round cruiser, sailing and cruising craft that has unfortunately been left behind of late by the march of improvement, if it may be called so. As far as the racers go we are in favor of removing all restrictions, save those of 30in. sharp ends, 16ft length, 30in. beam, with the present sliding scale, and to be sailed by one man. Standing or hoisting sails of any size, unlimited sliding seats, unlimited drop to centerboard, unlimited keel if any one wants to try it; if we are to have racing machines, and we certainly have them to-day, let us remove all arbitrary bars to improvement, preserving only the necessary limits of size, and learn how great speed can be had on 16ft. by 30in. sailed by one man.

When it comes to rules for the cruisers they cannot be too strictly drawn; lowering sails, a sliding seat, if any be allowed, no wider when closed than the beam of the canoe, a limit to the size of board, a clear space in the well and a proper working equipment of paddles, etc. It must be expected that in time racing features will encroach on the new class, and attempts will be made to evade the rules and to enter machines in disguise in the cruising races, but this can be guarded against by a careful study of the boats each year and a revision of the rules to meet evasions as they arise. The racing class will aid this work greatly, as all new experiments, such as the standing rig and sliding seat once were, can be tested for a season or two on the racers before being allowed, perhaps in some modified form, in the cruising class.

If the committee is thoroughly in earnest in the new crusade against unsafe appliances which it has just inaugurated, it may find here a wide field of work. The racing canoe, if properly used, cannot fairly be termed dangerous; in the hands of a skilful sailor and when out for racing or a practice sail, it is safe enough. The evil arises when a less skillful sailor undertakes to use it, or when even in skillful hands, it is used on long runs, where bad weather or a breakdown may be very serious, as some have found this year in making passages from one club house to another. The great fault is that this canoe is the only one which attains any prominence at the meets, the one which is practically put forward by the Association as the ideal of what a canoe should be. The remedy is not to destroy or cripple the racing canoe, but to recognize it as for racing and racing only; at the same time placing beside it a canoe in which the novice, the cruiser and the all-around canoeist may find safety, comfort and pleasure.

In order to avoid any error we wrote on Sept. 5 to Secretary Dunnell, asking him for the full text of the motion, the names of members present, and the vote for and against it. The reply to the last question was: "Motion carried, no ayes or nays taken." It now appears that this reply was incorrect, or at least misleading, as a formal vote was taken by raising hands, Messrs. Haviland, Schuyler and Knappe voting in the negative, Messrs. Putnam, Brazer, Jaques, Brokaw, Edwards, Dorland, French and Dunnell in the affirmative, Vice-Com. Gage declining to vote. We now learn that Mr. French was present only as an officer of the Central Division, and not as chairman of the regatta committee, and that, far from recommending the change, as Rule XXII. calls for, the regatta committee was not consulted in the matter, made no recommendation, and so far as the private opinions of its members are concerned, they do not favor the change, believing that the matter is one that is rapidly adjusting itself. This opens up an entirely new question as to the right of the executive committee to amend the sailing rules, save on a recommendation of the regatta committee.

Editor Forest and Stream:

As the general sentiment among the members of the A. C. A., in regard to the recent actions of the executive committee in abolishing standing rigs, seems to be opposed to their action and as much unfavorable comment has been made upon it, it seems to me only just that the position taken by each individual member of the committee present at that time should be made public.

This is only right in view of the publicity already given the matter and because I believe the subject has really only commenced to be discussed.

When the question was put at the meeting referred to (after a lengthy discussion in which almost every one present took part) Messrs. Kuappe, Schuyler and myself cast negative votes, the others voting in the affirmative, with the exception of Dr. Gage, who I believe cast no vote at all. I would be obliged if you would note this fact in your next issue.

WM. H. HAVILAND, Purser Atlantic Division.

YONKERS, N. Y., Sept. 13.

POINTE CLAIRE CANOE CREW.

THE special fall skiff and open canoe sailing races of the Pointe Claire Canoe Crew were sailed on the afternoon of Sept. 6. The wind was very light from S.E., and the boats had hard work to complete the course before the time limit expired.

The open canoe race, three miles on a mile and a half triangle, was started at 4 P. M., the starters being H. Routh, of Lachine; Larkin, of Darval, and A. Reford, of Pointe Claire. Larkin got a slight lead on the first round, but Reford passed him at the home buoy and held his lead until his canoe, which was leaking badly, became almost unmanageable. Routh's rig was much too small for the light air and Larkin finished with a good lead.

The skiffs were started at 4:10 P. M. in the following order: Vagabond, B. Linton; Jean A., C. Montserat; Tara, E. Chadwick; Gallagher, C. Saunderson. The course was three miles to windward and return, and for a time the fleet was very close together, but Jean gradually drew away and won with ease. The time of the race was as follows:

Jean A.	5 43 00	1 33 00
Tara	5 50 00	1 40 00
Gallagher	5 51 30	1 41 30

In last week's report of the third race the corrected times were wrongly given; they should be:

Valda	2 02 18	Chaperon	2 11 50
Minnie A	2 05 25		

Valda was therefore beaten by 15s. elapsed time and won the race by 3m. 7s. on corrected time.

THE BRITISH CANOE ASSOCIATION MEET.—Our English exchanges are bare of any news concerning the recent meet of the British Canoe Association, but we learn from a very interesting article in the current number of the *Sail and Paddle* that it really took place. The writer is Mr. Poultney Bigelow, of the New York C. C., to whom A. C. A. men owe a debt of gratitude as the discoverer of Pecomic Bay and Jessup's Neck.

A. C. A. MEMBERSHIP.—Atlantic Division: H. C. Allen, Trenton, N. J.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 25 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

MILICETE AND GOSSOON, SEPT. 9.

ON Tuesday of last week a match was sailed off Marblehead between the centerboard 40-footer Milicete, owned by Mr. A. B. Turner, and the keel 40 Gossoon, owned by Messrs. Adams, the stakes being $200. The course was from Half-Way Rock 10 miles S.W. by S. ½ S., to windward and return. Milicete allowed Gossoon 4min. 23sec. The race was far from satisfactory, the wind being fluky all the way out, making a close comparison impossible. On the return it shifted ahead, making another fluke, and as crowds all Gossoon broke down when the race was in her grasp. On the whole, however, she showed that she was well able to take care of herself in large company. Milicete had on board Mr. Gordon Dexter and his crew, from Hawk, in addition to her skipper, Captain Frisbie, while Gossoon was sailed by her owners.

The tug Camilla, with the judges, Messrs. George A. Stewart and Arthur D. Foss, gave the starting whistle at 11:20, the wind being then light, both carrying club and jibtopsails. The start was timed: Gossoon, 11:22:57; Milicete, 11:23:28, the former being a trifle to leeward.

Both crossed on starboard tack, but Milicete soon swung about and headed inshore, Gossoon following. Milicete opened out a lead when in toward the shore, so Gossoon left her, but found no more wind, in fact less, and when they came together Milicete crossed Gossoon's bows.

Both now made a long tack off shore to Pig Rocks and then in toward Nahant and out to the Graves, the two getting slightly different winds at times and Milicete holding the lead. They now parted company, Gossoon holding off on starboard tack, while Milicete stood in on port. Gossoon caught a fluke and came out ahead when they next met, crossing Milicete's bows. One more tack brought her to the turn, and she jibed around with a lead of 1m. 54s., the times being: Gossoon, 2:09:49; Milicete 2:11:43.

Gossoon soon had her spinaker full, but Milicete was slow in setting hers and then had it foul, so that it was lowered and reset. The run home had barely begun, when the wind shifted to northeast, breezing up considerably, the two being caught with spinakers aback. They were soon under working headsails, though still carrying jackyarders, and beating in to stronger wind and more sea. Gossoon showed the best at this work and opened up a good lead, being nearly 5m. ahead at Pig Rocks. Not long after, however, the bolt in her gammon iron broke, setting the forestay adrift and allowing the sides of the gammon iron to spring, so that the bowsprit lifted and broke. A temporary stay was rigged and the mast saved, but the race was over and Gossoon towed home astern of a steam yacht. Milicete took matters very easily for the rest of the course, taking in her jackyarder as the wind increased. The full times were:

	Start.	Turn.	Finish.	Elapsed.
Milicete	12 23 28	2 11 43	4 23 08	4 59 40
Gossoon	11 22 57	2 09 49	Disabled.	

HULL Y. C. SAIL-OFF, SEPT. 13.

THE Hull Y. C., in common with other Boston and New York clubs, came in for some hard weather last week, the result being one of the most exciting races in the club's history. The occasion was the championship sail-off in the first class, and the competitors were Albatross and Nimbus, the former a Mumm and the latter a Herreshoff sloop. The wind blew a gale from the southwest, so that the outer float, which is 80ft. long and 25ft. wide, was under water most of the time. The preparatory gun was fired at 2:30 and the starting gun at 2:45. Albatross was in fighting trim, topmast on deck, two reefs in mainsail, and staysail set. Owing to negligence Nimbus's topmast was left on end, and when her owner and skipper, Rear-Com. Souther, got on board there was no time to mend matters. She had three reefs in mainsail and storm jib.

Albatross waited for Nimbus to come up before leaving her mooring, and both boats were handicapped, Nimbus got away at 3:05:25, Albatross 20sec. later. After passing the "Gut" both boats jibed, Albatross just to leeward of Nimbus. Albatross then set her jib, and Nimbus changed her storm jib for her large one. From here to Harding's was a reach of 5 miles, and every inch was fought for. About one-eighth of a mile from the buoy Albatross passed Nimbus to weather and jibed around the buoy at 3:40, about 15sec. ahead.

From here to Riley's Ledge it was dead before the wind, and Albatross's crew started to set a small spinaker, but the squalls were so fierce as to compel them to give up the attempt. With the sea rolling after the boats, it was impossible at times to keep them from luffing. From Riley's Ledge to the Graves Whistler the course allowed the sheets to come in a bit. Albatross stowed staysail just before rounding the Whistler, made a sharp luff to get sheets flattened in, and started for her five-mile thrash to windward. She had gained only about 15sec. in her run from Harding's. Upon rounding the Whistler, Nimbus began to suffer from her topmast. The big jib had to be stowed and storm jib set, and she lost several minutes doing it. Her topmast on end was equal to a reef. If she had started with two reefs in mainsail, reef in jib and topmast housed, she would have carried her sail as well and done much better work.

Albatross gained rapidly in the beat home, and by the time Martin's Ledge was rounded was fully 12min. ahead. Just after passing the buoy the jackstay in her gaff broke in the middle, and though it held during two short tacks, when off the outer Brewster the rest of it went and with it the gaff upright in the middle. It was principally an amateur crew on the Albatross, with the famous amateur Fred Brown at the wheel, and their ability was shown by the way the head of the sail was lashed to the hoops and the reefs shaken out, making a big leg-of-mutton of the mainsail. The staysail was hoisted, and although about five minutes had been lost by the accident, the boat ranged about as fast as before, and Nimbus made no appreciable gain during the remaining three miles of the windward work.

On the last of the beat the wind lightened a trifle, but there was little diminution in the size of the seas. Albatross crossed the line a handsome winner in the hardest race sailed in these waters this summer. Capt. Souther sailed his boat in splendid shape, and it was no fault of his that she did not make a better showing. A closer race for ten miles in a gale of wind will never be seen. The Hull Y. C. showed the character of its yachtsmen in sailing such a race, as many would have refused to start under such circumstances. This practically winds up the season, there remaining only the sail-off in the sixth class, which was set for Saturday, but the boats could not have lived in the sea.

FIRST CLASS—SLOOPS 30FT. AND UNDER 35FT. (COURSE 15 MILES).

	Length.	Start.	Finish.	Elapsed.	Cor.
Albatross, Vice-Com. Henry	34 02	3 01 45	6 02 53	3 01 22	2 25 56
Nimbus, Rear-Com. Souther	34.02	3 01 25	6 09 34	3 08 09	2 32 25

Judges, Jas. B. Forsyth, Dr. Fred K. Brown, Ed L. Burwell.

MANHATTAN ATHLETIC CLUB, FALL REGATTA, SEPT. 13.

THE Manhattan Athletic Club, of New York, not satisfied with its successful growth ashore, has lately set out for new worlds to conquer, and has established a yachting department under the able direction of Mr. J. C. Summers, the compiler of the indispensable "Who Won," which is now the standard American yacht list. Mr. Summers has been working for some time past to arrange an open regatta for the leading racers, which race was very successfully sailed on Saturday. The starters were few, the smaller entries not liking the weather, but some fine racing was seen between Clara, Jessica, Liris and Mariquita. The Larchmont Y. C. very kindly lent its aid, the race being sailed over the club's regular Captain's Island course, and under Larchmont rules, while Mr. Scott, of the regatta committee, assisted Capt. Summers in the management from the tug Dalzell. There was a good lower sail breeze from S.W. which lasted all day, though varying some in direction and force. All started under lower canvas, but with jibheaders set in stops. Jessica, though classed with Liris and Mariquita, went into Clara's class to make a race for her, leaving Liris and Mariquita to sail for the club prize and a private stake, a match having been made between the two some time since. Of the smaller boats only Lakshim and Alene started, the latter dropping out. The start was timed:

Mariquita	12 19 44	Liris	12 20 28
Jessica	12 19 31	Alene	12 20 35
Clara	12 20 06	Lakshmi	12 21 38

On the reach across to Hempstead mark Clara and Jessica had a hard fight, both breaking out jibheaders, Clara being the first to do so. She passed Mariquita and was on Jessica's weather quarter as they reached the mark, rounding with a small lead. The times were:

Clara	12 44 40	Mariquita	12 45 26
Jessica	12 45 05	Liris	12 46 52

They ran to Captain's Island with spinakers to starboard, Clara taking hers in handily at the mark and making a neat jibe, while Jessica slammed her boom over with a shock that parted the mainsheet and cost her three or four minutes' delay. The times were:

Clara	1 26 01	Mariquita	1 29 26
Jessica	1 28 21	Liris	1 33 06

All stood to the north on port tack after rounding, Clara being well ahead with Mariquita second and Liris, who had tacked around the mark, on Jessica's weather quarter. There was still plenty of wind, and a heavy rain began; Liris taking in her jibheader, the others carrying theirs. The next long tack brought them in under the Long Island shore, where Liris set her topsail. Jessica had regained the second place, and Mariquita had gained a little on her. The times at Hempstead were:

Clara	2 49 22	Mariquita	2 58 35
Jessica	2 55 56	Liris	3 03 02

The last leg was made with small jibtopsails set. The full times were:

60FT. CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Clara	12 20 06	3 10 11	2 50 05	2 50 05
Jessica	12 19 31	3 18 40	2 59 09	2 54 01

50FT. CLASS.

Mariquita	12 19 44	3 22 13	3 02 29	3 01 38
Liris	12 20 28	3 23 31	3 06 03	3 05 03

30FT. CLASS.

Lakshmi	12 21 38	4 11 00	3 49 22	3 49 22
Alene	12 20 35	Did not finish.		

No yachts started for the Cherry Diamond Pennant, offered by Capt. Summers for the best elapsed time in the smaller classes.

BEVERLY Y. C.

168TH REGATTA, 5TH OPEN SWEEPSTAKES, MONUMENT BEACH, SEPT. 13.

THE race was sailed in a severe gale from S.W. by S.; the water being feather white, sea running very high, and the wind being harder than at the start of any race ever sailed here, except the Surprise, Mattie, Atalanta match some years ago.

Thirteen boats entered, and all but Daisy appeared at the starting line, each boat having in every reef possible, and many of them carrying small sails. Starling led off in first class followed by Mattie, but for some unknown reason came back and started again. In second class Mollie broke her tiller just before start. Gymnote led off, going very well, then Anonyma, with Widgeon close behind, and Mist with a ten-second handicap. These classes sailed the usual 11-mile course, which took them into very rough water. Third class was sent twice to the Pines Buoy and return, 5 miles. Fourth class went once round. Eina led off in third class followed by Puzzle, Cayuse smashing gooseneck just before start and running off under bare poles. Kitten and Rip started in fourth class; Kitten going very well, outpointing Rip and beating her in the tack against the head sea, but on the other tack Rip gained and passed her. About this time Mattie was seen lying to, with her sheet off; she was heavily loaded with ballast, and the sea washed over her filling her up with water, as her cockpit is not water tight. After pumping it out she withdrew and ran home, accompanied by Gymnote with her boom broken short off in the middle.

The third class appeared next, Eina rounding at 1:59:25, Puzzle 2:00:37, Eina having gained 27sec. She seemed to outpoint Puzzle.

Next came fourth class, with Rip 47sec. in the lead; the wind had moderated a trifle, which suited Rip, and Kitten shook out a reef. Then the wind increased and Kitten had too much sail to steer well. Next boat to appear was Widgeon, running home under bare poles. She had cracked her boom and been forced to give up the race.

On second round Eina beat Puzzle badly, and came home with a very respectable lead.

After quite a time had elapsed the other boats appeared, Anonyma leading, but Mist, with her boom broken off just outside leach of sail, was pressing her hard, while Starling had dropped astern.

The finish was very close. Mist was beaten 8sec. on allowance by official time, but was handicapped 10sec. at start. Taking actual time of start and dropping allowance Anonyma beat her 1sec.

Mist's boom broke in the jibe round Bird Island Buoy. Anonyma and Starling noted this, and tacked in place of jibing, losing some time but saving their spars. Altogether the race was very exciting and a great success. The times were:

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Cor.
Starling, J. Cobb	25.09	1 10 30	3 20 03	2 09 38	1 58 32
Mattie, H. Stockton	28.10	1 12 25	Disabled.		

SECOND CLASS.

Anonyma, F. L. Dabney	26.10	1 18 32	3 17 18	1 58 46	1 47 49
Mist, G. H. Lyman, Jr.	26.08	1 20 00	3 19 05	1 59 05	1 47 54
Widgeon, M. Williams, Jr.	26.10	1 18 58	Broke boom.		
Gymnote, W. E. C. Eustis	26.10	1 17 50	Broke boom.		
Mollie, S. O. Phinney	27.00	Broke tiller.			

THIRD CLASS.

Eina, J. Parkinson	22.10	1 22 50	2 38 05	1 15 15	1 08 02
Puzzle, Wm. Amory 2d	22.09	1 23 55	2 41 22	1 17 28	1 10 12
Cayuse, F. W. Sargent	22.09	Broke gooseneck.			
Daisy, H. Stockton	21.01	Did not start.			

FOURTH CLASS.

Rip, C. B. Jefferson	19.01	1 28 07	2 11 04	42 35	37 38
Kitten, G. H. Richards et al.	20.00	1 28 29	2 11 51	43 44	39 10

Starling, Anonyma, Eina and Rip take firsts, Mist second.

Judge, W. Lloyd Jeffries.

LOSS OF THE STEAM YACHT MIGNON.—On Sept. 9, at 8 P. M., the steam yacht Mignon, with Capt. D. H. Pugh in command, stranded on the point of Cape Fear, near Wilmington, N. C., and was lost, her crew of five being saved. She was a wooden vessel 85ft. over all, 81ft. l.w.l., 15ft. beam and 5ft. draft, built in 1880 on the Delaware. Her late owner, Mr. C. E. Hill, of New York, had just sold her to some Southern parties, who had sent her South. She was insured in New York for $4,000.

EASTERN Y. C. FALL REGATTA, SEPT. 10.

FROM the experience of the Eastern Y. C. last week it seems that racing yachtsmen have not progressed much during the season in the direction of a one gun start, as the last race of the year, or nearly so, was as bad a bungle as the first. In both cases, the present Eastern Y. C. regatta and the special race of the Seawanhaka Corinthian Y. C. in June, the committees were men of their word, who meant what they said and stood by it, which fact the racers did not realize until it was too late. Although the fleet was a small one, three forty-sixes, one forty and two thirties, it was very select, and in such weather there might have been a grand race had the boats started anywhere near the same time. As it was they did some fine sailing, but to little purpose so far as any interest to crews or spectators was concerned.

Wednesday was cold and rainy, with a strong E.N.E. wind and a heavy sea; the course was the smaller triangle of the E. Y. C., 24 miles, the sea leg, from Marblehead Rock to a mark boat, a reach, being sailed first, then before the wind to the Whistling Buoy off the Graves, and home to windward over the inshore leg past Pig Rocks and Tinker's Ledge. Gossoon was entered, but the loss of her bowsprit on Tuesday threw her out, leaving Ventura alone in the 40ft. class, so she joined the forty-sixes. In the 30ft. class were only Shark, and Mignon, Almira, the new Cape Cat coming down too late for even this race. Though the weather was far from pleasant, the regatta committee, Messrs. W. S. Eaton Jr., Chas. H. Joy, T. Dennie Boardman and R. S. Sears, hardened their hearts, donned their oilers and wound their little watch, steaming off in good season for Marblehead Rock, where they anchored, and in due course of time blew the proper signals, the starting whistle being at 10:45, as advertised.

With the exception of Ventura, there was nothing in sight, and no evidence of any starters for a good ten minutes. Mr. Foster was only a minute late, going off under lower sails only. By and by Alga, Milicete and Thelma came along at their leisure, and when they found that the race was well under way made haste to catch the rapidly vanishing Ventura. Mignon also, though her start was set for ten minutes after the larger yachts, managed to be comfortably late, while Shark, after towing down from Boston, only came into harbor at Marblehead after the preparatory whistle with sails down and her racing crew scattered on shore. Captain Waterhouse is not a man to be stopped by trifles, but gathered his men, towed out to the line, and began a successful stern chase with a most discouraging handicap of ten minutes, actual time. The starting signals were given at 10:45 and 10:55 respectfully, the actual times of crossing being:

Ventura	10 46 06	Milicete	10 57 24
Alga	10 57 47	Mignon	11 05 23
Thelma	10 58 01	Shark	11 15 21

The larger boats carried jibheaders and jibtopsails, Milicete wisely setting a baby, the others their intermediate. Shark had full lower sails and jibheader set, while Mignon had no topsail and a reefed mainsail, trying a small jibtopsail at first. Alga and Thelma first shifted to baby jibtopsails and then took these in. The order was not changed on the first leg, the times being:

	Actual.	Elapsed.
Ventura	11 45 16	0 59 10
Milicete	11 51 26	0 54 02
Alga	11 52 01	0 54 14
Thelma	11 54 16	0 56 15
Mignon	12 12 46	1 07 23
Shark	12 20 16	1 04 55

The elapsed times show the real work of each boat correctly.

Alga was the only one that cared to risk a spinaker at first, setting hers immediately after the jibe and sending up an intermediate jibtopsail. Ventura kept on under lower canvas, but Thelma and Milicete followed Alga's example, though the work was done very badly, both having to lose time in breaking the stops and clearing the sails. Shark had borrowed a silk spinaker from Saladin, which she set at once on turning, Mignon also sending up hers and a topsail as well. With no spinaker set, Ventura lost ground to the bigger boats, and was passed by Alga and Milicete on this leg. The times at the Graves were:

	Actual.	Elapsed.
Alga	12 53 37	1 01 36
Milicete	12 54 02	1 02 36
Ventura	12 55 00	1 10 34
Thelma	12 57 13	1 02 57
Mignon	1 24 49	1 12 03
Shark	1 28 45	1 08 29

Going home there was plenty of wind and a heavy sea, Shark housing her topmast and Mignon keeping one reef in her mainsail, though with topmast set. When doing well on the first part of the beat, Milicete came to grief through some trouble with her topsail, the hooks getting loose, so that the sail had to be taken in, costing her much time. Alga and Thelma passed Pig Rocks Buoy on one tack, and Thelma also made Tinker's Ledge, Alga tacking. Ventura managed to win by virtue of her long lead and her time allowance, though the following elapsed times from the actual start give a truer idea of the merits of the race. The official times were:

	Start.	Finish.	Elapsed.	Corrected.
40FT. CLASS.				
Ventura	10 45 00	2 13 59	3 28 59	3 23 44
Alga	10 45 00	2 10 48	3 25 48	3 25 15
Thelma	10 45 00	2 12 52	3 27 52	3 25 52
Milicete	10 45 00	2 14 25	3 29 26	3 29 26
30FT. CLASS.				
Shark	10 55 00	3 15 03	4 20 03	4 20 03
Mignon	10 55 00	3 19 07	4 21 07	4 22 17

The actual times are:

Alga	3 13 01	Ventura	3 27 53
Thelma	3 14 51	Shark	3 59 42
Milicete	3 17 02	Mignon	4 13 44

VOLUNTEER AND CONSTELLATION.—Two rather sensational rumors have been flying about this week, both concerning the large singlestickers. The more astounding of the two is that Piepgrass is now preparing to convert the new Morgan schooner Constellation, of 106ft. l.w.l., into a single-ticker, making the largest yacht of that rig ever built since Maria's day. The other report is that Gen. Paine has sold Volunteer to Mr. Camille Weidenfeld, a member of the New York Y. C., who will send her across after the Cape May and Brenton's Reef cups.

MINERVA AND LIRIS, SEPT. 9, 10, 11.

THE series of matches made last spring between Minerva and Liris were sailed on Tuesday, Wednesday and Thursday of last week on the Sound, the result being a victory for Minerva, as she won one race in hard weather by an easy margin, in another Liris broke her tiller and gave up, while a third was a drift that was not finished. On both of the latter occasions Minerva was ahead during the day. The first race was started from Captain's Island, the course being to a stakeboat off Hempstead Harbor, 6 miles, and back, two rounds or 24 miles, the first and third legs to windward. Minerva went over the line in a light S.W. breeze at 12:05:13, with Liris at 12:05:30. After some fluking Minerva turned the first mark at 2:14:10, with Liris becalmed a long way astern. Minerva finished the first round at 6:24:00, the pair drifting for several hours in the dark and then giving up.

The second race was sailed on Wednesday, in a strong lower-sail breeze from N.E., over the regular Captain's Island course of the Larchmont Y. C. Both were reefed, Liris having one and Minerva two tucks in. The start was timed: Minerva 11:56:45, Liris 11:57:07, the two reaching across very evenly to the Hempstead mark. On the beat to Captain's Island there was little to choose between them, but as Liris jibed around the mark her tiller snapped off. Head sheets were cast off and she luffed up, being taken by the tug into Larchmont. Minerva sailed the course out, her times being:

	Start.	Finish.	Elapsed.	Corrected.
Minerva	11 56 35	2 45 00	2 48 25	2 45 28
Liris	11 57 07	Disabled.		

The final race was one of the events of the season, though few were present to enjoy it. The wind and sea had increased greatly by Thursday morning, but a course of 10 miles dead to windward, from off Larchmont to a mark near Shippan's Point, was laid out, and at 11:45 the start was given from the tug Dalzell, which carried Messrs. Frank Scott, T. C. Zerega, and Thornton B. Smith, the judges. Minerva, with three reefs in her mainsail, one in the foresail, No. 3 jib, went over promptly, but Liris, with two reefs in the main, a whole foresail and No. 2 jib, was over a minute astern, the times being: Minerva 11:45:44, Liris 11:46:58.

The first long tack across the Sound occupied over half an hour, but after they reached somewhat smoother water they did not stay there; Liris started off again for the other shore, through seas that were really formidable, and Minerva kept close to her. Minerva had gained from the start and when the mark was finally reached she had a lead of 7m., the times being: Minerva 1:46:00, Liris 1:53:00. Minerva jibed, shook out one reef and set her spinaker, Liris set a jibtopsail on her housed topmast and a jury spinaker. The seas were very heavy as the little craft ran in, nothing but a portion of the sails being visible at times. Liris gained a little on the run, but was beaten on elapsed and corrected time, as follows:

	Start.	Finish.	Elapsed.	Corrected.
Minerva	11 45 44	3 08 23	4 22 39	4 19 42
Liris	11 46 58	3 13 34	4 26 36	4 26 36

Liris allows Minerva 2m. 57s., so the latter wins by 6m. 54s., corrected time.

CORINTHIAN NAVY.—Long Island Sound Squadron.—Greenwich, Sept. 13.—Course, triangular, round Captain's Islands; distance, 6 knots; weather, stormy; wind, S.W., very heavy; tide ebb.

FIRST CLASS—CABIN SLOOPS AND CUTTERS.

	Length.	Elapsed.	Corrected.
Merope, W. S. Gilmore		1 18 31	
Argo, Chas. Bouch		Did not finish.	
Swan, Henry Colledge		Did not finish.	
FIRST CLASS—OPEN CATBOATS.			
Gertrude, W. J. Selleck	21.10	1 26 30	1 25 37
Zelda, F. Williams	20.01	1 42 33	1 40 13
SECOND CLASS—OPEN CATBOATS.			
Jubilee, E. D. Hurlbut, Jr.	18.04	1 38 01	1 34 02
*Kittiwake, R. B. Pott	17.06	1 38 23	1 33 37

*Ruled out for fouling mark. The race was in charge of F. B. Jones, Fleet Captain Corinthian Navy. Out of twenty-one entries only seven braved the storm and crossed the line. The open cats showed their seaworthiness and able handling in finishing the race without being swamped. Regatta Committee: F. W. Lawton, T. T. Tabor, E. B. Hart, Jr. Judges: G. G. Tyson, J. E. Peck and Frank Lockwood, Riverside Y. C.

ROYAL CANADIAN Y. C., SEPT. 6.—The race of the R. C. Y. C. for the Prince of Wales cup was sailed on Sept. 6 over a course from between the Exhibition wharf and a flag buoy to the south, to the bell buoy; thence to a buoy moored 6 miles to windward; thence back to bell buoy, the circuit to be covered twice and finish at the flag buoy south of the Exhibition wharf, 30 miles. The wind was light, but with some sea on the Lake. Oriole and Vreda soon had such leads that the others gave up, the times being:

	Finish.	Elapsed.	Corrected.
Oriole	6 32 00	7 32 00	7 32 00
Vreda	6 48 20	7 48 20	7 35 18

Verve No. 1, Verve No. 2, Condor, Merle and Psyche did not finish.

A skiff class race, over the usual triangular course in the bay, distance about 10 miles, was also sailed, the times being:

	Start.	Finish.	Corrected.
Uneasy	3 00 00	4 44 40	1 44 40
Ægeria	3 00 00	4 47 10	1 47 10
Ripple	3 00 00	4 49 15	1 49 15
Chute	3 00 00	Did not finish.	
Nouna	3 00 00	Did not finish.	

The judges were Vice-Com. McGaw and Mr. J. E. Robertson.

JESSICA AND LIRIS, SEPT. 12.—On Friday last a private match was sailed between the new Fife 20-rater Jessica, 46ft. l.w.l., and the Gardner 40-footer, the course being from Larchmont Harbor around the Hempstead mark, and then around Stamford Light mark, 27 miles. There was a fresh S.W. wind and much less sea than on the previous day. The start was made at 11:50, the two going over together. The course, mainly reaching and running, with a good breeze, favored Jessica, her extra length of 6ft., with a small sail plan, being both at a premium for this work. At the turn she led by 8min., increasing this on the return until she had a lead of 14min. 36sec. at the finish, winning by 13min. 33sec.

DEATH OF MR. R. T. BUSH.—On Monday morning Mr. Rufus T. Bush, the original owner of the Coronet, died at his residence in Brooklyn from a dose of aconite, taken by mistake. Mr. Bush had just returned from a trip to Europe, and being unwell, took the medicine from a small medicine chest, mistaking the aconite for paregoric. As the dose was disguised in whisky the mistake was not discovered until the symptoms of aconite poison became apparent, by which time medical aid was unavailing. Mr. Bush, who was fifty years of age, was a successful manufacturer of illuminating oils. He at one time owned the steam yacht Falcon, afterward building Coronet, owning her at the time of her race with Dauntless. He was a member of the New York Y. C.

NAVY BOATS.—The current number of the Proceedings of the U. S. Naval Institute has a valuable and interesting article on "Navy Boats," by Ensign Albert A. Ackerman, U. S. N. Several excellent illustrations of surf boats accompany the article.

NEW YORK C. C.—The postponed regatta of the New York C. C. will be sailed on Oct. 4, off the club house, Stapleton, Staten Island, starting at 2 P. M. A new feature will be a race over the regular course with crews standing on deck.

NO MORE RACING.—Liris is now at City Island, where she will ship her winter rig. Minerva leaves this week for Beverly, where she will winter. Both she and Mariquita are for sale.

CORONET.—On Sept. 11 the schooner Coronet, Mr. A. E. Bateman, sailed from Havre for Cowes. She has been cruising in European waters during the season.

CORINTHIAN SAIL OFF, MARBLEHEAD.—The race set for Sept. 13 was not sailed, owing to the heavy weather.

VENTURA AND TOMAHAWK.—A match is talked of between these two forties, to be sailed on Sept. 25

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

T. F. H., Lancaster.—Opinions are divided as to the comparative effects on the barrels. Its use is not advised in rifles.

H. T., Seattle, Washington.—Would you be kind enough to inform me if there is a publication on game fishing in Puget Sound. Ans. We know of none.

C. C. B., West Newton, Pa.—To clean your brass shells "by wholesale" put them into a dish of vinegar. It is better, however, to rub the outside of the shell with a cloth dipped in vinegar and to leave the inside dirty.

J. H. D., Poughkeepsie.—Please state the meaning of the —— that almost always accompanies the illustrations of fishes, *vide*, the Black Bass number of FOREST AND STREAM, Fish Commissioners reports, etc.? Please give addresses of Chas. Hallock and F. Mather. Ans. 1. The line is the inch scale. 2. Mr. Hallock's address is No. 7 Warren street, New York. Mr. Mather lives at Cold Spring Harbor, N. Y.

J. W. R., Troy, N. Y.—1. Is Indian River in Jefferson county a good river for bass? 2 What kinds of fish are found in it? 3. Can good board be had on the river, and at what rates? 4. Give dimensions of a mascalonge rod, length and size of ferrules. 5. Give size of ferrules for an 18ft. salmon rod. 6. Give address of dealer in Bethabara wood. Ans. 1. Yes. 2. Black bass, pickerel, pike, mascalonge, etc. 3. At Theresa (Utica & Black River Railroad) Hotel, $2 per day; numerous good lakes near. 4 Short and stout; three joints, 9ft.; two joints, 8ft.; ferrules $^{13}/_{16}$ and $^{16}/_{32}$in. 5. This will depend on material, bamboo or wood; write to some reliable rod maker. 6. A. B. Shipley & Co., 503 Commerce street, Philadelphia, Pa.

S. H., Boston.—A pond intended for bass is about ¾ mile long, varying in width from ⅛ mile to 200yds. The depth is from 4 or 5 to 20ft. It is full of frogs and minnows. There are a great many pickerel in the pond. We have thought of putting in white perch and black bass. How does the small-mouth bass differ from the large-mouth? Which is the largest and gamiest fish? Ans. In our opinion the black bass will prove entirely satisfactory in your pond and the food supply is suitable. This, however, may need renewing from time to time. The white perch is known to harmonize with the black bass in some New England waters and can not do harm in your enclosure. In stocking the pond use bass of moderately large size, if you can get them, and they will hold their own against the pickerel. In our issue of July 24 you will find a pretty full discussion of the relative game qualities of the small-mouthed and large-mouthed bass; there will probably never be entire agreement among anglers on this subject. Our choice for your preserve, however, would be the small-mouthed species, because of its successful introduction into many New England localities. The small-mouthed species can be most readily distinguished from its relative by its smaller mouth, the upper jaw bone not reaching beyond the eye. In the large-mouthed bass this bone extends behind the eye. The small-mouthed species also has about 11 series of scales above the lateral line, while the large-mouth has only 8. These differences are well brought out in the FOREST AND STREAM of the date mentioned. We shall be glad to have an account of your club at your convenience.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, 'Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

PRICE $2.50.

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skilful sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

Canoe and Camp Cookery

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.

ANSWERS TO CORRESPONDENTS.

A MAINE ENTERPRISE.

THERE is an organization of sportsmen, anglers, guides and other persons interested, with headquarters at Rangeley, Me., under the title of the Franklin County Fish and Game Association. The members are banded together to promote the fishing and hunting interests of that region; and they have gone at it in an eminently sensible and business-like way, by restocking the waters with game fish. Last season, the first, they were successful in raising some 40,000 landlocked salmon. This year they propose working on a larger scale, and are planning for putting out a million landlocked salmon and trout.

The Association is in need of funds, and has issued a call, which we take pleasure in giving mention here, asking for the support of residents and visitors. There is hard common sense in the considerations which the Franklin county people present. Plantings of fish fry, say they, will mean better fishing, which will insure greater satisfaction among summer tourists, whose numbers will be increased thereby. This will mean more employment for guides, more business for all who have to do with summer travel; increased demand for garden and farm products; and as the visiting sportsmen, charmed by the attractions of Rangeley, Andover and Phillips, become in time permanent summer residents, the values of land will increase, and all local industries will share in the growing prosperity. This is precisely what has happened in other regions, and such a course of development and prosperity may safely be predicted for any favored fishing locality, whose residents have the business acumen to recognize their advantages and opportunities.

The Franklin County Association has made an excellent beginning. Thus to present and insist upon the economic profit of wise game and fish conservation is sure to tell in the end. It is a plan of campaign that will succeed. The great trouble with most game and fish protective associations is that too great dependence is placed upon the skill of the members in trap shooting. Such societies would do well to note and follow the business-like methods of the Franklin County Society.

The president of the Association is Capt. F. C. Barker, and the secretary is Mr. H. A. Furbish, Rangeley, Me. Membership costs $2 per year, and all funds are devoted to fish propagation and fish and game protection. There should be a large list of non resident members.

THE FISH COMMISSION INVESTIGATION.

THE Senate investigation of the United States Fish Commission, which began several months ago, has been closed after taking 600 printed pages of testimony, mainly from persons who were expected to sustain the charges of nepotism and use of public property for private advantage. While it is probable that the pressure of important bills and the near approach of adjournment will prevent the investigating committee from making a report during the present session, it is well understood that the unseemly attack upon this useful branch of the Government service will simply result in establishing the efficiency of the Commission and the animus of its enemies. The investigation has disclosed just the opposite of what the attacking parties hoped to show. Instead of fraud and incompetence, there is abundant evidence of integrity and increased skill. The Fish Commission can stand such scrutiny without flinching; but the amount of valuable time lost thereby is a very serious matter, and the expense involved in this malicious persecution is an item of no less serious moment. It would strike the average person of intelligence rather forcibly at this juncture that somebody should be made to suffer for this wanton exhibition of petty spite, with all the deplorable consequences involved in its gratification.

TAKE THE BOY.

IT is a hopeful indication for the future of field sports that in several recent papers by sportsmen the boy accompanies the father in his recreations, to the pleasure and advantage of both.

The gray-beard thrills with the delight of long-ago youth if his boy shows a quick eye and wit and a hand prompt to obey both. He is as pleased and proud as the youngster himself, if the son gets bird, beast or fish skillfully and honorably. With this quick imitator by his side, he grows punctilious in observing every law laid down by man or by nature concerning the game he seeks, that he may teach by his practice a reverence for such laws and an obedience to them. The "pocket pistol," too, is left behind, if it ever before was thought an essential part of the refreshments.

From too great familiarity, or from the oppressing cares that added years often lay upon the elder (and that will not stay behind), if unaccompanied by this quick observer, he would pass unnoticed many objects of interest and beauty—here a wood duck preened her plumage and left a many-hued feather on the log for token; a water lily, late blooming, gleams under an overhanging water maple; a hawk circles the far-off hilltop; or on a yellow birch a vireo has swung her birch bark basket; a fox has left a chicken's bone or turkey feather on the gray rock where he feasted the night before; a woodcock has twice bored the black mud by the wood road bridge.

To the boy such companionship brings numberless benefits. One of the best is the surprised feeling swelling his breast and beaming in his face of the comradeship implied.

He learns so pleasantly safe and legitimate methods of sportsmanship, that he will not forget to practice them in coming years. For him there will be no careless handling of the gun, no foolhardy feat attempted on the water, no fingerlings in his creel nor unlawful game in his bag.

He learns to love the woods, as by his father's side he steals silently over their sunny slopes to surprise a partridge; or as he stands by him, with finger on trigger and heart in throat, under birch or hemlock in October sunshine, listening to the nearing bugles of the hounds. So, in like manner, he loves the grass-bordered brook, from whose pools the trout leaps to his father's skillful cast, and the broader streams, where bass and salmon play. And mingled with this love of nature and her healthful recreations, there grows a stronger filial affection, not likely to grow less as the years increase.

FISH FOOD FOR THE PEOPLE.

A NUMBER of public-spirited gentlemen, among whom are ex-Judge Geo. F. Danforth, Justices Wm. Rumsey and W. H. Adams, Wm. Purcell, editor of the Rochester *Union and Advertiser*, ex-Senator George Raines, H. H. Warner, president of the Anglers' Association of the St. Lawrence River, and Chas. Babcock, president of the Caledonia Fishing Club, have issued a circular appeal, urging a public movement for the increasing and cheapening of the food fish supply of the State of New York. These gentlemen urge that with proper care the fisheries of Lake Ontario might be so vastly increased as to furnish a supply of food which would materially affect the cost of living to the people of the State. They point out that New York is far behind Ohio, Michigan, Illinois, Wisconsin and the Dominion in the work of keeping up a supply of whitefish; and it is urged that the results attained by these other States and by Canada have not only demonstrated the wisdom of their course in systematic food fish culture on a large scale in the waters of the Great Lakes, but have shown with equal emphasis New York's want of wisdom in not giving due attention to similar work. The specific demands to be made for the future in this field are thus detailed:

First—Regular and liberal yearly appropriations for the special purpose of propagating food fish, and especially of whitefish, in Lake Ontario and other suitable bodies of water of the State.

Second—Stringent laws against netting or fishing during spawning season, and on spawning beds.

Third—Forbidding the use of any net with a smaller mesh than 3½ inches; and the catching and marketing of whitefish of less than two pounds weight; and other fish in proportion.

Fourth—The appointment of a first-class fish warden, with enough deputies thoroughly to patrol and protect all the stocked waters of the State, according to law.

Fifth—Co-operation with the National and Dominion governments. If we show that we will give the money and enforce the laws, we know our own government will co-operate with us in this great and beneficent movement.

THE HEATH HEN.

IT is to be hoped that Mr. William Brewster's interesting notes on the heath hen of Martha's Vineyard, published in our Natural History columns, may have the careful reading merited by them. Here is a valuable game bird, which as the remnant of an abundant supply once scattered over a wide territory of the Eastern States, has persisted on a single island of Massachusetts. When one considers the restricted area of the Vineyard cover, and all the agencies which are working to destroy it, the survival of the heath hen here is a matter of wonder. It speaks well for the hardiness of the bird and gives abundant assurance that if properly protected and by transplanting given a wider territory, the species might once more be reckoned among the game birds of the East. Mr. Brewster's suggestion that the subject might well be given attention by the enterprising sportsmen of Boston is well worth consideration. The Massachusetts Association would render a service certain to be appreciated, if they would use their influence and their means to protect and increase the stock of heath hens.

THAT ADIRONDACK FAWN OUTRAGE.—We have received full confirmation of the report given in our issue of Sept. 4, of the fawn killing case on the upper Chateaugay Lake in the Adirondacks. The so-styled sportsman was one J. J. White, of Philadelphia. The testimony given on the trial before Judge C. Richardson, of Lyon Mountain, was that when the fawn, driven by the hounds into the lake, its mother having just been killed on the shore, was rescued by two ladies, these fellows White and Barraby rowed up, and White threatened that unless the fawn were given up to him he would shoot it where it was. Having thus terrified the ladies, White seized the fawn by the hindlegs, dragged it out of the boat into his own, and killed it. The paltry fine of $50 paid by White for this proceeding was an inadequate penalty; the flagrancy of his offense deserved a more fitting punishment.

MR. AUSTIN CORBIN has recently imported a number of wild boars from the Black Forest, and put them out on his extended game preserve in New Hampshire. Other boars have previously been introduced into New York and New Jersey.

The Sportsman Tourist.

"ABEO PISCATUM."

HAVE you forgotten Sodus, Sweet, and all that pleasant day,
And how our little dainty boat went dancing down the bay?
It somehow seems, as summers pass, that clouds were whiter then;
And ah! that skies can never be so deeply blue again.

How dewy cool the soft breeze crept adown that dim old grove,
To touch your fair cheek tenderly as with a velvet glove;
And how we gathered golden-rod to wreath your wide-rimmed hat,
And how you caught the fish, Mignonne, you must remember that.

He was a monster, I admit, nor marvel at your fear,
Who darted off with a wicked rush when you had drawn him near.
He pulled, and plunged, and leapt, and lunged, all frantic to be free;
Life may have seemed as sweet to him as it was then to me.

You begged for me to land him, but a sudden fancy swayed,
To leave it all to you, Mignonne, and watch the fight he made.
That fish should be an augury, his fate mine own fortell:
Should he break loose—but 'twas no use, you had him hooked too well.

Ah! still I see that dreamy, tender blue of bay and sky,
And far beyond the harbor piers the sun-bright sails go by.
It haunts me, too, when twilight blue hath turned to violet.
Have you forgotten all, so soon? and shall I not forget?

M. M. Cass, Jr.

IN BRUIN'S STRONGHOLD.

MIDWAY of the river's murky tide our guide, with a dextrous dip of his paddle, turns the prow of our "dugout" diagonally abreast the stiff current, and we drift, broadside on, toward the eastern bank.

No suitable place for landing presents itself. The bank of yellow clay, precipitous and overhanging in places, is fringed along its base with a ragged barrier of bared tree-roots and half-submerged drift, such as usually gathers along the outer circle of a river bend. One would have need of a scaling ladder to surmount this natural rampart, even if the half-drooping, half-erect growth of blue cane above had not sufficed to discourage the attempt.

"Great Harrison! Did you ever see such fishing rods?" exclaimed Smith, accustomed to view everything with the eye of an angler. "Some of 'em are twenty feet long, if an inch!"

"Thah's longah ones in thah brake, yondah," remarked the guide.

"I don't care to see 'em; those in sight are eighteen inches longer than my wildest anticipations."

"I kin show ye longah an' bettah ones," persisted the guide, "back in thah brake whah thah watah don't ride 'em down."

"But here, even at this high stage of the waters, the shore overlooks the river by a dozen feet. Surely this bank is never submerged?"

"I've seed watah ten foot up on that hackberry," responded the guide, indicating a tree on the highest point. "Don't you see how all that cane p'ints down stream?"

"I can see scattering drift lodged in the branches of yonder bush," observed the Doctor. "It must be a grand sight when this winter's overflow is at its height, and the whole country on either side is submerged. Guide, how wide is this little stream when at full flood?"

The swamp dweller shut one heavy-browed optic, and meditated a moment before replying. "How wide is it right heah? Let me see. It's foah miles tew Hamilton Hill, an' foah moah 'cross tew Raft Creek highland at thah ol' mill seat—that's eight. T'other way it's somethin' like ten mile moah."

"Eighteen miles of water! Just think of that, Smith."

"Sounds fishy," responded Smith abruptly.

"You'd think fishy," said the guide, failing to catch the implied doubt of his veracity. "When thah ovahflow stahts down I kin load this ol' dugout in no time."

"With fish?"

"Fish an' shovel-bill cat," making the distinction as though it were a matter of course. "Duck yer heads an' mind that bresh, boys. I'm goin' ter run her ashoah heah." We had floated down the stream, reaching the point where the bluff bank had given way to a weed-grown mud bar, wet and sticky from a light rain that had just passed over, and shaded by overhanging cotton-woods and willows. The Doctor lost his footing in springing ashore, leaving the imprint of his corpulent person in the soft slime, but was comforted by Smith's assurance that the bears would scratch the mud from his clothing before it would have time to dry.

As this was to be merely a reconnoiter with a view to discovering desirable hunting grounds, a scrutiny of the river bank for signs was the first thing in order. Two of the party were the rankest of greenhorns in business of this kind, having only left twelve hours before the Pullman car that had borne them, via the Iron Mountain route, from St. Louis. The guide, however, was fully qualified to do the "inspecting" for the entire party. In a few minutes Smith and the Doctor were examining the deeply-imprinted hoof marks of a little buck that had evidently wandered aimlessly along the water's verge not many hours previously, though certainly before the rain-fall.

"Thar's lots of tracks, but some of 'em are powerful dim," announced the guide. "I reckon that watah holes in thah bottom is done filled up by thah rains. Otherways all thah game 'ud be watahin' heah at thah rivah."

We climbed the shelving shore and followed the guide, though not without some misgivings, as he plunged into the almost solid walk of cane. Penetrating a brake of blue cane is a hard task to even the most experienced "swamp ranger." It is a perpetual "crawl" under the most trying of surroundings. Imagine a scope of country cut up with narrow deep gullies, strewn with fallen timber wrapped up in a growth of briers. Then, over all impediments of log, brier and ravine towers the rank, springing cane, standing like blades of grass in a meadow with enough of the dead and fallen, but still stubbornly tough canes, to intermat the whole into a barrier not easily passed.

Hardly 20yds. into the brake the party halted at the Doctor's pleading,

"I don't kick at anything reasonable," he grumbled, "but there is no use wedging ourselves into that confounded thicket. There is no bear in there; they couldn't get in there!"

The guide explained that he had not entered the brake to find bear, though there was a possibility of meeting one at any time. The hunting ground proper lay beyond the brake.

"And my interest in the great 'beyond' is just now very faint," persisted the Doctor, wiping his perspiring brow. "You fellows go on and find your bear, and I will go back to the boat and watch for that deer."

"But it's a heap furdah tew thah boat than it is tew thah open, yandah," unexpectedly replied our guide. "It's good goin' when we strike that slew."

In fact the "slough," a long, narrow depression, bare of cane, was then 30ft. away, though to the inexperienced eye there was nothing to indicate the proximity of open ground. Once in the slough, our progress was comparatively easy, though at every sharp bend in its course we encountered drifts of logs that sometimes forced us to make detours through the tangled cane. Here during the high waters existed a swift and deep current; every indication pointed to the fact, and our guide, when interrogated, sustained our supposition.

"Cut-off running from that upper river," said he. "That hull bottom's full of 'em."

Occasionally at some angle a branch slough would lead off, only, in a few yards, to end in a wall of cane, and a mass of logs and driftwood.

In the damp earth of the slough bed we were shown the track of a cub bear. Smith's excitement became suddenly immense and even the Doctor began to take a renewed interest in the matter. A hundred yards further on we found the trail of a big fellow who had merely crossed over without stopping. Both tracks were old—a week old at least. Gradually, as we proceeded, the cane became smaller and more scattered, and the slough, divided into several prongs, finally became indistinctly defined. We were now among a wilderness of low ridges sprinkled over with switch cane, while the principal growth of timber consisted of pawpaw sapling, with an occasional persimmon and oak. The fruit of the persimmon was delicious, and although something new to two of our party it was pleasing to see how quickly they acquired a taste for the luscious "possum apples." No pawpaws were found, as the season for that fruit was already over.

Bear tracks were everywhere, but bruin himself was not in sight. This was not a disappointment to us, for we knew that the hour was too late to expect to encounter a bear in the open ground. At early dawn or late in the evening are the only times when bruin can be still-hunted successfully. During the middle of the day he lies hidden in the most impenetrable coverts and can only be routed by the use of dogs. As I have said, we were simply out looking for "sign," and we found enough to more than satisfy us.

Bears had been crushing the acorns beneath the cow oak trees. "A fat ol' b'ar," insisted the guide; "pore b'ar allus swaller thah hulls—this'n didn't." Great claws had turned over the fallen leaves in search of persimmons, and the swamp nettles were rooted up as though by a drove of hogs. Bears are very fond of the nettle roots, it would seem.

Tracks of deer, big and little, were mingled with those of the bear. Apparently we had reached a region singularly blessed with wild life; but of human visitation in the past there was not a sign. On the west side of the river settlements were quite numerous; but here—not five miles from a habitation in a direct line—we were as much in the wilds as though the past two hundred years of Arkansas history had been only a dream. Leaving the pawpaw ridges, we swung still further from the river, entering a wide expanse of grass-grown bottom, covered with a growth of elm, hackberry and ash, but quite free from cane and underbrush. Here we flushed a covey of turkeys from the grass, and the Doctor distinguishing himself by killing a diminutive young hen on the wing. It was a snap-shot of course, for a .45-90 Winchester is hardly the arm for wing-shooting, but the Doctor was reasonably exultant at his success, since it was the first game killed by the party and the only game killed that day, although three deer were sighted at a distance.

After an extended circuit through the open bottom we struck the edge of the cane brake again, in the vicinity of a little water hole, where bear sign was again successfully sought for. Here, guided by land-marks known to himself alone, the guide pushed boldly into the brake, and after a very short crawl we emerged upon the bank of White River, within a very short distance of our dugout.

It is not my intention to speak of the numerous opportunities for bear killing that we afterward enjoyed on this range. As the guide carried off the laurels as a bear slayer he should be the man to chronicle the hunt. Of course, the rest of us might have killed more game than we did, but each had his own reasons for refraining. The Doctor advanced the somewhat doubtful statement that his mission on earth was to save life, not to take it; while Mr. Smith's tender heart forbade the infliction of unnecessary suffering, while bloodshed was a thing that he abhorred. I wasn't aware that he possessed those characteristics until he informed me of them after the hunt was over. Next time I penetrate the White River swamps I desire the companionship of a veritable butcher, a "man of blood," as the novelists would say; one of those remorseless pot-hunters whom we often read about but never see; in fact, I want a companion who will look for bear on the second day of the hunt as earnestly as for "sign" on the first.

S. D. Barnes.

Houston, Texas.

Hudsonian Curlew in Connecticut.—On Sept. 9 I had the good fortune to shoot a Hudsonian curlew (*Numenius hudsonicus*), on the meadows at Westbrook on the Sound, while plover shooting. This is the only living specimen I have seen for ten years, and is a rather rare Connecticut visitant. He has been nicely mounted for me by Mr. John Clark, the Saybrook taxidermist, who has hundreds of birds in his collection, including the sickle-bill (*Numenius longirostris*), and Esquimaux (*Numenius borealis*), but not *hudsonicus*. I have not seen a golden plover on the Connecticut coast for about ten years, and these are also getting to be rare migrants.—A. W. Jones (Center Brook, Conn.).

TRAPPING DAYS.

V.—AMONG THE SIOUX.

BUT a very few years passed after the great massacre of 1862 until the tide of civilization, checked for a time by the red hand of war, again rolled on over the fertile lands of the great Northwest; and as much of the very best of the trapping ground passed gradually into the hands of individual citizens, the trapper, like the Indian before him, had to go. Some indeed, in whom the love of the wilderness was a ruling passion, faced resolutely westward and may to-day be found in out-of-the-way places among the Rockies or Cascades, clinging still to the freedom of the wild life, which they long ago had learned to love so well upon the great water-shed of the continent. The old ground was harried to comparative barrenness by the ever-increasing swarm of trappers, and as still a little good ground remained in the country occupied by the Santee Sioux, my brother consulted the Sioux Indian agent, Col. McPhail, in regard to the question of his own safety should he go alone among them; and being assured by the agent that little or no danger need be apprehended from them, he determined in the summer of 1868 to "carry the war into Africa," first securing, if possible, an Indian partner.

For this purpose he visited the first Indian settlement on the shores of Lake Ootopaheeda to find an Indian known to the whites as John Moore, who had been recommended to him as a representative man among the Sioux, and one who spoke English well. He consulted with him in regard to obtaining a guide and partner, who should be reliable and thoroughly versed in the knowledge of the best trapping grounds, offering at the same time terms of partnership more favorable than any Sioux had probably ever heard of before; when the Indian turned and after a short consultation with a fine-looking young Indian standing near, replied: "My brother, she go with you if you want." (John's English was not perfect, and he invariably spoke of a man as "she" and of a woman as "he.") "But," added the Indian, "my brother want to take she's wife with she."

This part of the contract was something unexpected, and seeing the hesitation and disappointment pictured in the white man's face, the Sioux hastened to add, "You not be 'fraid of he; he do you good; he pitch your tent, he cook you grub; he pay he's way, you bet!"

Hoping still for some way out of the dilemma, Isaac asked: "What if the woman refuses to go with him?"

"Oh," replied the Indian, "my brother tell he to go, he go, you bet!"

As there was no help for it, and as he did not feel at liberty to go further into the Sioux country without an Indian partner and guide, my brother at length with many misgivings agreed, although fearful of the success of so strange a partnership. Not one word could the Indian or his wife speak, while my brother had yet to master the first word of the Sioux language. They proved to be perfectly honest, skillful and industrious—in short, a lady and a gentleman in the very truest sense; and although their conversation proved a difficult art to acquire, still, as each was put upon his mettle, the result was that each learned of the language of the other vastly more than would have been possible under the tuition of any other master than stern necessity. A very successful trip was the result, and my brother's half of the fur amounted to a trifle over 1,000 rats, with other furs in proportion. He was taken far out into the entirely new ground in Dakota, which had not before been visited by white trappers, and his success was the natural result of the skillful and industrious use of the splendid outfit of 150 traps which he carried.

Returning home with his load of fur he was immediately beset by a swarm of his old trapping cronies, eager to learn where so fine a load of furs had been obtained. Without any hesitation he replied: "If you wish to go where I have been, go first to Lake Oo-top-a-hee'-dah, then to Kah-ka-dah'-ko, then to Shian-kŏt'-ton, then to Kah-ka-hah'-ko-soo-kah'-ko, then to Shoog-o-wah'-kee-hoop-ah-itch-itch-ah'-kah, then to —" "Oh, the devil!" interjected a listener; "we don't know as much now as when you began;" and when my brother offered to make it all plain in English to any one who, after five minutes' trial, would pronounce correctly the name of the last mentioned lake, they were obliged to acknowlede themselves beaten and allow him to keep his secret unmolested. These jaw-breaking words are the veritable Indian names for a string of lakes of which we never heard any other designation.

The year following, having concluded to trap the new-found grounds together, we started in August in order to be early on the ground, and first driving to Oo-top-a-hee-dah, I there made the acquaintance of the Indian friends of my brother, and found John Moore to be quite a character. He hailed our coming with joyful demonstrations, and invited us to the dinner of elk meat, boiled with an edible root found on all those northern prairies, which was just spread out before a group of a dozen Sioux at the moment of our arrival; and while I cared for the team and pitched the teepee, my brother accepted the hospitable invitation, and, returning to the wagon, pronounced the dinner perfect.

John and his wife having in return been invited to take supper with us, my brother added: "Now, John, we have both tea and coffee; which does your wife like best?" "My wife he like all the time the best coffee; he's the devil for coffee!" replied John.

Quite a crowd gathered to take supper with the white visitors, and with plenty of sugar in their coffee and a plug of the white man's tobacco to fill their pipes afterward, all were put in the best of humor, and a pleasant evening followed, while John acted as interpreter for all.

The next morning, when ready to move on, we asked John to tell us what to say when we wished to learn the Indian name of anything from the wandering Sioux we were likely to meet. In other words, how to say "what do you call it?" in Sioux.

"You must say, '*tah-qua-deah-che'apa?*' replied John. And we found this little question of great value many times afterward.

For the sake of any possible lady readers, of the "woman's rights" persuasion, I must not omit John's opinion of women in general, which he kindly favored us with during the camp-fire chat of the evening before. "Injun woman he the best woman," said John; "he pitch you tent, he skin you rat, he cook you grub, he dress you fur; he the best woman of all. Dutch woman he the next best." John had visited a German settlement and had

seen the women at work in the hay field. "He work pretty good. 'Merican woman he no good; he want to put on he's fine clothes and set round."

Bidding good-bye to this red-skinned philosopher and his friends, next morning found us early on the trail which led nearly due north over an almost level country, high and dry, dotted with lakes and plentifully sprinkled with buffalo chips, but the buffalo, alas! were gone forever. Occasional settlements of Indians were found, commonly of two or three teepees each, and invariably located on the south or southeast shores of the lovely little lakes which dotted the wide and fertile plain. The reason for this is plain when it is remembered that the autumn gales, which drove the prairie fires over all the great Northwest, moved invariably from northwest to southeast, and while all the young timber growing on the exposed ground was annually burned down to the roots, a little grove of growing timber was often found on the southeast shore of a lake where the lake itself had proved a fire-break, and here the little cornfield of the Sioux women was located, at the edge of the timber where the gophers and ground squirrels had loosened the earth enough to make cultivation with a hoe possible; and near by the teepee was located in order that a never-ceasing watch might be kept of the growing crop.

With the very first indication of morning light, all the little children and the very old people repaired to the cornfield and climbed up on scaffolds, where little bowers were erected on poles above the tops of the corn stalks, and placed at short distances apart through the corn, and here for the whole of the long summer day watch was kept to protect the precious corn from marauding blackbirds; and the weird monotonous cry of the watchers, in the cracked voice of age or the shrill note of childhood, formed one of the most peculiar and striking phases of the wild life of the red man of the plains.

The study of wild life among the Sioux was, to the writer, one of ceaseless interest. One could not be long indifferent to the spectacle of a people struggling against adverse circumstances with the most dogged persistence, when the terrible loss of the buffalo was only just beginning to be felt, and when every pound of meat of whatever kind not needed for immediate use was carefully husbanded for the coming of rigorous winter, with an industry tiresome to contemplate; and all this with the most pitiable ignorance of the superior methods of the white people, together with a childish inability to adapt themselves to their new surroundings.

On our return we stopped for a day at Ootopaheeda, and were invited to dine with a Sioux woman and her daughter—who, by the way, was the best looking woman we found among the Sioux people—and were feasted on green corn, beans and potatoes, all boiled together; and served up in the tidy teepee just as neatly and cleanly as by the best white cook in America. After dinner the good woman, whose husband was absent on the Big Sioux Rivet, after first vainly trying to trade a span of ponies for the yoke of oxen which formed our team, led the way back a few rods from the teepee to show us the cause of her present trouble, and to ask our advice and help. Her husband had bought a new wagon of the most utterly worthless type that ever met my eye; and on almost the first trial of the new vehicle the "dish" in one of the hind wheels had gone the wrong way; and the poor woman had laid the wheel across two logs, and had piled logs and chunks upon the hub to force it back into place again. It was hard to meet the sorrowfully inquiring look with the humiliating explanation that they had been cheated; that the wretched wagon was utterly worthless. But had the wretch who palmed off the "Cheap John" affair upon the ignorant creatures been present, I question very much if he would afterward have reached civilization with a whole skin.

The practice of the most rigid economy was everywhere apparent among the Indians. The teepees, made of cloth—and indispensably necessary in their fall journeyings from the summer grounds to the place selected for winter quarters, and again during the spring migration back to the corn-raising ground, which as in the present instance formed their summer home—were entirely too precious and too difficult to replace to be exposed to the weather and allowed to flap against the lodge poles, while the summer winds wore them to rags; but they were, instead, most carefully housed for coming need, while the bark teepee which formed their summer home was the most ingeniously constructed affair I have ever found among the Indians. In my boyhood I had examined with admiration the winter teepees of wandering bands of Omaha and Pawnee hunters, formed of bent poles curiously thatched with bundles of slender wild cane which grew in the sloughs on the prairies of western Iowa; yet here was a house still more roomy, comfortable, and perfectly formed for a cosy summer house. A row of posts, each the size of a man's thigh, set deeply in the ground, in a circle about 18 or 20ft. in diameter, and about 6ft. high, and from these posts short rafters ran up to a circular opening in the center of the roof, which was steep enough to shed rain perfectly; and this opening, as in that of the cloth teepee, was the chimney for the escape of the smoke of the fire beneath. Small poles were now bent around the row of posts and the rafters above at short distances apart, and the whole was neatly covered with bark, stripped with wonderful dexterity and patience from the short trunks of the stunted trees which grew along the lake shores, and lashed fast to the structure in the same manner as were the rafters and poles, by means of withes; and as the inside of the bark was invariably turned toward the inside of the lodge, the walls of the strange structure were clean, and the whole edifice was neat and tidy enough to form a summer home for the most fastidous company bent upon a pleasant summer outing. Of course this house could be built only during the spring when the sap loosened the bark of the growing trees, and one could easily tell whether Indians were camped within a radius of miles by noticing the tree trunks in the small groves as he passed along.

Here, too, we found a degree of skill in the pursuit of wildfowl exceeding anything we had ever before observed. This, too, was born of the stern parent necessity. As ammunition carried far into the wilderness, becomes very valuable, and as in their case, both capital and transportation were exceedingly limited, not a charge of powder or load of shot were to be thrown away.

They preferred shotguns with long barrels and about 16-gauge as giving the best results with the small loads they used, while they themselves endeavored to make up for the loss of power in the small load used by the most consummate skill and cunning in their approach to the game, which had been rendered strangely wary by the daily murderous hunting of those who proved their ability to support their families by the chase of the waterfowl alone.

A lake or slough was approached at the time of day when the waterfowl sought their food along the shore, and selecting a bunch of grass or clump of weeds growing near the edge of the bank, while yet the hunter was too far distant to see the water near the most distant shore, he dropped upon hands and knees and crawled toward the lake, using the bunch of grass as a shield, and reaching it peeped through, and without showing any part of his person to a duck or goose at any point on the lake, scanned carefully the water near his own shore as far as the shore was visible, then marked with his eye the point where a curve in the shore hid the edge of the lake beyond from view, and crawling back in his trail to the starting point of his crawling, rose up, and keeping out of sight of all the lake water, walked around until opposite the point he had selected while creeping, and again choosing some point of cover, repeated the process, and continued this mode of operations until game was observed at some point which could be approached closely enough to make their slaughter with a carefully planned pot-shot an absolute certainty. No amount of toil discouraged, and no degree of exposure to the cold dews, which hung from every grass blade and saturated his clothing as he crept along, was sufficient to deter this patient and persevering hunter; and the result of his day's toil was solely and simply a question of whether there were any ducks in the country or not. Assure him of this fact and their death followed inevitably.

I marveled much at the extreme wildness of the waterfowl when first we reached the lake region inhabited by the Sioux, yet when on our return we stopped at Oo-topa-hee-da and the young Indian who had been my brother's partner the year previous offered to go with us on an elk hunt near the great pipe stone quarry, provided we would stop over a day and give him time to hunt game sufficient to last his family during his absence, and we had agreed to do so, right there in the country daily harried and shot over, where I would not have contracted to kill a dozen ducks in the given time, the lynx-eyed little fellow secured forty-two ducks that very day. Continuing on past the long string of lakes with the unpronouncable names already given, we reached the shore of a lake named Cha Nopa (or Two Wood). Here my brother had trapped the year before, and this, indeed, was the most northern limit of his wanderings during the previous year.

This was the goal of our hopes, toward which the wagon tongue had pointed for many days.

An immense amount of fur had been gathered here during the previous fall by the single white trapper and many Indian comrades, and the supply of furred animals at that time seemed so great that we anticipated a rich harvest. But—

"The best laid schemes 'o mice an' men
Gang aft agley!"

For a number of reasons, which would take long to explain and which would scarcely be of interest to the general reader, a trapping ground may be very productive of fur one year and the very next year prove comparatively barren, and the following season be again productive.

At any rate, after having carefully examined all the ground, we sat down in the teepee to hold a very sober council, in the study of the very important question embodied in the quaint phraseology of Uncle Remus, "what us gwine to do?" ORIN BELKNAP.

BOSTON SPORTSMEN'S OUTINGS.

THE game bird season opened in Massachusetts on the 15th, but so far no good bags are reported. The quail, the results of the restocking, are hard to find, the dense foliage still being on the trees and shrubs. Indeed this foliage is more dense than usual, the result of the extremely rainy weather. In short, there have really been but a couple of sunny days since open season began. E. M. Gillam, of the Boston *Advertiser*, was out at Arlington Heights with dog and gun on Saturday, but succeeded in finding no quail. Shore birds have not yet put in a favorable appearance at any of the best gunning resorts along the Massachusetts shore. The Plummer Brothers, of the leather trade, were down at Nantucket for a week, beginning with the open season. They had very little success. The day they started for home they packed up all their shells in disgust. Their guns they also packed. While waiting for the steamer the air was suddenly alive with birds. Their guns they could easily have unpacked, but not a single shell had either of them, their whole lot being stowed away in their baggage and that baggage in the hands of the baggage-master. The result was the loss of the finest flight of plover they had seen for years. Moral: Always keep both gun and shells handy until well out of the brush.

Lewis W. De Pass, assistant secretary of the Boston Chamber of Commerce, is spending his vacation with dog and gun. N. G. Manson, Jr., of Bellows & Manson, with his friend Ned Binner, of Cambridge, has returned from his three weeks' outing at Richardson Lake, Me. They had remarkably fine fishing. All were taken with the fly. The string weighed 32lbs., and not a trout of less than ½lb. was kept. After this time they scarcely saved one of less weight than 1lb. They tell the full story of how Mr. Bayard Thayer got the young bear in the vicinity of that lake, mentioned in the FOREST AND STREAM last week. It seems that Mr. Thayer, with one of his guides, was partridge hunting in the neighborhood of the Cranberry Bog. Mr. Thayer's gun was loaded, both barrels, with fine shot. Suddenly the little bear appeared in a tree. This was too great a temptation for the hunters, and one barrel badly wounded the youngster in the paw. He came down out of the tree with a yell, and as the guide was putting him out of his misery with the axe, the old bear suddenly appeared. She was up on her hind feet in a moment, and was going for the hunters in a manner that badly frightened them. The guide was cautioning Mr. Thayer to make the most of his remaining cartridge, and if possible to get another into the gun, when Thayer's foot tripped over a limb and he fell backward, and off went the gun into the air. But with the noise of the discharge and the smell of the powder the enraged old bear was alarmed, and she made off into the woods. To say that both the guide and Mr. Thayer were badly frightened would be to tell a truth that either of them would not care to deny.

Fly-fishing has been remarkably good thus far in many of the celebrated Maine trout waters. The trout have not generally been remarkable for size, and yet Mr. Osgood, of Lowell, Mass., has taken a very fine trout at the Upper Dam. This fish weighed 9lbs. 2oz. Mr. N. G. Manson, of Boston, saw the trout and has a drawing of it. He says that the fish was taken fairly with the fly. This is remarkable from the fact that such trout are hard to lure to the fly. The fish was taken Sept. 3. About the same time Dr. and Mrs. Sheldon, of Topeka, Kansas, caught in one day at Camp Bemis forty-two trout, the whole weighing 20lbs. Some forty more were taken near the same place the next day.

Large game is plenty in Maine, and considerable of it is being killed out of season, too. The other day a friend of the FOREST AND STREAM was coming into Boston on the steam train, when he saw only a seat or two away a gentleman exhibiting a slug that had been fired in a rifle, and he overheard the remark that the bullet came from the body of a caribou that the gentleman had just killed in Maine. The first-mentioned gentleman could not catch the name of the locality where the hunter had put in his illegal work. A hunter who kills game out of season in Maine and escapes the law is regarded by the unthinking as a hero when he tells his story in Massachusetts.

A gentleman who has been on a fishing trip in the Rangeley region stopped on his way in at Andover, and from thence went fishing in Roxbury Pond. He was quietly fishing for bass, when, hearing a splashing in the direction of the shore, he turned his head and saw, as he thinks, a large moose. He did not appear to be alarmed, but browsed around for a while and then disappeared in the woods. But the opinion of hunters and guides of that vicinity is that it was not a moose after all, but a caribou instead. Several large ones of that species of game have sometimes been seen in that vicinity, but moose have not been seen for years. The gentleman had never seen a live moose, and though he was quite confident, yet tracks examined later were like the tracks of the caribou. SPECIAL.

BOSTON, Sept. 22.

Natural History.

CALIFORNIA QUAIL.

Editor Forest and Stream:

In your issue of Aug. 28 you invite information for the Massachusetts Fish and Game Protective Association in relation to California quail, with a view of their introduction into Massachusetts, and while regretting that my views will not be altogether favorable to the enterprise, I hope they will not be entirely useless. My observations of both varieties of California quail, during a residence of twelve years in that State, lead me to think that neither variety like perpetual snow even during the winter months, and that the blue or valley quail will avoid snow entirely if possible, and even the mountain quail will seek the bare spots under the hemlocks and other evergreen trees when the more exposed ground about them is covered by snow. I have noticed also that when the Nevada Mountains began being loaded with snow in the early winter at an altitude of five or six thousand feet, then the mountain quail would be more plenty lower down at altitudes of two and three thousand feet above the sea level; even in sections lying two thousand feet above sea level in California snow seldom falls more than a few inches in depth, and then remains but a few days, and the temperature is seldom lower than 20° or 30°. I found that when the mountain quail were driven down the mountain to the foothills to an altitude of about two thousand feet by the cold and snow, that then the same causes would send most of the blue quail still further down in the valleys entirely beyond the snow line.

In view of the subject of changing the location of these birds, one must remember that while in Massachusetts the entire width of the State from north to south will show but a slight difference in temperature, while in California a distance of two or three miles will often show a difference of a thousand feet in altitude, and a corresponding change in temperature; hence while in California the birds can easily procure a change, in Massachusetts they would be obliged to endure the constant rigors of an Eastern winter. While in California these birds may change their locality partly to escape the cold and snow, and partly the more readily to obtain food; the first could not be well obviated in Massachusetts while the latter could be well overcome by constant and judicious feeding.

The facts I have named in regard to the inclination of these birds to escape the snow and excessive cold does not conclusively prove that they can not be acclimated to endure both, for they are exceedingly vigorous and very tenacious of life, especially the blue or valley quail. The mountain quail would be most likely to flourish among hemlock or spruce groves, with an occasional opening of underbrush for cover, while the blue quail would require the open country with an abundance of close, brushy cover and patches of tall grass, which the bent grass of the Eastern States would amply supply. I brought a pair of the blue quail from California nearly twenty five years ago, intending to release them in my native town in Connecticut, but when I got home my mother insisted on keeping them as pets, which she did for several years in an ordinary wire cage, and they continued healthy and cheerful until by accident the cage fell from an open window and the shock seemed to prostrate them, for they soon after died. They never laid while in captivity. I earnestly hope the Massachusetts Association may make the trial of acclimating these birds and succeed, for if they do they will add a rare pleasure to their sport, for both varieties are beautiful birds in every way, and the mountain quail is the finest bird I ever had the pleasure of bagging. A.

HADDAM, Conn., Sept. 13.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

THE HEATH HEN.

NOTES ON THE HEATH HEN (TYMPANUCHUS CUPIDO) OF MASSACHUSETTS.

IT is probably more or less well known to the readers of FOREST AND STREAM that a grouse, closely allied to the pinnated grouse or prairie hen of the West, still exists on the island of Martha's Vineyard, Massachusetts. Until recently the Eastern and Western species were supposed to be identical, but some apparently good distinguishing characters have been found;* so that they are now regarded by most ornithologists as distinct. In early colonial days pinnated grouse, all presumably of the Eastern species, were found at various points along the New England coast from Boston to Connecticut, as well as on Long Island and in portions of New Jersey, Pennsylvania and Virginia. In some of these localities they lingered until a little less than fifty years ago; but the gun and the snare did their work so thoroughly that the birds were at length wholly destroyed excepting on Martha's Vineyard, where, thanks partly to an enlightened public sentiment, partly to protection by law, but chiefly perhaps to the fact that the interior of the island is comparatively inaccessible and remote from market, the stock has never quite died out and at the present time is by no means at a hopelessly low ebb.

Of this I obtained good evidence during some two weeks spent on the Vineyard in July, 1890. Having no dog with me, and being obliged to devote most of my time to other things, I did not succeed in finding any of these birds; but by driving around and across the region which they inhabit and questioning such farmers and native sportsmen as were supposed to know the most about them, I acquired some knowledge of their haunts and a good many facts relating to their numbers, habits and distribution. Information had in this way is not always entirely satisfactory, but in the present case my informants appeared to be intelligent and trustworthy, while their independent statements agreed in the main so well as to inspire me with considerable confidence in the general truth of what they told me. I have accordingly thought it worth while to present this evidence, which is in substance as follows.

Throughout Martha's Vineyard the heath hen (locally pronounced hèth'n, as this grouse is universally called, is well known to almost every one. Even in such seaport towns as Cottage City and Edgartown most of the people have at least heard of it, and in the thinly-settled interior it is frequently seen in the roads or along the edges of the cover by the farmers, or started in the depths of the woods by the hounds of the rabbit and fox hunters.

Its range extends over practically the entire wooded portion of the island, but the bird is not found regularly or at all numerously outside an area of about forty square miles. This area comprises most of the elevated central portions of the island, although it also touches the sea at not a few points on the north and south shores. In places it rolls into great rounded hills and long irregular ridges, over which are scattered stretches of second-growth woods, often miles in extent, and composed chiefly of scarlet, black, white, and post oaks from 15 to 40ft. in height. Here and there, where the valleys spread out broad and level, are fields which were cleared by the early settlers more than a hundred years ago, and which still retain sufficient fertility to yield very good crops of English hay, corn, potatoes and other vegetables. Again this undulating surface gives way to wide, level, sandy plains, covered with a growth of bear, chincapin and post oak scrub from knee to waist high, so stiff and matted as to be almost impenetrable; or to rocky pastures, dotted with thickets of sweet fern, bayberry, huckleberry, dwarf sumac and other low-growing shrubs. Clear, rapid trout brooks wind their way to the sea through open meadows or long narrow swamps wooded with red maples, black alders, high huckleberry bushes, andromeda and poison dogwood, and overrun with tangled skeins of green briers.

At all seasons the heath hens live almost exclusively in the oak woods, where the acorns furnish them abundant food, although, like our ruffed grouse, they occasionally at early morning and just after sunset venture out a little way in the open to pick up scattered grains of corn or to pluck a few clover leaves, of which they are extremely fond. They also wander to some extent over the scrub oak plains, especially when blueberries are ripe and abundant. In winter, during long-continued snows, they sometimes approach buildings, to feed upon the grain which the farmers throw out to them. A man living near West Tisbury told me that last winter a flock visited his barn at about the same hour each day. One cold, snowy morning he counted sixteen perched in a row on the top rail of a fence near the barnyard. It is unusual to see so many together now, the number in a covey rarely exceeding six or eight, but in former times packs containing from one to two hundred birds each were occasionally met with late in autumn.

Only one person of the many whom I questioned on the subject had ever seen a heath hen's nest. It was in oak woods among sprouts at the base of a large stump, and contained either twelve or thirteen eggs. The date, he thought, was about June 10. This seemed late, but I have a set of six eggs taken on the Vineyard July 24, 1885, and on July 19, 1890. I met a blueberry picker who only the day before had started a brood of six young less than half grown. These facts prove that this bird is habitually a late breeder.

The farmers about Tisbury say that in spring the male heath hen makes a booming or tooting noise. This, according to their descriptions, must resemble the love notes of the Western pinnated grouse. About sunrise on warm still mornings in May, several birds may be sometimes heard at once, apparently answering one another.

There is a belief, current on the Vineyard as well as elsewhere in Massachusetts, that at one time many years ago the primitive stock of heath hens ran so low that Western grouse were imported and liberated to bring it up again. At both Cottage City and West Tisbury I was assured of the truth of this report, and some of my informants went so far as to declare that the native birds were utterly destroyed by the severe winter of 1858–59, and that the present stock is wholly of Western origin. One Dr. Ezra Fisher, of Edgartown, was generally credited with having obtained the fresh birds—from Illinois, it was said. Upon visiting Edgartown I found that Dr. Fisher was no longer living; but one of his sons, Mr. David Fisher, assured me that the only foundation for the story was the fact that his father, in the spring of 1859, imported and liberated a number of quail and ruffed grouse. The native quail had been practically exterminated by the rigor of the preceding winter. The ruffed grouse, so far as he knew, had never before existed on the island. The heath hens had always been there—as far back as memory or tradition went—and to the best of his knowledge and belief the native stock had never received any infusion whatever of foreign blood.

Another report which has been rather widely circulated and generally believed, is that foxes and raccoons, which were brought to the Vineyard not long since, have multiplied to an alarming extent, and are rapidly exterminating the heath hens. This story, like the first, has some foundation of fact, but, according to the best evidence I could obtain, it is largely untrue. Foxes and raccoons were introduced—for purpose of sport—about eight years ago. The former quickly spread over the entire island and become abundant everywhere, killing many young black ducks and carrying dismay among the farmers by their destructive raids on poultry. But neither they nor the raccoons—which are not as yet very numerous or widely dispersed—seem to have had any direct effect in reducing the numbers of the heath hens. There was indeed a marked diminution of the birds for three or four years after the foxes came, but during the last three or four years they have steadily increased, despite a still greater increase in the foxes.

Nearly every one agreed that they had been unusually abundant during the past winter and spring. Mr. Fisher had seen more than in any previous season for five or six years. He believes that if they were protected from the gunners they would continue to increase in spite of the foxes and raccoons. Indeed, he doubts if many of them have been killed at any time by either foxes or raccoons; for long before these were introduced the number of heath hens fluctuated widely in different seasons. Once, many years ago, they became so scarce that none were seen or heard of during an entire winter, and it was supposed that the race had completely perished. At the time it was believed that for some unknown reason they had not bred, or at least had not succeeded in rearing any young for several successive summers; but this theory, however probable, appears to have been pure speculation.

During my stay on Martha's Vineyard I obtained as many estimates as possible of the number of heath hens which are believed to exist there at the present time. My most trustworthy informants were creditably averse to what was apparently mere idle guessing; but when I questioned them, first as to the extent of the region over which the birds ranged, and next as to how many on the average could be found in a square mile within this region, they answered readily enough and even with some positiveness. As already stated, the total present range of the heath hen covers about forty square miles. The estimates of the average number of birds per mile varied from three to five, thus giving from 120 to 200 birds for the total number. These estimates, it should be stated, relate to the number of birds believed to have been left over from last winter. If these breed freely and at all successfully there should be a total of fully 500 young and old together at the beginning of the present autumn. When one considers the limited area to which these birds are confined, it is evident that within this area they must be reasonably abundant. I was assured that with the aid of a good dog it was not at all difficult to start twenty-five or thirty in a day, and on one occasion eight were killed by two guns. This, however, can be done only by those familiar with the country and the habits of the birds.

To sportsmen who in the West have bagged their fifty or one hundred pinnated grouse in a single day's shooting, such figures must seem insignificant. They are indeed sufficiently small to warrant grave solicitude for the continuance of this interesting remnant of a once widespread race, as well as the most strenuous efforts for its protection and encouragement. There is no need of further legislation, for the present law prohibits killing the birds at any season; but while it is enforced against non-residents—or would be if any such ventured openly to disregard it—the resident sportsmen, shielded and to some extent encouraged by public opinion, shoot a good many birds each year with perfect impunity. To some extent they hunt them openly and systematically with trained setters, of which several are owned on the island, but the greater number are shot more or less incidentally by fox or rabbit hunters. These men often pick up a bird or two while driving to and from their hunting grounds, for the heath hens resort much to the wood roads to dust or bask in the sun, and become so accustomed to passing carriages that as the horse nears them they merely run out to one side for a few yards, and either stand motionless or squat among the leaves. The foxhounds also frequently flush a covey of birds, which are almost sure to be shot at if any pass within reach of the guns. The total number killed in any one year is probably not large, but it is said often to equal the total annual increase.

The farmers and even some of the sportsmen of the better class expressed themselves to me as thoroughly opposed to this illicit slaughter and in favor of an impartial execution of the law. It is doubtful if they could be relied upon to furnish evidence against offenders among their own people, but they would certainly throw no obstacles in the way of an officer who with the requisite amount of energy combined sufficient tact and prudence to deal his blows where they would do the most good and cause the least local resentment. Doubtless much could be done, also, by feeding the birds during severe winters, a task which many of the farmers would gladly undertake for a trifling remuneration. When, by this and similar means, the heath hens had become sufficiently increased, a brief open season might be permitted. In time, moreover, the birds might be trapped to serve for stocking the extensive oak forests of Cape Cod, which are so nearly identical with those of Martha's Vineyard that they could scarcely fail to supply all the conditions which the heath hens require.

Such a plan is so simple, so obviously practicable, and so certain to result in lasting benefit to a large number of people, that one cannot help wondering why it has not been long since adopted. Of course its execution would entail some expense. But if the Massachusetts Fish and Game Protective Association, within whose province it clearly lies, would but devote to it some of the money which they obtain so easily for the introduction of exotic game, it could be speedily accomplished. Surely these heath hens, indigenous to the oak woods of Martha's Vineyard and once found along much of the Massachusetts coast as far north as Boston, afford more promising subjects for experiment than do the sharp-tailed grouse or any of the plumed quail of our Western States.

WILLIAM BREWSTER.

COLLECTING ON THE SEAL ISLANDS.

MR. HENRY W. ELLIOTT, United States Treasury Agent at the Fur Seal Islands in Behring Sea, has just returned to his home in the East after an absence of several months at his post of duty. Mr. Elliott will immediately begin the preparation of his report on the condition and prospects of the fur seal fishery. Mr. William Palmer, of the National Museum, Washington, D. C., has also returned from a summer's collecting with Mr. Elliott, and he is very enthusiastic about the strange sights of the far away Territory and the splendid opportunity for making natural history observations and collections. Mr. Palmer has secured a very valuable series of skins of birds and mammals living on the island of St. Paul. Among the birds there is one that has never before been recorded from American territory; it is a species of cuckoo native to the Asiatic continent, and will prove a treasure in the national collection, as it was a great source of gratification to Mr. Palmer and a fine reward for his arduous toil in securing it. To begin with, the bird was found near a seal rookery, and shooting with an ordinary gun was strictly forbidden. This rookery was at the extreme northeast point of the island, and the collector's cane gun was at the other end, about 15 miles away. Those of our readers who have visted southern Alaska can form an idea of the toil involved in a walk of 30 miles over the rough and yielding surface of St. Paul Island; but Mr. Palmer was determined to have the new bird if persistent effort could win it, and he actually made the journey, returned to the locality frequented by the cuckoo and after a great many tantilizing failures secured the prize and was happy.

Foxes were so tame at the time of his visit that they often circled about him out of sheer curiosity, barking defiance at a distance of only a few feet. One very fine example, quite unlike anything seen by the natives before, and probably a cross between the blue and the white fox, is among the rarities of his collection. This fox was killed after a most exciting experience. Mr. Palmer began firing at him, with his cane gun, at a distance of 50yds.; but could not bring the bullet and the animal into the desired conjunction, and the fox was very much interested in the whizz of the ball. Whenever a bullet came near enough he would bark furiously and run around in a circle seeking to discover the cause of the strange noise, the gunner being entirely concealed behind some tall grass on one of the sand dunes. Gradually the fox drew nearer to the unseen hunter, and everything seemed to point to a speedy and successful termination of the hunt, but unluckily in trying to remove a tight shell Mr. Palmer pulled off the head, leaving the cylinder in the breech; then began a lively struggle to extract the shell in a hurry. The excitement was so intense, however, that the fox approached almost within arm's length before the obstruction was gotten rid of and a new cartridge inserted; then while the fox was chattering away most earnestly, Mr. Palmer, not wishing to spoil the skull, took aim behind the foreleg; but the bullet, ranging a little too far ahead, crashed through the legs without killing the animal, which struggled off behind a sand dune and was apparently lost beyond recovery. The collector, however, circled around in a direction opposite to that taken by the fox, and unexpectedly came upon him at very short range, and this time sent a bullet squarely into one of his eyes and ended the singular chase. Young foxes were frequently seen, but were difficult to kill before escaping into their burrows.

Mr. Palmer's method of collecting cormorants was somewhat unique. The peculiarities of their nesting are such that he found no difficulty in creeping unseen near enough to the nest to reach over with his hand and catch young birds fully grown, and in some cases old birds, with the hands alone. Fresh eggs of these birds were found as late as Aug. 7.

About a dozen kinds of fishes were obtained on the island, mostly marine, but a few of them in the fresh waters.

With a small camera several hundred photographs of fur seal, foxes, flying birds, and various other objects of interest were made. Altogether Mr. Palmer regards this as one of the most interesting and fruitful of his experiences in the field.

Game Bag and Gun.

A SOUTHERN TEXAS GAME COUNTRY

[*Concluded from Page 183.*]

NEXT morning Pedro's endearing epithets to his quadrupeds, delivered with Parisian volubility, roused us from our slumbers, and after a hearty breakfast we made an early start. A sharp drive of two hours brought us to Rio Havanna, a small settlement of about twenty huts, with one white inhabitant, who officiated as postmaster and school teacher. We strolled through the place while our driver took his team to a well to be watered. I asked the teacher's permission to take a look at his scholars; he smilingly assented. I counted in the schoolroom twenty-two pupils, both sexes, from ten to about fifteen years old, clean and in neat light attire, very respectful to their teacher, who told me that, although they were half savages, it was a pleasure to teach them. From what I heard, the Mexican language was used in school. Our conveyance being brought around, we were off again, and after a drive of about three hours, passing two more smaller settlements, we left the main road and turned to our right, bringing up at a large lagoon surrounded by heavy live oak timber, where we went into camp.

While unharnessing, Pedro gave me a knowing wink, and pointing to a fine stretch of open live oak, told me confidentially that I would find turkeys and chachalackas in great numbers there; the timber in question grew on an island formed by the Rio Grande River, the lagoon and some flooded fields. After our routine work about camp we made for the island. As a precaution we had gotten into our waders and taken an ample quantity of ammunition, both duck and buckshot. The lagoon opposite the camp was about 100yds. wide, and about 6ft.

deep, with a very miry bottom. We followed the bank nearly half a mile, came to a strong fence, and crossed without difficulty. Moving down the other bank, we soon found an old trail leading into the woods and followed it. The woods were open and we decided to move through them down to the river, said to be about four miles distant. I branched off and had not traveled far when my dog began trailing, and I saw him tree a bird about the size and shape of a pheasant. I approached the tree carefully, and for some time could not make out my quarry entirely hidden in a clump of thick moss. A motion of its head called my attention, and a charge of No. 6 shot sealed its doom. Only for the jet black plumage I would have pronounced it a pheasant, and I still think it belongs to the species; it proved to be my first chachalacka.

Before I had duly examined the bird four shots rang out in quick succession and the fusilade continued for about 5 minutes. I could not imagine what my companions had run afoul of until the quick stroke of strong pinions above the treetops told the story of their finding a feeding ground for ducks, and thinking that they might need the assistance of my dog to retrieve their birds I hastened in the direction of the firing. More running than walking, fifteen minutes brought me to a clearing, apparently a flooded meadow, and stumbling out in the open, without a thought of my chances to come to shot myself, I scared a flock of teal, which got away before I could come in range, only to be reached by the murderous fire of my companions, who were on the other side of the lagoon and 800yds. away. I followed the lagoon down in the edge of the timber, and coming on a line with my companions shouted to them and proposed to follow the lagoon to its end. We fired no potshots and killed eight teel and two redheads before we got to the end of the open water, which terminated in a canebrake. I crossed with some difficulty and joining my companions ascertained that they had a small tree hanging full of ducks, some twenty odd they said. It was now near sundown and we agreed to return to camp. Arrived at the tree we divided the ducks; there were eleven for each to carry, mostly teal. We took the old wood trail to camp and managed to get in at sundown. Pedro showed me two dozen eggs and a bucket of milk, brought to camp by the children from a ranch near by, where he was well acquainted. I gave him a dozen ducks for his friends, added two dollars for the purchase of some corn and hay for his animals, and notified him that we should remain in camp for several days, news which appeared highly to please him

We had enjoyed supper and were planning the destruction of the turkeys said to be about, when we were startled by the ear-splitting noise, "Chachalacka, chachalacka, cha-cha," so plain that we concluded the source could not be over a quarter of a mile distant. We grasped our guns and were about to leave camp when Pedro, returning from his message, called to us, and awaiting his arrival I saw that he was leading two dogs, which in the blaze of the fire developed into two fair looking half-hounds. I told him that we were about to interview the chachalackas. He counseled to postpone the matter until the following evening and proposed a run after wildcat and coon in lieu. Neither of us old chaps had run coon for ten years or more—it had since become a matter below M.'s dignity—the youngster never had, and the latter declaring his eagerness to see the fun, I rummaged our traps in search of the Ferguson, and after unearthing and getting it in working order, was ready for the opening. Our Mexican here explained that there was hardly any call for our leaving camp, that he would cross with the dogs, make a circuit of about two miles and cast them off; he felt positive that they would try to drive toward camp, and once treed, would hold the game until we could walk up at our leisure. This plan suited me admirably; not so the youngster, who wanted to be in the chase from beginning to end, and consequently set off with Pedro, after I promised that I would try to get in at the death provided I would not have to travel too far.

They started, and after the lapse of about an hour my ears caught the first bay of a hound, then after a few minutes a long drawn howl, the signal of the lead dog, and I knew the chase had commenced, but was not aware of my being in it, until I made a false step in crossing the fence, and found the water rather chilly. Called thus disagreeably to my senses, I became aware that the hounds, whose music I heard about a mile away, were not more eager for that pelt than I was; and feeling chilly, I moved off to meet them at a gait I would not have considered myself capable of. I had barely gotten to the edge of the woods when the short and ferocious yelps told me that the pursued, no matter what it was, had either treed or holed; and taking things more leisurely, I got to the tree almost the same time the youngster and Pedro reached it. Lighting the Ferguson and holding it aloft, we made out an animal lying flat on a large branch about 30ft. from the ground. The youngster, who had brought a .32cal. target pistol, undertook to wing the game, so as to give the dogs at the same time a reward for their labor and an easy victory. He managed to shoot the animal, whose head was in full view, through the lower jaw, it jumped, and the dogs grabbed it before it could reach another tree, and made short work of killing it, notwithstanding the most valorous resistance. The youngster voted for another run. Pedro also appeared to like the fun, I had to wend my way to camp alone, volunteering to carry their quarry, a fine leopard cat, not quite as large as a bobtail, but beautifully marked.

M. had gone to bed and his sonorous snore guided me over the last quarter mile. The fire, burned down low, gave me no light. I replenished it and then upset things in general, trying to find some dry clothing. This and the chattering of my teeth nearly aroused M., who for my special benefit lectured in his dream as follows: "Old idiot. Cast iron constitution all bosh. Drenched to the skin and cold night air. Neuralgia, rheumatism question of time only. Brandy, claret, quail on toast, chronic dyspepsia, gout—" I escaped to the camp-fire and no doctor being available I examined my case carefully and prescribed. Then I enveloped myself in a blanket, Indian fashion, and reclining against a tree with my feet to the fire my thoughts lost themselves in the dim distance, and gradually the curtain rose as it sometimes will on a sportsman's past. At first the scenes, although rapidly changing, were distinct, every actor known, the dogs could have been called by name by the sound of their voice. Gradually the panorama became more and more indistinct, until finally the curtain fell just as the advance of the German poet's mythical "Wild Huntsman" swept on the boards.

When I awoke I found myself stretched full length longside the embers of the camp-fire, and opposite to me in the same position was the Junior. I got on my legs, found them well rested, limber and serviceable, and after an ablution I hunted Pedro, who informed me that they had killed one more cat and two coons and did not get to camp until near sunrise. They had found me asleep, and the other gentleman busily engaged devouring a breakfast of eggs and milk. The Junior had left word that he was not to be disturbed until dinner was ready; the other gentleman, after finishing his breakfast, had shouldered his gun and left without mentioning his intentions. Pedro also told me, that he had passed under a turkey roost, but had not fired at the turkeys because they already had a load, and the dogs were running such a hot trail at the time that the game was likely to tree at any moment. He volunteered to find the roost for me during the afternoon, but I did not like the idea and turned the conversation to chachalackas, ascertaining that they have very much the same habits as the turkey, are, if possible, shyer and harder to approach, that their flesh, if in prime condition, is considered more juicy and of finer flavor than any other fowl, and that the best time to hunt them with a fair show of success is either at daybreak or at sundown.

I passed the forenoon cleaning and oiling the guns in camp, stretched the skins of the cats and coons, and in the afternoon busied myself preparing a gala dinner, of broiled teal and Saratoga chips (sweet potatoes), baked redhead properly stuffed, and stewed fruit, hot rolls and coffee. While thus occupied M. returned to camp with two young turkey hens; he had heard them call, and had stalked them, getting within 50yds. of quite a number feeding; had killed the two he carried first and second shot, and had not bothered about following up the others. On his way to camp he had seen where several deer had crossed from the island. He felt called upon to make some non-complimentary remarks about our night hunt. This fully aroused the youngster, who was on the point of favoring us with his view of the matter, when I gave them to understand that they had just three minutes to get ready for dinner. They reported promptly, and we seated ourselves to what I knew from experience would prosper a reconciliation had there been, instead of most perfect harmony, serious differences of opinion.

About an hour before sundown we left camp, crossed over to the island and followed the old wood trail to the canebrake with the intention to shoot chachalackas. We heard the birds call in all directions. They were apparently feeding in the direction of the open woods, and now and then a call sounded within easy range. We had separated, but although I advanced with utmost care, and kept my dog to heel, I did not see a feather. After several efforts to approach the calling birds and get a sight, I gave up and sent my dog into the thicket. He was hardly out of sight when one of my companions fired not over 50yds. from me. I heard him send his dog in to retrieve, when my own dog appeard carrying a dead bird. I heard more firing, and nothing showing my way I returned to camp disgusted, and vowed that I would not hunt chachalackas any more. M. and the Junior did not return until after dark, they had seven birds between them, and asserted that they winged several more but could not get them. The birds were very fat, and properly prepared, are as fine and juicy as capon served in Parisian restaurants. M. fell so in love with them at breakfast next morning that he declared he would make them the sole object of his pursuit for the rest of the trip.

I had to promise the Junior to accompany him on a deer hunt next morning, and to be out at the dawn of day we retired early. I awoke about 4 o'clock and set to work cooking breakfast and putting up a substantial lunch. The Junior also was about early and we had breakfast and were ready to start an hour before daylight. Pedro had given me minute directions about the lay of the land, the intersection of different trails, and the most likely place to find deer. We left camp and followed a dim wood trail through thick chapparal for about three miles, when we came to an opening, which looked like a large meadow, but proved to be a shallow lagoon, overgrown with fine grass. We had sufficient daylight now to draw a bead, and I proposed to the Junior to hunt separately, each following one side of the lagoon, and to meet at its end to discuss our lunch, which was carefully stowed in the capacious pockets of my shooting coat. We further agreed that should either of us shoot and kill, the other was to join him upon hearing three shots in quick succession, to assist in bringing the game to camp. I found a stock trail following the lagoon and had fairly easy traveling, and advancing carefully, never took my eyes from the marsh, which was in places over a mile wide.

When I came to a branch swinging in the direction of our camp I intended to cross, but my rubber boots being too short, I followed the branch down with a view of hunting around it. There was no path, and I had just turned a chapparal thicket when I saw two eyes staring at me over some low brush about thirty yards distant. My old Sharps spoke, and when the smoke cleared I saw a young buck cross the clearing and leap out of sight before I could reload. When I stepped up to where the deer I had fired at had stood, I found a full-grown doe; she had dropped dead in her tracks; my bullet had entered above the right eye and ranged out on a line with the left ear. I fired three pistol shots to call the Junior, and, after dressing my deer, patiently awaited his coming for over an hour. Not hearing from him, I came to the conclusion that I would have to shoulder my deer alone if I wished to take it to camp, and, although I had repeatedly made up my mind never to lug a deer on my back for miles any more, I went to work and cut off its head, tied its legs together, and after shouldering it wended my way toward camp. I am convinced that the doe did not dress more than 100lbs., but after carrying her about a mile she felt like a log, and I had to rest several times before I reached the old wood trail, where I intended to hang my game up and send the wagon after it.

Upon emerging in the open trail I noticed a horseman, who proved to be Pedro's friend, the owner of the ranch in the vicinity of our camp. I inquired whether he had seen another hunter, and was told that he had met the Junior and had cautioned him not to penetrate too far in the "monte" (as near as I can make out the Mexican appellation for the chapparal wilderness), where a man not thoroughly acquainted with the country is almost sure to get lost. He also offered to take my deer to camp, a kindness I gladly availed myself of. I assisted in fastening the deer to the saddle, selected a nice shady spot and settled down to my lunch and a siesta, concluding not to start for camp until the Junior should join me. Whether it was the heat, the lunch, the claret or the soothing fumes of my perique mixture or all combined, I could not tell, and it does not matter, since the fact of my falling asleep remains the same. The report of a shot in close vicinity awoke me to see the Junior and hear him clamor for lunch. His face lengthened visibly when I told him *non est*, and I imagined that I heard him grumble some compliment, when I had to make the further statement that I only brought one bottle of claret. He said that he had not heard me fire the signal, and that he had killed a spike buck, fired a signal himself, and not hearing from me had carried the little fellow to within about half a mile from the road to an opening where he could get the wagon. It was now about 2 o'clock P. M., and the Junior pretending to be ravenously hungry, we made all haste for camp, where we found dinner awaiting us.

Pedro, after a long preamble, asked me to let him have my Ferguson jack that night, stating that he also would like to have a hunt, and after receiving it he and the Junior left camp in the wagon to bring in the latter's spikehorn. Had I known what slaughter I would be the innocent cause of I would rather have demolished the jack than have loaned it out. The wagon did not return to camp until 8 o'clock next forenoon, and there were besides the Junior's spikehorn, one buck, two does and one fawn in it, all killed with buckshot fire-hunting in the lagoon I had hunted the previous morning. When I expostulated against the wanton wholesale slaughter, because we could not possibly use the meat, Pedro hastened to explain that we might jerk a portion, give the rest to those who could use it, or exchange it for eggs, vegetables, or anything we might be able to obtain. The Junior only remarked, that sportsmanlike or not sportsmanlike, slaughter or no slaughter, he had wanted to see and participate in a night hunt, that he had done so and was satisfied, he would not indulge in any more unless driven to it by short rations. We remained in camp that day and prepared to leave for pastures new the following morning, deciding to camp somewhere in the vicinity of R. Granjeno, said to be the best turkey ground on our route.

MUX.

WORCESTER SPORTSMEN.

WORCESTER, Mass., Sept. 19.—The posting of land has not been extended a great deal the past summer and seems to be slowly going out of favor among the better class of land owners. In fact the farmers and "sportsmen" are coming to a better understanding of each other, which can only result in benefit to both. The Sunday depredations of hoodlums are the cause of much of the posting, and the sooner sportsmen use their influence to frown down the raids made on fruit and vegetables by roughs who have no idea of sport, beyond hunting rabbits with a ferret and drinking rum, the sooner the farmers will learn to distinguish between the man who fishes or hunts for pleasure and those who make these sports a pretext for Sunday carousing, which would not be tolerated in the city.

Birds were reported plenty, as they invariably are previous to the open season, but the bags so far brought in show that the usual amount of hard work is necessary to make a fair bag.

The Sportsmen's Club did more effective work in stopping shooting before the law was off than ever before. They offered a reward of $25 for evidence that would convict of illegal shooting; and appointed as club game warden one of the best bird hunters in the State, Charles Cowee, of Milford. Now, Charlie is one of the best fellows that ever lived, in the brush or on the street, but when he says a thing you can bank on it every time. Instead of sneaking around the covers to catch some unwary lawbreaker, he went directly to the parties who have a reputation far illegal shooting (and he knew pretty well where to go) and told them of his appointment, adding that he proposed to carry out the wishes of the club in regard to illegal shooting. He secured the promise of all he approached that they would respect the law, which promises he has taken pains to see have been lived up to.

This policy has reduced the amount of illegal shooting to a minimum. A few cases have been reported to the club, but when followed up the reports have proved to be falsehoods manufactured out of whole cloth. Not a single report has stood the light of investigation.

Great preparation had been made for opening the season last Monday, and as early as 3 A. M. the more enthusiastic were on the road. Daylight, however, found most of them on the road home wet and disgusted.

Tuesday the weather was about the same, and Wednesday worse yet. These three days of grace were a perfect godsend to the birds. Nearly every cover was invaded during the time by some one who could not wait for a fair day, and who did just shooting enough to set the little "biddies" to thinking, and not enough to do any harm. They educate pretty rapidly about this time of the year, and the contemplated opening day slaughter will not take place this season. A few hunted through the rain Monday, and quite a number got in a half day's hunt Tuesday. By Thursday nearly every one had lost confidence in the weather, and but few started out though the day was perfect.

So little hunting has been done that an estimate of the abundance or scarcity of birds cannot be made. There is probably about the usual supply. While some hunters report the broods as being small, there certainly were some good sized bunches raised. I have been there and kept tab on a few of them myself.

HAL.

INDIANA GAME.—Lebanon, Ind., Sept. 13.—I was superintending the cutting of some timber about seven miles west of this city to-day, when we flushed a quail and it fluttered off very slow. I told my son she probably had young ones that she wished to protect by getting us to follow her, as she flew very slowly. Sure enough, on keeping still a little while, we soon heard the young ones peeping, and on looking we found several that could not have been more than three days old. Is not this brood unusually late? Quail are plenty here, also rabbits by the thousand. Squirrels scarce. No chickens. Farmers nearly all posted, but the owners do not hesitate to trap quail by the dozen.—W. H.

SOME NEWFOUNDLAND RESORTS.

Editor Forest and Stream:

These notes of sport in Newfoundland may be of value to some of your readers who are contemplating a trip thither. They were sent to me by a sportsman residing there, and may be relied upon as trustworthy.

The shooting seasons are: For snipe, Aug. 20 to Jan. 12; curlew, Aug. 20 to Jan. 12; plover, Sept. 15 to Jan. 12; partridge (willow grouse), Sept. 15 to Jan. 12; caribou and deer, Sept. 1 to March 1. There are plenty of wild geese and Arctic hares, with open season all the year.

Snipe.—Good snipe shooting can be had within two hours' drive of St. Johns, actual expenses being $3 for team. Guide, $2 per day. A fair average would be twenty birds a day. Very little attention is paid to snipe by resident sportsmen.

Partridges.—Shooting good in most parts of the island, principal places as follows:

Pouch Cove and Banline.—About three hours from St. Johns. Leave by cab early in the morning and return at night, though there are fair accommodations there. Cab $5. Guide $2 per day.

Witless Bay and Holyroad.—Cab to Witless Bay $5. Walk with guide 18 miles to Holyroad—camp half-way one night or more—and return by train to Holyroad, fare $1.50. This is an excellent ground.

Placentia Bay.—This is the best ground visited by St. Johns sportsmen, where they generally stay a week or more. From 40 to 100 birds a day can be killed here. Good hotel and comfortable boarding houses. No need of camping. Train to Placentia Bay leaves 10 A. M. and 3 P. M., fare $3. Cab to Bauch and St. Bridges $4 per day. Guide $2 per day.

St. Mary's Bay.—Carew's Hotel Salmonier. This is also a great resort for sportsmen. The famous Salmonier River runs back twenty-five miles into the country and empties into Salmonier Harbor; it has an abundance of very large salmon. This river is protected by law, and has a keeper during the close season. Splendid partridge shooting within half an hour's walk from the hotel. Excellent for deer and caribou, in fact the best within the Peninsula of Avalon for all kinds of game. Beaver are still found here, and plenty of wild fowl—a beautiful and healthy locality.

To the north of the hotel we come to Colinet River, Rocky River and North Harbor River. Excellent trout fishing in these rivers and excellent deer shooting on Harricot Barrens and about Colinet. By following the Colinet River to the eastward four miles excellent deer shooting can be had. Good boarding house at Colinet, and the best Newfoundland guides live here. Average cost of guides, provisions, board, etc., $5 per day.

Exploits, etc.—If the sportsman desires a wild trip to where caribou, deer and all feathered game are plenty let him take a steamer at St. Johns, with guides, canoe, provisions, etc., to Exploits, proceed up the Exploits River to the interior. The party can leave their canoes daily and find all kinds of game along the river. Red Indian Lake can be reached this way, one of the wildest and best game resorts on the island. The total cost of an excursion through this part of the island, say for a party of three sportsmen and four men, would be about $12 per day, including all expenses. W. HOLBERTON.

PIKE COUNTY GAME.—Delaware, Pike County, Pa.—I am told that black squirrels are occasionally met with, while grays and chick-a-rees are plentiful. Rabbits are excessively common. Woodchucks are abundant. Foxes in winter furnish great sport. Deer are rare and bears scarce. A few wild pigeons were here two years ago, but none were reported last fall. Ruffed grouse and quail are very plentiful; the call of Bob White was heard in the summer everywhere in the valley of the Delaware. I have seen the fresh-water mussel shells heaped up on rocks in great quantities here by muskrats. Yesterday a big muskrat came out of his hole and swam in the river near us. The species is extremely common, dividing honors in that respect with the watersnake this season.—T. H. B.

POISON OAK AND IVY.—Garrettsville, O.—The simplest and best remedy known to me is prepared by cutting up the stalk and leaves of the "ragged milk weed" (not the ordinary milk weed), and steeping in water, and bathing the affected parts with the decoction. Two applications have been known to cure, and the worst cases are at once relieved and speedily yield to the treatment.—E. S. W.

WILD PIGEONS IN VIRGINIA.—Warrenton, Va., Sept. 18.—Wild pigeons are here now in moderate numbers. It is not uncommon to see them in larger or smaller flocks every year.—D.

TEXAS GAME.—Beeville, Tex., Sept. 11.—As the pleasant fall months glide along the old fever creeps over us again, and the .32cal. rifle and 12-gauge Parker are brought forth from the corner, and other traps and accoutrements cleaned up; an inventory is taken of the munitions of war preparatory to making an onslaught on the old buck, turkey, quail and other game of which there is a good supply this season. Already deer have been brought in which were found to be in splendid condition. The number of turkeys this season far exceeds that of several years previous, and they are fat. It may be truthfully said southwest Texas is a paradise for hunters this year. A large influx of waterfowl is expected, as the oak mast is good. Any brother sportsman or angler of other and less favored localities seeking new fields can obtain further information of this section by addressing me.—T. J. SKAGGS (Box 20.)

SUNDAY SHOOTERS IN HARD LUCK.—On Sunday, Sept. 14, Game Warden A. C. Collins visited Suffield, Conn., and found Thomas Russell and James A. Russell shooting. He promptly marched them out of the woods, and the next morning they were arraigned before Justice of the Peace Horace K. Ford, of Suffield, and both entered a plea of guilty and were each fined $7 and costs, and making their fun cost $31.92.

WAITING FOR THE FIRST.—I have been up at Haddam, Conn., for a few weeks, where in fact I spend about half my time, and did not get your ever welcome numbers till my return; but I don't skip any, but walk straight through them all when I get back. Quail and partridge are unusually plenty in our section this fall, and I have been longing, boy-like, for the first to come.—A.

MARYLAND GAME.—Elkton, Sept. 18.—The rail and reed bird season opened in Cecil county Sept. 5. Rail are reported scarce, reed birds plentiful. C. F. Rudulph was high boat the first day, with 43 rail; other shooters reported from 3 to 25 rail. Saturday, Sept. 13, was the best tide since the season opened. One young Philadelphia sportsman counted out 48 rail on his return from the marsh, but there is a suspicion that some other metal besides lead was used to bring them to bag. I saw one fine bunch of reed birds said to contain 100 birds. I did not count them. The prospect for quail and rabbit shooting is fair, several coveys of birds having been seen near town. Woodcock were quite plentiful early in the season, but none can be found now. Squirrels are numerous enough to give good sport to those who know how to hunt them.—E. S. G.

BIG GAME.—If any reader of the FOREST AND STREAM contemplates a hunt for big game this fall, but does not know exactly where to go or of a guide he can depend upon, by addressing me I will gladly give him information that will lead to his having a successful hunt.—J. WHYARD, P. O. Box 1798, New York city.

WINNINISH (*Salmo salar*), VAR. SEBAGO.

Drawn for the FOREST AND STREAM by A. H. Baldwin, from specimen furnished by Mr. C. Clarence Maxson.

Sea and River Fishing.

THE METABETCHOUAN WINNINISH.

Editor Forest and Stream:

I was much pleased to learn from your editorial notice and also from the letter of acknowledgment from Washington that the winninish were received in a condition suitable for examination. I now very much regret that I did not also send a specimen from the Discharge. As had I known there existed any such difference in general appearance I would most certainly have done so. I am, however, able to send you a carefully taken outline of a 3¼lbs. fish from the Discharge.

So far as I was able to observe the larger fish taken during my stay there, this was a fair sample of the type. The invariable exception to the rule occurred, however, as I took one or two medium weight fish, 1½ to 2lbs which were of a deeper and more rounded form, but all had the silvery lustre, similar to our common alewife and which is lacking in the Metabetchouan fish. Of course I do not think that there is any difference in species, but I am inclined to think that the fish keep as distant and apart from each other as the salmon of different rivers, and might it not be that the Discharge fish, spending so much of the time as they do in the boiling, surging water of the rapids, have developed a type peculiarly adapted to the conditions under which they exist, and somewhat different from the ordinary landlocked salmon of the lakes and stiller waters. The opinion of the guides at the Discharge seemed to be that these fish remained there through the summer and early fall, and then went up to the lake to spawn.

At the Metabetchouan they told me that they remained in the lake until about Aug. 15 and then went into the river preparatory to spawning. This has some showing of fact, as if reports are correct, no fish of any account are taken until after about Aug. 15.

I was also told that instances of taking them through the ice had been known. At the Discharge, however, the best fishing seems to be in June, July and early August. Had there been any "habitans" on the Peribonca or Mistassini quite likely they would have told me the fish lived mostly in the water, but spawned in the air.

My most taking fly at the Discharge was a drab or mouse color, tied on No. 10 hook. This was quite a good imitation of the fly then upon the waters in countless numbers, and no other pattern seemed to suit. At the Metabetchouan I very naturally commenced with the same cast, but was soon convinced that it was useless on that water, for the time at least. So after some experiments settled down to a silver-doctor and queen-of-waters, on No. 6 hooks, the preference being for the first mentioned. With these I had good success.

My conclusions are of course drawn from limited observations, this being my first experience with the fish, and perhaps may be changed upon a further knowledge and more certain source of information.

WESTERLY, R. I. C. CLARENCE MAXSON.

RIVER JEANNOTTE TROUT.

Editor Forest and Stream:

Appended below is the record of twelve trout, all taken with fly in the River Jeannotte, the outlet of Lake Edward, early this month. From an examination of the club register it was found that in point of numbers this was not nearly up to the average catches, so far as recorded this season, but it will serve to show the possibilities of the stream.

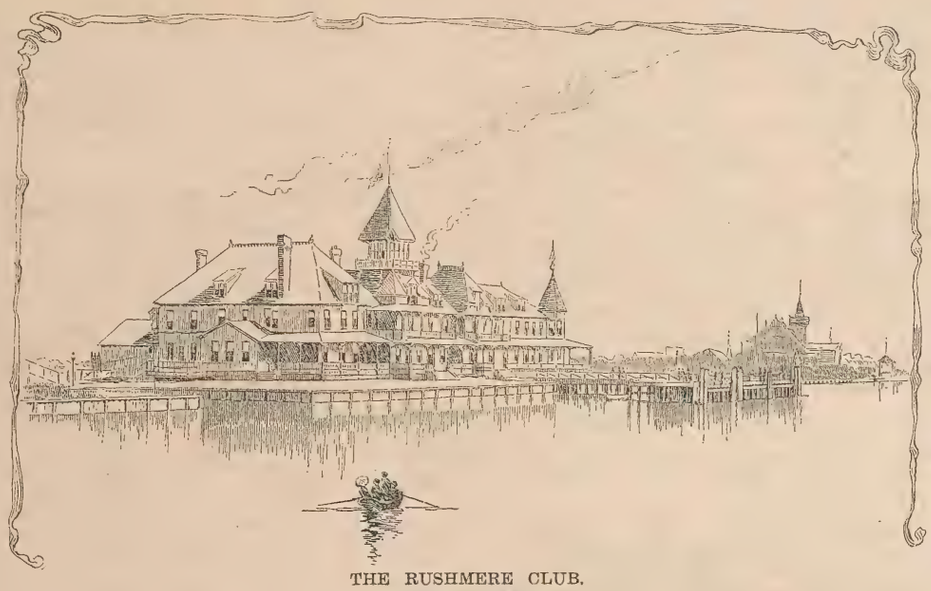
This stream (as it would be called in the "States" instead of river, is under lease to the Orleans Club, of Quebec. Through the courtesy of the club the writer was allowed a day's fishing, and with the advice and direction of the gentlemanly guardian, Achille St. Laurent, was well satisfied with the result. Weight of twelve largest fish, 30¾lbs.; average, 2lbs. 9oz. The five largest fish weighed as follows: 4½lbs., 4lbs., 3¾lbs., 3¼lbs., 3¼lbs.

The catch of Lieut.-Gov. Angers, mentioned in your issue of Sept. 18 as noted in the register, was between 40 and 50 fish with an average weight of 3lbs. Mr Croteau, the club president, equalled or slightly exceeded this a day or two later.

These fish have undoubtedly run down from the lake, and at this time of year the pools seem to refill about as fast as they are depleted. Up to this time the fishing has been done exclusively in the two upper miles of the stream. The club controls fifty miles of the river and all its tributaries, as yet untried and unexplored, except as to these upper pools. What its probabilities are, of course no one can say; but it would seem as if its possibilities are such as to justify the gentlemen of the Orleans Club in believing they are possessed of an "Eldorado" of trouting water. RHODE ISLAND.

WORCESTER'S GREAT SEASON.—Worcester, Mass., Sept. 19.—The first day of September saw the close of one of the greatest fishing seasons Worcester sportsmen have had for years. The catches made on opening day gave promise of a good supply of trout, which has been more than realized. The fishing continued good the entire season, and the fish averaged better than usual. Several exceptional catches were made, your correspondent being fortunate enough to take the finest basket of trout ever taken in the county (so say the old fishermen) in a single day. The trip would bear a detailed account, would modesty permit. Suffice it to say that I left the city by team on the morning of the 4th of June, returning the same evening with 28 trout weighing 21lbs., the largest tipping the scales at 2lbs. 6 oz. the following morning, and fourteen of them going a pound or better apiece.—HAL.

I THINK THAT BLACK BASS NUMBER of July 24 the greatest success FOREST AND STREAM has made for a long time; and that means a great deal. The articles were excellent and the whole admirable. You know I am a little of a crank on black bass fishing, and I enjoyed it very much.—H. J. T.



RAINBOW TROUT IN PENNSYLVANIA.—Delaware, Pike County,—Mill Creek, near us, is now well stocked with rainbow trout, and the species is multiplying there naturally. Brook trout are abundant in the same stream.—B

THE CLUBS OF THE ST. CLAIR FLATS.

V.—THE RUSHMERE CLUB.

CROSSING the deep cut off above Mervue Club, one comes to a fresh and pretty cottage, with a good little lawn and generally self-respectful look. This is "Sunnyside," the summer abode of Mr. A. C. Varney, a noted Detroit architect, who designed the great building of the Rushmere Club, which stands so close by as nearly to over-shadow his modest dwelling. Mr. Varney was out on the roof of his barn doing some shingling. At least, it would have been the barn if there were any such thing as a barn on the St. Clair Flats, only that instead of pulling the carriage up by the barn you row the boat up there. The Flats are strictly aquatic. There is not such a thing as a horse or a vehicle throughout the club region. The summer resorters here have no long moonlight drives, it is true, but then they have no livery bills. Everything goes by water. When Mr. Varney first began to come up into this country he was broken down in health through hard work at his profession, but some years of outdoor summer life at the Flats had changed him from all that, and made him an apparently hearty and certainly very good-natured man. Mr. Varney rolled down his shirt sleeves and volunteered to go over to Rushmere club house with the thirster after facts. Accordingly we crossed the little arched bridge, whose single truss is a long oak plank, and crossing an expanse of ground whose filling in is not yet complete, soon stood on the wide expanse of green velvet lawn of the Rushmere Club.

The engraving will do well which gives any adequate idea of this noble building, which is in many ways the superior of anything of the kind I have ever seen. I remember when the opening of this club was reported in the papers, a few years ago, it was generally said that no club house in the country came near this one in the ornate, elaborate and expensive character of its structure. It is indeed a noble building, and no temple of sportsmanship and pleasure in all the country round about shall we find to overtop it in our scale of comparisons. Shades of the muzzleloading days, look down upon us! What is modern sportsmanship coming to? Thirty-four thousand dollars here, expended for a playhouse, with no one knows what additional outlay for the boats, yachts and personal paraphernalia belonging thereto. Organized sportsmanship shows how commanding of respect the sportsmanship of to-day really is. No sneer at sportsmen to-day. They are a class. Their trade is worth money. Forty thousand dollars, let us say, was here paid by one body of sportsmen. It went to a good many people. The tradesmen dare not argue against that. The business man dare not scoff longer at the fellow with the gun. After a while the politician will bend a willing ear to hear what the sportsman has to say.

THE RUSHMERE CLUB.

The baptismal name of "Rushmere Club," as it is generally called, after the local name of the club building, is "The Detroit Fishing and Hunting Association." It is, of course, duly incorporated, the charter members being Mr. W. R Clark, president; Mr. F. B. Dickerson, treasurer; Mr. Charles Beck, secretary; Mr. L. Burt, Dr. Phil Porter, Dr. Moore and Mr. A. C. Varney. The organization was made in the fall of 1884. The club house was built the second season, and occupied the next thereafter.

The price paid for the Rushmere realty was $400 per 50ft. lot. The present grounds, as far as completed, are now 340ft. front and 100ft. deep. The club owns the tract between the cut-off and Mr. Varney's cottage, 300ft. more, and this will soon be filled up thoroughly and put down in grass. The plot thus formed will be given over to the children for a playground. I understand that Mr. McQueen, the Canadian gentleman who is bent upon plunging into the depths and bringing up drowned title by the locks, would fain have it understood that he owns this ground as part of his indefinite "Hersen's Island." He will probably see warm places freeze before he gets any hush money from the Rushmere men.

Rushmere is put up upon a large scale in every way. The lawn is both long and wide, the dock is long and solid; even the boat houses present quite an array. The latter lie across a narrow cut, between the proposed playground and the club house. The club boat house is 75ft. x28ft., and besides the big boat house of Messrs. Burt and Hurlbut, there are 150ft. of private boat houses all in line along the cut or boat canal, making a total string of over 240ft. of boat houses. The number and quality of the boats may be judged from these figures. There are several of them, if not more.

The main building of Rushmere club house, if the reader likes figures, is 325ft. front by 38ft. in depth, with two large wings additional. There is also another building, a bit further back, 35x50ft. in size, for laundry and servant domicile purposes. A big club is necessarily much like a big hotel. For instance, there are seventy-five bed rooms in Rushmere, and sometimes Mr. Moore and his genial wife, who have the household reins in hand, are called upon to dispose of 200 guests. When the summer months come, the interesting fact becomes evident that every Detroiter has web feet. Along in June, July and August, all Detroit lives on perch and bass, and goes up to the Flats to catch and eat them. The Saturday traffic on the boats of the Star Line is something immense. These great clubs are the lungs of Detroit, and a very hearty, pleasant, city they help to make her.

There is a great veranda on three sides of Rushmere, and built with Providence alone knows how many soulful nooks, juts and unexpected corners. The architect who designed this veranda will be responsible for a great many flirtations or even marriages, no doubt, for which may the fates have mercy upon him.

Off the veranda opens a big hall, upon the opposite side of which is a most excellent big grate, over whose mantel rests a goodish oil painting. The main stairway is to the right of that, and to the right, close by the entrance door, is the office, beyond which is the smoking room, and beyond that again, down at the end of the long cross hall, is the ladies' parlor, a bright and cheerful nook 14x14ft. in size. To the left of the entrance hall is the main parlor, 18x34ft., white curtained, tasteful and quiet, supplied among other attractions with a pretty little piano which I certainly should have stolen if there hadn't been so much other stuff in the duck boat. Back of this parlor is the dining room, 26x45ft. in extent, and all as it ought to be, of course. Traversing the building for the greater portion of its length is a cross hall, 8ft.x145. Rushmere is a club of magnificent distances. You couldn't kill a duck across the veranda, and you could hardly cast a frog the length of this long hall.

The entrance hall, or reception room, is finished in natural pine, worked down in hard oil. This will improve with age, but the effect is mellow and pleasant today. The floor is polished hardwood, the hat racks are heavy oak, the pictures that adorn the walls are largely by the facile hand of the "Detroit boy," Hopkins, whose field studies are well and widely known. Mr. Hopkins, Mr. L. C. Earle, of Chicago, and Mr. Tracy, of New York, would form a great triumvirate. They have done the best work of the century in depicting, in a truthful, consistent and intelligent manner, the sports and the spirit of the field. I wish it were possible that these three men might meet.

The Moslem says there are grades in Heaven, and perhaps he knows. There are grades in Rushmere, and when you get upstairs you are simply in the second heaven. There is a big reading and writing room up there, finished in the same manner as the reception room, and commanding a fine view out over the channel. There are two fine balconies up there, too, where one can sit and write poetry, and think of new words to call the Canada club, whose wild rice flaunts itself exasperatingly just across the river.

But details of the architectural excellence and elegance of the house or description of the charms of the Rushmere cuisine, will hardly be what most greatly interests the sportsmen who read about the Flats. What do the members do, how and where do they shoot and fish, what sorts of boats do they use, and what are the special features of the sport enjoyed—those are questions which will be asked imperiously. To answer them must bring out the unique character of the sportsmanship of this locality. In no other spot is the element of dilletanteism so strongly impressed upon the sportsmanship without weakening or injuring the latter. Let us say rather that the dilletante idea mingles with or flows about the cult of the hardy professional sportsmanship, which holds its own unaffected, sturdy and unadorned. We have no right to scoff at the sportsmanship of these big clubs, and call it the summer day or kid glove sort. The very gentleman who glides correctly through a Rushmere waltz at a Saturday evening assembly, may be able to stop a bluebill or cast a minnow as well as our friend who is not noiseless with his coffee. Sportsmanship is not hurt by the graces of good society, nor is the latter hurt by the graces of good society, nor is the latter hurt by the hardy virtues of the field. To see the two blend, as here they certainly do, is very pleasant and very instructive, too. The fellow with the gun is coming up in the world.

Rushmere has no preserve. It owns the sky, the lake, and all out doors, as all the other clubs. No wail can here be raised about the wealthy sportsmen who have taken up all the best grounds, so that a poor man has no chance to shoot, etc. All that Rushmere claims is her little island, and she made that herself, mauger Mr. McQueen. The grinding monopoly of the Flats is the Canadian Club.

Rushmere men fish for bass after the fashion of St. Clair bass fishing, which will be touched upon a little later on, in the course of speaking of some of the other clubs. They shoot ducks as has been already mentioned. We may, however, go a little further in one regard, and assign to Rushmere a boat that may be called typical, though it follows the description already given of the craft in most general use. Mr. Varney showed the writer a boat of his own device which is worth comment. This little ship was 18ft. over all and 5ft. 5in. beam, with a skin entirely smooth. She was decked forward about 4ft., and had steps for two different positions of the mast, according to the amount of wind. She had a good stiff centerboard drop, and was provided with rowlocks for two sets of oars. Handsomely furnished and finished, in and out, this made a most comfortable craft for a long fishing journey. Mr. Varney showed me on this boat a little appliance invented by himself, which has lately been largely copied by the seamen of the Flats. This is simply a light little fender rail, covered with sheet brass, and running along the swell of the sides from stem to stern. The nicely painted skin is thus protected from injury or chafing against the dock when making a landing or lying alongside. This "Rushmere" model is of very safe but graceful lines, and is said to be a good stiff sailor, which is something highly desirable on the touchy-tempered seas of this region. Riette and Day Dream, property of Mr. Brubo and Capt. Miller, are large enough to satisfy the ambitions of the boldest sailors.

The system of conducting the household at Rushmere is that general among the clubs. The steward furnishes everything by way of food, and charges a rate per diem. The annual dues of the club are only $25. The membership fee was originally $100, but has been raised to $225. The lists will always be full, and will always represent a body of men of the very best class, whether in society, in business, or more than all, in sportsmanship.

CHICAGO, Sept. 12.—Mr. Alex. T. Hodge, of the Butler Paper Co., has just received from the embalmer the corpse of the 33lbs. mascallonge he caught at Squirrel Lake, near Minocqua, Wis., on Aug. 15. It is a very bad piece of mounting that he got done, and fails to show the symmetry of a mascallonge, but it shows the bigness of this one. Mr. L. W. Yaggy was his companion in the boat that day, and he also took a good fish, which weighed 22lbs., and fought like a demon, nearly filling the canoe with water. On that day also they killed a large lynx, whose skin is preserved in good shape. Mr. Hodge naively remarks that they were rowing along and trying to get a shot at a deer when they got a mascallonge. That is about a sample of the morals of the average tourist to these woods. A deer is a deer, they think, whether the date be August or October. Mr. Hodge relates an incident which befel a man in the country they visited. He had a mascallonge hooked and close to the boat, where the fish lay glaring at him. He put his hand out toward the fish, and sprang at and caught it in its mouth, tearing the hand badly. There are a few things any madder looking than a hooked mascallonge, and if they don't always jump at a fellow they look as though they would like to.

At the Jenney & Graham Gun Co.'s there is now displayed the mounted head of a mascallonge caught in Black Lake, Mich., this summer by Mr. Lamos. This head shows the cold and cruel eye of the old water wolf very well. The fish weighed 35½lbs., and was 4ft. 7in. long.

The Twin Lakes fish, mentioned earlier as taken by Mr. Harry Goodall, of the *Drovers' Journal*, has been very nicely mounted and is now a fixed proof that newspaper men do not always tell fish stories without foundation.

Dr. Madder and several others have tried the little Abalone shell spoons, which I was probably the first man to use in this country, having brought on a few from the San Francisco firm mentioned earlier. They are a great go out there, and while I have not yet had time to test them thoroughly, they bid fair to be great killers here. Dr. Madder and his brother John fished from the same boat on the Kankakee, at the Mak-saw-ba Club, and the Abalone spoon killed twenty bass in less than three hours' fishing, and also a 14lbs. pickerel, over 3ft. long. Comparisons are odious, and I should not like to say anything against the standard spoon which was used at the same time, but really the metal spoon was not in it. Five bass were taken out of one hole on the abalone spoon after the metal spoon had been tried without success. That sounds fishy, but it is what Billy Mussey told me. And then he asked me if I had ever seen one of those spoons. The fact is our enterprising friend Mr. Hirth, with whom I left a dozen or so of spoons for inspection, had given them all away as samples, so when I wanted one to try for myself this week, there wasn't a good one left in the box, all the boys are using my spoons and asking me if I ever saw one. I like that. Not having had a chance to borrow one, I cannot yet say so much for them. They were used by casting from the boat. The gang on these spoons should not be feathered. If some fellow will advertise these spoons now, he can sell about a barrel of them here before the snow flies.

The Kankakee down Mak-saw-ba way is alive with bass this fall. That club has employed two retired Irish prize fighters, who terrorize the country and have thus just about stopped illegal shooting. The netting and spearing of fish has been stopped on these grounds for some time back, and the result is apparent. These two Irish policemen are spoiling for a fight, and are complaining of the "dool toimes" they are having lately. They have built a sort of shanty on the marsh up toward the Two Trees, and this, in apt allusion to the late Clan-na-Gael affairs, has come to be universally known as "Camp 20." Woe be to the lawless shooter who disturbs "Camp 20," for he is apt to be suddenly "removed." English Lake Club also has two big special policemen on its marsh in the same way.

Another fact to back what is now an old story. One evening last week, at 8:15, as Billy Mussey was coming down the Kankakee to the club house, paddling his duck boat, he was startled by a sudden splash and the flash of something before his face. It was a big bass, and it sprang diagonally clear across the boat, went over his left shoulder and struck him on the ear as it passed. It scared Billy pretty near silly. The fish was seen by Billy's friends in the boat just following, and cannot, therefore, be considered a sudden hallucination.

There was a late report in the daily papers to the effect that the refuse of a glucose mill had killed 32,000 of fish in the Fox River, but I cannot learn where that was or how accurate the story may be.

Fishing will grow better from now on, for the next thirty days. The fall fishing season would have more importance here if the shooting season did not overshadow it to some extent. E. HOUGH.

MAINE BLACK BASS.

Editor Forest and Stream:

Four years ago from force of circumstances I spent my first vacation with the black bass of Kennebec county rather than with the marvelously beautiful trout of the Dead River region. But now give me the lordly and gamy dusky inhabitants of the clear waters of Great Belgrade Pond, Long Pond and the whole chain of sparkling waters from Oakland to South Monmouth in preference to ponds depleted of their speckled denizens. There is more sport with a 2¼ to a 3½lbs. fighting bass than with many ½lb. crimson-flecked swimmers.

The frequent rains in the Pine Tree State had given the verdure of the hills and mountains, the valleys and the shores of lakelets and streams its fullest glory. And autumn wild flowers were never more abundant and gorgeous.

Long Pond, between Mt. Vernon and Belgrade, has been my favorite fishing ground; but alas! the "fish hog" has been there; yes, many hundreds of them, so popular has the place become; and the fish are not so plenty as two years ago. A string of thirty bass was shown me with great gusto and pride, when I am sure I could have selected fifteen of the number that would not have weighed more than 3lbs. Shame, I say, on such sportsmen, if they can be called by such a name. And these anglers were from the large cities of Maine and Massachusetts. The string I speak of was but a sample; others could have been seen any day when the boats were out.

But with gratitude I say Long Pond is but one among the constellation of this grand cluster of ponds. Some near by were not stocked so early, but now are just becoming good rivals. Cobbosseecontee was stocked earlier and has many worthy patrons. Its waters are clear, decked with a large number of islands, and its bass large, toothsome and gamy. Its banks have excellent accommodations for the sportsmen, as has been told me by a large number of Boston friends, who enjoyed them in July and August. Maranacook, too, was well stocked years ago and has good feeding ground; and now its waters has a grand army of the stalwart fighters. The boarding house have great fame, and next year, as I am told, is to be much enlarged and improved. The location has no superior. Other ponds in Winthrop have their admirers. A few miles to the southwest of Winthrop village is Annabessacook, which has recently been brought into notice by some very large strings caught by zealous fishermen.

Black bass are rapidly growing in favor with the natives, though they do not give up yet the white perch they have so many years fed upon, and which still in great numbers populate this congregation of ponds. Nature has been very lavish of her bounty to this region.

At times I have spoken to you of methods of keeping minnows alive for bait. I improved my methods some by adopting the Calcutta water cooler plan. My minnow can is about 20in. high and about a foot in diamter. I put upon it a jacket of four thicknesses of cloth. When starting out for a day's fishing I completely wet the jacket with water. (Was told that salt water would be more effectual, but did not try it.) If the air was dry and the sun bright, care was needed, or the water would become too cold and the minnows suffer. If the sun did not shine and the air was sultry, the water in the jacket did not rapidly evaporate, and a little ice between the jacket and the can was of service, though, as I have said, or intimated, if the evaporation is rapid, a little of the water taken from the can and pond water put in regulates the temperature of the water to the comfort of the little fish, and they would remain active and live as long as wanted. Nothing new about this. The Calcutta plan, or that of our farmer fathers', putting a wet cloth about their earthenware pitcher of drink as they took it into their hayfields, are models for us. This method was of great service to me this year, as I took my bait nearly three miles in a carriage to Long Pond.

My vacation is finished and so is my angling for this season. My hair is white with many years. I never had a more pleasant vacation. Shall I have another as good?

J. W. T.

BOSTON, Sept. 15.

FISHES AT CAPE CHARLES, VIRGINIA.—From Mr. B. A. Bean, who has just visited Cape Charles, we learn that fishing is poor in that locality. Eighteen or twenty kinds of fish were taken in three hauls of a seine. Anchovies and young pompano were found, also young bluefish and sea bass. Pipefish, usually among the commonest of the shore fishes, are scarce. Half beaks (*Hemirhamphus*) were abundant and spawning. The silver gar (*Tylosurus*) were not common. As for the birds, a few plover were seen and many ospreys; ducks were absent.

CARP AND COWS.

Editor Forest and Stream:

Some time ago the Superintendent of the Census addressed to me some inquiries concerning the German carp, which I received when our Government made its distribution of those fish. I replied in good faith to the best of my poor ability, but no acknowledgment has been made of my answer, wherefore I conclude that they have been thrown out by the official at whose request they were made. I am confident that they contain information which should not be lost, and therefore inclose them with the blank which called them forth, hoping they may see the light in the columns of your valuable paper, to whose readers I trust I am not altogether a stranger:

PROF. SMILEY—*Dear Sir;* In 1878 I placed four carp in a pond one-eighth of an acre in extent, which I had prepared especially for their reception, at an expense which I cannot now estimate.

They grew so rapidly that in five years the pond was too small for them. They were unable to turn around in it; their backs were out of water and they could get no food, but such as I fed them. This consisted principally of cabbage, fed them in summer in its natural state, in colder weather in the form of sauerkraut. This food was suggested by the Teutonic origin of the fish and they throve finely upon it.

The parts in the ice and those exposed above it were frozen perfectly solid, but the fish did not appear to have suffered at all from this, for when they thawed out in the spring they were as lively as ever.

Having attained such a size that it was impossible to keep them longer in the pond, and knowing that the species subsist almost entirely on vegetable food, I turned them out in a pasture with my cows as soon as the grass was started well. It is an interesting fact regarding their readiness to adapt their habits to their situation, that they easily learned, by observing their companions, to keep the flies off by a dextrous switching of the tail.

They throve almost as well as when in the pond, but becoming unruly and frequently breaking bounds into meadows, grain fields and neighbors' lands, I was obliged to kill them. The greater portion of the carcasses was sold at a fair price in the nearest market, while I kept a little for my own use.

As "an article of food," I consider the carp quite valuable. For a little goes a great way, indeed quite around a long table, as one mouthful suffices each person, unless he be to the manner of German carp eating born.

As to the query concerning "carp fry," I can only answer that I never attempted to fry any but once. The result was so unsatisfactory that the experiment was not repeated. I did not attend any special "Fry of 1889," and cannot estimate the ages of the guests present, but believe them "All over three years."

An exact "estimate of the cost" of the food eaten by the carp would be difficult, but I should say each fish ate one hundred cabbages worth 10 cents a head, which would amount to $10. I cannot give the amount of pasturage consumed, as they were in the same field with my cows when not astray. What they ate of my neighbors' fields cost me nothing, and so far they were quite profitable. They cost me much time and labor in driving them and repairing fences, and on account of an unusual expenditure of strong language I felt constrained to give my pastor $5 more than has been my custom.

I do not consider the experiment as having proved profitable on the whole. The Government need not be at the trouble of sending me more carp. Very respectfully,

J. VERITY, U. S. H. M.

ANGLING NOTES.

THE weakfish season is nearly over, a few scattering fish are still taken here and there, but the bulk of the schools have left our waters for this year. The gamy striped bass, however, are taking their place, and right welcome are these royal fish to the angler.

From Barnegat Bay to Broad Channel, and up the Hudson and Long Island Sound these fish are now to be found. If the angler fishes for sport, he should use a flexible bait-rod about 10 or 11ft. long, a multiplying reel holding 300ft. of 9 thread Cuttyhunk line, to which should be fastened a good double-gut leader by means of a swivel, and to the leader should be looped a 3-0 or 4 0 sproat hook. This is all that is necessary, excepting the bait, which should vary according to the locality. The best baits are shedder crab, shrimp, lobster and red and white sand worms. Little if any sinker need be used.

An angler writing to a friend recently relates that while trout fishing one day this summer he passed a place that looked very "woodcocky," as he expressed it. It was a little cove made by the backwater, the mud well shaded by ferns and trees, very cool and inviting looking. He often passed the place when fishing and always expected to see a woodcock fly up. This time, as he stopped for a moment to take a look at it, he was agreably surprised by seeing three noble birds flutter down, one after the other. He watched them several minutes boring and feeding, when an accidental movement startled them and they went twittering off in the woods.

Mr. Geo. Ricado, one of the fish wardens of New Jersey, while fishing in the waters of the upper Hackensack River, caught a good-sized black bass that had a 1-0 hook, baited with a crawfish, in its stomach. This would be about equal to a human being with a shark hook inside of him, but fish do not seem to mind a little thing like this. Unless the hook injures the gills and causes red blood to flow, it seems to do them no permanent injury. It is a well-known fact that perch have been taken with their own eyes for bait.

A gentleman who has lately been the guest of the Inglewood Club up in New Brunswick gives us a very glowing account of this hospitable club and its good fishing. He says they have upward of twenty lakes in their territory, all full of trout, and in several of them very fine landlocked salmon are caught. Most of them are easily reached from their comfortable club house. The Mushquash River runs through their property and a few sea salmon are still caught in it. They are going to restock this river with salmon and will soon have fine fishing again. The trout fishing he describes as simply grand, with no end to speckled trout from ¼ to 2lbs. in weight. There is one lake in which the trout do not take the fly and not many are taken with bait. They are large dark-colored fish with the under jaw more developed than usual. They call them "cannibal" trout up there, and say they live on young trout only. These fish are often found in trout waters and easily known by their peculiar shape and color. The heads are large in proportion to their bodies, and they are ugly looking specimens, resembling the savage pickerel more than the quiet trout. The writer caught one not long ago while fly-fishing, a small trout had taken the tail fly. While reeling it in one of these cannibal trout made a dash at it and swallowed it. A sharp strike secured the rascal and we considered the stream well rid of him.

ONEONTA ASSOCIATION RECORDS.—Oneonta, N. Y.—The open season for legal trout fishing closed in Otsego county Sept. 1, but remained open until the 15th in Delaware county, as that county is embraced in the forest preserve. The members of the Oneonta Fish and Game Protective Association and other anglers have been very successful this year, and many more trout were caught than in 1889. My statistics show a catch of 6,100, not including what have been caught by fishermen living along the streams, which would no doubt increase the number to over 8,000, which is 3,000 more than caught in 1889—a fact which shows the benefit we are deriving from constant stocking of our streams. Otsego county furnished about 4,500 and Delaware county about 3,500 of the number taken. There have been caught about 50 trout that would average from 1 to 1½lbs., and one that weighed 1lb. and 10oz. The average size also was good. Several brown trout have been caught 7 to 9 inches in length, which indicates that they are doing well in our streams. The Oneonta Fish and Game Association now has 120 members, and is doing all it can to improve fishing and hunting in this vicinity. There was placed in our streams last year about 50,000 fry of brook and brown trout, the aggregate plant of the three years of 1888, 1889 and 1890 being 210,000. The association intends to continue planting all the fry it can obtain from the State. The association put out 10 dozen West Virginia quail last winter and from all reports they are doing well, as numbers of their young have been seen. The association will import more of these birds the coming winter. The game laws have been well enforced in this vicinity. Only one case has been prosecuted by our association, and that was against an old offender for netting trout. The proof in this case is so strong that there is no chance for the offender to escape punishment.—C. W. LEWIS, Ex-President.

BASS AT NARRAGANSETT PIER.—Mr. David Stevenson, of this city, who has a summer residence at Narragansett Pier, R. I., tells us that he has had excellent fishing this season. Casting from the rocks, near his home, he caught four striped bass, weighing 42lbs., 23½lbs., 22½lbs., and 20lbs.; and among the bluefish landed were four of about 8lbs. each. His largest bass gave him a hard struggle for three-quarters of an hour; and another bass was hooked which was so large and so powerful that he could not handle it at all. The bait used was lobster; menhaden would have been more successful, but could not be obtained. Bass fishing has been excellent all along the coast. The Cuttyhunk Club records show an aggregate catch of about 2,000lbs.; and anybody who knows anything about striped bass will appreciate the fact that there is enough solid fun in a ton of striped bass to go a long way around, and to make things very lively for the men at the big end of the rod.

COAL DIRT AND BASS.—Trenton, N. J., Sept. 18.—I have just returned from our annual bass trip on the Delaware, at Frenchtown, N. J., and regret to report that (with the exception of a few strings secured by that persistent fisherman Mr. Johnson Walford, of that pretty village before our arrival) no luck came to our boat. I can only account for our poor success by the coal dirt laden water, which has come from the Lehigh lately. This has driven the bass to other parts. I had hopes of giving my fishing brothers some encouraging reports from this section, so easily reached, but am disappointed, although among the lot that fell to Warford's rod three reached the 4lbs. mark on the scales. Taking the pools, riffs and bottom of the river at this point, no better ground can be found for the king of fish, the small-mouth bass.—W. H. S.

POTOMAC RIVER FISHING.—Swan Point Cove, in the lower Potamac River, is unsurpassed at present as a fishing ground. I have been taking sea trout (weakfish), tailors (bluefish) and rock (striped bass) until my arms ached from pulling in the weight. The fishing never was better. Besides the three kinds mentioned there are spots and white perch. We use handlines with heavy sinkers and frequently two or three hooks. It is not uncommon to catch two fish at a haul. The best fishing is found in the mouth of Cockwell's Creek on the flood tide; it is during the strength of the flood and ebb that the weight is needed in the sinker. This is a famous ground for ducks and swans in cool weather and ordinary winters. Quail are more plentiful than ever before.—H. T.

CARP IN THE HUDSON.—About thirty-six years ago I accompanied John J. Ferris, of Highland, N. Y., an enthusiastic disciple of Walton, in a fishing excursion to the Bennewater, at which time I found him very communicative regarding all matters pertaining to fish and fishing. Said he: "There are carp in the Hudson and but few know it, but they will find them before long. I'll tell you how they got into the river. A gentleman near Newburg had a pond in which he kept carp, there came a big freshet which broke the dam and let the fish into the river." Sure enough, some years after that the brooks along the Hudson presented the novel sight of the beautiful fish of golden hue.—N. D. ELTING.

BLUEFISH GROWING SCARCE.—Reports from Wellfleet, Mass., dated Sept. 12, indicate a steady diminution of bluefish and it is believed they are about to move southward. The fishing for all the common food fishes has been greatly injured presumably by the presence of the voracious bluefish.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Fisheulture.

SHAD IN ALASKA.

THE extensive migration of the introduced shad in the Pacific has excited the wonder of fishculturists everywhere. Originally planted in the Sacramento the fish soon traversed the coast of California, and from the Columbia it has now journeyed northward, according to the testimony of Mr. Woodcock, to south-eastern Alaska. Where its migrations will end is an interesting problem. Mr. Woodcock wrote to the Commissioner of Fisheries last year that several shad were taken in a trap near the mouth of the Stikeen river. Again on Sept. 5, 1890, he sent from Fort Wrangel the following communication: "This season I procured several specimens, and have one in a tank belonging to the Albatross, which will be forwarded to the Department. Four shad were taken during the month of August in the trap. There is no doubt the fish have 'come to stay' and I think you will find the specimen compare favorably with the eastern fish of the same age."

The changed environment in the case of the shad has soon caused remarkable changes in habits, the migratory instinct apparently being strengthened in the northern areas of introduction and the disposition to remain in certain bays throughout the winter increasing in some portions of California. In Sacramento Bay shad are frequently caught from December to February in salmon gill nets, and we have been told that they can be taken every month in the year. Here the seagoing habit is dropped and the species greatly exceeds its eastern representatives in size, the spawning season remaining practically unchanged.

"DOMESTICATED TROUT."—Under this title Mr. Livingston Stone, in 1872, had published a manual of trout culture which was indorsed by leading fishculturists and influential journals of America and Europe, and will always be invaluable for reference. The book sold freely and immediately took a place among the classics of fishculture. Several editions have been sold and now the author offers a fourth edition which seems to be a reprint of the third. It is unfortunate that Mr. Stone did not bring the manual up to date, inasmuch as the thirteen years which have elapsed since the last edition was printed have witnessed many radical and important changes in fishcultural methods and several notable books on the subject have made their appearance. The publishers are Houghton, Mifflin & Co. of Boston.

FIXTURES.

DOG SHOWS.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Sept. 23 to 26.—Third Dog Show of the London Kennel Club, at London, Ont. S. F. Glass, Secretary.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1058.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer Superintendent.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 4 to 8.—First Beagle Field Trials of the National Beagle Club, at Hyannis, Mass. F. W. Chapman, Secretary, 364 Washington street, Boston, Mass.

Nov. 7.—Ninth Annual Field Trials of the Robins Island Club. W. L. Wellington, Secretary, Brooklyn, N. Y.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York. Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

TORONTO BENCH SHOW.

THE most successful dog show Canada has ever known was brought to a close Friday, Sept. 19. Favored by delightful weather throughout, with the exception of an hour or so late in the afternoon of Friday, the last day, the people simply flocked to the fair in thousands, and as the dogs were benched in an enticing manner and in a pretentious building, most of them naturally had to take it in along with the other sights so generously provided. As an instance of the capacity of the building and the continuous stream of people that passed through the aisles, I might mention that on Wednesday 16,281 people clicked the turnstiles, the admission fee being 10 cents, and a very wise precaution on the part of the management, or the building and everything else would have been completely swamped. The judging was not concluded until Wednesday afternoon, Mr. Mason hardly getting to work with his accustomed celerity. I have already given you particulars of the first two days' proceedings On Wednesday, owing to the absence of the officials of the show, Mr. Geddes, of Ottawa, the Clumber spaniel man, jumped into the breach and made an efficient steward of the ring, while Mr. Mason judged his remaining classes. On that day two or three important decisions had to be made, notably the specials for best greyhound, which laid between Balkis and the Canadian dog Scavenger, the decision, after careful scrutiny, going to Balkis, who excels in neck, ribs, loin and shoulders, both being shown very fit. Then the special for the best Irish terrier laid between Breda Tyne and the new dog Breda Bill, the ribbon, or rather card, going to the former in recognition of her better head and front. The battle between Blemton Volunteer and the new bitch Eva Nettle was also very close, the former eventually winning by the aid of his condition, coat and front. The judging may be said to have given satisfation, though several dogs which had been high up in the list at Detroit had to be content with inferior honors. Difference of opinion creates a charm of uncertainty in dog show judging, and the more judges employed the better chance have all dogs of being recognized one time or another. I can hardly speak in terms of praise of the way the aisles were kept clean, and there was considerable grumbling about the scarcity of clean straw, and the proper conduct of these two important branches of show management is very important both for the health of the dogs and the comfort of the visitors. Owing to the height of the building the atmosphere was kept reasonably sweet, considering the lack of disinfectant. The feeding was on Spratts biscuit, but did not give the usual satisfaction, a great many dogs being seriously affected by the purging. In justice to Spratts Co. I may say that the food was not prepared by them, as is usually the case, even the biscuits, I am told, coming from and being manufactured by their factory in Montreal. Before passing on to the criticisms I may say that it was the intention of the management to get out a marked catalogue by Wednesday morning, but owing to the delay in judging it was Thursday morning before they made their appearance. I will now pass on to review of the dogs present, taking them in the order of the catalogue.

MASTIFFS—(MR. MASON).

These classes I cannot say were of a very high order, in fact they were quite ordinary, the only challenge entry, Menglada, being absent. In the open dog class the first to catch the judge's eye was J. Massey's Minting Minor, which is short enough in muzzle and excels in skull, but is deficient in bone. Hugh Falconer's Mode was out of shape or would have won; he is, though, a bit slack in back, light in eye, has a weak pastern but a fairly good head. Grimsby Caution, third, is shelly in body yet, small, light in eye but shows his breeding. Lord Caution, vhc., lacks substance and is faulty in head. Major, c., lacks quality and other points too numerous to mention. In the bitch class Battram's Bessie B. must thank her good body and bone for her position; though she has a good skull, her muzzle is wofully small. Bess, second, shows much more quality, but is a bit straight faced, though an Ilford Caution bitch; she is gray in muzzle and light in eye. Forbes's Ilford Bess is wanting in quality and many mastiff attributes, and the same may be said of Raymond's Lady Bell, vhc. In puppies Grimsby Caution received the only prize, second being withheld and rightly so. In novice dogs, the class being divided, Grimsby Caution again scored, Lord Caution coming second, and Falconer's Faust, long in head and straight behind, was given third. Two bitches were shown, first being withheld, second went to Ilford Bess mentioned in the open class. The special for the best mastiff was given to John Massey's Minting Minor, he also winning the special for the best mastiff in Canada and one for the best in Toronto.

ST. BERNARDS—(MR. MASON).

There being no challenge entries, the open class was first to claim attention, Laidlaw and McBean's Benmore, after considerable examination, scoring a win; he does not show the quality one expects to see in a good one, still he excels the second prize winner, Williams's Monk, in head, bone, and movement, though he loses in coat, being quite curly, and in markings. Arahell's Lord Dalhousie is long-faced, high ear, straight in stifles, but has a good skull and excellent bone. Williams's Monarch, res., has a nice coat, but long and sharp in face; Charlesworth's Garibaldi is light in body yet, is faulty in muzzle, but well off for bone; Bruce also, very high com., who won at Chicago, is very plain-faced, poor markings, but has an excellent straight coat; in the high com. division Baker's Leo lacks type, and Crooks's Duke has a fair body but poor head; Magaun's Chump loses in body and condition. Coming to the bitches we find Pottersburg Kennels' Phyllis, the new importation, very much off in head properties, being long and snipy, but has a rattling good body, though now she is all out of shape in coat, she was head and shoulders over Williams's Nora, who lacks substance, is out of coat and long in head. Trimble's Berna, third, has only her good bone to be proud of, not sufficient stop and lacks depth of body. Cora, transferred from novice class, though a winner under the same judge at Buffalo, was not noticed, she lacks type and markings, but might have had something for body. In puppies Pottersburg Kennels' Ben Maida has good size, but is wanting in substance, his kennel mate, Kildnoan, second, has excellent bone, but Williams's Senator is narrow-chested, stilty and shelly throughout. In smooth challenge class the well-known dog now Lewis's Victor Joseph was alone, he is not looking in such good flesh as we have seen him. Open dogs saw Brady's Baronet the only entry, has a fairly good body but a mean head, and is straight behind. In bitches the well-known Alpine Queen, though far from a good one, won comfortably over Wilson's Nellie, who is also off in head, narrow, long and flat, has good legs but open feet; this bitch beat Baronet in the novice class by her better quality and bone. The special for best kennel of four went to John S. Williams, as also that for best in Canada, J. B. Lewis's Victor winning that for best St. Bernard in show.

There were no bloodhounds entered, though I think the $25 offered by the Association might have tempted Mr. Winchell to enter his kennels.

NEWFOUNDLANDS—(MR. MASON).

These dogs I expected to be better represented here. Old Leo, one of Dan O'Shea's dogs, shown under the name of Watson, lost to Langton's Major in coat, though the former is better in head. Third went to Hemetson's Toby, who is too long in head and big in ear, but nicely coated. Salter's Duke, a rather weedy one, came in for an hc. card.

GREAT DANES—(MR. MASON).

There was a fairly good show of these dogs considering the distance from the great Dane centers. Nothing appeared in the challenge class, but in the open we were introduced to one of the best great Danes it has been my good fortune to see. Though a little heavy in head and lippy, his excellent formation of body, limbs and action simply smothered his competitors, and in size he was a very Triton among the minnows; in fact, I never saw such a well-built dog as he is throughout; not a sign of weakness throughout, with legs as straight as gun barrels. Of course he won. Roedler's Lord, second, has a better shaped head than the winner, but is small, throaty and not so good in front. Howard's Bismark, third, is a bit stilty, straight behind, and has an indifferent head. Wilson's Pollux, hc., has only a fair body to recommend him, his head being faulty and he is not good behind. In bitches first went to Irene, very much improved since Wilmington; in fact, but for her bag I would scarcely recognize her. Howard's Dudley Flora is too wide in front, knuckles over a bit, is also light in bone and wanting in muzzle, besides being shown heavy in whelp. Wilson's Freda, third, is flat-faced, but has a nice body. Same owner's May, hc., was shown too fat and is small. The only deerhound shown was Deering's Nora, which has not developed much on her puppy form, though well off for coat. The special for best kennel of great Danes was given to F. W. Wilson's team, the medal for best in show going, of course, to H. G. Nichols's Melac.

GREYHOUNDS—(MR. MASON).

These were very strong classes, and show that there is no lack of good material in this breed in Canada, Toronto especially, old Memnon being responsible for many of them. In the challenge dogs, Huntington's Balkis easily defeated his kennel mate Higland Chief, who did not look so well as we have seen him, but Balkis on the contrary I never saw looking more fit and well. Cassandra had a walk over for the bitch challenge, and luckily for her, as she did not look herself at all, maternal duties no doubt having something to do with it. In the open class quite a large number appeared, but Taylor's Scavenger had little difficulty in scoring, though a well developed youngster in Ireson's Jolly Ranger is a pretty good one; he is a bit straight behind yet and his feet might be better, but in neck, ribs and loin he wins well over Huntington's Sir Lancelot, who is deficient in chest, is plain in head, but has good legs and feet. Dickison's Apparition and Turk were given vhc.; the former ha hardly bone enough and is straight in shoulder, the latter is coarse, has good bone, but is faulty in feet. In the hc. division, Kennedy's McGrath is too long cast, is weak in hocks, but fairly well fronted. Taylor's Milo is also faulty behind, and Miss Douglas's Sport was lucky to get hc., though the judge got out of it very gracefully I must say; Sport was entirely too coarse and fat. Taylor's Second Sight won fairly well in bitches, though she is not a good one, is light in loin and flat ribbed among other faults. Ramdall's Grimsby Jess was shown fat and is too flat in back. Huntington's Halloween has bad feet and is weak in hocks, though she is young yet. No puppies entered. The special for best kennel was given to H. W. Huntington's team; Geo. C. Taylor the one for best four in Canada. The medal for best in show went to H. W. Huntington's Balkis, and Geo. C. Taylor's Scavenger took the silver cup for best owned in Canada.

POINTERS—(MR. DAVIDSON).

Quite a nice lot of pointers faced the judge, though there were really no cracks among them. Challenge classes did not fill. In the open the class was divided according to weight, which let in Daniels's Lord Graphic for first place in heavy weights, he is well known on the bench and in the field; a promising youngster in Davey's Westminster Drake winning second; he has excellent legs and feet, but is a bit long in coat, heavy in ear and might be better in shoulders. Danay's Shot is a bit faulty in head, but a fairly-made dog. In bitches over 50lbs. Devon Nell, first, is faulty in muzzle, and could be improved in hind parts. Minnie-ha-ha might be deeper in muzzle and was shown a bit fleshy. Iler's Sporte, third, is too straight in stop, snipy-muzzled, knuckles over and carries a bad tail. In dogs under 55lbs. Mackle's Shot is out in front, is snipy in muzzle, but there is little to find fault with elsewhere. Cassel's Snipe is throaty and houndy-headed, lacks quality and depth of chest. Robertson's Hector is coarse-headed and faulty in stifles. Lord Graphic's Lad is weedy, has a bad head, is straight behind and open in feet, still he was given an hc. card. In light-weight bitches Fan N. scored; there is little fault in her except a weakness in pasterns. Trinket S. was shown a bit above herself and is faulty in stop, but is a good mover. Galena, third, is not quite the thing in front and is a little open in feet, and Thornton's Duchess would be improved by more bone. Galena was the only entry in novice class In puppies Lord Graphic's Jem was the winner, though his head is poor, he beats his kennel mate Lord Graphic's Jean in body and bone. The special for best kennel went to John R. Daniels's team. Medal for best pointer to Davey's Fan N. and $5 for best puppy to J. R. Daniels's Lord Graphic's Jem.

ENGLISH SETTERS—(MR. DAVIDSON).

These classes were well filled, and with some pretty good specimens. In challenge dogs Dad Wilson, not looking quite tip-top in coat, was the only entry, and so was old Leddersdale in her class; she carries her eleven years very well. In open dogs the red card went to a good-looking setter in Kent II., whose excellent coat stood way out from the rest; a very promising youngster in Tony Gladstone coming next, he is out of coat, but little fault can be found with his make up, his light eyes being noticeable. Chickasaw, third, loses in muzzle, shoulders and feet. Royal Kent, reserve, is houndy-headed and straight in shoulders, but has a good coat. Locksley, vhc., well known, is out of coat. Forest Fred, hc., is big in ear, and only fair in head. Dad Wilson's Boy, hc., is a bit long cast, skull too domy and is light in bone. Roger Boy is also long cast, and has a bad carriage of stern. Open bitches had Bohemian Girl for the winner; she is a nicely-modeled bitch, not quite straight in muzzle, and tail carried faulty, she was shown in excellent shape. Second went to Genevieve, shown too fat, though a bit straight behind; she has many good points. Delle Gladstone is plain and coarse in head and light boned. Scottish Belle is out at elbows and a bit weak in pasterns. Forest Gladys, hc., loses in expression, eyes not right and is off in coat. Forest Topsy, hc., is small and weedy. Nellie Dale and Forest Nettie were given a c.; the former is long in head and snipy, and little more than a weed; the latter is too short in muzzle and does not stand well in front. These were all far away from the winner in class. Puppies had Forest Heather for the winner, a very promising youngster, will let down a bit yet behind. George III., second, is a bit too thick in skull, and Roger loses in ears and head, bone good. In novice class Forest Heather won again, with Chickasaw and Forest Fred in the order named. The special for best kennel went to J. Shelley Hudson. Best kennel in Canada, T. G. Davey. Best English setter in show Cohannet Kennels' Kent II. Best bred in America, J. Shelley Hudson's Bohemian Girl.

IRISH SETTERS—(MR. DAVIDSON).

The display in these classes could hardly be surpassed, either in numbers or quality. In fact, Mr. Davidson told me the open dog class was about the best he ever handled and competition was very keen. In challenge dogs Dick Swiveller was placed over Blarney, a decision some people did not agree with, but as the judge knows more about this breed than I do, I won't quibble over the decision. Blarney is better in head, quarters and color to my thinking. Ruby Glenmore was given a challenge class to herself. In open dogs Armour's Max, though faulty in muzzle, beats Kildare in loin, pasterns and head. Glendyne Kennels' O'Donovan Rossa is too long and light in body, pasterns also faulty. There were several vhc., but there was no reserve marked in judges book. Maughan's Paddy Sarsfield is too light in quarters and straight in stifles; his Larry is too coarse headed and wrong in hocks, but has good bone and color. Pearsall's Jack Malone, first here last year, is throaty and thick in skull. Covert's Red River Glencho is too strong in head and falls away too much in quarters. In the hc. lot Kildare Kennels' Sarsfield is faulty in muzzle, and straight and light behind. Ryan's Red Kern has a poor head, and Maughan's Phil Sheridan wants more rib and was shown light in flesh. Pearsall's Redstone, though faulty in skull, might have been a bit higher up, though shown a little above himself. Maughan's Bang, c., is dish-faced, has good color; his Jerry is also plain-faced and loses in quarters to the others. In bitches Pearsall's Belle Ida is loaded in shoulders, but has a good body, legs and feet. Hilsendegen's Biddy Clare I did not see, but she was second at Detroit. Oriole Kennels' Jeannette is faulty in eye and ear. Four vhc. cards were given. Maughan's Florrie is throaty and weak in muzzle; his Kerry Gow stands well on her limbs, but is light and shelly in body. Covert's Ghdelia is a trifle out in front, and Molly Glendyne is only of moderate merit, too long cast. In hc. division Pearsall's Lillie Ban has a nice head, but is a bit out in front. Glendyne Kennels' Sedan is weak in back and out of coat, fair color. Covert's Kildare Ruby, c., is small-sized and weak in muzzle. Puppy dogs saw Maughan's Elector the winner, he is too stilty and shelly in body; his Parnell came second and his Sport third, they are both well off for bone, but faulty in other respects; his Dan is too full and light in eye, knuckling over a little, too; Glendyne Kennels' Lismore was too small to say much about. Bitch puppies were poor. In novice class Kildare won, with Florrie second and Larry third, all mentioned in other classes. The specials were distributed as follows: Best kennel, Kildare. Best kennel owned in Canada, H. J. Maughan. The special for best dog or bitch was divided between Dick Swiveller and Ruby Glenmore. Best pup bred and owned in Canada, H. J. Maughan's Elector. Best pair of pups, under 8 months, in the show, H. J. Maughan's Parnell and Nellie D. Best Irish setter puppy, born in Canada, H. J. Maughan's Elector. Best bitch in challenge class, Kildare

Kennels' Ruby Glenmore. Best bitch, Kildare Kennels' Ruby Glenmore. Best brace owned by one exhibitor, Ruby Glenmore and Kildare. Best dog in open class, A. V. Armour's Max.

GORDON SETTERS—(MR. DAVIDSON).

Though small in number of entries, the quality was all there. In challenge dogs Dixon's Leo B. won over his Field Marshall (late Dixon), and Hammett's Rose was given a class to herself. They were looking in excellent shape. In open dogs Dixon's Ivanhoe, well known, won over Gibbs's Clyde in head. Open bitches found the winner in Mount Royal Kennels' Hilda, who has a poor expression, but promises a well made body, Flett's Bloom coming second. No puppy or novice class entries. The special for best kennel went to S. G. Dixon. Best kennel owned in Canada did not fill. Best Gordon in show, S. G. Dixon's Leo B.

FOXHOUNDS—(MR. DAVIDSON).

These classes were lacking rather in quality and good type. Gibbs's Genius won in dogs, as he excels the second winner, Nicol's Bingo, in body, bone and size, but loses in head to the latter. Bitches—A fairish stamp in Gibbs's Vanity, first, a bit out in front and plain in head. His Vexation I liked better all around, but his Nancy loses considerably in head and was shown heavy in whelp. Mr. Gibbs won the kennel prize.

SPANIELS—(MR. OLDHAM).

It was acknowledged on all sides that a better and larger show of cockers has never greeted any judge than that of the black bitches, no less than twenty-five being shown in that class, and though two or three were hardly dealt with, the judge, on the whole, was said to have placed the winners about right. In water spaniels, challenge class, the only Patsey O'Connor was the star. In the open class a rather ragged bit faced the judge, the best being Countess Bendigo. Handy Andy, second, is too thick in head and not close enough in curl. Ross's Ootwan Biddy, third, is also bad in coat; the other Biddy failed to score. In Clumber challenge class Brownie was alone; shown in whelp, she did not look as well as I have seen her. In open dogs, Darby, domy in skull and fine in muzzle, but nice in body, was the only entry, and won. Belle of Ottawa (a pretentious name enough), a bit full in brow and looks a little out in front, was also alone in her class. Field spaniel challenge class had the winner in Newton Abbot Laddie, not looking at all well, and Bridford Ruby, second, looked even more ragged in coat. The winner in open dogs turned up in Beau, who is too thick and short-headed. Samson, whom I saw at Buffalo, who was next, has gone off; he is too houndy-headed and flat-sided. Black Diamond, third, is faulty in head and is out of coat. Faust, vhc, is wavy-coated and crooked in front. Napoleon, hc., has a nice body, but is wrong in front. Black Knight, in the same division, loses in muzzle and also has the prevailing fault in these spaniels. Friday and Sweep were in the c. lot; the latter is too long-faced, but stands on good legs, the former is too short in muzzle and a little high on legs. In bitches Lady, well known, won over Miss Ben d'Or, also a familiar face, but shown too fat. Gipsy Queen, third, is a bit pinched in muzzle, but I liked her body, legs and feet. In challenge cocker dogs, any color, the well-known Brantford Red Jacket scored over Robbi, a decision some did not agree with, but in Robbi's present shape it was about right. In bitches Juno W beat the much-lauded but very much over rated Sensation, who was not in her old-time condition. Open dogs saw Black Duke the winner; he might be improved in muzzle. King of Obos' dished face spoils him somewhat, but he is getting some good stock all the same. Dono, third, is light in body, stands a little out in front and muzzle is a bit faulty. Brock, reserve, is also light in body, and Pedro, vhc., has the same fault. Bob Obo, a so vhc., drops behind shoulders and has too much stop. Rosedale Dandy, hc., stands wide in front, and Fine Fur's, c, best points are legs and feet. Then came that good class of bitches, and after weeding out the judge found himself with a good row of very typical spaniels according to the present fashion. After much pondering the red card went to Novel, who was looking her best. Idea, a good one, a little off in muzzle and boxed in front, though she is young yet and will straighten out, came next, and Bessy W., well known, followed; she is rather light in flesh at present. Rosedale Busy got the reserve; she is a bit wide in front and weak in muzzle, though a nice stamp. Nina, vhc., is faulty in muzzle and front. Floss W. also loses there, and Busy's long muzzle could get her no higher. Topsy and Woodland Sally were c.; the one is wrong in skull and the other too long faced. Any other color dogs saw Bambo placed first; he is a bit domy in skull, and not straight enough in front, and should hardly have beaten Nugget. Crosby, third, is thick skulled, stands a bit out and is light in body. Roy, hc., is bad in front and long faced, nice body and coat. King Pharoah's Sister (will some one not stop this long-winded nomenclature?) is a nice one and deserved her first in bitches over Zetta, who is too long in head. Little Red Riding Hood (there's another) is a bit fine in muzzle, though she stands well. In puppies, dogs, Bambo scored over Rosedale Rover, though this is hardly right as the latter's only very apparent fault is a light eye. Nugget was third, and Rosedale Boodles, vhc., is long faced and not straight in legs. Snob is a bit on the big side. Bitches had for the winner Idea, and rightly too, second going to Woodstock Minnie, who stands a bit high and has not filled out yet. Rosedale Belle securing third will make a field spaniel some day. Fatmia, vhc., has nice legs and feet; bit too long in face though. I forgot to mention Sunol as reserve; she is quite a nice stamp. In novice class the winners have about all been mentioned and their positions given last week. The special for best kennel went to Rosedale Kennel (J. F. Kirk), and I am glad to see him to the front again. Mr. Laidlaw won for the best kennel of cockers. Best kennel of cockers owned in Canada, Rosedale Kennels. Best field spaniel, champion Newton Abbott Laddie. Best cocker, Brantford Red Jacket. Best Clumber, Bates & Geddes's Bromine. Best Sussex, Rosedale Kennels' Beau.

COLLIES—(MR. DAVIDSON).

With Scotilla and The Squire on hand there was some quality present, but the entries as a rule were not anywhere near their class. Champion Scotilla, in ragged coat, was alone in challenge class. In open dogs The Squire stood away above the others, his fine head and expression, nicely formed body and good legs discounting his lack of coat, though there was still enough of that to beat Scotilla for the special in his present shape. Colonel Scot, second, has lost his look of quality and was closely pushed by McEwen's Bute. Rutherford's Mess, thick in skull, was given vhc, and a weedy-looking pup, Sir John, hc. Roslyn Dandy, though out of coat, showed lots more quality and was better in head than many in the class; I liked him for second place, but he was left in the cold altogether; and such a thing as Collie given a c. card. In bitches I hardly agree with McEwen & Gibson's Manilla beating Cora II. in her present shape. Manilla is a bit plain faced and very light-eyed, but has better symmetry of body than Cora, still the latter's better coat and bone should have turned the tables this time, whatever they can do when both are in A1 shape. Nancy is too big in eye and lacks expression. Duncan's Floss, vhc., faulty in ears and expression, has also a soft coat. Sanderson's Flo is a poor one. In puppies Chestnut Hill's Roslyn Trefoil is hardly developed yet, but is big in ear, not straight in forelegs and of course short of coat. Drury, a fairish one, second. Laddie, third, and Lassie, vhc., I failed to find. In novices Roslyn Trefoil, Drury and Lady Florence were placed as named; the latter was lucky. The kennel special went to Chestnut Hill Kennels, and the best kennel owned in Canada did not fill.

BULLDOGS—(MR. MASON).

Champion Harper, looking fairly well, was alone in the challenge class. The well known Carisbrook was the only entry in open dogs, and the same must be said of the bitch Dolly Tester, who was shown in poor flesh. She is a bit flat in skull and lacks depth of jowl, but is nicely broken up. R. B. Sawyer won the kennel special, though the special called for four dogs or more.

BULL-TERRIERS—(MR. MASON).

Starlight, looking well, won another challenge prize. In open dogs, owing to the sickness of Prince Bendigo, Mr. Dole had to depend on White Prince, who beat Symond's King of Hearts in head and front, the latter is a bit full in eye and lippy; Harris's Vic III. and Dickison's Gip are hardly class enough. In bitches, Frank Dole scored again, with Grove Duchess shown in bad shape; open feet is about her worst fault. Same owner's Miss Gladstone followed. She has a patch on eye, muzzle faulty before eye, stands a bit wide in front. Two well known dachshunde were shown, Lewis's Gill first in dogs and Joe Lewis's Feldman K. in bitches. The special for best kennel of bull-terriers went to Frank F. Dole, and his Starlight won the special for best in show. Gill won the medal for best dachshunde in show.

BEAGLES—(MR DAVIDSON).

A nice show of these merry little hunters turned up, thanks to the Hornell-Harmony Kennels, which captured most of the "siller." Royal Krueger, looking in fine shape, scored in challenge dogs over Little Duke, who is aging, and Una was alone in her class. In open dogs Simpkins's Witch Hazel Prince (there is another) won over Cull's Drummer. The former is faulty in legs and feet, and body is light throughout. Drummer is too long in head, a bit coarse too, has a good bound coat, legs and feet. Hornell-Harmony's Whisker's (third) most prominent defect is in carriage of stern; he is young yet and looks light in body, has a good coat. Mabac's Stormer, vhc., is a poor one and oversized. Tuckett's Sinbad, hc., is thick in skull and too wide in front. The well-known Elf, whose only fault is that she is a little pinched in muzzle, is now an inmate of Harmony Kennels, and scored easily over Lewis's June M., who is a bit long cast and out at elbow. Tuckett's Stella, third, is a bit coarse and out in front. Glenrose Kennels' Lila, vhc., is light in bone and snipy-muzzled. Maybee's Beauty, hc., is pinched in muzzle and coat too soft. A class for under 12 inches was made for the sweet-headed Ava W. The special for best kennel went to Hornell-Harmony. Best in show, Hornell-Harmony's Royal Krueger. National Beagle Club's special for members only, for best beagle in show, Royal Krueger.

FOX-TERRIERS—(MR. MASON).

Though none of what we may term the principal kennels were represented, with the exception of the Oriole of Ohio, the large entry and the good show of quality proved that Canada and some of the smaller owners will soon give the cracks a close push. The time is past when one kennel can monopolize the prizes, for if one may not be able to buy the best, if he gets the right blood, he may have the luck to breed a clinker; the race is not always to the swift. In challenge class old Bacchanal (Oriole Kennels) was alone, and looked fairly well. Thirteen showed up in the open, the prize going to the well-known Oriole Kennels' Blemton Rubicon, looking as fit as a fiddle, he was followed by Blemton Tru up, also an oft time winner at our shows, third going to Dole's new dog Starden's Jack, whose good body, legs, feet and coat are offset by a somewhat plain head, too straight in stop; Oriole Trap was reserve, his feet might be better, and is somewhat bitch-faced; Thomson's Zig-Zag weak in muzzle and cheeks, and his Pickle soft in coat, a bit light in body and not close enough in feet, were the vhc division; hc., Oriole Kennels Richmond Crack is a bit cloddy, throaty, too straight in face, and stands a bit wide; Wilson's Rant, c., loses in muzzle and front. Open bitches brought out the English winner Wheeler and Davey's Eva Nettle, a trifle weak in muzzle, feet not compact enough, and is now a bit soft in coat and condition, owing to maternal duties; she won somewhat easily from Oriole Kennels' Blemton Vice, who is light in bone and faulty in feet; I preferred Macpherson's Speck, third, though she's a bit too prominent in brow, and coat could be better; the same owner's Ebor Speedy headed the vhc. lot, she is faulty in neck and skull; Miss Morris's Belle is too fine in muzzle; Douglas's Mischief is round in skull and soft in coat; Oriole Belle is light in bone and body, and not right texture of coat; hc., Steward's Brooklyn Vernon is big in ear, has open feet, but is otherwise fair. Wilson's Spot is too long cast and a bit coarse in ear. The c division had Saunders's Rose, Prescott's Dot and Judy, neither of them very bad, but too faulty in legs, feet and head to get any higher up. Blemton Brilliant not mentioned. The number of cards will show the quality of the class for a provincial show. In puppies Pickle took first, followed by Hendrie's Charity, too round in skull. Punch, vhc., mentioned before. Dot here gained a vhc. card. In novices the class was divided; Wilson's Moody scored, quite a nice puppy, with Punch a good second. Mitchener Scallops, third, is a bit big and coarse in head, good legs and feet. Bickle's Clip, reserve, is too short in muzzle. In the bitch class Blemton Vice won over Speck; third not marked, vhc. going to Judy; Dot and Oriole Belle, all mentioned in other classes. In Wires Hendrie's Eskdale Broom, with a nice promising head and good expression and coat, scored over his Wentworth Wonder, a little too short-headed and faulty in feet. Macpherson's Adswood Jim II. is too straight-faced and faulty in front; his Patch, vhc, is too thick in skull and stands too wide in front. Novices saw Macpherson's Stanley returned the winner, with Hendrie's Wirey second, short-faced and badly carried ears; his Twig, third, needs a little touching up to show off his head and neck. Altogether this was one of the best shows of wires we have yet had. The special for best kennel went to Oriole Kennels. Best kennel owned in Canada, F. W. Wilson. Best fox-terrier, Oriole Kennels' Blemton Volunteer won over Eva Nettle by the aid of his better condition, legs and feet, though beaten in skull and ears.

IRISH TERRIERS—(MR. MASON).

The new dog, Symond's Breda Bill, was to the front in open dogs, the class being divided. He is not good in front, knuckling over, and is bowed in forelegs, feet too large and spreading, head a bit short, coat and body good. Evictor is better in legs, feet and head than the winner, but loses in other points. Old Burnside, of the Lewis and Jarrett combination, had, much to his surprise, to go without his accustomed challenge blue ribbon and to content himself with third this time. You must place him better than this in the future, Mr. Jarrett. Special for best in show went to Chestnut Hill Kennels' Breda Fancy over Breda Bill, who loses in forelegs, feet and head to the bitch. Prizes withheld in Scotch terrier classes.

DANDIE DINMONTS—(MR. MASON).

Butterfield's Mena, too straight in front, better in length and coat than Daniels's Fan, who is better in type and forelegs. Butterfield Goyon, third, is poor, in fact the whole class was.

BEDLINGTON TERRIERS—(MR. MASON).

Baldwin's Pica, not a good one, but as a youngster shows more type than Watson's Sentinel, won in open dogs over the other, and in open bitches Watson's Zulu, better in size, topknot, coat and bone than Morris's Jerry, won.

SKYE TERRIERS—(MR. MASON).

Outside of Sir Stafford, who is well known, the others were hardly worth mentioning. Harrison's Donald, second, is ragged in coat but has good length of body, though shelly. Wells's Prince II. third, is small, and Heenly's Rigg, hc., is short-faced and inclined to be woolly in coat.

BLACK AND TAN TERRIERS—(MR. MASON).

There was quite a gathering of these smart little dogs, and I am glad to see the increased interest the judging of these classes created. Smith's Buffalo General had things to himself in challenge dogs; he was looking well, too. Open dogs saw the competition lay between Campbell's Kaiser and Dr. Foote's new dog, The Senator (late Broomfield Como). The former wins in head, front and condition, The Senator having a little the best in markings, but loses again in bone, the result being as I have written them down. Rochelle Scot, third, has a fineish head, but is leggy and could be better in body without upsetting anything. Campbell's Donovan is a bit round in skull and a trifle out at elbows; shown in nice shape. Watson's Jack is big and coarse. In bitches we were introduced to Dr. Foote's Broomfield Madge, but cannot say I was much impressed, considering her English reputation. She won, but she is faulty in skull and very snipy muzzled, throaty, loaded in shoulders, thick and short-necked and wide in chest; body I cannot speak of, as she is in whelp; color of tan good, but legs and feet could be improved. It is a pity such an enthusiast as Dr. Foote cannot spare the time to go over the water and get just the right thing for himself. Campbell's Desdemona, barring her pinched muzzle, I like better than the winner, take her all round as she stands to day. Rochelle Madge, third, is improving. Dickison's Jenny, vhc., is faulty in legs and markings and a bit snipy muzzled. The kennel special, owing to the absence of Dr. Foote's Dick, did not fill, and that for best in show was won by Campbell's Kaiser.

YORKSHIRE TERRIERS—(MR. MASON).

With Toons Royal looking better than I have ever seen him, Fishpool Gem had to be content with another second; Royal has a wonderful coat just now. Campbell's Petro, third, Toby, vhc., and Pinch, hc., were not in the same class with the winners, and the same may be said of the bitch class, for with Symond's Daisy and Venus placed in the order named, the former winning in color and coat, the others were plainly outclassed. Best kennel, C. S. Symond.

PUGS—(MR. MASON).

Bob Ivy was alone in challenge dogs, and Bessie held undivided sway in her class. Open dogs saw Cryer's Climax an easy winner, though not good in markings, too dark, and ears could be improved, still he showed more quality than Chequasset Tzar or Kizer, both too large and fat. Dr. Cryer's black-headed Cassina had an easy win in bitches, second being withheld, and third going to a poor one in Reed's Sissy. The special for best kennel went to Dr. Cryer. Best pug in show, Dr. Cryer's Bessie.

TOY SPANIELS—(MR. MASON).

Some nice spaniels were shown, Toronto Charlie, scoring again, being alone in the dog class. In bitches Forshaw's Ruby wins in skull and coat. Topsy, second, has also a nice head and good markings. These were the only entries.

The miscellaneous class, judged by Mr. Mason, was divided by weight and then by sex. In over 30lbs. Purbeck's Dexter, a finely corded poodle, had no difficulty in winning, followed by his other poodle Nell, third going to a pretty fair Dalmatian, not clear enough in spots. In dogs under 30lbs. the schipperke Othello got the card and the poodle Kava II. was given second over a fairish toy terrier, Boozer, a rough terrier, hc. In the bitch class Jos. Lewis's Italian greyhound Sprite rightly won over the poodle Cora, followed by another toy, Miller's Daisy Diehl, third, and a toy poodle, Frost by name, was given hc. Mr. A. W. Purbeck won the special for the best kennel of poodles.

NOTES.

On Friday evening the following testimonial was addressed to the superintendent Toronto show, Mr. C. A. Stone. Mr. Powers read it to the assembled doggy men in the committee room, and in answer Mr. Stone expressed his thanks in a neat speech, which was received with three times three.

"To Mr. C. A. Stone, Supt. Toronto Bench Show:

"DEAR SIR—The undersigned having been present at the Toronto bench show during the past week, as exhibitors and visitors, and noting your unflagging intent in everything pertaining to the welfare of the dogs, their owners and the general public, your pleasant and courteous treatment and manner under trying circumstances, we take the opportunity to thank you for your uniform kindness, and trust you may occupy your present position for another term, that we may have the opportunity to similarly express our highest appreciation of your valued services. Signed—W. N. Powers, J. B. Lewis, Carl Heimerle, W. B. Harrison, G. Smith, C. S. Wixom, A. Teshavs, B. F. Lewis, John Ridge, Geo. H. Covert, Herbert E. Nichols, Arthur Wilgrew, F. W. Wilson, G. T. Bickle, W. Morris, Geo. H. Thomas, C. C. Bennett, Frank F. Dole, Henry Jarrett, H. W. Lacy, W. F. Peck."

To prove the interest the general public took in the dog show part of the fair at Toronto we give the amount taken in during the five days of the show, which was kindly furnished us at the treasurer's office: Monday (half day), $883.30; Tuesday, $662.60; Wednesday, $1,006.90; Thursday, $797.30; Friday about $500, making a total of $3,350.10, thus admitting 33,501 people.

This is a substantial proof indeed that this is a dog show town, and will go far to induce the fair people to open their purse strings very wide next year.

We cannot quite understand the rule at Toronto show that if dogs were entered in the novice and open classes the novice was to be judged first. This leads to confusion and serves no good end that we can see. Then the Canadian Kennel Club at their meeting during the show, an account of which will be found in this issue, adopted a rule that when no challenge class is provided dogs eligible for that class must not compete in the open as is usual. This still further handicaps the already much-abused challenge dogs. There is little inducement except honor to gain that much-sought-after title. To our minds the best dogs are entitled to the spoils. It is all right and proper to encourage the showing of new dogs, but still we all want the dogs whose merit should be standard to breed by.

It is always a pleasant duty to speak of the courtesy and kindness of railroad officials, because of the very few who are entitled to it. The boys at Toronto were loud in praise of Mr. W. Robertson, General Passenger Agent of the Grand Trunk, at Detroit, who passed the dogs, over 60 in number, that had been at that show, and delivered them at the Toronto grounds free. Exhibitors will bear this in mind in future and favor this line again.

An interesting feature of the fair was the trotting dogs to sulky, a black and tan setter being particularly good, going round the track in great shape, with hardly a break. It was quite funny to see how the drivers pulled the dogs down to a trot after getting in the air, as it were. The noted Irish setter trotter Doc did not put in an appearance, as his terms are in proportion to his acknowledged ability.

One of the jokes of the show was the ride of several doggy men in the Deadwood coach in the Wild West show at the fair. Those who were fortunate enough to see the fun said J. H. Naylor, the Scotch terrier man, "died hard," giving the Indians who looked into the window the full benefit of the red light.

Several dogs were sold at the show at Toronto, but the sales were kept very quiet, on account of the customary bondid nuisance. H. W. L.

ADDITIONAL AWARDS.

FOX-TERRIERS—WIRE-HAIRED.—1st, Eskdale Broom; 2d, Wentworth Wonder; 3d, Adswood Jim II. Very high com., Patch. —NOVICE—1st, Stanley; 2d, Wentworth Wirey; 3d, Wentworth Twig. *Puppies:* 1st, Stanley; 2d, Wentworth Wasp; 3d, Baby.

IRISH TERRIERS.—*Dogs:* 1st, Breda Bill; 2d, Evictor; 3d, Burnside *Bitches:* 1st, Breda Tiney.

SCOTCH TERRIERS.—Prizes withheld.

DANDIE DINMONT TERRIERS.—1st, Mena; 2d, Fan; 3d, Goyon.

BEDLINGTON TERRIERS.—*Dogs:* 1st, Pica; 2d, Sentinel. *Bitches:* 1st, Zulu; 2d, Jersey.

SKYE TERRIERS.—1st, Sir Stafford; 2d, Donald; 3d, Prince. High com., Ittig.

YORKSHIRE TERRIERS.—*Dogs:* 1st, Toons Royal; 2d, Fishpool Gem; 3d, Petro. Very high com., Toby. High com., Pinch. *Bitches:* 1st, Daisy; 2d, Venus; 3d, Daisy (Campbell's). High com., Dolly and Tiney.

PUGS.—CHALLENGE—*Dogs:* 1st, Bob Ivy. *Bitches:* 1st, Bessie.—OPEN—*Dogs:* 1st, Climax; 2d, Chequasset Czar; 3d, Tizer. *Bitches:* 1st, Cassina; 3d, Sissy.

MISCELLANEOUS.—LARGE—1st, Dexter; 2d, Nell; 3d, Spot.—SMALL—*Dogs:* 1st, O hello; 2d, Vava II.; 3d, Tiny. High com., Boozer and Frost. *Bitches:* 1st, Sprite; 2d, Cora; 3d, Dasiy Diehl.

DOGS OF THE DAY.

A CORRESPONDENT of a contemporary in extending an invitation to Mr. Geo. R. Krehl to visit America next spring promises that I will show him all the cock fights he wants. I am not thinskinned by any means, but this is dropping me a bit lower than I care to go. I have never been to but one small affair, and then solely as a matter of business. That was several years ago. The homeward journey was taken in company with a gentleman in blue uniform. The judge, after doling out ten days or $10 to a score of the "attached," called upon my brother scribe and myself to tell what brought us there, which done, he decided, much to the disgust of the halffine minion of the S. P. C. A., that we were exempt. As a wind-up he called us into his private room, whence we adjourned to drink his good health in a small bottle. No, Messrs. "Espan," I am not in that line of business; but I suppose the idea arose from my stating about a year ago that the S. P. C. A. was a humbug in many respects, and that dog fights and cock fights could be located without trouble in New York if the society agents did their business.

It would be a treat to have Mr. Krehl come here if only to read his story of the journey. His trip to Norway, now running in the *Stock-Keeper*, is one of his happiest efforts. Get it, my friends, and see if you don't agree with me. A good many have tried to poison me against him, but I know George Krehl, and it is labor lost to try to set me against one of the best fellows that ever lived, a gentleman in every thought, word and deed. Ask Ashmont, ask Frank Dole about him, and hear what they say of the man I am proud to say is my friend.

Archduke, the winning St. Bernard at Wilmington, is likely to shine as a sire if his only litter is taken as a criterion. I have seen two dogs and a bitch by him, all remarkably good for their age. One dog is, I think, the biggest in bone and largest in skull of any puppy I have seen. The dog ought to get good-headed ones, for he is by a son of Hermit (litter brother to Otho) out of a bitch by Otho.

Mr. Frank Smyth of Germantown has recently sold the following St. Bernards: To Mr. Mortimer of Pottsville, a bitch by Bonivard Jr., dam Madame Barry; to Mr. J. H. Byrne, Carbondale, Pa., a bitch by Marquis of Stafford (by champion Sayo), dam Lovedine; to Mrs. Quigley, Newport, Del., a dog by Neumond, dam Cassandra II.

Mr. Wm. H. Child, of this city, ex president of the A. K. C., has been under the doctor's care for some time, but I learn he is about again in much improved health.

A special "whip" has been issued for the A. K. C. meeting of this week, and I hope there will be a large attendance and that matters be discussed. The reader will please lay emphasis on discussed. Look at the reports of recent A. K. C. meetings and it will be seen that it is only occasionally any other name than Mr. Anthony, Mr. Belmont and my own appears. I do not know how Mr. Anthony feels about it, but this is my case. I see a dozen men in the room, each with a vote and each as silent as a juryman listening to the arguments of counsel. I accept it that some may be with my views, others opposed, with the balance open to conviction. Sometimes after occupying the time of the club for half an hour in discussing back and forth with Mr. Anthony a proposition before the meeting, I have been beaten voteless. At other times the result has been the other way. Now I have no desire to take up time in that way, nor waste energy in such a hopeless case, and I take it that neither does Mr. Anthony, and when we oppose each other, either will stop when he sees a one-sided vote for the opposition. As long, however, as delegates will continue to sit on their chairs "like knots on a log," just so long will there be a waste of time.

An important engagement which I cannot cancel will prevent my being present at the meeting, but in order to have the Spaniel Club represented I have resigned my position as to delegate. I won't blame any one for saying, "Thank goodness that long-winded fellow won't tire us out this time." To which I can only say, that I was elected a delegate with the full knowledge that I was not a clam, but a kicker from Kickersville.

Exhibitors in this district will have received a premium list of a South Jersey Kennel Club show, to be held at Woodbury, N. J., on Friday and Saturday of this week. What I want to say is that shows of this kind are wanted everywhere. They are educational and pave the way for the development of fanciers. Mr. Fred Kirby started the idea about two months ago, got a few others interested enough to get together and form a club, hire a building and announce the show. The classification is graded so as to bring together the various breeds without splitting them up too much, and $5 and a medal are the prizes offered for first and second. There is room for many a hundred of such educational shows as this two days' affair at Woodbury.

If dog men want a treat in the way of dog pictures by all means let them get "Teufel the Terrier," published by the *Pall Mall Gazette*, London. A friend has just sent it to me from the other side and I have not had the time to do more than look through it at the illustrations, but if the letter press is in anything like keeping with them every dog man in the country should have it, while even if it is not the pictures for the scrap book are worth the shilling over and over again.

Mr. E. W. Abbott, of Concord Junction, Mass., says that his mastiff Presto (what a name for a mastiff—change it) measures 33⅝in. under the standard, and weighs 191lbs. He is willing to wager $100 that no mastiff ever appeared on exhibition that was of equal height or as large as his dog. Mr. Abbott further claims that the editor of the American *Stock Keeper* took the measurement of the dog, and as his letter is published in that journal, it is a verification of the measurement. Such being the case, I don't think any one will dispute his being the tallest mastiff ever shown on this side of the Atlantic. As for our friends across the water they give stud "ad." measurements.

I said last week that I doubted the correctness of the announcement that Mr. Crowell was bringing the St. Bernard Donna Silva. I have just learned from the Swiss Mountain Kennel, of Germantown, that a letter has been received from the gentleman who is making some purchases in England for the kennel, and under date of Sept. 10 he wrote that he was just starting for London to complete the purchase of Donna Silver and attend to shipping her in company with Dart on the steamship Montana, which left London on the 12th. This certainly looks as if the Swiss Mountain Kennel would have Donna Silva, who from all accounts is a very good one indeed. She was bred on Aug. 20 to Scout. Mr. Gosling's dog, which won first and cup at the Kennel Club show, first and cup at Brighton, first and cup at Brussels, second and cup at St. Bernard Club show, a record which stamps him as a dog of the best class. Dart as I stated last week was bred to Lord Bute.

Both bitches, by the way, are by Duke of Wellington, a dog that has always been pedigreed as by Barry, owned by Mr. Sidney Smith. All I can say is that Formosa when she won at Leeds must have had a long look at Bonivard, for Duke of Wellington is simply Bonivard over again—of a larger size. When I saw him in England in '84 I liked him so well that I cabled Mr. Rodney Benson to let me bring him over for him, but getting no reply I could not bring him. Mr. Benson says he always regretted not having got him. When I said to Mr. Smith at the St. Bernard show, "He is by Bonivard," he said, "I would say so myself if I did not know that Formosa was bred to Barry." But I only shook my head and said, "Barry never got one like that."

I see by the *Stock-Keeper* that there was a rumor at the Cardiff show that Mr. Chapman had refused £3.000 for the St. Bernard Princess Florence. If such is the case, what chance is there for Americans to buy world-beating St. Bernards?

Mr. A. H. Megson, after offering £60 to Mr. T. H. Stretch for the young collie Ormskirk Leofric, without tempting the latter to sell, at the Birkenhead show, has finally secured the dog for an even £100. He is a son of Christopher.

What a touching little story that was about the three-year-old child that strayed away from Hudson, N. Y., and was not found until the fourth day with no companion but the dog. His weight in gold ought not to tempt the parents of the little boy to part with the dog, for it undoubtedly saved the child's life. In such inclement weather as we had at that time it was the warmth of the dog that saved the child's life. And on the approach of the searchers the faithful dog protected him against what he thought was the intention of strangers to do the child harm.

A Santa Cruz, Cal., paper tells of a couple of terriers that found a rattlesnake, and during the fight that ensued the bitch was bitten by the snake, which, as soon as she had killed the snake, made for a bunch of snakeweed and ate freely of it, and then to a muddy pool into which she jumped and rolled herself until she was completely covered with mud. The next morning she was all right. I suppose the story is correct, because the name of the owner, Mr. J. F. Coope, Ben Lomand Vineyard, is given.

Mr. L. A. W. Smith, of Buffalo, gets in a fair hit at Dr. Foote when he says that Meersbrook Maiden, the one with the white spot, was making a clean sweep under certain judges, and Doctor was finding no fault with the black and tan judges, nor was he at all anxious to form the club for reform judging which he particularly wishes to do since the Detroit show.

Mr. E. H. Morris published a letter in the contempory: "In the spaniel world all is serene, and if in the future there is less of the happy family tendency of the officeholders, so much the better." What does he mean? Does he want the executive committee to be fighting between themselves, or what? Does he seek to imply that the officeholders elected themselves? If so, he is very wide of the mark. At least two of the present committee stated their desire not to serve again, but at the annual meeting of the club, which was the largest attended of members of any annual meeting yet held, their desire was completely overlooked, and the election, if my memory serves me, was practically unanimous. Mr. Morris's views on some subjects are very like those of Mr. Millay. Mr. Millay wants judges who never make a mistake; he wants dog show reporters to never earn their criticism, and he means by these wishes that he, Mr. Millay and his particular friends, must be judges, and that only the reports in his papers can be strictly correct and devoid of prejudice. Mr. Morris practically means the same thing, and that he should be both interested in the ring and writing manifold reports for all the papers.

Only a line from Frank Dole, but lots of news in it. "Have bought all of Sawyer's bulldogs." As I believe Mr. Sawyer had his dogs at the New Haven Kennels for some time, this is simply a change in ownership. Harper is, of course, the premier of the kennel, and he is a hard one to beat beyond a question. Then there are quite a good lot of bitches, but they are hard things to rear even after you have got a litter.

A few days ago I saw as pretty a litter of spaniels, by Jersey, as I have ever set eyes on. Mr. Willey told me six months ago that Jersey was the best sire he had ever had, and I don't doubt it after seeing the lot I speak of. J. W.

SPANIEL IMPORTATION.—Newark, N. J., Sept. 19.—*Editor Forest and Stream:* I have just received, per S. S. Spain, the black field spaniel Beverley Negus, purchased from Alfred Wild, of Bury, England. Although over two weeks on the water he arrived in fine condition, and I am well pleased with him. I expect soon to breed him to my two bitches, Lady and Miss Ben D'Or, and will also place him in the stud. His winnings are: First Chester, Birkenhead, Liverpool and Darlington. Second Bangor, Edinburgh and Manchester.—ROWLAND P. KEASBEY.

DOGS EATING DIRT.—Somerville, N. J., Sept. 15.—*Editor Forest and Stream:* Can you give me the cause and explain the reason why my Irish setter dog will eat dirt? He will scratch the sod back and eat two or three mouthfuls at a time. Please give me a remedy for this, and oblige.—J. V. H. [Dogs, as well as horses and other animals, often eat dirt. Probably this is nature's remedy for some ailment or derangement of the system that is not understood.]

AMERICAN COURSING CLUB.—Headquarters American Coursing Club, Great Bend, Kans., Sept. 16. Notice is hereby given that there will be a meeting of the club, held at these headquarters on the evening of Oct. 20, 1890, for the purpose of nominating and balloting for membership, as prescribed by the by-laws. All applications should be presented to the secretary as soon as possible.—IRA D. BROUGHER, Sec'y.

DOG TALK FROM ENGLAND.

MR. GOSLING'S grand St. Bernard brood bitch champion La Mascotte, dam of champion Plevna, Pleiad, Onyx and other good ones, died this week of internal hemorrhage.

Mr. J. F. Smith's well known puppy Troubadour contracted distemper at Gloucester show and died in two days.

At the time of Hesper's sale to America his get had not made much mark, but it is quite a different thing this year. Andromeda is without question one of the best bitches in England. Donnybrook Fair, a 10 months puppy out of Winnie, promises to make a "clinker." Lady Livingston you have seen already, and I have several young ones that promise to rival the best, among them a bitch with a very similar head to her sire and with bone nearly if not quite as heavy, the property of Mr. Evans, Hesper's former owner.

We have some Japanese pugs in the States that we think are about right, but what would their owners think of one three years old, perfect in formation and only 3lbs. weight. Mr. Fellows has just returned from Japan with one of that weight and size.

I have told the readers of FOREST AND STREAM of Scottish Prince, of a brother of Sir Bedivere, of Donnybrook Fair and a few other good ones coming up. But I hear Mr. J. F. Smith has one by Lord Bute that will rub Scottish Prince very closely, and many that have seen him expect to see him beat Sir Bedivere in the near future.

While speaking of the coming dogs I think Mr. Evans's puppy by champion Guide out of Sans Peur is well worth mentioning. He is 7 months old and weighs 120lbs. He has a bit too much length of ear, but his body and limbs are grandly proportioned. His muscular development reminds one very much of Watch when at his best.

In addition to the string before mentioned I am taking out Mr. Gosling's St. Bernard dog Republican, a promising 18-months. NAMQUOIT.

PEDIGREE OF DU VERNAT'S LION.

Editor Forest and Stream:

For a year or two I have been on the chase of the tangled up pedigree of the above dog. It is stated "Lion was sired by Captain out of Psyche; out of Gwendoline by Cardinal Wolsey; out of Juno by Colonel; out of Linden I. by Granby; out of Duchess by Turk; out of Venus by Farrier." A student of mastiff pedigrees is immediately snagged by the fact that Psyche was out of a Juno by Nichols's Captain, that "Linda" (Linden I.) was bred to Granby and that she was by Fabius (Farrier), and that Gwendoline was bred several times to Cardinal, the result being that one feels convinced that the pedigree is an honest one, wretchedly bungled in setting down. This has been the view I held from the first, and Mr. Wynn was so impressed with the same view that he thought the pedigree could be easily traced. However, after blundering round for a long time, I was, by the kindness of Wm. Robinson, Esq., brought in touch with a prominent mastiff man of Liverpool (the city the dog was said to be exported from), who by odd good fortune met the breeder of Lion and obtained the startling information that the pedigree was a complete fraud, that the dog had no pedigree whatever beyond the names of sire and dam, and that this breeder so stated to the party who brought the dog over to Mr. Du Vernat, who replied that it didn't matter, he could soon make up one! There seems to have been some further crookedness about this pedigree, and on this side of the water, as a gentleman owning mastiffs with Lion's blood told me that he had been informed that the dog was exported by a party named so and so, the agent of the Cunard Line in Birmingham, England. This opened up a new phase of the question, and I investigated as to this Mr. So and So in Birmingham. A prominent mastiff man in that city writes me that he can find no trace whatever of there ever having been any such Mr. So and So in Birmingham, and the agent of the Cunard Line adds that they never had an agent in Birmingham with such a name. I have hesitated about exposing this fraud until every crack and cranny was explored, that there might be no possibility of mistake; and now the chain is complete, as the gentleman to whom Mr. Robinson referred me has a character beyond question and is exceedingly careful and painstaking. W. WADE.

HULTON, Pa., Sept. 20.

THE BEAGLE FIELD TRIALS.

BOSTON, Mass., Sept. 15.—*Editor Forest and Stream:* For the benefit of those who have not as yet received copies of our constitution and by-laws, also our running rules (some 300 of which have already been sent to different parties in the United States, Canada, and England), I will say that there will be a regular meeting of the National Beagle Club on Oct. 3, 1890, at which time the numerous applications for membership already received will be considered, as well as any new applications which may be received on or before that date. Parties who are intending to enter their dogs in our trials and those who have already entered, but who are not as yet members, will find it to their advantage to join this organization at the October meeting, as it will give them free admission to over $100 worth of special prizes for which they could not otherwise compete. As compared with the benefits to be derived therefrom, the cost of joining us is ridiculously small—only $3 admission fee and $2 per year, dues payable semi-annually. All present indications point to a most successful and satisfactory trial. We have secured the services of two thoroughly competent and trustworthy judges in Messrs. H. W. Lacy of New York, and Joe Lewis of Cannonsburg, Pa. Both are men who know a beagle's field work perfectly, and who are able and willing to keep the dogs within sight and hearing from beginning to end, thus having the dogs under judgment all the time. Again in offering our prizes, we have tried to be as liberal as possible to all, and yet not promise that which we could not fulfill. Arrangements have been made with the proprietor of the hotel at Hyannis, and during our trials special rates will prevail to our patrons which will satisfy all, especially as the house is not far from the grounds. Competent attendants will be on hand and dogs will be benched during the trials in clean, commodious and comfortable quarters. It would be well for those who are unable to attend the trials in person to have their dogs in the hands of some competent and trustworthy handler at least a fortnight before the trials occur. As fast as new specials are added to our list they will be published and it is confidently expected that by Oct. 10, the date of closing of entries, we shall have some $200 worth. Application and entry blanks, constitution and running rules can be had of the secretary.

F. W. CHAPMAN, Sec'y and Treas.

364 WASHINGTON ST., Boston, Mass.

LOSS OF SCENTING POWER.—Camden, N. J., Sept. 19.—*Editor Forest and Stream:* I have an imported collie dog that has apparently lost his scent through distemper. Do you know of any remedy or of a similar case?—M. H. YORK. [Such cases are not uncommon. The dog will probably improve in this respect and perhaps entirely recover.]

THE MANITOBA FIELD TRIALS.

THE annual field trials of the Manitoba Field Trials Club were run at Morris, Sept. 9, 10 and 11. There were two stakes, the Derby and the All-Aged stakes, with twelve starters for each stake. The trials were run under the rules of the Eastern Field Trials Club—the "spotting system"—the result being highly satisfactory. The judges were Mr. S. Beckett and Rev. W. H. Spence, of Grand Fork. Following is a list of the starters:

DERBY.

BUNTY (T. A. Montgomery), liver and white pointer bitch (Ightfield Dick—Polly Peachem).

CORA (W. F. Ellis), lemon and white English setter bitch (Bruce M.—Fowler).

FROST III. (T. A. Montgomery), black, white and tan English setter bitch (Van R.—Qu'Appelle Belle).

MANITOBA FRISK (Thos. Johnson), black and white English setter dog (Dick Bondhu—Western Belle).

NOVELIST (F. Dorsey), black, white and tan English setter bitch (Woodhill Bruce—Novelty).

POWDER (A. Halloway), black, white and tan English setter dog (Van R.—Qu'Appelle Belle).

POYNTZ (J. Wootton), liver and white pointer bitch (Bob —Fraulein).

PRAIRIE A. (E. D. Adams), orange and white English setter bitch (Prairie—Jannie).

PRINCE NOBLE (D. Smith), black and white English setter dog (Prairie—Fannie M.).

RUSH (J. H. Brown), black and white English setter dog (Cable—Dell).

UPTON (J. Johnson), liver and white pointer dog (Ightfield Dick—Polly Peachem).

VESTA (C. W. Young), black and white English setter bitch (Cable—Dell).

The winners were: First, Manitoba Frisk; second, Novelist; third, Prairie A.

ALL-AGED STAKE.

BOB (J. Baird), liver and white pointer dog.

DASH B. (W. H. Hogg), orange and white English setter dog.

FANNIE (E. D. Adams), lemon and white English setter bitch.

JENNY DEANS (H. Galt), white and lemon English setter bitch.

MAC (E. D. Adams), liver and white pointer dog.

MANITOBA BELLE (Thos. Johnson), orange and white English setter bitch.

NOVELIST (F. Dorsey), white, black and tan English setter bitch.

PRAIRIE (D. Smith), orange and white English setter dog.

PRINCE (D. Hope), black and tan Gordon setter dog.

PRINCE NOBLE (D. Smith), black, white and tan English setter dog.

ROYAL (H. M. McCulloch), liver and white pointer dog.

TOM JOHNSON (M. Putnam), orange and white English setter dog.

The winners were: First, Manitoba Belle; second, Prairie, third, Prince.

OTTAWA SHOW.

[*Special to Forest and Stream.*]

OTTAWA, Ont., Sept. 23.—The Ottawa show opened on Tuesday with an entry of 230 dogs. The good and the bad are about equal. Spaniels are especially strong, with twenty Clumbers alone. H. W. Lacy judged all classes, and got to work by 2 P. M. Many dogs arrived late.

Tuesday's awards are:

MASTIFFS.—1st, Connelly's Wyoming Count; 2d, Lord Caution.

ST. BERNARDS.—*Dogs:* 1st, Benmore; others withheld. *Bitches:* 1st, Berim; 2d, Mona. *Puppies:* 1st, Lord Caution.

ENGLISH SETTERS.—*Dogs:* 1st, Royal Kent; 2d, Kent II.; 3d, Grouse. Very high com., Polo. *Bitches:* 1st, Zona III.; 2d, Flo II.; 3d, Nellie Dale.

IRISH SETTERS.—*Dogs:* 1st, Jack Malone; 2d, O'Donovan Rossa; 2d, St. Lawrence. *Bitches:* 1st, Lillie Ban; 2d, Jeannette; 3d, Belle Ida. Reserve, Elpeda. Very high com., Ledan and Molly Gendyne.

GORDON SETTERS.—*Dogs:* 1st, Domo. *Bitches:* 1st, Hilda.

POINTERS.—*Bitches:* 1st, Devon Nell; 2d, Ada.

GREYHOUNDS.—CHALLENGE—1st, Harmony.—OPEN—*Dogs:* 1st, Hazelhurst; 2d, Elcho; 3d, Sir Launcelot. Very high com., Justinian. *Bitches:* 1st, Hallowe'en; 2d, Fannie M.; 3d, Betsy. Very high com., Galatea. *Puppies:* 1st, Sir Launcelot; 2d, Galatea.

FOXHOUNDS.—1st, Dan T.; 2d, Jack. Com., Brandy, Ranger and Mungo.

DEERHOUNDS.—1st, Robin.

BEAGLES.—CHALLENGE—*Dogs:* 1st, Royal Krueger. *Bitches:* 1st, Una.—OPEN—*Dogs:* 1st, Whisker. *Bitches:* 1st, Elf; 2d, Doll.—UNDER 12IN.—1st, Ava W.

IRISH WATER SPANIELS.—1st, Sport; 2d withheld; 3d, Dick.

CLUMBER SPANIELS.—CHALLENGE—1st, Boss III.; 2d, Bromine.—OPEN—*Dogs:* 1st, Shell; 2d, Rake; 3d, Fop. Reserve, Johnny, Jr. Very high com., Lagrippe. High com., Darby. *Bitches:* 1st, Lucy II.; 2d, Joan II.; 3d, Vic. Very high com., Belle of Ottawa. *Puppies:* 1st, Darby; 2d, Belle of Ottawa. Reserve, Lagrippe. Very high com., Rake.

FIELD SPANIELS.—*Dogs:* 1st, Samson; 2d, Prince; 3d, Napoleon. Very high com., Trot. *Bitches:* 1st, Topsy; 2d, Fanny.

COCKER SPANIELS.—CHALLENGE—1st, Doc; 2d, Rabbi.—OPEN—*Dogs:* 1st, King of Obos; 2d, Bob Obo; 3d, Brock. *Bitches:* 1st, Ida; 2d, Dot Smirle; 3d, Dutchy. Reserve Minnie. Very high com., Rideau Rollie and Trumps.—OTHER THAN BLACK—*Dogs:* 1st, Rufus; 2d, Brush; 3d, Jeremy. High com., Bambo. *Bitches:* 1st, Blushing Rose; 2d, Blondie G. *Puppies:* 1st, Bounce; 2d, Blushing Rose. Very high com., Bambo.—NOVICE—*Dogs:* 1st, Lagrippe; 2d, Johnny, Jr.; 3d, Rideau Rollie. *Bitches:* 1st, Ida; 2d, Rideau Flossie; 3d, Joan II. Reserve, Cleo. Very high com., Blushing Rose and Minnie. Com., Colonel and Rip. *Bitches:* 1st, Manilla; 2d, Floss; 3d, Flora. *Puppies:* 1st, Reality; 2d, Norman. Very high com., Nellie Bly.

BULLDOGS.—3d, Nettle.

BULL-TERRIERS.—1st, King of Hearts; 2d, Count Dick.

CANADIAN KENNEL CLUB MEETING.

THE annual meeting of the Canadian Kennel Club was held on the evening of Sept. 17, in the superintendent's office in the bench show building at Toronto, Ont. Dr. J. Wesley Mills, of Montreal, one of the vice-presidents, occupied the chair. The members present were Messrs. A. Geddes, Ottawa; John Davidson, Monroe, Mich.; S. F. Glass, London; H. B. Donovan, Toronto; P. G. Keyes, Ottawa; H. P. Harrison, Toronto; Geo. C. Taylor, Toronto; G. J. Mitchener, Toronto; and secretary C. A. Stone.

Mr. Glass presented the treasurer's report, showing receipts amounting to $174.75, and a balance on hand of $95.17. The club is now in a prosperous condition, and the number of dogs now registered reaches over 1,700, though the registration fee has been doubled.

The working amendments to the rules made by the executive committee since the last meeting were indorsed by the club.

Mr. Geddes proposed an amendment to the rules to the effect that no dog qualified for the challenge class shall be allowed to compete in the open class, where no challenge class is provided. The resolution was seconded by Mr. Keyes and adopted.

On motion of Mr. Glass it was decided that the list of gentlemen recommended as judges should be decided by the annual meeting, and that the list be selected by ballot.

The *Kennel Gazette* of Toronto was decided on as the official organ of the club.

In future a mail vote of the executive committee can be taken when members at a distance cannot attend the place of meeting.

Officers were elected as follows: Honorary president, Richard Gibson, Delaware. President, J. Lorne Campbell, Simcoe. Vice-presidents, Dr. J. Wesley Mills, Montreal; John Massey, Toronto; T. G. Davey, London; Geo. C. Taylor, Toronto; Thos. Johnson, Winnipeg. Secretary-treasurer, S. F. Glass, London. Executive committee, Dr. J. S. Niven, London; C. A. Stone, Toronto; H. B. Donovan, Toronto; A. W. Palmer, Woodstock; H. Bedlington, Hamilton; C. H. Corbett, Kingston; P. F. Keyes, Ottawa; J. G. Mitchener, Toronto.

LONDON SHOW.

LONDON, Ont., Sept. 23.—[*Special to Forest and Stream.*] The London Kennel Club's bench show opened Monday at noon with 300 entries. All classes fairly well filled, quality excellent. America well represented by Dr. Cryer, Blemton Kennels, Chestnut Hill Kennels, B. F. Lewis, Joe Lewis and J. H. Naylor. Judging began at 2 o'clock Tuesday and was all over, with the exception of a few spaniels, by 6 o'clock; quite an improvement on Toronto. Mr. Davidson took the sporting classes and Mr. Mortimer the non-sporting, giving general satisfaction. The attendance has been good. If weather continues fine the show will be financially successful.

THE ENGLISH SETTER CLUB.—New York, Sept. 15.—*Editor Forest and Stream:* The first regular annual meeting of the English Setter Club will be held at 50 Broadway, New York, Thursday, Sept. 25, at 11 A. M.—PERCY C. OUL, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Forest King and Forest Queen. By F. A. Hayes, Dexter, Me., for foxhound dog and bitch, whelped March 21, 1890, by Hayes's Brave out of Gipsey.

Brier Rose Lightning and Brier Rose Lady. By Jos. W. Kerr, Philadelphia, Pa., for white, black and white head, fox-terrier dog and bitch, whelped Aug. 10, 1890, by Reckoner (Regent—Nita) out of Olive Branch (Hillside Dandy—Richmond Olive).

Brier Rose Thunder. By Jos. W. Kerr, Philadelphia, Pa., for white, black head, fox-terrier dog, whelped Aug. 10, 1890, by Reckoner (Regent—Nita) out of Olive Branch (Hillside Dandy—Richmond Olive).

BRED.

☞ **Prepared Blanks sent free on application.**

Kizma—Scotch Bonivard. H. H. Kent's (Wollaston Heights, Mass.) St. Bernard bitch Kizma (Merchant Prince—Rensol) to C. J. Wheelock's Scotch Bonivard (champion Bonivard—Mirza), Aug. 17.

Donna Juanita—Count Howard. J. W. Wood's (Poughkeepsie, N. Y.) English setter bitch Donna Juanita (champion Rockingham—Donna) to F. Windholz's champion Count Howard (Sir Alister—Mena), July 24.

Lady Learnerd—Charlie W. Learnerd Kennels' (Hudson, N. Y.) Irish setter bitch Lady Learnerd (Wolf's Ned—Estella) to H. C. Williams's Charlie W. (champion Elcho—Roxey), Aug. 31.

Learnerd Dair—Major Vox. Learnerd Kennels' (Hudson, N. Y.) fox-terrier bitch Learnerd Dair (Knapp—Nora) to W. D. Holsapple's Major Vox (Regent Vox—Media), Sept. 9.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Olive Branch. Jos. W. Kerr's (Philadelphia, Pa.) fox-terrier bitch Olive Branch (Hillside Dandy—Richmond Olive), Aug. 10, three (two dogs), by J. E. Thaver's Reckoner (Regent—Nita).

Rose. Learnerd Kennels' (Hudson, N. Y.) fox-terrier bitch Rose, Sept. 18, five (three dogs), by W. D. Holsapple's Major Vox (Regent Vox—Media).

SALES.

☞ **Prepared Blanks sent free on application.**

Club. Fawn pug dog, whelped June 3, 1889, by Santa Claus out of Victoria, by Thos. I. Ballantine, Peoria, Ill., to John Powers, same place.

Smuggler. Fawn pug dog, age not given, by Lord Clover out of Midget Belle, by L. S. Hudson, Lansing, Mich., to Thos. I. Ballantine, Peoria, Ill.

Lord Clover. Fawn pug dog, whelped Aug. 30, 1886, by champion Loris out of Goulding's Nellie, by L. S. Hudson, Lansing, Mich., to Thos. I. Ballantine, Peoria, Ill.

Midget Lord. Fawn pug dog, whelped Oct. 24, 1889, by Lord Clover out of Lady Flossie, by L. S. Hudson, Lansing, Mich., to Thos. I. Ballantine, Peoria, Ill.

Lulu. Fawn pug bitch, whelped March 16, 1886, by Little Duke out of Lady Cloudy, by L. S. Hudson, Lansing, Mich., to Thos. I. Ballantine, Peoria, Ill.

Lady Flossie. Fawn pug bitch, age not given, by Max out of Pet, by L. S. Hudson, Lansing, Mich., to Thos. I. Ballantine, Peoria, Ill.

Sir Satin. Fawn pug dog, age not given, by champion Kash out of Fair Inez, by Thos. I. Ballantine, Peoria, Ill., to Geo. Isold, Red Oak, Ia.

Quintrin. Red Irish setter dog, whelped April 10, 1890, by Blaze out of Gladys B., by R. H. Burr, Middletown, Conn., to Thos. Davis, Lansing, Mich.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

F. D. B., Mt. Morris, N. Y.—Please tell me what I can do to cure my pointer dog of canker in the ear. Shakes his head continually. Ans. Wash the ears with borax and warm water, teaspoon of borax to teacup of water. After drying use the following by dropping a little in the ear twice daily:

℞ Ti. opii	3 ii
Bromo-chloral	3 ii
Aq	3 iii

Mix. Sig. Ear wash.

J. R. H., Bridgeton, N. J.—I have an English setter dog 3 years old. He has always been in good health, but within two or three days has been troubled with a sort of hollow cough. He acts as though he had something in his throat. When he is on chain it does not trouble him as much as when he is loose. When he runs it seems to choke him and he is disposed to vomit. He acts very like a person who has something in his throat, and by coughing tries to dislodge it. I have examined his throat, but I cannot see that anything is the matter with it or that it is inflamed. Can you give me some advice in regard to him in your Answers to Correspondents? Ans. Chronic laryngitis. Give 5-grain quinine pill night and morning concealed in a morsel of meat. Get the following:

℞ Ammonia muriat	3 ii
Potass iodid	3 ii
Aq. camph	3 iv

Mix. Sig. Teaspoon in a little water three times daily.

You can also give chlorate of potash lozenges hidden in a bit of meat three or four times daily.

A CHANCE TO MAKE MONEY.

Mr. Editor:

Having read Mr. Moorehead's experience plating with gold, silver and nickel, I feel it my duty to inform others of my success. I sent for a plater and have more work than I can do. It is surprising the spoons, castors and jewelry that people want plated. The first week I cleared $37.10, and in three weeks $119.85, and my wife has made about as I have. By addressing W. H. Griffith & Co., Zanesville, Ohio, you can get circulars. A Plater only costs $3.00. You can learn to use it in an hour. Can plate large or small articles, and can make money anywhere. I now have a nice home and bank account, all the product of $3.00 invested in a Plater.—S. S. NORTON.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

DAYTON SHARPSHOOTERS.

DAYTON, Ohio, Sept. 23.—The big events among the shooters the past week were the two days devoted to the targets by the riflemen. The Sharpshooters' annual king shoot on the Kennel Club range was largely attended, and the sport was maintained at high tension through the annual medal contest of the Hibernian Rifles, one of the crack military companies of the State.

The Dayton Sharpshooters' Society was organized in the summer of 1863, when the only arm in use was the squirrel rifle, and the society has as regalia a squirrel-tail plume and the old powder horn. And every year since the society has held a prize shoot in the spring and king shoot in the fall. The gray-haired veterans of the society to-day were the organizers of this sport twenty-eight years ago. The original targets were life-sized figures of kings, and the heart the center shot. Now the society uses six square targets with white or black bullseyes, the center the size of a silver quarter, and counts 24, then around that are 24 half-inch rings. Col. Wm. F. Sanders won the crown at that first shoot in 1863, and Julius Webner first prize, with a clean score of 100 rings.

Timber was cut away for a 200yd. range in the woods adjoining the kennels, and there this 28th annual shoot was held Wednesday. The firing sheds are on a knoll and the targets 200yds. to the east.

Conditions of these contests are any rifle, muzzle rest, 5 shots each, possible 120 rings, no restrictions as to sights or gauge:

C Whealen	22 21 18 23 22—105	W Schwind	15 20 18 18 19—88
A Schwind	23 19 17 21 24—104	H Bergk	16 21 18 11 20—86
B W Early	20 21 19 20 20—100	J Weinstein	17 20 17 19 12—85
L Schwind	20 20 20 20 19—99	J D Turner	20 18 17 21 7—83
J Wehner	17 22 14 22 24—99	W Brown	16 18 20 15 14—83
E Schwind	17 20 24 18 18—97	D Bergk	22 21 13 13 13—83
C Sander	20 14 20 20 22—96	J Henn	19 15 21 13 14—82
Col W F Sander	22 21 19 15 19—96	C Lang	21 13 18 9 15—81
G Sander	19 19 19 21 19—94	A L Bauman	22 16 18 19 5—80
G Schwind	18 18 22 19 14—91	A W Kumler	19 15 20 16 8—78
P Kern	15 19 16 21 19—90	F Huber	10 3 22 12 16—63

The contest being decided in favor of Chas. Whealen by a score of 105, Mr. A. W. Kumler, president of the society, with a very neat brief speech presented the regalia to Mr. Whealen and crowned him King of the Sharpshooters. Fred Hubor, who had won the honor the year before by a score of 103, only scored 63 this time. About 80 other members of the society participated in the match, but the scores scaled down to single figures. This is the fourth time that Mr. Whealen has been the king shot, and this last victory was won on his forty-sixth birthday anniversary.

Following the convivial scene at the refreshment stand after the ceremony of installation, came the free for all match, in which there were over a hundred participants. 24 prizes, same conditions as the king shoot, except 3 rings, possible 72:

A Schwind	23 23 23—69	Chas Long	21 22 21—64
John Henn	23 21 24—68	Wm Sander	23 22 18—63
Chas Whealen	22 23 22—67	Ed Schwind	22 18 23—63
D Bergk	23 22 22—67	Louis Schwind	22 23 18—63
Gus Sander	21 22 22—65	Henry Bergk	21 20 22—63

Adolph Schwind was the winner of first prize. He had been king of the sharpshooters, and the contest between him and Henn of Tippecanoe, and Wheeler and Daniel Bergk was close and exciting, and he had three other ex-kings chasing him close. With first prize Schwind also won a silver cup and a fine split-bamboo rod and reel for the best aggregate score in the membership and free for all shoots, 173 rings in a possible 192. Wheeler next with 172. Most of the sharpshooters use Sharps rifles, .40cal.

The next day the Hibernian riflemen held their annual medal shoot on the same range, 200yds., 3 shots at rest, 2 off-hand, 24 rings, possible score 120, open sights, Springfield rifles, .45cal. In 5 practice shots Corporal Dennis J. Madden scored 16, 16, 16, 17, 19; total 84. Joseph F. Sloan 18, 19, 15, 11, 9; total 75. James Murphy 7, 4, 23, 14, 12; total 60. When the medal shoot opened the scores were not so good: Corporal Madden 18. Timothy McIntee 14, J. F. Sloan 24, C. P. Sweetman 24, J. M. Sweetman 0, Corporal Thomas Shelly 8, Captain Pat J. Madden 0, Thomas Sherlock 0, Ed. J. McKinney 0, J. P. O'Connell 7. Sloan and Sweetman shot off their tie and Sloan won in 3 shots, score 56 to 25, and took the medal. O'Connell, Sloan and Sherlock tried a Creedmoor match, 3 shots each, possible 62, each man to advance to the firing point, kneel and shoot. Sloan was again winner by score of 40, O'Connell 17, Sherlock 0. Chris Swectman challenged Sloan for a 5 shot match and beat Sloan 48 to 34. Then they tried it over again and Chris got left, Sloan finishing up the day with 5 shots, 58 rings.

The trap-shooters wound up the week's sport with an afternoon at Lang's Road House. Four matches were shot, two at standard targets and two at live birds, American Association rules.

After some little practice a match at 10 standard was arranged, 3 traps, 10 entries, Thos. B. Hannah referee:

S McDonald	0011011011—6	C Miller	0011111001—6
R Heikes	1110111111—9	J Achey	1011110101—7
E Rike	1101111101—8	W Kneisley	1110111111—9
W Pratchett	1010101011—6	E Taylor	1010011111—7
W Brown	0101011101—6	J Stuck	0111110101—7
A Sander	0111011000—5		

Moneys were all divided.

Ten singles:

McDonald	0110010110—6	Miller	1110110111—8
Pratchett	0111011011—7	Kneisley	1101010111—7
Heikes	1011111101—9	Achey	1011111001—8
Sander	1101000011—5	Stuck	1010111011—7
Brown	0111110100—6	Rike	1111111110—9

Moneys all divided.

Five ground traps, 20yds., $1.50 entrance, Ed Taylor, of Cincinnati, referee:

Heikes	20101—3	D G Porter	10212—4
Rike	22111—5	Brown	00100—1
Pratchett	00021—3	Kneisly	21112—5
Hannah	02111—4	McDonald	11111—5

First and second div., Heikes third.

The day wound up with an 8 live pigeon match, 5 ground traps, $2.50 entrance, 11 entries, Taylor referee:

Heikes	11211220—7	Kneisley	11011210—6
Pratchett	12011102—6	Brown	10120101—5
Porter	02111211—7	J R King	00001211—4
Rike	02121111—7	Ed Cain	00010211—4
Miller	20211100—5		BROWN.

PHILADELPHIA, Sept. 18.—The Philadelphia Rifle Club held their annual prize shoot to-day, at their beautiful shooting park on Queen's Lane. The day was one of the finest that could be desired, which was shown by the large number of ladies present. Also the creditable scores made both on the honor and the ring targets. These targets are what are called the German ring target, composed of ½in. circles from 1 to 25, 3 shots to each score, making it possible to get 75. The following, which speak for themselves, are the official scores:

Honor target, 3 shots, possible 75:

Dr M Price	66	Gus Soedling	53
J Weatherly	61	Chas Molter	51
E Travis	60	Wm Gelzer	47
C W Schwieckardt	57	J Riest	46
Wm Stein, Jr.	53	E F Kolb	46
E Stieber	42
J Weatherly	40
J S Loeffler	40
J Yarrick	40
J M Green	40

Ring target, 12 prizes only on this target, 3 shots, possible 75:

E Travis	62	Chas H Beeler	52
Wm Stein, Jr.	55	Peter Bernhard	51
Charles Molter	55	Dr M Price	49
E F Kolb	54	G F Kolb	47
J Weatherly	46
J T Oliver	45
Wm Wurfflein	43
Wm Gelzer	43

Bullseye target, 4in. centers, each member's best cartoon measured from center of bullet-hole to center of cartoon, 24 prizes:

1. G T Kolb	.07½	9. W Stein Jr.	.40½
2. E Travis	.11	10. G Brehm	.43½
3. W Gelzer	.25½	11. G Soedling	.49
4. C Molter	.28½	12. W Wurfflein	.50½
5. E Stieber	.29½	13. J M Green	.52½
6. E F Kolb	.33	14. M Dubbs	.67½
7. J Yarrick	.34	15. Dr M Price	.74½
8. P Bernhardt	.34½	16. M Brierly	.80½
17. Sch'kardt	.91½
18. J T Oliver	1.13
19. F Holtz van	1.07
20. J L Loeffler	1.15
21. J Zirnkelt	1.28
22. J Weath'rly	1.28½
23. C F Loeffler	1.42½
24. L Thomas	1.45

EPHRATA, Pa., Sept. 19.—The members of the North End Rifle Club met on their range for practice this afternoon and made the following score, distance 200yds., off-hand:

C S Wenger	5	8	7	9	4	7	6	8	6	10—70
W Carpenter	7	5	7	4	10	8	6	8	6	7—88
L M Wiest	5	9	4	7	6	6	7	3	9	8—64
W D Winters	5	5	4	5	9	7	3	4	7	3—52
C Konigmacher	8	6	7	4	4	3	0	9	3	3—47
R W Bickley	8	10	7	8	0	3	4	9	0	3—61

The day was fair with a strong breeze across the target most of the time. The club meets again next Friday afternoon. The club propose to choose a number of its best shooters and challenge any club in eastern Pennsylvania to furnish the same number to shoot for an expensive medal, or several medals. This will be decided finally at the next meeting.—D. B. LEEVER, Sec'y.

BOSTON, Sept. 20.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. The attendance of riflemen was large, among them several members of the Press Rifle Club, who were out practicing for their fall shoot that is to be held at this range Thursday, Oct. 16. W. M. Foster won the silver membership badge, and below are the other best scores made to-day in the all-comers' matches, 200yds., standard American target:

(R.) ALL-COMERS' REST MATCH.

J Francis	115	F C Paine	101
S Wilder	106	J B Hobbs	101
J N Eames	104	H B Clark	100
F W Chester	103	E I Blount	98
M T Day	102	J W French	95
A S Hunt	93		
M R Barter	89		
D Martin	86		
A N Mann	85		

(R.) ALL-COMERS' OFF-HAND MATCH.

E F Richardson	88	T Oliver	73
O M Jewell	88	R Lawrence	72
S O Merville	81	A N Mann	72
M T Day	76	S C Sydney	71
H B Clark	75	J B Hobbs	70
J Ryan	65		
D Bailey	65		
A Keen	63		
M R Barter	61		

(R.) PISTOL PRACTICE MATCH—50YDS.

H Severance	90	W Gill	85
A D Stevens	88	M T Day	82
A S Hunt	82		

(R.) Only re-entries allowed.

NEW YORK, Sept. 17.—The steamer St. John and a wet but merry company of New York marksmen returned late this evening from the Navesink Highlands, where the New York Schuetzen Corps, under the leadership of its popular captain, G. H. Wehrenberg, had held its annual fall shoot. The winners of prizes in the different events were as follows: Eagle shoot—M. von Dwingelow, center crown; C. Mahnken, right crown; F. W. Mertens, Jr., left crown; I. G. G. Thoelke, right wing; M. Barthmann, left wing; C. C. Cramer, right head; F. Schmidt, left head; H. Buthfer, German flag; C. Grosch, American flag; I. E. Berkman, right neck; W. Leuicken, left neck; Cord Meyer I., sceptre; H. G. Buescher, orb; J. Kretzner, right wing; G. Landwehr, left wing; J. Gobber, right leg; D. Basse, left leg; F. Rahe, right claw; H. Decker, left claw; W. Lackmann, tail, and W. Rohring the body with the coat of arms. Mr. Rohring was crowned shooting king and took first prize. The target was 20in. in diameter and had a bullseye of 4in. Each man was entitled to three shots, which were measured from the center, the shortest total measurement entitling the marksman to first prize, and so on. H. Evers first, with 2⅛in.; B. Zettler second, with 4in.; F. Hoops third, with 4½in, and H. Buthfer, C. Meyer, D. Koster, P. Feige and C. N. Brunie in the order named. The extra premium for the best bullseye went to J. Bunz, who made a nearly perfect center shot.

VIENNA, Sept. 17.—The further large use of smokeless powder on the field of battle, which has been made one of the chief features of the recent military maneuvers in Hungary has resulted in confirming the view which has already been arrived at by the authorities on army matters, that the adoption of the new explosive would compel the institution of extensive changes in the tactics of war. There were 77 battalions of infantry, 36 squadrons of cavalry and 128 pieces of artillery engaged in heavy firing for four hours during the maneuvers. The commanding officers were unable to judge of the position and strength of the opposing forces by the density of the smoke as they can when the old powder is used, and it took a very long time to fix the positions of the firing batteries. While the infantry was under cover it could scarcely be discovered at all, and no estimate could be made of its force or movements. The new powder emits an unpleasant odor. Altogether it is very unpopular with the army.

EMPIRE RIFLE CLUB.—An election of officers and the gallery shoot were held by the members of the Empire Rifle Club at their headquarters in the Deutsch-Amerikanische Schuetzen Halle, 12 St. Marks place, on Wednesday evening, Sept. 17. The election resulted as follows: President, E. Smith; Vice-President, J. Grimm; Treasurer, C. Zettler, Jr.; Secretary, A. Stahl, Jr.; Shooting Master, Wm. Rosenbaum. The following were the scores on the Massachusetts 12-ring target, possible 120 points, 100ft. distance; C. Zettler, Jr., 108, J. Grimm 108, W. Maisenholder 100, J. Zettler 99, H. Stahl, Jr., 97, F. Schneider 91, E. Smith 89, A. Krueger 85. The shoot will be continued weekly.

CLEVELAND, O., Sept. 17.—The best scores of the Cuyahoga Rifle Club at their regular shoot on Cedar Bluff range was as follows, 200yds., offhand, 10 shots:

Furlong	73	Phare	72
Bosworth	53		
Brush	64		

200yds., rest:

Phare	100	Furlong	90
Bosworth	86		

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Sept. 24-26.—South Side Gun Club Tournament, Watertown, N. Y. L. H. Prentice, Secretary.

Sept. 25-27.—Harrisburg, Pa., Annual Fall Tournament, Harrisburg Shooting Association. Two days Keystones one day live birds. Programmes now ready. A. M. F. Worden, Sec'y, Box 468.

Sept. 30, Oct. 1-3.—Sixth Annual Tournament of the Middlesex Gun Club, at Plainfield, N. J. Two days targets, two days live birds. $1,000 guaranteed. Programmes ready for distribution Sept. 1.

Oct. 7-8.—Altoona (Pa.) Trap-Shooter's Tournament, at the Driving Park. Live and inanimate targets. Sweepstakes and guaranteed purses. G. G. Zeth, Secretary.

Oct. 14-16.—First Annual Tournament of the Boiling Spring Fishing and Gunning Club, at Rutherford, N. J. Sweepstake purses. Address P. A. Jeanneret.

CHICAGO TRAPS.

CHICAGO, Sept. 15.—A meeting will be held this week to determine the members of the team for the great return match of the Chicago-Kansas City race, which will be shot at Elliott's tournament at Kansas City, probably beginning Tuesday, Nov. 11. The team will be probably fifteen men, and the race at 100 birds, $100 a man. This will be a great shoot. Chicago will win it this time, so the boys aver.

A number of private matches are up for early dates here. Messrs. Ben Dicks and R. C. "Stevens" will probably get together this week for 100 birds, $100 a man. This will be shot at Mak-saw-ba grounds. Mr. Dicks will shoot Mr. Geo. T. Farmer a 50 birds race, $50, at Watson's Park, this week probably.

A good deal of fun has been had here to-day by the boys over the Montgomery Ward tin pigeon medal, which was won by George Kleinman at the Mak-saw-ba shoot. The terms of the competition state that the shoots must be held in Chicago, and, therefore, when a recent call was issued for the winner to defend the medal at the out-of-the-way village of Morgan Park, where it seems there is a tin pigeon club, there was a rebellion, and the upshot is that the call had to be reconsidered, and issued more at the convenience of the Illinois State Sportsmen's Association, to which, it should be remembered, this medal belongs unreservedly. "Did you hear that?"

There is a story connected with this change of base in the medal shoot. They were shooting tin pigeons out at Watson's Park, and when the shot would strike the bird and fail to open it, some one would say, "Did you hear that?" This never failed to irritate the inventor of the bird, Mr. Best, who invariably explained that it "was only a glancing shot." etc. Then Roll Organ, who is perhaps the most inveterate "kidder" on earth, grasped the situation, and soon everybody was saying, "Did you hear that?" They gave Mr. Best the worst of it so bad that he swore he would never allow one of his birds to be shot on those grounds again. Hence the Morgan Park call, and the rebellion, and hence also a new phrase among the Chicago shooters. Everybody now says, "Did you hear that?"

E. HOUGH.

NEW JERSEY ASSOCIATION.

FANWOOD, Sept. 17.—*Editor Forest and Stream:* Mr. A. Heritage, President of the New Jersey State Sportsmen's Association, desires to give notice through your valuable journal that a meeting of the State Sportsmen's Association of New Jersey will be held at Achmuttey Hotel, 812 Broad street, Newark, on Saturday evening, Sept. 27, at 8 P. M. It is to be hoped that all the clubs belonging to the association will send delegates to the meeting, notice of which is given above.

JACOB PENTZ, Cor. Sec'y, N. J. S. A.

ARTIFICIAL BIRD.—It is likely that a pool, trust or understanding on the part of the makers of inanimate targets will be reached before another outdoor shooting season opens.

CATSKILL TOURNAMENT.

CATSKILL, N. Y., Sept. 15.—Tolley's eighth kingbird tournament took place on the grounds in West Catskill, with a good attendance of crack shooters from Albany, Troy, Cohoes, Tannersville, Cairo and Saugerties. Besides the usual events, of which there were 15 shot out, there was the medal of the Eastern League to be shot for, Mattice, of Catskill, Paul, of Cohoes, and Levengston, of Saratoga, having tied for it at the last Troy tournament. Mr. Levengston not being on the ground, was ruled out. Paul, of Cohoes, and Mattice, of Catskill, shot at 25 birds, Mattice capturing 23 and Paul 21. This medal must be won three times to become the property of the shooter. Mr. Buesser, of Troy, and Mr. Mattice have each won it once. The next shoot for this trophy will take place at Catskill next month, and already there are a dozen entries; any member of the Eastern League may contest for it. The ladies on the grounds undoubtedly spurred Mr. Mattice on to his excellnet score by their continuous applause, and when he completed his score the hearty cheers could be heard echoing from the surrounding hills for some time. The next shoot promises to be of unusual interest, as the medal and other events will be sharply contested. Following are the scores:

Contest No. 1, 10 kingbirds, entrance $1:

Patten	1111111111—10	Shufelt	1101111011—8
Taylor	1110111111— 9	Mattice	1110111011—8
Bemis	1101101111— 8	Paul	1001101111—7
Beach	1111100111— 8	Schutt	0101110111—6
Leon	1011111101— 8	Eloc	0100101011—5
Mardo	0111011111— 8		

*Forfeited shot.

Ties on 8: Bemis 5, Leon [5, Mardo 3, Shufelt 3, Mattice w, Beach w.

Contest No. 2, same as No. 1:

Bemis	10	Beach	8	Paul	6
Leon	10	Patten	8	Shufelt	5
Mattice	10	Schutt	7	Eloc	4
Taylor	9	Mardo	7		

No. 3, same as before:

Bemis	9	Patten	8	Schufelt	6
Taylor	9	Paul	8	Eloc	5
Leon	9	Mardo	7	Shutt	3
Mattice	9	Beach	6		

No. 4:

Beach	10	Paul	8	Leon	6
Mardo	9	Mattice	8	Eloc	5
Bemis	8	Taylor	6	Patten	4
Schutt	8				

No. 5:

Beach	9	Leon	8	Mardo	6
Taylor	9	Schutt	8	Goggin	5
Mattice	9	Paul	8	Eloc	4
Bemis	8	Patten	6		

No. 6, 15 kingbirds, entrance $1.50:

Bemis	15	Patten	12	Leon	10
Beach	14	Mardo	12	Schutt	9
Mattice	13	Taylor	12	Eloc	9
Goggin	12	Paul	12		

No. 7.—In this and all succeeding 10 bird events the entrance fee was $1, the purses divided 50, 30 and 20 per cent.:

Bemis	10	Taylor	9	Leon	6
Goggin	10	Paul	9	Mattice	6
Beach	9	Schutt	8	Valk	6
Mardo	9	Patten	6	Eloc	5

Mo. 8:

Bemis	10	Paul	8	Mardo	7
Mattice	9	Goggin	8	Schutt	6
Taylor	8	Beach	7	Valk	5
Leon	8	Patten	7		

No. 9:

Mardo	10	Taylor	9	Mattice	8
Goggin	10	Paul	9	Schutt	7
Bemis	9	Beach	8	Valk	5

No 10:

Paul	10	Taylor	9	Mardo	7
Bemis	9	Mattice	9	Goggin	7
Beach	9	Schutt	8	Valk	6

Prizes for aggregates—A purse of $10 was divided 40, 30, 20 and 10 per cent. as rewards for best aggregates made in regular contests two to ten inclusive. A contestant shooting through the nine events had to shoot at 95 kingbirds. Out of the number Bemis (Albany) scored 88 and won first; Taylor (Albany), Beach and Mattice (Catskill) came out of the race with scores of 80 and div. second; Paul (Cohoes) won third with a total score of 78; Mardo (Albany) captured fourth with a total of 74 dead birds.

Sweep No. 1:

Bemis	10	Taylor	9	Mardo	7
Paul	10	Schutt	8	Valk	5
Mattice	9	Beach	8		

Sweep No. 2:

Bemis	15	Taylor	12	Schutt	11
Paul	14	Valk	12	Mardo	10
Beach	13	Goggin	12	Mattice	10

Sweep No. 3:

Mattice	10	Schutt	9	Goggin	8
Taylor	9	Beach	9	Bemis	7
Mardo	9	Valk	8	Paul	6

Sweep No. 4:

Mattice	10	Taylor	8	Schutt	7
Bemis	10	Paul	8	Mardo	6
Goggin	9				

Sweep No. 5:

Paul	10	Goggin	9	Taylor	6
Mattice	9	Beach	8	Mardo	6
Bemis	9				

Following are the scores for medal:

Mattice	1111111111111111101011111—23
Paul	0110111111111111110111101—21

Ever since the Catskill Club began shooting, an effort has been made to make 50 straight, and for a couple of years G. F. Tolley had a standing prize for the one making a clean score of 50. On the 4th inst. T. B. Beach shot with a new L. C. Smith 12-bore, 7¾ gun, received from the Hunter Arms Co. that day. In shooting at the 50 birds, as above, he "got the hang" of the gun, and said he would undertake to break 50 straight. This he did, making the longest string of hits (55) ever made on the Catskill grounds, which not only speaks well for Beach, but also for the gun.

DE TOLL.

ISLAND GUN CLUB.

WHEELING, W. Va., Sept. 10.—I inclose the scores of the first annual tournament given by the Island Gun Club, of this city. Trap-shooting is something quite new to Wheeling and proved quite interesting to a large number of spectators. Among the shooters from a distance were W. S. King, Geo. Cochran, H. J. Levis and J. Huffman, of Pittsburgh, Pa.; I. N. Crable, of East Liverpool, O.; Mr. Sigfield, of Steubenville, O.; C. E. Verges, Lowell, O.; I. S. Bibbee, Zanesville, O.; Mr. Mayberry, Parkersburgh, W. Va., and T. Tully, Youngstown, O. Wheeling was represented by J. A. Penn, R. B. Burt, Dr. Myers, Jack Wright and others. J. A. Penn made the highest average of the day with 141 out of 149 breaks to his credit. It was a hot crowd, and a glance at the scores will show how the boys hustled each other. Bluerocks were used, American Association rules, rapid-firing system, purses divided 40, 30, 20 and 10 per cent, except seventh event. Ties divided:

First event, 10 singles, $1 entrance:

Burt	1111111101— 9	Tanner	1011111101—8
Penn	1111111101— 9	Cochran	1011100111—7
Huffman	1111111101— 9	Sigfield	1100111001—6
Tully	1101111111— 9	Mayberry	0101100110—5
Wright	1111111101— 9	Crable	0100100101—4

Second event, 10 singles, $1:

Penn	1111111111—10	Wright	1110001111—7
Cochran	1011111111— 9	Mayberry	1010101111—7
Burt	1111110111— 9	Bell	1100110111—7
Tanner	0111101111— 8	Myers	0110101101—6
Huffman	1111111001— 8	Sigfield	1010011001—5
Tully	1110011111— 8	Crable	1010011100—5

Third event, at 20 singles, $2 entrance, $20 guaranteed:

Penn	11111111111111111111—20	Tanner	11101101111011101110—15
Cochran	11111101111111111111—19	Levis	00110111011111111111—15
Burt	11111111111111011111—19	Myers	11100011010101111111—14
King	11111111111111100111—18	Wright	11110001010111101111—13
Tulley	01111111111101101111—17	Crable	01011111111000010100—11
Huffman	11110111010101111116	White	10001110000101010110—9

Fourth event, at 10 singles, $1:

Cochran	1111111111—10	Bibbee	1011101111— 8
T Tulley	1111111111—10	Burt	0110111101— 7
Wright	1111110111— 9	Tanner	1011001011— 6
King	1111111101— 9	Huffman	1011110011— 6
Levis	0111111111— 9	Sigfield	1010110011— 6
Penn	1011111011— 8	Waite	1010001001— 4
Myers	1011111011— 8	Crale	1010101000— 4

Fifth event, at 15 singles, $2:

Penn	111101111111111—14	Myers	010111101111111—12
King	111101111111111—14	Cochran	101111111111100—12
Huffman	111111101111111—14	Tanner	010111111111100—11
Dr Caddle	111111111110110—13	Wright	101111001111101—11
Tulley	111111011101111—13	Bibbee	101010100111101— 9
Burt	111101111011111—13	Crale	110011010100110— 9
Levis	011111111111011—13	White	110001100010100— 6

Sixth event, 10 singles, $1:

Penn	1111111111—10	Crable	0111111011— 8
Cochran	1111111110— 9	Tully	1111101011— 8
Bibbee	0111111111— 9	King	1110111110— 8
Levis	1011111111— 9	Tanner	1100111111— 7
Burt	1110011111— 8	Wright	1101111100— 7
Myers	1101110111— 8	White	1100111001— 6
Caddle	1110111011— 8	Huffman	1101011010— 6

Seventh event, 20 singles, $2.50, $25 guaranteed, 4 equal moneys:

Burt	11111111111111111111—20	Levis	11111110111111001111—17
Cochran	11111111111111111111—20	Huffman	11101110111110011011—15
King	11101111111111111111—19	Wright	01111011111111001011—17
Penn	11110111111111111011—18	Bibbee	00111111101110110011—14
Tully	11111111111111111100—18	Tanner	10111000110111001101—12
Myers	11111111111110001111—17		

Eighth event, 10 singles, $1:

Penn	1111111111—10	Cochran	1111111001— 8
King	1110111111—10	Tanner	0111101111— 7
Bibbee	1111111111—10	Crable	1011110010— 7
Huffman	1111111111—10	Myers	0110101111— 7
Burt	1111111011— 9	Sigfried	1101111000— 6
Tully	1111111011— 9	Wright	0011000111— 5
Levis	1111111110— 9		

Ninth event, 10 singles, $1.50:

Penn	1111111111—10	Levis	1011111110— 8
Tully	1111111111—10	Bibbee	1101111001— 7
Burt	0111111111— 9	Myers	1100101011— 6
Huffman	1101111111— 9	Tanner	1101101101— 7
Cochran	1111110111— 9	Wright	1011010110— 6
King	1111111101— 9		

Tenth event, 12 singles, $2:

Penn	111111111111—12	Wright	111110011111—10
Levis	111111111111—12	Tully	011111111011—10
King	111111101111—11	Huffman	010111101111— 9
Cochran	111111111101—11	Bibbee	110011010001— 7
Burt	111101111101—10	Myers	001010111115— 7
Tanner	111011110111—10		

Eleventh event, 12 singles, $1:

Tanner	111111111111—12	Penn	111101101111—10
Burt	111111111111—12	Huffman	111111101011—10
King	111111111111—12	Tully	111111111010—10
Wright	111111111101—11	Myers	011001111101— 8
Levis	111111111111—11		

Twelfth event, 10 singles, $1:

Penn	1111111111—10	Myers	0111111011— 8
King	1111111111—10	Levis	1110011111— 8
Tully	1110111111— 9	Tanner	1110011111— 8
Burt	1111111100— 8	Wright	1011110010— 7

BROOKLYN.

BROOKLYN, Sept. 17.—The entire landscape at Woodlawn to-day presented one scene of gray in gray and the rain came down with hardly any intermission during the entire afternoon, while the invitation cup shoot of the Coney Island Rod and Gun Club took its course at the Woodlawn Park grounds. The following organizations were represented: Coney Island Rod and Gun Club, Fountain Gun Club, of Brooklyn; Glenmore Rod and Gun Club, Parkway Gun Club, of East New York, and Central Gun Club, of Long Branch. The race between the Parkways, the Centrals and the donors of the prize was very close during the entire shoot, the scores not showing any greater divergence than two in the total of birds killed. The Parkways had a good chance of winning the trophy until the last round, when H. W. Bookman met with misfortune. The Centrals and the Coney Islanders ended with a tie, and the latter, as hosts, presented their plucky adversaries with the prize instead of shooting off the tie. The marksmen went to the score in squads of five, one from each team. The following were the results:

Coney Island Rod and Gun Club invitation shoot, open to teams of ten from the Central, Fountain and Parkway gun clubs, and the Glenmore Rod and Gun Club, 7 birds each man at 25yds. rise, no handicap on bore of the gun, 80yds. boundary, Hurlingham rules:

Coney Island Rod and Gun Club.—F. Pfaender 7, C. Dettlefsen 6, C. Plate 7, R. Dwyer 7, Dr. T. Northridge 6, D. Monsees 7, F. Sanger 6, A. Eppig 5, J. Schliemann 7, J. O'Brien 6, total 64.

Fountain Gun Club.—Dr. Shiels 5, L. Davenport 7, J. Fisher 7, Dr. Schwarz 5, E. Allen 7, Callos 7, J. Lake 6, J. W. Stuart 6, C. W. Jones 7, B. W. West 6, total 63.

Central Gun Club.—C. W. Reed 6, C. Wooley 7, J. Van Dyke 7, W. C. Price 6, E. E. Taber 7, F. Beale 6, E. W. Price 7, J. Price 6, Wm. D. Campbell 5, E. Wooley 7, total 64.

Glenmore Rod and Gun Club.—Dr. Powell 6, W. R. Selover 5, G. U. Forbell 5, W. Levens 5, E. H. Madison 6 J. Vreeland 5, P. Sulter 5, J. V. Van Wicklen 5, J. E. Edgarton 7, Dr. Bachin 7, total 56.

Parkway Gun Club.—J. Bennett 6, R. Phister, Jr., 7, Van Wyvekoff 7, H. Steinheuser 7, J. Blake 6, L. Lehmann 7, E. Helgans 7, H. Bookman 3, total 63.

Scores at the end of each round:

	1	2	3	4	5	6	7	8	9	10
Coney Island	7	13	20	27	33	40	46	51	58	64
Fountain	5	12	19	24	31	38	44	50	57	63
Central	6	13	20	26	33	39	46	52	57	64
Glenmore	6	11	16	21	27	32	37	42	49	56
Parkway	6	13	20	26	33	40	46	53	60	63

KEYSTONE RULES.

Editor Forest and Stream:

I have received so many inquiries regarding the new Keystone rule No. 4 that I am unable to reply to them all personally, and take this means of answering.

There shall be five traps set in a straight line, 5yds. apart, and three traps 60yds., measured from No. 3 trap. In measuring from there that will bring the outside traps in a circle. Traps to be numbered 1, 2, 3, 4 and 5 for inside and 6, 7 and 8 for outside traps. Outside traps to throw a straight incomer, a right quartering incomer and a left quartering incomer. Inside traps, No. 1 a right quarterer, No 2 a left quarterer, No. 3 a straightaway, No. 4 a right quarterer, No. 5 a left quarterer. With our new switch board outside traps can be pulled as well as inside. Traps must be pulled by indicator. If gun fails to go off unless caused by a defective primer, it is a lost bird. If bird breaks in trap or gun fails to go on account of bad primer, the indicator must be turned in such cases each time. H. A. PENROSE, Keystone Mfg. Co.

MILWAUKEE, Sept. 16.—The last regular shoot of the South Side Gun Club for the season was held this afternoon at National Park. For some reason or other the shooting did not come up to the usual average mark, some of the old experts even shooting worse than their young friends. A. W. Friese carried off the honors of the day. The live-bird shoot resulted as follows at 7 birds:

Brand	5	Marlett	6
Wood	4		
Broich	4	Rock	4
Strassburger	2		
Hanson	6	Greike	6
Chapman	3		
Manegold	4	Thomas	3
Story	3		
Lewis	5	Bentan	5
Gropper	4		
Pickard	7	Friese	4
Warner	5		
Carmichael	4	Van Ells	7
Seefeld	4		

In the evening a banquet was enjoyed at the Park Hotel, at which the prizes and medals for the season just ended were distributed. They were as follows: First in Class A, F. P. Stannard; second, Frank Van Ells; third, Steve Meunier. First in Class B, Chas. John; second, John Meunier; third, John Strassburger. First in Class C, Walter Bantam; second, J. E. Warner; third, Dr. Carmichael. The prizes consisted of charms and medals. The club has now a membership of 100, to which it is limited by the constitution. The election of officers will be held on the first Tuesday of next February. Besides a considerable sum in the treasury, the club owns 400 acres of land in Forest county, which it is intended to make the starting point for a large deer park. Several thousands of acres are to be bought in the near future.

BROOKLYN, Sept. 16.—Monthly shoot of the Kings County Sporting Club for gold badge at Dexter Park. The rain kept the majority of the members home, and those that did shoot had a large head on them from the larger excursion of the Conrad Thiel Association the day before. That accounts for the poor scores of some of the members; 20 bluerocks, 2 traps, right and left quarterer, 18yds. rise:

T Shoet	01101101111111111111—17	Lindstedt	01111111111011111111—18
J Link	11111110110111101111—17	F Stoll	10010111100011111101—18
F Greiner	11110011010111111101—15	F Keller	10011111011011100011—14
C Thiel	11110000110111101111—14		

Lindstedt wins badge.—SNAP SHOT.

BEEVILLE, TEXAS.

BEEVILLE, Sept. 5.—At the Beeville Gun Club's two days' shoot here the boys had a general good time. One of the features of the occasion was a big barbecue each day on the grounds, provided by the home club. Ties divided unless noted.

Event No. 1, 12 single bluerocks, 5 traps:

St Hubert	111111110111—11	Dr Stephens	000000000010—1
Skoggs	011111000110— 7	***	010001000000—2
Critzer	011111111011—10	Guessaz	110101101010—7
Holtzapfel	110101111011— 9	Miret	001001000000—2
Vansickel	001111100000— 5	Thiele	111001100 0—6
Mushaway	011100001010— 5	Cook	011101101000—6
Beasley	011010100010— 5	Nutt	001000010000—3
Westervelt	011101101010— 7	Parr	001110100101—6
McCormack	000100001011— 4	Licht	111111001000—7
Klipstein	011010100010— 5	Blanco	100100110010—5

Match at 5 live birds, 26 entries, prize and 3 moneys, 80 yds., American rules:

St Hubert	00011—2	Parr	11010—3
Skaggs	00000—0	Mushaway	11011—4
McCormack	01011—3	Fore	00060—0
Smith	10110—3	Klippstein	01111—4
Critzer	11102—4	Holtzapfle	01111—4
Stephens	10 11—3	Shiele	10110—3
Beasley	00000—0	Miret	11011—4
Nutt	10101—3	***	00000—0
Vansickley	00100—1	Scott	00000—0
Westervelt	11111—5	Blanco	11111—5
Cock	10000—1	Leicht	01110—3
Guessaz	00101—2	McChurdy	00000 0
Armstrong	00110—2	Barr	01011—3

Most of the birds fell dead out of bonds.

Match at 9 bluerocks:

Armstrong	4	Shiele	7
Parr	3	McChurdy	4
Critzer	8	Cook	5
Westervelt	8	Skaggs	5
Beaslep	5	Barr	6
Vansickle	2	Guessaz	7
Holtzapple	8	St Hubert	8
McCormick	9	Mushaway	9
Miret	5	Klipstein	7
Stephens	2	Blanco	7

Second Day.—Weather fair and good attendance. Nine single bluerocks, 5 bluerock traps, American Association rules, one prize and three moneys:

Holzapel	010111101—6	St Hubert	111010100—5
Leicht	010011010—4	Westervelt	010031100—3

Blanco	030000100—1	Klipstein	011010000—3
Mushaway	101111001—6	Smith	110110000—4

Ten singles and 5 pairs bluerocks, 5 traps, American Association rule, one prize and three moneys:

St Huoert	11	McCormick	11
Thiele	13	Critzer	12
Beastey	6	Mushaway	10
Westervelt	10	Miret	8
Guessaz	7	Bond	7
Cook	7	Halzapel	13
Blanco	4	Skaggs	8
Stephens	6	Stepuens	6
Armstrong	4	Leicht	6
Smith	8		

Fifteen singles:

Cook	6	Mushaway	7
St Hubert	13	Armstrong	5
Critzer	13	Scott	1
Holtzapel	13	Barr	7
Beasley	4	Texas Field	10
Klipstein	9	McCormack	3
Fowler	4	Gugenheim	1
Parr	0	Thiele	12
Westervelt	8		

Fifteen single bluerocks:

Holtzapel	11	Thiele	11
Beasley	9	Mushaway	14
Critzer	11	McCormack	10
Barr	8	Texas Field	7
Stephens	3	Klipstein	1

Ten single bluerocks:

St Hubert	7	Barr	5
Fowler	2	Westervelt	2
Beasley	7	Mushaway	7
Cook	3	Thiele	8
Nutt	2	Miret	8
Scott	2	McCormack	2
Critzer	5		
Texas Field	6		
Texas Jack	8		
Stephens	3		
Armstrong	4		
Smith	5		
Davidson	2		

Three single live pigeons, teams of two:

San Antonio.		Cuero.	
Thiele	011—2	Holtzapfel	111—3
Guessaz	110—2—4	Harmon	0 0—1—4
Beeville.		**Corpus Christi.**	
Beasley	011—2	Westervelt	101—2
Cook	001—1—3	White	001—1—3
San Diego.			
St Hubert	110—3	Miret	001—1—3

Five single bluerocks:

McCormack	4	Critzer	3
Mushaway	5	Davidson	1
Beasley	3	Barr	1
Thiele	2	Holtzapfel	4
Parr	2	Tex Field	4

Five single bluerocks:

Critzer	3	Mushaway	4
Beasley	5	Holtzapfel	2
McCormack	1	Barr	0
		Tex Field	4

T. J. SKAGGS.

WALNUT HILL, Sept. 14.—A more disagreeable day could not well be imagined than was experienced by the small party of trap shots who met at the range to-day. There was no heavy rainfall at any time, but a constant drizzle, accompanied by a northeast wind and heavy fog, which kept everything in a half dissolved condition. The main interest of the occasion centered in the tenth competition in the diamond pin match, in which Mr. Bennet took the lead with the creditable score of 27 out of a possible 30. He also won the champion gold medal.

Diamond pin match, 20 single Keystone targets, Keystone system, and 5 pair standard targets:

Bennett	11111111111011111111—19	11 10 11 11 10—8	27
Bowker	11111111111111101111—19	10 10 10 11 10—6	—25

Parkham	11111211000100101—13	10 11 10 10 10—6	—19
Gale	00111010101101111010—13	11 01 10 00 11—6	—19
Nichols	11100111110010101001—13	00 10 00 10 00—2	—15

The next meeting for shotgun shooting at Walnut Hill will be held Wednesday, Oct. 1, when in addition to the current matches a new match will be opened for an elegant gold trophy of rare design and much intrinsic worth, presented by the Keystone Target Co. to the trap-shooters of the Massachusetts Rifle Association, and intended to be worn as an ornament on a gentleman's watch chain.

ST. LOUIS, Mo., Sept. 19.—An interesting live-bird match took place at Compton Avenue Park, this city, last Wednesday afternoon, between J. E. Hagerty and J. E. Latsham, both of this place. Hagerty's work was certainly a very grand exhibition of shooting, and with just a hint of luck he would haved scored a clean score. The three birds that he lost were hard hit and fell dead just a few yards over the boundary. The weather was cool, which made the birds quite frisky, making them what might be called a good lot, in fact the best that have been trapped in this city for a long time. The conditions were 100 live birds each, Hurlingham rules, $100 a side:

Hagerty	1112111121111112111111111111111221c2111211o11112 1111111121221111212112c1o111121112221222111—97

UNSER FRITZ.

MIDDLESEX ANNUAL.—The sixth annual tournament of the Middlesex Gun Club, that will open at Dunellen, N. J., Tuesday, Sept. 30, promises, from present indications, to eclipse all previous efforts of the club. The grounds have been put in splendid condition, and will present a very pretty appearance. Every comfort of the shooters will be looked after, and the system of making entry and the prompt payment of prize moneys will be a feature. The first two days will be entirely devoted to inanimates. The last two to live birds. The $500-sweepstake at 25 live birds on Friday, Oct. 3, will draw together a large entry list, and as all surplus is added, it will surely fill to over $500. The programme presents a long list of events at 10, 15 and 20 targets, and in addition, if it is desired by the shooter, some events at unknown angles will be introduced.

CLEVELAND, O., Sept. 18.—The members of the East End Gun Club held their regular shoot this afternoon with following result:

A B Jones	21	Sweetman	22
Wherry	17	Bloom	14
Brockway	23	Baker	17
Mago	22	Night	22
King	23	North	27
J Turner	12	W Tamblyn	12

North won the class A badge and Brockway the class B on the shoot-off with King.

ALTOONA (PA.) TOURNAMENT.—The trap-shooters of Altoona, Pa., are to have a two-days' tournament, Oct. 7 and 8, and a neat little programme is now ready for distribution. A spirit of liberality seems to pervade the managers, for in their circulars they announce that "the price of birds (inanimates) is fixed at 2 cents above the cost of entrance. This charge will be made in each event, except where stated otherwise, till we have realized enough to pay the expense of trappers, etc. After this all targets will be furnished free. We intend this tournament for the benefit of the shooters and not to benefit ourselves financially." This is somewhat unusual and seems to point to preparations for a "good time," rather than a desire to make all the money possible out of the visitors. There is a diversity of style in the matches arranged and several live bird sweeps are to be shot on the second day. Mr. G. G. Zeth, Sec'y, will furnish programmes and information.

ALLENTOWN, Pa., Sept. 19.—Score of the Lehigh Gun Club, Game and Fish Protective Association:

John Benning	0011111101111100—10	M Leisering	1010101000101 0—7

MADISON COUNTY.—Cazenovia, N.Y.—During the latter part of this month the Madison County Sportsmen's Association will hold their sixth meet at Cazenovia, N. Y., in Athletic Park under the auspices of the Cazenovia Gun Club. A goodly number of prizes have been donated by the citizens and outsiders, for which the club return their thanks, and will try to make this meeting a pleasant one.—HAMMERLESS.

METHUEN, Mass., Sept. 22.—The Methuen Gun Club has been recently organized with fifteen members and elected the following officers: President, C. W. Douglas; Vice-President, F. A. Wardwell; Secretary, Treasurer and Captain, John Ostler; Directors, G. B. Bradbury, F. J. Barrett and E. M. Buttle.—JOHN OSTLER, Sec'y.

GOLDEN CITY, Mo.—The sportsmen of this city have formed a gun club, to be known as the Golden City Gun Club. It is limited to 12 members and has for its officers W. L. Ganett, Pres.; Dr. O. C Hankins, Vice-Pres.; and Roy W. Aldrich, Sec'y. Regular club shoots will be held and shooting interests generally will be pushed.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

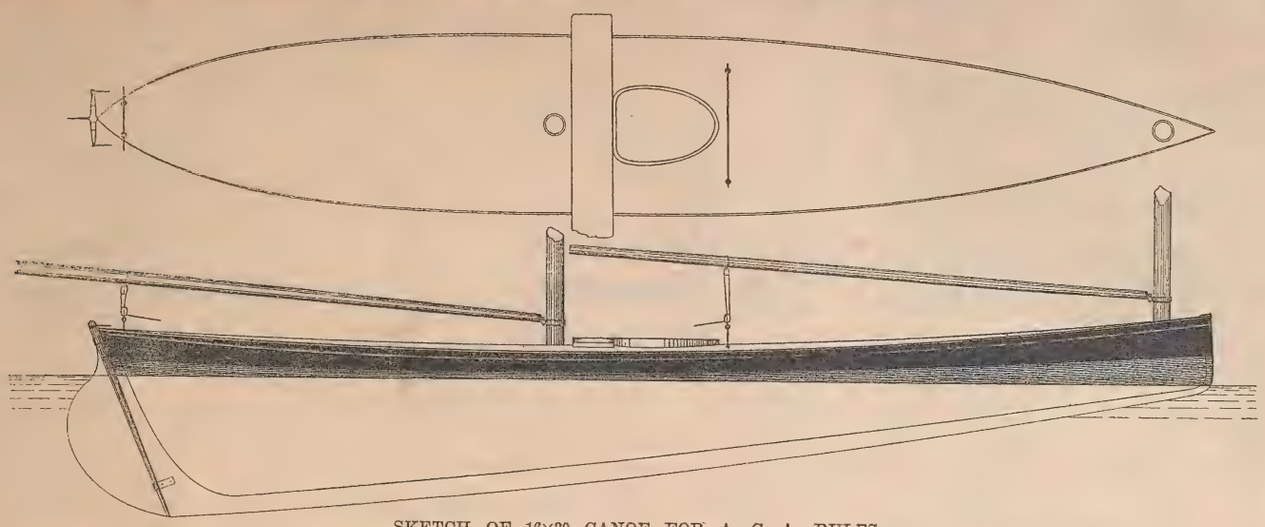
Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

RACING RULES AND STANDING SAILS.

AS the time has now come when men begin to talk of something faster for next year, and to dust off their drawing boards and pull out piles of old designs, we submit the accompanying preliminary design to those in search of a new "bull downer" or trophy winner, with no guarantee that she will beyond question distance the fleet, but merely as a suggestion that may be worked up to advantage, and also to show some of the possibilities of the present A. C. A. rules. It will be seen that every requirement of the rules is complied with, 16×30, not over 16in. depth from under side of deck at fore end of well to garboard strake beside keel; outside keel not over 3in., being a keel boat. We have been content with a moderate draft, taking but 2ft.; at the same time it would easily be possible to take another foot if desirable, but we do not believe in extremes, even for racing. Being a keel boat, the regular 3in. keel has been taken; but by carrying the rabbet line down so as to leave but ¼in. of keel below it, which would merely be a detail of construction and would not alter the form, a centerboard of 60lbs., dropping 18in. below the rabbet, could be added.

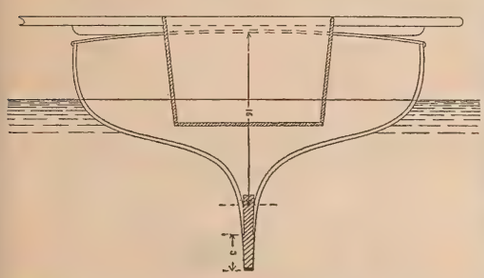


The drawings are sufficiently correct to show the general form of such a canoe, but there are a number of important details to be considered before the boat could be built with a fair show of success. The form of midship section, rake of sternpost, displacement, weight of ballast, area and disposition of canvas, and above all the proportionate increase of sail and frictional surface, would have to be very carefully considered. At the same time, if any good racer is really desirous of giving the model a fair trial, we will see that he has no trouble in securing a design. In ballasting it would probably prove best to use shot in bags, stowed as low inside as possible, but another plan would be to make a long and narrow centerboard of lead, 60lbs. being allowed, which should house in a sham trunk in the keel, the board never to be lowered but nominally fitted to do so in order to evade the rule; which, while allowing a 60lbs. centerboard, limits the total weight of keel in a keel canoe to 36lbs. As a metal keel band not exceeding ¼in. is allowed on a centerboard canoe, this band could be of lead an inch wide in the middle and running the entire length. In this way about 75lbs. of lead could be placed in the keel without coming much above the rabbet. Sufficient inside ballast could be added to make the canoe stand up in a calm with her sails hoisted, some 200ft. square or more, leaving to the canoeist only the work of holding up this canvas against the wind pressure by the aid of his sliding seat.

The planning of this canoe has arisen from the evident desire of many to carry the larger sail aft, from the addition of a scag to a number of existing boats, and for the most practical demonstrations which Mr. Fife has given in the cutter Minerva of the value of such a lateral plane. At the same time the idea is not a new one, in 1879 Mr. W. Baden-Powell designed and built a similar canoe, in which he won the R. C. C. challenge cup that year. His canoe was different in dimensions, rig and details from this proposed craft, but with the same leading feature of a deep keel aft, by which the limit of depth was evaded. So far as can be foretold, from the success of similar features in yachts, from the old Nautilus of 1879 in her races with canoes of the conventional type, and from a comparison of the elements of this design with those of the present racers, there is a very fair prospect of the success of such a canoe in good hands, and in weather not distinctly unfavorable to her type. This being the case, she is just as much a product of the A. C. A. rules, and just as directly encouraged by them as Sea Bee, Vesper, Guenn, Notus and Thetis were in their day. Given such a craft, it matters little whether she be rigged with a standing sail or not; for racing purposes, and she will be used for nothing else, she would be as safe with one as the other.

The racing men to-day constitute a very large and important contingent; the sixty canoes that entered in the late races, with many others of their class that were not present, represent a considerable investment of money, no small part of it in the form of standing rigs. The development of racing has been left unrestricted for years by the Association in spite of strong efforts at times to prohibit certain features, until, by virtue of this long immunity the racers have come to look at certain privileges as rights which may not be idly infringed upon. That the Association has the power, through certain recognized channels, to deprive them of these rights, is true; but the justice or policy of such action may be fairly questioned. This applies especially to the case of the standing rig; in the spring of 1889 the prohibition of this rig was recommended by the regatta committee of the year, the measure being widely discussed; a vote by mail of the executive committee was taken, and the motion was killed by the votes of men who were opposed to the standing sail, but did not favor its summary abolition. Probably as the result of this discussion at the time when men were fitting out, but few standing rigs were seen at the meet of 1889; but with the encouragement of the virtual indorsement of the rig by the executive committee, and the entire abandonment of the movement against it, the rig has come to the front in full force this year, though not with such uniform success as to show that it is at all faster than the lowering and hoisting rig.

The racing canoe has long passed a point where it could do any good to canoeing at large or to cruising craft, the rigs, the appliances and the entire fitting of the boats are now of little use to the cruiser, and the model promises soon to be something that the cruiser will in place of imitating avoid as far as possible. While this condition of affairs demands the immediate recognition of the Association, it cannot be remedied by merely retracing lost ground, it is too late now to do what might have been done in 1887 or 1888, but which the Association positively declined to do at those times. To-day a different course is necessary, the racers must be left in the enjoyment of all the privileges so long accorded them, and if anything is to be done for the cruisers—and all will agree that some action of the kind is necessary—it must be by turning to a new and clean page, and not by erasures and corrections on the old one. Ten years ago the American Canoe Association started out with no rules at all, and with a most heterogeneous collection of primitive canoes to work on. Looking over the history of the past it must be admitted that the Association has done very well, that while some errors are to be seen in looking backward, the men who made the rules have succeeded much better than might have been expected. At the same time there is much to be learnt from the course of events in the past, and the Association is in a better position to-day than it ever has been, to make a thorough reconstruction of its rules of measurement.



It has, to begin with, one strong, vigorous and flourishing class, the racers, to whom it owes much of the interest and attractiveness of its general meets, and the best thing it can do with the class is to let it alone to go as fast as it can and have as much sport as possible. This, however, is not enough unless the Association is prepared to abandon entirely the various ends set forth in its constitution and become simply a racing body with a week of racing every summer. If it is to encourage and promote cruising, and to assist canoeists to cruise, it must recognize in some way a canoe which may be used for cruising, and this it may do without any regard to its racing class. The way to do it we have pointed to a number of times, to place among its racing rules a definition of a cruising canoe, a boat with which we are all familiar and which most of us have once used with a great deal of pleasure, whose general features are recognized by all, whatever difference may exist over the minor details. She should be a canoe in which a man can sleep, cook, sail, paddle, carry a friend or a load of duffle, run a rapid, or can beach easily and launch from a boat house unaided. Given such requisitions as these, it does not matter how fast she may prove or how many prizes one may win in her; she must be a cruiser first, however much of a racer afterward. After recognizing and defining such a canoe, the next step is to offer a little more positive encouragement by establishing some regular races for her, or perhaps giving a prize for the most perfect and complete cruising canoe at each meet. We know that these things have in a measure been tried at times with but small success, but it would at least look well for an Association which nominally offers so much to cruising canoeists if it officially recognized a certain type of canoe as suitable for cruising, if it established races for this craft, and a yearly competition which should encourage men to improve their cruising boats. It might be that little would result in a year or two, or

SKETCH OF 16×30 CANOE FOR A. C. A. RULES.

even in time, but the cost would be very little and no possible harm could follow.

In the second season of the Atlantic Division a movement in this direction was inaugurated, though on too small a scale to offer a fair test, a cup being given by the flag officers under the following conditions: "Each canoe must come within the limits laid down by the A. C. A. rules, and in addition must have a well not less than 16in. wide for a length of 4ft.; there must be a permanent bulkhead forward and one aft, not less than 3ft. from the stem and stern respectively, and at least 6ft. between them; and there must be room in the well for the crew to sleep, with at least 5ft. between the after end of the well and the centerboard trunk; all centerboards must house without projecting below the keel or above the surrounding deck or coamings; no part of the hull or fittings shall project beyond the beam allowed by the A. C. A. rules. Sails shall be lowered on deck and hoisted again at least once during the race, and the start may be ordered with sails down. The donors of the prize reserve the right to refuse the entry of any canoe which shall violate the spirit of these rules." These conditions contain the main features of the idea, though they would not, as they stand, fit the case to-day. We hope later on to publish the lines of a canoe designed two years since practically to comply with them, the boat having proved fairly fast as a racer while a complete success as a cruiser, thus proving

the practicability of the scheme. As our drawing this week shows, some new limitation of extreme depth is now necessary, and other points could be improved. The provision concerning sails seems an excellent one, a sail which can be taken in and set again once or more in a race without a serious loss of time cannot be so terribly dangerous.

The history of the development of the rules and the boats in the past ten years shows one point very clearly; that while a constant tinkering with the sailing rules is very undesirable, at the same time no rules can be made which may not be evaded, or perhaps merely outgrown in time; and that a constant scrutiny of the working of the rules is necessary in order to secure the best results to all. It is not enough that, after some feature has been carried to an extreme which is fully apparent, some means should be taken to cure the evil, but the rules should be studied each year, side by side with the canoes which they have produced, and any tendencies to extremes, or any palpable evasion of the spirit of the rules should be acted on immediately. Such a course would work well in making men cautious in bringing machines and extreme features to a meet, with a possibility that they may be barred out. The recognition of a separate racing class would make this work easier than in the past, as any new devices, such as the sliding seat once was, might be tested for a season on the racing craft before being admitted in the cruising races, thus offering no bar to improvement. A case in point that proves the necessity of acting in advance on any promised evil is the present limit of depth, which we have shown may prove at any time a dead letter. A change at once would harm no one and awake no opposition, but if the matter be left until the keel of such a cutter canoe is laid, further legislation will be unjust.

This task of guarding and correcting the racing rules is too important to be left to volunteers from the membership of the Association, but should devolve on some competent and responsible body; and there is none better fitted for it than the regatta committee, to whom this work has been intrusted for the past nine years. The only change necessary is to make the list of their duties in Chapter IX. a little more specific, stating that the report there called for from them shall take cognizance of the good and bad points which have been developed in the course of the racing, and shall recommend such measures as they may deem fit; this report being the basis on which the changes, if any, must be made by the executive committee. Any member desiring to propose a change of rule may suggest it to the regatta committee, who should be competent to pass on it and thus save some idle discussion at the few and busy meetings of the executive committee. It never has been and need not be compulsory in the executive committee to make the changes suggested by the regatta committee; the power of the former is limited only in such a way as to secure careful and deliberate action on such important matters and to secure a desirable amount of publicity for all changes of the rules; a method whose wisdom is no less proven by the harmony which has prevailed under such methods in the past than by the discussion recently awakened by a contrary method of procedure.

THE AMENDMENT OF THE A. C. A. RULES.

IT will be a surprise to many A. C. A. men, as it was to us, to learn at this late date that the much discussed resolution of the executive committee abolishing standing sails was by no means the most important work of the meeting of Aug. 18, but that it was followed by the far more general and sweeping change. This change, which has only come to our knowledge during the past week, adds a third issue to the two now under discussion, and makes the action of the executive committee at the meeting in question of far greater importance than at first appeared. The discussion thus far has been confined to the questions, whether it was desirable that the standing sail should be dealt with at all; and whether, if this question was answered in the affirmative, the recent hasty and unexpected action was either politic or just. Both of these may well be set aside for the present until it is fully decided that the executive committee had the right to act on the matter at all in the way which it has done, and that it has not greatly exceeded its authority at the meeting in question.

The second resolution, passed immediately after the one relating to standing sails, reads as follows: Resolved, That Rule XXII. of the Sailing Rules be amended by striking out "On the recommendation of the regatta committee." In order to realize the full force of this resolution it is necessary to consider the discussion which accompanied the two motions. This discussion of course does not appear in full on the minutes and we can only give such a report of it as we could derive from conversations with several who were present, if we are wrong in any vital points we shall be glad to be corrected. As we have been informed, in the course of the discussion over the standing sail, the question was raised whether the executive committee had the power to make the desired change in the Sailing Rules under Rule XXII., which reads as follows: "These rules may be amended by the executive committee on recommodation of the regatta committee." This new question was fully discussed, the decision of the chair being in substance that as the regatta committee was the creation of the executive committee, it was absurd that the creating body should be limited or restricted by a subordinate body created by it. This ruling being acquiesced in, the standing sail resolution was put to vote and carried, after which it was moved by Rear-Com. Dorland and seconded by Vice-Com. Brokaw, "That Rule XXII. of the Sailing Rules be amended by striking out 'on the recommendation of the regatta committee;' which motion was also carried by a unanimous vote.

The first sailing rules of the A. C. A. were drawn up in 1881, and in the ten seasons of use that have followed they have been materially altered to meet many changes in the canoes and in the racing. Throughout all these changes Rule XXII. has remained untouched and respected, it has stood the test of ten years' trial and no fault has been found with it. The letter of the rule reads plainly enough, "These rules may be amended by the executive committee." How? "On recommendation of the regatta committee." No other interpretation has ever been put upon it, and its inherent force has been strengthened by a long observance of it which has built up the strongest kind of precedent. Many of the changes in the rules have been made directly on the recommendations contained in written reports from the regatta committee, but it has frequently been the case that the regatta committee was present at the general meeting in the fall, where most of such changes are made, and has worked in harmony with the executive committee in arranging the amendments.

While the power of the regatta committee is limited by a chapter of the By-Laws which forbids any change in the classification, measurement or sailing regulations without the sanction of the executive committee, the rights and duties of the regatta committee as proper medium for the consideration of all proposed changes, and the presentation of such as they approve to the commodore for action upon by the executive committee have never been questioned. The regatta committee is appointed by the commodore without regard to the executive committee; it reports to him and is answerable only to him, the executive committee having no power over it. We do not wish to put any false construction on the actions of the executive committee, but from all that we have been able to learn by diligent inquiry it has in the first place displayed an extraordinary lack of courtesy in taking up any proposed change without recognizing the regatta committee; in the second place it has deliberately disregarded a perfectly plain rule whose meaning has never before been questioned; and in the third place, after disregarding the rule it has completed the work by wiping it off the statute book. If this be a correct statement of the case, we submit that no more proof is required of necessity for the instant restoration of the expunged clause in a still stronger form, positively prohibiting any change of the racing rules save after publication for several weeks of the proposed change.

If this last act of the committee is to stand as legal, there is a direct premium on party legislation of a sort never seen before in the A. C. A. But seven members or deputies are necessary to a quorum of the executive committee, and if at any time the friends of the standing sail should find themselves in the majority they can take up the obnoxious motion. "The regular sailing races of the A. C. A. shall be confined to canoes whose sails can be readily lowered while afloat," and amend it by substituting after the word sails, "which are permanently laced to the masts." This would be turning the tables with a vengeance, and it would then be in order for the other side to capture a meeting as soon as possible and make a new change. Undignified and positively bad as such legislation would be, it has been made possible by this action of the executive committee.

If racing is to continue and sport afloat is not to be replaced by unseemly squabbles over rules, some stringent provisions must be made to govern all changes of the Sailing Regulations. Not only must the last portion of Rule XXII. be replaced, but it must be accompanied by a positive statement that all proposals for future changes must come through the regatta committee, and that even then none may be acted on until they have been publicly announced for at least three weeks. Popular representation is one of the strong principles of the Association, every member should have the right to know what changes are proposed in any of the laws; and there are very few changes in the Sailing Regulations or other rules that require to be made so quickly that public notice cannot be given. In a matter of this kind the custom of the larger yacht clubs offers a very safe precedent, and in all of these the alteration of the racing rules is most jealously guarded. Not only must the proposed amendment be printed in full and sent to each member ten days or more before a meeting, but in some cases it is required that the amendment must be submitted to a second meeting for a final ratification, and as a rule all changes are specially prohibited after the approach of the racing season. If such safeguards against hasty and ill considered actions are necessary in clubs where frequent meetings are held, and where matters of news are not only noised about from mouth to mouth, but where members meet constantly for the private discussion of such matters, they are much more essential in a body such as the A. C. A., where the power must of necessity be deputed to a few, and where no general meeting of a majority or even of a fair fraction of the members is possible.

Since the above was written we have been informed by two members that the amendment to Rule XXII. was the first passed, but the minutes state to the contrary.

PHILADELPHIA C. C., SEPT. 17.

THE annual regatta of the Philahelphia C. C. was held Wednesday of last week at Riverton, N. J. Through the courtesy of the Riverton Y. C. its commodious and beautiful house was used for the occasion, and the verandahs were filled with well known people from Riverton and Philadelphia.

The first event was the single paddling race, with the following contestants, who finished in the order named:

Trio, Norman Ellison	1
Juanita, J. Etter Small	2
Chandos, Frank E. Bennett	3
Regina, H. R. Wray	4
Norka, W. S. Runk	5
Noname, Wm. R. Ellison	6

The first prize was a handsome Bavarian tankard and the second was a silk flag.

A half gale from the northwest reduced the number of starters in the sailing race and twice capsized Osceola, but she was righted and won easily as follows:

Osceola, Wm. S. Grant, Jr.	1
Aglaia, S. H. Kirkpatrick	2
Echo, F. D. Brown	3
Enid, J. A. Inglis	Did not finish.
Valkyr, Francis Thibault	Did not start.
Muriel, W. S. Runk	Did not start.
D. B., C. S. Kates	Did not start.
Hottentot, C. F. Marlow	Did not start.

The first prize was the sailing trophy, a silver cup, and was reawarded to the holder, Wm. S. Grant, Jr., who won it in 1889. Second prize, a silk flag.

The tandem paddling race was very close and exciting, the canoes being bunched at the finish, and the winning crew being well lapped by the second. The order at the finish was:

Juanita, J. Etten Small and H. R. Wray	1
Trio, Norman Ellison and W. S. Runk	2
Chandos, Wm. R. Ellison and Frank E. Bennett	3
Aglaia, S. A. Kirkpatrick and Wm. S. Grant, Jr.	4
Regina, Wm. R. King and J. A. Inglis	5

First prizes, two German tankards; second prizes, two silk flags.

The last event was the paddling upset race, and showed that the Delaware River canoeists are well prepared for capsize, the men all regaining their canoes with remarkable agility and quickness. This race was finished as follows:

Aglaia, S. H. Kirkpatrick	1
Nautilus, C. S. Kates	2
Valkyr, J. A. Inglis	3
Juanita, J. Etter Small	4
Chandos, Wm. R. Ellison	5

First prize, silver flask; second and third prizes, two silk flags.

In the evening a reception was given by the Riverton Canoe Club to the Philadelphia Canoe Club and its guests, in the handsomely decorated reception rooms of the Lawn House, when the prizes were awarded, and excellent music tempted the feet of the dancers until a late hour.

ROCHESTER C. C., WILSON CUP.—The third annual race for the Wilson Cup was sailed on Sept. 13, the first gun being fired at 11 A. M. The wind was very light and variable, and the time slow:

	1st round.	2d round.	Time.	Points.
Massawippa, W. H. Martin	39 15	41 15	1 20 30	9
Marie, H. M. Stewart	30 30	52 15	1 22 45	8
Polly Wiggie, F. S. Smith	39 45	46 45	1 26 30	7
Prudence, H. J. Wilson	44 15	48 15	1 32 30	6
Surprise, H. D. McVeac	44 00	49 15	1 33 15	5
Hero, Geo. Ruggles	41 30	52 30	1 35 00	4
Louise, C. H. Moody	1 29 30			
Toodles, A. B. Dodge	Withdrew.			
Midget, E. L. French	Broke down.			

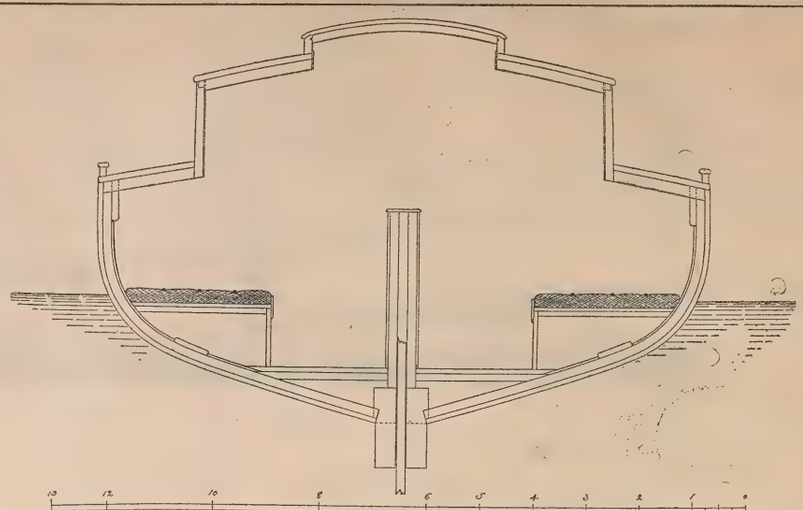
The fourth race of the series was called at 1:35 P. M., a strong and steady wind from the north having sprung up. The race from start to finish was very close and interesting. Hero secured the best start and a long lead, but was overhauled and passed by Marie and Surprise after a hard fight. Surprise parted her main halliard just before the last gun was fired, and was very late in starting. Both races were sailed over the regular club course, twice around the mile and a half triangle. The wind freshened on the second round and made the work very lively; especially for Massawippa, who was over-canvassed. Marie carried 150 sq. ft. and Surprise 130 sq. ft. easily, Massawippa 130 sq. ft., Midget 110 sq. ft. and Polly Wiggle 100 sq. ft. The rest carried smaller sails, from 90 to 70 sq. ft.:

	1st round.	2d round.	Time.	Points.
Marie, H. M. Stewart	26 30	21 30	0 48 00	9
Surprise, H. D. McVeac	27 00	24 30	0 51 30	8
Hero, Geo. Ruggles	26 00	26 30	0 52 30	7
Massawippa, H. W. Martin	30 00	27 00	0 57 00	6
Midget, E. L. French	30 45	26 45	0 57 30	5
Polly Wiggie, F. L. Smith	30 45	28 45	0 59 00	4
Prudence, H. J. Wilson	29 45	30 15	1 00 00	3
Louise, C. H. Moody	34 45	Withdrew.		2
Toodles, A. B. Dodge	33 00	40 00	1 13 00	1

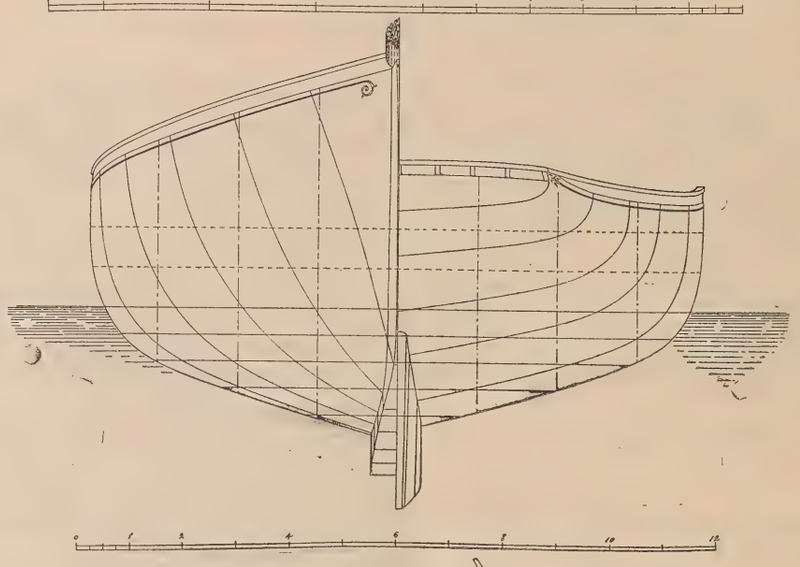
BROOKLYN C. C.—On Sept. 20 a race was sailed for the Brooklyn cup, there being but three starters: Guenn, Wm. Whitlock; Eclipse, F. L. Dunnell, and Nomad, Wm. Wintringham. Toltec, W. W. Howard, of the New York C. C., was present, having sailed across the bay in a strong N.W. wind, and started with the others to receive a special prize in case of a win, club members only being allowed to enter for the cup. There was a heavy canoe sea and so much wind that Eclipse and Nomad started with too much sail, Guenn and Toltec carrying each about 70ft. The course was triangular, off Bay Ridge, two rounds. Toltec was over the line with a good start, but the position of the line made it necessary to luff around the flag, and as she turned Nomad struck her about 4ft. from the stern. The consequent delay made the four on nearly even terms at the start, Guenn soon taking the lead, the course being to windward. Before the first buoy Toltec passed her, while the others had too little sail to buck the tide and were far astern. Toltec led by half a minute at the end of first round, holding this advantage until the second mark of second round was passed, when a flaw struck her, and in trying to right her Mr. Howard caught his foot between the trunk and the side of the boat, his centerboard extending the whole length of the small well. The canoe lay with her sails afloat for some little time, and when Mr. Howard had freed his foot and righted her his opponent was just on his weather, Toltec started off, the course being reached, but with water aboard she could not keep her course, luffing up in the frequent puffs, and Guenn won by several length. Eclipse finished third, but Nomad withdrew. Another race will be sailed on Saturday.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.



THE "CAT-SLOOP" RAHNEE.



THE yacht whose lines are here given is of special interest just now in connection with the gradual evolution of the sloop from the cat rig about Cape Cod, as shown last year in Harbinger and some other craft.

The present boat is a step nearer to the sloop, but at the same time has some of the distinguishing features of the catboat. She was designed and built last winter by Messrs. Read, of Fall River, builders of the sloop Mabel F. Swift and other yachts, being intended for a somewhat similar purpose as the Newport catboats, for day sailing and taking out pleasure parties. The dimensions and elements are:

Length, over all	34ft.
L.W.L.	27ft. 9¾in.
Beam extreme	11ft. 6¼in.
Draft without board	3ft. 9in.
Least freeboard	2ft.
Displacement, long tons	7.85
Ballast, iron, keel, long tons	.80
inside	2.00
total	2.80
Ratio of ballast to displacement	.35
Mainsail, luff	23ft. 6in.
head	23ft.
foot	36ft.
area	873.5sq. ft.
Jib, luff	27ft.
leech	26ft. 6in.
foot	13ft.
area	161sq. ft.
Total area	1,034sq. ft.

The frames are of steamed oak, 2×1¾in., and the yellow pine planking is 1¼in. thick. The companion and cockpit are finished in mahogany. The 10in. mast is stayed to steel channel plates, 1ft. wide. The head room in cabin is 5ft. 11in. The name Rahneé signifies an Eastern queen, being the feminine form of Rajah. A step has been provided for a mizen mast, so that the yawl rig may be tried. The yacht is enrolled in the new Fall River Y. C. We are indebted for the drawings to Mr. Frank T. Wood, of Fall River.

COLUMBIA Y. C. FALL REGATTA, SEPT. 18.

THE Columbia Y. C. finished the season with a stirring race on Thursday last, in a squally N.W. wind, the course being to Yonkers and back for all but Class K, these boats turning a mark off Spuyten Duyvil. The times were:

CLASS B—CABIN SLOOPS OVER 30FT.

	Start.	Finish.	Elapsed.	Corrected.
Mergus	11 19 08	2 53 10	2 05 52	2 05 52
Emma and Alice	11 17 03	2 17 58	3 00 55	2 10 47
Hazel	11 13 00	2 19 20	3 06 20	2 18 10
Gracie T	11 11 30	Did not finish.		

CLASS C—CABIN SLOOPS OVER 28 AND UNDER 30FT.

Vixen	11 13 40	2 22 40	3 09 00	2 08 06
Bertha	11 14 00	2 23 59	3 09 59	2 08 11
Forsythe	11 14 13	2 22 30	3 08 17	2 13 23
Brunhilde	11 14 47	2 33 53	3 19 06	2 22 18
Soutter Johnnie	11 14 11	2 36 58	3 22 47	2 22 27
Annie R	11 15 40	2 39 49	3 24 05	2 25 01

CLASS D—CABIN SLOOPS UNDER 26FT.

Lurline	11 16 32	2 33 18	3 16 46	2 13 10
Christine	11 15 05	Did not finish.		

CLASS E—CABIN CATBOATS.

Nina	11 16 30	2 19 45	3 03 11	2 09 33
Guile	11 11 25	3 00 06	3 48 41	2 43 54

CLASS F—OPEN SLOOPS.

Thorn	11 22 15	2 19 25	2 57 10	1 52 18
J. A. Cameron	11 21 41	2 22 20	3 00 39	1 59 05

CLASS I.

Pauline B.	11 23 25	2 22 21	2 58 56	1 49 04

CLASS K—OPEN CATBOATS UNDER 21FT.

Sisters	11 21 50	1 25 45	2 03 55	1 15 31
Dolphin	11 23 00	1 26 35	2 03 35	1 16 35
C. T. Wills	11 25 05	1 28 39	2 05 34	1 18 16
Gauntlet	11 23 35	Did not finish.		

In Class B Mergus wins, with Emma and Alice second. In Class C Vixen wins, with Bertha second. In Class D Lurline wins. In Class E Nina wins, with Guile second. In Class F Thorn wins, with John A. Cameron second. In Class I Pauline B. has a walk-over and a prize. In Class K Sisters wins, with Dolphin second.

BEVERLY Y. C., 169TH REGATTA, Third Buzzards Bay Championship, Monument Beach.—Courses, first and second classes, No. 2, 11 miles; third class, No. 7, 8 miles; fourth class, No. 9, 5 miles. Strong S.W. double reef breeze. Summary:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Mattie, Howard Stockton	28.10	2 01 40	1 52 36

SECOND CLASS.

Mist, G. W. Lyman, Jr.	26. 8	1 55 54	1 44 43
Widgeon, M. Williams, Jr.	26.10	1 56 18	1 45 18
Anonyma, F. L. Dubney	26.10	1 58 05	1 47 05

THIRD CLASS.

Puzzle, Wm. Anory, Jr.	22.09	1 46 39	1 35 01
Parole, W. H. Davis	22.08	1 48 20	1 36 38
Caysue, F. W. Sargent	22.09	1 48 37	1 36 59
Eina, John Parkinson	22.10	1 49 40	1 38 08

FOURTH CLASS.

Rip, C. B. Jefferson	19.01	1 16 17	1 06 28
Kitten, G. H. Richards	20.00	Disabled.	
Edith, Irving Chapman	19.04	Withdrew.	

First class, Mattie won; second class, Mist; third class, Puzzle and Parole; fourth class, Rip. Mist and Rip win and hold pennants. Judge, F. Elliot Cabot.

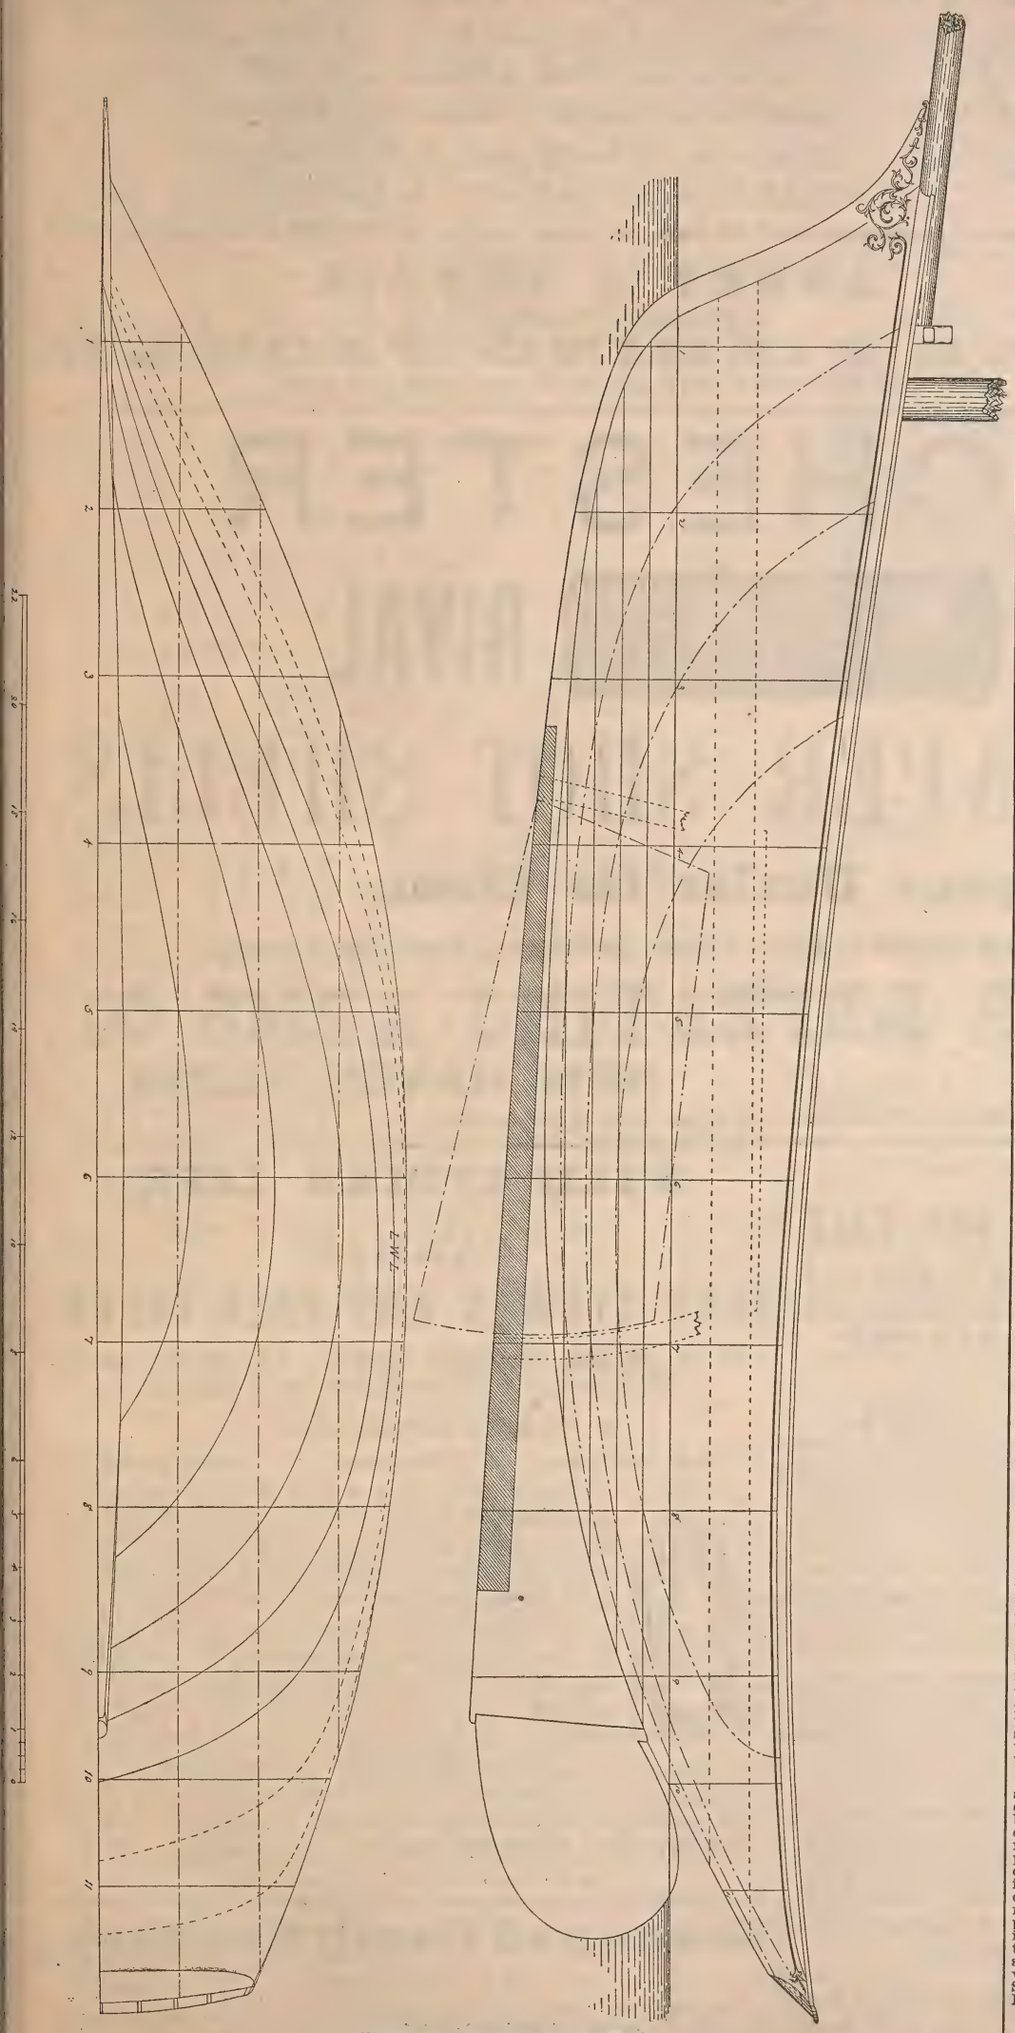
DORCHESTER Y. C., SEPT. 20.—The third championship race was sailed on Saturday in a reefing breeze from northwest, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Mudjekeewis, W. P. Whitmarsh	25.07	1 32 52	1 03 00
Montezuma, G. E. Curry	22.01	1 46 07	1 12 22
Rival, W. S. Nickerson	26.05	1 44 56	1 15 53
Gilt Edge, D. L. Whittemore		1 44 31	

SECOND CLASS.

Viento, C. B. Pear	15.07	1 39 35	1 07 19
Jackdaw, George Lewis	18.02	Withdrawn.	



SPECIAL CLASS.

Scamp, Jr., H. N. Nute	1 51 53
Beatrice, J. F. Preston	1 53 11
Cowslip, J. W. Longstreet	1 53 25
Rose, F. W. Porter	Disabled.

Mudjekeewis lost her bowsprit, but won. Rose carried away her mast. Viento takes second prize in the second class, Rocket having previously won the cup. Beatrice, Rose and Scamp, Jr., having each won a leg in the special cass, will sail-off for the cup. The judges were Hartfort Davenport, H. W. Smith, Walter S. Fox. Regatta Committee: C. Edwin Bockus, Chairman; H. W Burr, Sec'y; H. W. Smith, F. C. Blanchard, D. H. Mason.

ATLANTIC Y. C.—The Atlantic Y. C. is the first club to begin the fall work of improving the racing rules, the following steps being taken at a meeting on Sept. 15: To provide for establishing a 25ft. racing class of cabin yachts; to appoint a committee to submit desirable amendments to the constitution, by-laws and racing rules; to take action with respect to extension of time for filing lines of winners of prizes in the annual regatta; to consider matter of arranging the present classification, and racing rules and regulations, so as to divide cruising and racing yachts, or to reduce the number of classes; and to consider the matter of providing for actual measurements of sails, instead of the present method for measuring sail area, for calculation of time allowance. All of these are in the line of work begun by the club this spring, and which it evidently intends to carry out most fully. The creation of the new racing class of 25ft. corrected length is one of the most important steps that has been taken for some years by any American club.

SAVIN HILL Y. C.—Only Florrie and Elsie started in the third class championship race on Saturday, Elsie parting her allhard and giving up. One more race will be sailed.

"THE CAT-SLOOP RAHNEE."

RIVERSIDE Y. C. PENNANT REGATTA, Sept. 20.—The pennant regatta of the Riverside Y. C. was sailed on Saturday, resulting as follows:

FIRST CLASS.

	Elapsed.	Corrected.
Wayward, F. Beltz	3 04 50	3 04 50
Alcedo, W. A. Hamilton	3 07 49	3 06 15

SECOND CLASS.

Vorant, G. G. Tyson	3 30 36	3 30 36
Doctor, M. Young	Did not finish.	

THIRD CLASS.

Nahma, W. Luke, Jr.	1 51 27	1 51 04
Lassie, H. O. Aston	1 55 31	1 53 11
Gertrude, W. J. Selluk	1 54 36	1 54 36

FOURTH CLASS.

Dot, C. T. Pierce	1 45 40	1 45 40
Pearl, G. Smith	1 49 07	1 47 59
Unique	Did not finish.	

Nahma was disqualified and Wayward will be remeasured.

MASSACHUSETTS Y. C., 126TH REGATTA, SEPT. 20.—The final race of the season was sailed on Saturday in a strong N.W. wind, resulting as follows:

SIXTH CLASS.

	Length.	Elapsed.	Corrected.
Queen Mab, W. O. Gray	23.01	1 20 28	1 14 39
Posy, F. T. Hunt	27.04	1 17 42	1 16 33

SEVENTH CLASS.

Magpie, H. G. Otis	20.07	1 22 01	1 19 33
Peri, F. Driscoll	19.01	disabled.	

EIGHTH CLASS.

Psyche, F. Gray	19.01	1 26 15	1 21 15
Paradox, L. M. Clark	19.04	1 28 48	1 24 13
Mirage, J. Dearborn	19.00	1 29 58	1 24 50

Queen Mab carried away her throat halliards, but won in first class. The judges were W. T. Mann, A. J. Clark, H. Davenport, A. T. Shepard.

MANCHESTER REGATTA.—On Sept. 20 a regatta was sailed off Manchester, Mass., resulting as follows:

FIRST CLASS.

	Elapsed.	Corrected.
Jester, G. P. Crooker	1 01 10	0 45 55
Bess, Mahoney & Baker	1 08 07	0 52 53

SECOND CLASS.

Undine, J. R. Shaughnessy	1 07 12	0 47 18
Helen, A. F. O'Brien	1 12 20	0 52 30

THIRD CLASS.

May R., J. L. Bremer	1 09 27	0 48 16
Samaria, Geo. P. Eustis	1 12 00	0 51 00
Surprise, E. P. Crooker	1 04 18	0 44 43

FOURTH CLASS.

Blanche, E. P. Crooker	0 56 44	0 44 43
Mary Alice, E. P. Stanley	1 04 03	0 49 18
Trout, A. W. Maslin	1 18 28	1 03 31
Toledo, J. H. P. Dodge	1 20 56	1 04 29

ESSEX Y. C.—The annual regatta of this club was sailed at Essex, Mass., on Sept. 20, the times being:

	Length.	Elapsed.	Corrected.
Idle Hour, Dr. Woodman	17.05	1 29 39	0 55 37
Eruymone, E. B. James	19.03	1 29 15	0 57 25
Daisy, W. H. H Burnham	22.06	1 26 10	0 58 10
Voma, J. W. Norwood	14.10	1 38 51	1 00 42
Gossoon, L. B. Norton	16.09½	1 38 25	1 03 22

CORINTHIAN NAVY.—A regular meeting of this association will be held at the Hotel Marlborough, Thirty-sixth street and Broadway, on Sept. 30, at 8 P. M., when important changes in the by-laws and constitution will be proposed, and the regatta committee will award the prizes won at the association regatta on June 28. Proposed for membership: Thomas B. Willson, Daniel F. Day, H. C. Hauser.

CLARA AND CINDERELLA.—These two old rivals have not met since the August regatta at Marblehead in 1887, when Clara lost her bowsprit and withdrew. Some time since a match was arranged which was sailed on Saturday over the Captain's Island course of the Larchmont Y. C. Clara's bobstay parted near the end of the race, Cinderella being in the lead at the time and winning.

HULL Y. C.—The sail-off in sixth class on Saturday was a sail-over for Rocket, as Wildfire was not present. This race ended the season.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

SPORTSMAN, New York.—Either one of the makes of guns you name will be serviceable, and you cannot mistake. There is an advantage in having two barrels. Select not larger than a 12ga. with a 28in. barrel, and if you choose the rifle attachment get a caliber from .25 to .38.

W. R. P., Cologne, Germany.—Please inform me per your correspondence column where to apply for Chinese ring pheasants, as we would like to try and introduce them here in Germany. Ans. We presume your best plan would be to enlist the services of your consuls in China and Japan.

F. C. W., New York.—I have a pair of gun barrels that became rusty. I used emory paper to remove and now the barrels are too bright and shiny to suit me. What can I put on to bring back the dull natural color? Ans. "Old Timer" in last week's paper recommended a coat of shellac for this.

BLACKFISH, New York.—1. What is the best way to kill a wounded bird? 2. Can a man kill game birds out of season on his own property? 3. What is the best way to clean a gun after a day's shoot? Ans. 1. Break its neck; many gunners bite the neck. 2. Not in this State, nor, as a rule, in other States. 3. Swab with warm soap suds and dry thoroughly; then rub with flannel soaked in benzine or kerosene, and rub thoroughly with dry chamois skin.

T. A. R., Zanesville, O.—1. What gun will do better work in the field, 10 or 12-gauge? 2. What is the lightest gun, 10-gauge, you recommend, 32in., to shoot 4½dr. black powder and 1¼oz. shot, with safety and comfort to the shooter? 3. Would an 8lb. 10-gauge 32in. gun be comfortable to shoot 100 shots at the trap, using 4½dr. black powder and 1¼oz. shot? Ans. 1. We would recommend a 12-gauge except for ducks. 2. Of 8lbs. 3. It depends on your build and strength.

G. E. S., Chattanooga, Tenn.—The writer has been considerably annoyed by the appearance of rust in a 10-bore hammerless gun. Lately we have been keeping the barrels corked at the muzzle very tightly and filled with sperm oil and then with corks in the breech and a cloth cover on the barrels we would keep them muzzle down in a dry place. A few minutes' work will empty the barrels, wipe them out and put the gun together, using the same oil repeatedly. Is there any objection to this plan other than the trouble? Ans. The best sperm oil is an excellent thing to use, and the treatment should be efficient.

M. H. B., Passaic, N. J.—I wish to inquire whether it is not almost universally the rule with the regularly organized gun clubs, where three or five traps are used, shooting at inanimate birds, to throw all but the last bird from an unknown trap, excepting where they shoot under Keystone rules or tournament rapid shooting. Also please give your opinion whether it is wise policy or not for a club, after shooting two and a half years, to change their rules so as to shoot at all known birds, in order to improve their scores and enable them to shoot against other clubs. Ans. The club should shoot under American Association rules, with the three traps throwing at fixed angles; but the particular trap to be pulled at each shot to be determined by the indicator. It is mere child's play for a club to shoot at known traps throwing known angles, and it's doughnuts to dollars that such a club in a match where American Association rules prevailed, would come out at the bottom at the tail end of the race. Send to Major Taylor, American Shooting Association, Stewart Building, N. Y., for a copy of the rules.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price $2.50. For sale by FOREST AND STREAM.

WILD INDIAN LIFE.
PAWNEE
HERO STORIES AND FOLK-TALES.
With Notes on the Origin, Customs and Character of the Pawnee People.
By GEORGE BIRD GRINNELL ("YO.")
Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

Canoe and Camp Cookery.
By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.

ANSWERS TO CORRESPONDENTS.

OCTOBER.

OCTOBER is the sportsman's month, and in this latitude its opening is most auspicious. Shooting conditions are not yet in their prime. The foliage is very dense, not so heavy as that of last year, but heavier than usual. There have been no frosts, and until the cold nights come and the leaves begin to fall shooting in cover will be difficult. To bag his birds in early October this year, to use an old and hackneyed but expressive phrase, one must "cut loose with the eye of faith and the finger of instinct." The successful shot is made with the gun pointed "where the bird ought to be," not where it can be seen to be.

Owing to recent rains the woodcock grounds are moist and the scent would be good were the birds confined to their accustomed haunts, but the same wet weather has dispersed the birds; they are scattered widely, and while this is fortunate for them it is equally unfortunate for the gunner. In the north, over the line in Canada, woodcock have been noted in great supply; they bred abundantly there and knowing shooters are looking out for a woodcock flight this fall which shall give better returns than the flights of recent years.

From all parts of the country come reports of an abundant supply of quail. It has been a favorable year indeed for them, with the mild winter of 1889-90 and the propitious weather conditions during the breeding season. The open time in Massachusetts began the middle of last month, but September quail shooting is not what the sport will be in the last of October and in November. There are shooting conditions which cannot be changed by whims of legislatures. No legal enactments to encourage July woodcock shooting can give to the mid-summer pursuit of that bird the bracing and exhilarating nature of autumnal flight shooting, and it is beyond the power of the lawmakers to prescribe rules and regulations to be observed by "Bob White" for the convenience and delectation of his human enthusiasts who love and preserve him that they may pursue and slay him. The feeding habits of the birds in September differ so much from their habits later in the season that the conditions of shooting are not at all the same. So long as food is abundant everywhere, as it is in September, a flushed covey taking wing will be likely to fly far and not return; while in November, as the supply diminishes, the birds frequent the stubble fields and the valleys, and flushed here to-day will in all probability return on the morrow.

GAME FISHES OF IDAHO.

THE article contributed to this number of FOREST AND STREAM, by "G. H. W." on the salmon and trout of Idaho will be read with much profit and pleasure by all of our readers who delight in this noble family of fishes. The account of the habits of the redfish corresponds exactly with our own observations on the red salmon (*Oncorhynchus nerka*) of California and the region northward to the Yukon River in Alaska. Even the month (August) in which dead salmon line the river banks is the same in Alaska as in Idaho. In short it is an accepted fact that the redfish and red salmon, or blueback are identical. There are, however, landlocked fish of this species, and we have seen examples from Washington which were sexually mature at a length of 10in, This is the only one of the Pacific salmon known to have a landlocked form. The colors described by "G. H. W." —a sharply contrasting green head with a reddish body—agree perfectly with those of the red salmon on Kadiak Island as we saw them last fall, but Alaskan salmon are somewhat larger than the 20in. fish of Idaho. What is the bull trout here mentioned? A dark-colored thickset fish with a large head and the habit of lying in deep pools and taking bait near the bottom, while all the other trout of this communication take the artificial fly—this is the description of a trout which we have long supposed to be the dolly varden (*Salvelinus malma*), which is the only red-spotted trout recorded from the Western region. The other three kinds, we assume, are all black-spotted and represent varieties of the red-throated or Clark's trout (*Salmo purpuratus*). There is in Henry Lake, Idaho, and doubtless other lakes as well, a trout which we fail to recognize among those described by our correspondent; it is the lake trout or *namaycush*, which is so widely distributed in North America, from Labrador to Alaska, and from Idaho to the Arctic Ocean. This will be easily accessible and always desirable for the great work of stocking the Yellowstone Park now in progress. Living in deep lakes, growing to the greatest size of all the trout and possessed of admirable qualities as food and game, it must always command the attention of anglers and fishculturists.

CALLIOPES IN THE FIELD.

WE have all encountered him in the field, the man who howls like a maniac at his dog. It is not because the dog is deaf, for even if he were there would be no need of the howling and shrieking; but it is that the howler knows not a bit better. He has the notion that a hunting dog must be worked like a sledge dog amid Arctic ice fields, and so he makes an Eskimo of himself every time he goes shooting. And none of us ever yet saw a dog that worked any better for the racket than he might work, or might at least have been trained to work, without it.

As a safe rule, the man who howls at his dog in the field may be put down as a poor sportsman, and the dog that is howled at as a poor dog. For the matter of that, the dog which finds game for a noisy master usually does about what his dog sense tells him to. The very fact of the man's noisy demonstrations imply that he cannot make his dog obey. With dogs as with horses, the master who handles them best is not he whose voice can be heard in the next county. The quiet control of horse or dog is the only true mastery.

There is nothing to be said for noise in the field. Properly trained, a dog will obey as readily, and as intelligently, and as effectively a motion of hand, or gun, or head, as the bawling and roaring of a Boanerges. It is true that the dog-exhorter may thereby secure a needed and beneficial degree of lung exercise; but he is not at all likely to secure so large a count of game. Of all sounds that startle the birds, that of the human voice is most certain to alarm them. Every expert gunner knows this, and keeps still. The shouter is a tyro; or if he shouts year after year, he is certainly a poor sportsman; and when in company with others who do not share his noisy proclivities, he is voted a general nuisance. Many a grouse has been lost for no other reason than because it was startled and flushed by ill-timed speech.

Roscoe Conkling once pointed out that it would not do to hunt ducks with a brass band. He meant the remark to apply to politics. There are some men who never have learned, and never will learn, that it applies to shooting too.

BLUEFISH IN LONG ISLAND WATERS.

FISHERMEN around Great South Bay have not for many years seen such great numbers of large bluefish as are present this season. One man caught 450 in a single day recently, and 250 at another time. Capt. Daniel Thurber, of Patchogue, states that during August they drove up on the beach near the Blue Point Cove Life Saving Station immense schools of small fish that resembled herring. On Sept. 24 we were on this beach and saw on a stretch of about one-half mile west of Capt. Thurber's house fifty-one round herring (*Etrumeus teres*) which had been driven ashore very recently and were still fresh. When Capt. Thurber's attention was called to the fish he said these were the herring on which bluefish had been feeding during the summer, and whenever they were seen on the beach the men were sure to find bluefish close at hand. Sometimes they chased the round herring up to the water's edge, and many bluefish were captured with gaffs and by throwing and hauling a jig or drail from shore. At Fire Island, pleasure boats of various types are now engaged in chumming in the inlet, and, although the large fish are not often taken, individuals of 3 to 5lbs. are not uncommon. A catboat, with a fish painted on its pennant as a sign of its business, plies about to furnish the parties with chumming bait. The bit of bottom known as "The Cinders" is a favorite locality. Here the water is comparatively deep and the tide runs with great force. In shallower water near the north shore the young bluefish, here called "snappers," are freely taken with rod and line.

SNAP SHOTS.

THAT is an old and familiar story, of the man in jail whose counsel said to him, "My dear sir, they cannot put you into jail for that." To which the client retorted, "But I'm here." When told that the American Kennel Club had convened in secret session, considered Mr. C. J. Peshall's case without giving him a hearing—in fact while he was detained elsewhere in the custody of a sheriff—and had pronounced him guilty, and disqualified him permanently, some one remarked, "But they could not do that." To which it was replied, "But they did." This is probably the impression that the proceedings at the American Kennel Club office last Thursday will have on most people who are interested. Assuming that Mr. Peshall was guilty of all the charges on which he has been disqualified, and that his sentence is a righteous one, the manner of his trial in secret session of the club last Thursday was not only in violation of precedent, in any other country than Russia, but it is repugnant to accepted notions of fair play.

For several years the farmers of both the Big and Little Miami valleys of the Ohio have been trying to effect a State organization for the protection of streams and farms from reckless hunters, trespassers, campers and marauders, and for detective work to aid in ferreting out and prosecuting cases in the courts. The Ohio Farmers' Law and Order League has been incorporated, with headquarters at Dayton, and expects to be in complete working order before the quail season opens. Gentlemanly hunters will have no more annoyance under this league than heretofore; but indiscriminate shooting and abuse of farmers and their property will be effectually checked.

Readers of "Uncle Lisha's Shop" and "Sam Lovel's Camps" will be gratified to know that Mr. Rowland E. Robinson, who has been threatened with loss of sight has just successfully come through a surgical operation for the restoration of his vision. Among those who happened to be in the city to congratulate "Awahsoose" was our contributor, Maj. F. G. Dabney ("Coahoma"), of Mississippi, who assured Mr. Robinson that the philosophical tenets of the Vermont Canuck, Antoine Bissette, are making steady progress in the cane-brakes of the South, a fact to which Mr. H. P. Ufford had previously testified, as noted by him in the Acadian country of Louisiana.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

ON A GLACIER IN SUMMER.

THE lodge was pitched at the foot of the Upper Glacial Lake. To the northeast ran the narrow trough through which Glacier Creek flows to join the main swift current, but on every other side rose mountains, steep, ragged, snow-patched; the homes of the white goat, the bighorn and the white-tailed ptarmigan.

The little brown conical lodge, standing half hidden among the spruces, would hardly have been noticed by the eye of any stranger who might have penetrated this narrow valley, but eight or ten horses scattered about over the grassy meadow near the lake shore told that quite a numerous company were camped here. If you had counted noses at supper that night you would have found six; the Chief, the Rhymer, Jack, Appekunny, Yo and Tail-feathers coming-in-sight-over-the-hill, whose every-day name is Brocky.

It had been for more than one of the party a day to be marked with a white stone—a day actually marked with white goats. Two of the men on that day had risked their lives on the precipitous ledges of the west side of Cataract Creek, and the outcome of the clambering for each had been his first white goat. Two "billies" of large size had been killed, and had taken those fearful plunges down over slide rock, snow bank and precipice which, when seen, fairly appal the man who, for his own pleasure and in the excitement of the chase, has put himself in a position where a little carelessness might result in his falling as his prey does.

Cataract Creek is a modest stream, and five or six miles long, which flows into Glacier Creek from the south. It heads in snow banks and ice fields which lie in part on Monroe's Peak and Gould Mountain, and also on a high divide which probably separates the waters of Swift Current from those of the Upper St. Mary. Many of the rivulets which gurgle out from beneath these ice fields flow a milky current, which indicates that, though small, they have the motion which is characteristic of true glaciers. The vertical rockfalls above these snow and ice fields, and the deep narrow clefts in the rock, which shelter the winter's accumulation from the rays of the sun, are favorite feeding grounds for the white goat. Here, up a steep long slide, the Rhymer had stalked a great male that, unconscious of his approach, continued to graze on the tender plants until he felt the bullet's fatal sting, and then sturdily making his way up the rocks, exposing himself to other shots which finally brought him rolling down the steep incline.

The Chief to-day saw his first goat. It was browsing on a cliff far above the valley, and to get within shot of it required careful work and hard climbing. At length, having crept along the narrow ledges until he was within range, the Chief shot it, wounding it so severely that it was unable to climb. It had strength enough, however, to walk along a ledge and on behind a point of rocks where it lay down. The hunter followed it, but when he reached a point where he could see it, only the top of its back was visible above rocks. He fired a shot hoping to make it move to a point where he could kill it. At the report it rose to its feet, walked around another point of rocks and again lay down. The Chief then climbed up to within 50ft. of where it lay, but on the opposite side of a narrow and deep water course. The goat lay there looking at him, but neither his shouts nor the stones which he threw at it had the effect of making it get up. It was impossible to approach it where it lay, and the Chief, in the hope that in its death struggle it might fall to a place where it could be got at, shot it through the heart. As the ball struck it, it gave a convulsive spring, fell forward into the ravine, rolled down that to a snow bank, over which it slid until it reached some slide rock, where it again began to roll over and over. As it went on, becoming to the eye each moment smaller and smaller, it moved more slowly, and at the foot of the slide rock it had almost stopped, when it rolled on to a long snow slope down which it slipped, gathering each instant more momentum, and at last shot out over a waterfall and disappeared, not to be seen until some time later, when it was found on a ledge behind the waterfall several hundred feet below. The Chief declared that it made him quite weak to watch the animal's fall and to think that his course, if he should slip, would probably be over the same ground.

When both the men had got in with their meat they found that one section of the party had gone off in a new direction.

The year before, when a part of the men had visited this same little valley, Jack, Appekunny and Yo had with infinite labor scaled the cliffs which barred the way to the huge mass of ice which lies in its basin, far up toward the mountain's summit. They had found it covered with new-fallen snow, and only in a few places near its edge had the fact that the mass was really ice snow covered been evident to the eye. Now it was much earlier in the season; there were no indications that as yet any considerable amount of snow had fallen since the preceding spring, and it was thought that if the glacier could be examined now, it might show quite different characters. For this and other reasons Yo was anxious to make the ascent of the mountain; yet to clamber to the glacier and back to camp the same day would leave no time for work on the ice, and it was determined to carry up a little food and some blankets and to camp at the highest point where wood for cooking could be had.

Yo and Appekunny had started early in the day, carrying rifle and camera, and were to be followed somewhat later by Jack and Brocky, who should bring up food and bedding. Instead of proceeding over the rocks to the head of the Upper Glacial Lake and climbing up the precipice there, as they had done on the occasion of their previous visit, Yo and Appekunny began the ascent of the mountain on the north side of the valley, climbing laboriously up the steep slope until they reached the ledges, which, like the steps of some giant stairway, rose one above the other until the last were hidden beneath the slide rock which fell from the gray barren crags that formed the mountain's crest. The way, though steep and arduous, had in it nothing of danger nor of excitement. When the ledges were reached the climbers made their way from one to another through narrow crevices torn out from the rock by the torrents which in spring rush down from the melting snows. Sometimes a long search would have to be made at the foot of a vertical precipice before a practicable path could be found to the step next above; at others a crevice would be found cutting through two or three of the ledges in succession. Progress was slow, and they had been gone five hours before they reached the lateral moraine on the north side of the glacier. Here they sat down to look over the ice while they eat their lunch.

At the time of their previous visit to this spot the glacier had appeared much more extensive than it did now. The bitter cold had checked its melting and many a heavy fall of snow had covered its borders, so that it seemed to be of wider extent than at present. It was now melting rapidly, broken by crevasses and scored with streams of swift-flowing clear water. The torrents which poured forth from beneath the blue ice were white as milk, for they carried with them a fine powder, the ground up rock of which the mountain is composed. Along the lateral moriane, on the north side of the ice, were freshly turned up rocks and earth, which showed that the glacier was now moving. This moraine is about 125ft. high and is formed of great smoothed rocks, cemented together by a hard clay. In one place a glacial stream has broken its way through it and flows down on the outside of the wall.

Descending from their perch upon the moraine the men moved on to the ice. Its surface showed no new snow, and it was soft and everywhere melting. Down the steep slope of the ice hurried a dozen swift torrents, which had worn for themselves deep channels in which they whirled, and eddied and rushed, until at last they plunged into some deep crevasse and with hollow roarings disappeared from view. The blue icefield was dotted far and near with fragments of rock, great and small, with mud heaps and with great quantities of other debris, which had fallen down on the ice from the cliffs above. The ice was slippery beneath the feet of the men who now ventured on it, and as its surface was sharply inclined they were obliged to move very carefully. The deep crevasses with which it was everywhere seamed were alarming, for they seemed bottomless, and if a man should fall into one of them he would never be seen again. They had with them a coil of light rope taken from one of the pack saddles, and with this they tied themselves together, only one man approaching the crevasses at a time, the other standing at some little distance, so as to hold his companion in case the latter should slip.

The glacier was vocal with the sound of running water. The musical tinkle of the tiny rivulet, the deep bass roar of the dashing torrent, the hiss of rushing water, confined as in a flume, fell upon the ear, and up through the holes and crevasses in the ice came strange hollow murmurs, growlings and roarings, while the whole ice mass seems to shake and quiver from the concussion of the masses of water that are rushing along beneath it. Many of the crevasses were too deep to be measured by the 100ft. fishing line which Yo carried in his pocket; others seemed to be not real crevasses, but mere fissures in the ice 25 or 30ft. deep, and partially filled with clear water, through which the blue ice of the bottom could be plainly seen. Besides the crevasses there were many circular holes or wells of unknown depths, in some of which the black water rose nearly to the surface of the ice, while in others no water could be seen. In one of these a slender spire of blue ice, seemingly not more than 1ft. in diameter at its lowest visible point, rose perhaps 50ft., and tapering to a needle point at its upper extremity, reached almost the surface of the ice.

The sloping face of the ice was not easy to walk on, and if it had not been for the occasional stones which now and then gave a secure foothold, it would have been impossible to move about on it at all. Notwithstanding this fact, Yo, who was very anxious to reach the crest of the mountain, started to climb up the west arm, which showed a gradual slope from the Moraine up almost to the high saddle from which the west arm of the glacier starts. It seemed to him that the ice, although it sloped sharply, might be climbed, and that walking over its smooth surface would be less arduous than clambering among the rough rocks which formed the side of the trough down which it ran. He started up the slope, walking carefully, and supporting himself by means of the stock of his rifle, which at every step he dug into the soft ice. Appekunny followed, but in a short time concluded that the rocks were "good enough for him," and made his way to the edge of the ice and sprang to the ground. It was not long before Yo wished that he had done the same thing. The ice grew more and more steep and more and more slippery, and the footing less secure. The fragments of rock lying on the ice became less frequent, and it was each moment more difficult to plant his feet in the ice. He tried to make his way to the rocks at the side of the glacier, but a wide chasm yawned between the ice and *terra firma*—a chasm too wide to be jumped. Below him was the steep ice slope a mile in length and ending in a series of crevasses, above was the steep, smooth face of the glacier. A slip of the foot might result in a fall, and the man if he fell would go sliding down the ice with no hope of stopping before the crevasses were reached, and if engulfed in one of these his case would be hopeless. Yet this particular mode of going out of the world did not seem especially alarming, for it was certain that if he started to slide down this slope he would be dead before he reached the crevasses, since the rock fragments that dotted the ice would have stripped all the flesh from his bones before he had reached the end of the slope, and only his skeleton would fall into the crevasse.

At all events there was but one thing to do. To go back down the ice was impossible; he must continue to climb. It was a slow, toilsome and very delicate journey, the last half mile of this climb, but at its end Yo found himself within 75yds. of the end of the west arm. Here further progress was barred by a wide crevasse, beyond which the ice sloped so sharply that no living thing could have climbed it. Making his way to the edge of the ice, he at length found a place where a shoulder of rock projected out from the cliffs to within 3 or 4ft. of the ice, and by a careful spring he crossed the gap and kept on his way up toward the saddle. When he at last found the firm rocks beneath his feet he breathed a little easier, and looking back saw Appekunny, who had been watching him for an hour or more, turn away and sit down on a rock as if a load were off his mind too. It took but a few moments to reach the saddle, from which point Yo could see far to the west. At his feet the mountain sloped off sharply in a smooth grassy slope, dotted here and there with low-growing pines and junipers; at the foot of the slope was a beautiful park country of open grassy meadows with here and there a little lake and clumps of pine timber—a real paradise. He had come from surroundings of snow and ice and cold gray rocks, and now he looked down on a scene which held only freshness, verdure and beauty, which was picturesque, but not stern; charming, but not majestic. Further away and half hidden by the haze that hung over the scene could be seen a deep cañon running to the southwest and another running to the northwest. Far to the south stood a tremendous mountain, and in a great basin to the west of it lay a mighty mass of ice and snow—no doubt a glacier. Yo believed that in this saddle he stood on the Continental Divide, and that the little lakes and streams at his feet poured their waters into the Pacific Ocean.

At length, turning his face from this pleasant scene, he took his way with hasty steps down over the rocks toward the glacier's foot, and before very long joined his companion. The sun had set and it was growing dark when they climbed the great moraine near the glacier's foot, and hurried down toward the timber. Among the low gnarled evergreens which here make a fierce struggle against the bitter cold, the unceasing winds and the barren soil, they could see the flicker of the firelight where Jack and Brocky had evidently made camp, and before long they were warming themselves by the grateful blaze.

Though their food was scanty that night, and though their resting place was but a few paces from everlasting ice and snow, they slept well and rose refreshed. After breakfast Appekunny and Brocky started down to camp with the beds, while Jack and Yo crossed the moraine at the foot of the glacier and clambered to the saddle between Monroe's Peak and Gould Mountain. The clouds were flying over the mountain and the wind was blowing hard, presaging a storm. In the moraine at the glacier's foot was a line of enormous blocks of white feldspar and of dark syenite, which had been brought down by the ice from above, and at the south side of the glacier is a lateral moraine less in size than the one near the west arm. From the side of Monroe's Peak can be seen the whole valley of Cataract Creek, and from their lofty perch they looked down on the spot where a day or two before they had seen the white goats then so far above them. To have pushed on further over these heights would have been pleasant, but the fast falling rain forced them to hurry toward camp. They did so, but the rain continued, and when that afternoon they reached the lodge they were thoroughly soaked. Yo.

TRAPPING DAYS.

VI.—RUN TO EARTH.

AT the lake where we were now camped, which was called Cha-Nopa Tonka, or Big Two Wood, to distinguish it from Cha-Nopa Cheestun, or Little Two Wood, we remained for nearly a fortnight examining all the ground within a distance of several miles, as we were loth to give up the search for fur, and yet the more thoroughly we examined the country the more fully were we satisfied that the glory of Cha Nopa had (for the present year, at least) departed.

In one of my expeditions of exploration on foot I had the good luck to crawl within shot of three white cranes, and, although my only weapon was a carbine, I managed with a lucky shot to clip the tip joint of the wing of a stately bird, and after a most furious chase to capture it.

I have hunted for many years and this was the only white crane I was ever lucky enough to bag; and among all my hunting acquaintances I do not remember one ever blessed with similar good luck.

Here we were visited by several small parties of Sioux, who lived in the vicinity of Ootopaheeda, and were journeying to the northward to visit friends living in that direction; and as we made it a point to entertain liberally in return for the privilege of trapping without molestation, our little teepee at times resembled a frontier hotel.

Every party going north carried presents for their people, often of dried elk meat, and invariably of blocks of pipe stone from the great and only quarry of this singular rock; and on one occasion I bought a large pipe, made of this material and highly ornamented, for a common milk pan full of flour. We found these poor people very grateful for favors however small, and withal as prompt and ready to entertain us as to receive favors at our hands.

While a party, including three women, were one evening visiting us, one of the women observing my own awkward efforts to sew a patch on the sole of a damaged moccasin, with a smile at my awkwardness, drew the moccasin from my hand, and with a few deft stitches secured the obstreperous patch in half the time and far more neatly than was possible to my own clumsy fingers. "Isaac, what is 'Thank you' in the Sioux language?" I asked. "Pe-dom-i-i," he replied, and a pleasant smile circled round the dignified group as I repeated the courteous word.

Finally, after having become entirely satisfied that the trapping ground would not do at all, at the close of a long and very earnest council on the shore of the lonely lake far remote from civilization, when it was fully apparent to us that not only would the present ground prove entirely inadequate to keep us employed during the trapping season, but also that there was no other locality known to us but what was either overrun by swarms of green recruits eager to pass muster as trappers, or was included in the cowyards and pigpens of encroaching settlers—in short, that the great lake region was at last played out as a trapping ground; we then and there decided forever to abandon the occupation which had at times been a source of profit and pleasure, and again of loss and disappointment, and the memory of which with its mingled recollections of painful struggles with exposure and bitter cold, of vigils and watchings against the crafty savage, and of the many pleasant camps in the wilderness, where friendly faces both white and red reflected the cheerful light of the cosy camp-fire, was withal a source of pleasure rather than of pain.

The final decision was not reached without a mental struggle, deeper on my own part than on that of my more philosophic brother; and it would not have been reached at all had we known where in all the yet remaining wilderness of North America another such a trapping country could have been found.

If, in the rehearsal of this long story of the old days on the frontier, I have unduly taxed the patience of the

readers of FOREST AND STREAM, let them congratulate themselves upon the fact that I have spared them very much which I was tempted to inflict upon them. The story of the unsuccessful elk hunt during our return to civilization; of my trip to Lake Talcot, during which, near the outlet of Graham Lake, a band of 110 startled elk, drawn up in one glorious group, stood in the sunset of an autumn day waiting to be photographed upon the never-fading tablet of memory; of their panic-stricken retreat, when for miles and miles apparently, over the almost level plain, their line of precipitate flight was outlined by the thin cloud of dust raised from the earth by the hammering of many hoofs, which, floating away on the evening breeze, completed a picture never to be forgotten, and strongly suggestive of Gordon Cumming and the plains of the Kalihari desert.

As a final illustration of the freaks of fortune in the trapper's experience, the story of a single day's success of an old trapper named Clark at the Great Oasis, a few miles west of Lake Shetek, is hereby given:

It was just at the beginning of winter, and with a light snow upon the ground the old man started out to visit his traps, accompanied by a couple of dogs, and in passing a small lake, whose waters had receded far from their former level, while walking along the sandy beach the dogs began snuffing at a hole in the turf above the sandy beach, and as a stroke or two of the hatchet showed that the hole was but shallow and ran up the bank only just below the turf, the trapper continued to break in the turf and to follow the hole up the bank, until at the end he found and captured three fine otters, which were evidently wandering in search of winter quarters and had stopped for the night in this odd retreat.

Removing the skins, the old man continued on his way around the lake, and before he completed its circuit two other similar holes were found, out of each of which another otter was taken. On his return toward camp in the afternoon he ran across the trail of three more in the snow, and following it to the crest of a hill, saw the otters playing on the ice of a small lake a short distance away. His dogs charging down the hill in pursuit, all the otters disappeared in a hole through the ice near the center of the lake, and as the trapper ran down on the ice he saw at a glance that the low swampy shores of the lake offered no chance for a hole in the bank, and that the animals would be obliged to return to the hole for air. Kneeling down hatchet in hand at the edge of the hole, he was scarcely in position when the head of an otter appeared and was met with a killing blow from the hatchet, and being grabbed by the neck and withdrawn from the water the head of the second appeared and in like manner all three were secured within thirty minutes.

What the old trapper's catch of fur in his traps was for that day I have forgotten, but here were eight otters, secured by an amazing and unparalleled streak of pure "luck," which, at $12 each, swelled the sum total of his lucky catch for this red-letter day of his trapping life to considerably more than $100. These red-letter days were, however,

"Like angel visits, few and far between."

Commonly the life was one of toil and hardship, with scanty enough pay, and with occasional tragedies, when life and limb were the sport of the cruel cold, or at the mercy of the unsparing savage, who left no trace of his fiendish work save the bleaching bones of his helpless victim.

Scattered far and wide are the remaining members of the old fraternity. A letter from a friend tells of a hunting expedition in the Rockies by a party of gentlemen from the East, and adds: "Old Dan Bellows goes along as master of ceremonies."

Should this meet the eye of old Dan, will he accept a word of friendly greeting from one of his old comrades in the life and death struggle with the blizzard on that never to be forgotten night of Dec. 10, 1864?

Natural History.

HEATH HEN OF MARTHA'S VINEYARD.

Editor Forest and Stream:

Having spent ten years of my life upon this beautiful isle of the sea, and during that entire period devoting a great deal of my recreations to that best of all sports, shooting, I certainly should be a very poor follower of our honored "Frank Forrester" if I was not somewhat familiar with these birds. Mr. William Brewster, in his article on the heath hen in FOREST AND STREAM of Sept. 25, makes a number of statements which, with all due respect, I wish to take exceptions to.

Mr. Brewster says the reason of our having the remnant of the grouse family now found there with us is due "partly to an enlightened public sentiment, partly to protection by law, but chiefly to the fact that the interior of the island is comparatively inaccessible and remote from market." My observations have shown the birds not inclined to dwell in the thickest of the cover over which they are found, and I doubt if any one has ever seen a "he'th'n" light in any thicket to which one could well apply the word inaccessible. As to the location being remote from market, compare the distance between the Vineyard and Boston or New York with the distance these birds are now brought from the far Western States. I am very sorry Mr. Brewster gratified his desire for possessing a collection of eggs by taking the six which he says he did in 1885; those alone, if success had followed their progeny, would have now numbered among the hundreds. A great many of the farmers of the island are friends of mine, and I would not for a moment doubt the sincerity of their statements; yet might not the booming which they have heard have been that of the ruffed grouse? We all know that they are noted for this kind of music.

Again he says the foxes were placed there for sport. I am informed upon good authority that they were released by a party of individuals—I will not call them sportsmen—who had arranged to hold a fox hunt. Their first run was defeated by the farmers, who found the dogs were making havoc among their sheep. They then decided to kill a fox and follow a drag trail. At this point the S. P. C. A. rightly claimed this to be an act which they had power to suppress, thus ending the hunt. These individuals sought revenge by liberating the remainder of the foxes to stock and overrun the island. May that portion of tribulation, which should ever be meted out to persons of this character, be not wanting in this case.

Now, as to the number of birds on the island. In the fall of 1882 there were a good many birds. By a good many I mean that a person knowing the ground with a good dog could start fifteen or twenty some days. Since 1882 I have never seen over a dozen in any one season—note I say season, not day. What caused this sudden decrease I cannot imagine. During the past four years there have been two heath hens shot ahead of my dogs, which have been preserved as specimens. The past season, during several days' hunting on the Vineyard, I failed to see a single chicken, but I did hear that more birds were seen last year than for several years back.

Now as to the assertion Mr. Brewster makes, that the resident sportsmen are the cause of the depleted covers. Here again I disagree from him. I am sure the non-resident sportsmen, who in times past have visited the island, have killed more of these noble birds than ever the local gunners have done. Mr. David Tilton, now deceased, a native of the island and an ardent lover of the rod and gun, who was ever a welcome visitor among the farmers in the interior of the island, once told me that the non-resident sportsmen came down for the grouse-shooting in such numbers that he deemed it necessary to cause the arrest of two of these parties. Search being made at the place where they were stopping revealed a number of grouse concealed in a barrel of grain. They were each fined quite a sum and compelled to give up their unlawful shooting. As to the birds being frequently started in running foxes or rabbits, in all my shooting of this kind I never saw but one bunch flushed while hunting with hounds.

The plan Mr. Brewster proposes, regarding stocking Cape Cod, may be feasible in the distant future. There is a game club now organized on the Vineyard known as the Hookumpake Shooting Club, several of whose members are also members of the Massachusetts Fish and Game Protective Association. The idea has been advanced, though not original with me, that from the limited area over which the birds range and the great number of years they have been confined within this space, interbreeding successively year after year has resulted in a degeneration in their powers of reproductiveness. Realizing the reasonableness of this, the Hookumpake Club is at this time trying to secure some Western pinnated grouse to place on the island. This same club is ready at any time upon reliable information to bring suit against any parties violating the game laws of Massachusetts on Martha's Vineyard.

J. E. HOWLAND.

NESTING BIRDS AND SCENT.

Editor Forest and Stream:

I think I have discovered something new in the natural history of the grouse, and I wish to lay the matter before your readers, hoping that some one has made the same discovery.

In a former communication I stated that a ruffed grouse had nested several years within sight of my cabin. It was this grouse that attracted my attention to the new feature in natural history.

My cabin is in the woods, situated on an old highway, deserted for a hundred years or more. South of the cabin is a small brook, and just across it a path turns off into the woods, and it was near this path that the grouse nested. Several hundred people passed and repassed the nest while the bird was hatching out her first brood. Many bird dogs accompanied their masters, and I thought it singular that they did not scent the bird. The second year I tried an experiment. The grouse nested near the old spot, and I borrowed a bird dog of a friend, and while an easterly wind blew directly from the bird across the path, led the dog to and fro. Strange as it may appear, the dog did not take the scent. Afterward I went to a boulder, the drumming resort of the male grouse, and the dog pointed the spot every time he passed the rock. Thinking that while his sense of scent was aroused he might notice the nesting bird, I tried him once more but with the old result.

The path near which this grouse nests is a common highway for skunks in their nightly visits to my cabin door yard. Raccoons also use it when frog-hunting in the little brook. The old tumble-down wall along the deserted highway affords weasels, minks and stoats a road through the woods, and what seems passing strange is that some one of these keen-scented animals has not ferreted out and destroyed the grouse before this.

I have noticed since I have lived in the woods (six years) that often ruffed grouse nest near paths that are in constant use, and usually rear or at least hatch out the young. I can recall three nests so situated this last season which were undisturbed.

After due and careful consideration of the subject I have come to this conclusion: That it is a change of scent that protects the grouse while nesting, and that it is an admirable provision of nature to enable the bird to rear its young and propagate its kind.

We all know that domestic fowls have a breeding fever, and who can say that the grouse does not have some such fever, and this fever does not change the scent? What say you?

HERMIT.

NATIONAL MUSEUM PUBLICATIONS.

WITH the twelfth volume of the Proceedings of the U. S. National Museum a new and greatly improved form of extra copies of the separate articles composing the volume has been devised. For each article of four or more pages is furnished a neat cover containing the title of the paper and a statement of the volume in which it is printed. There is a very decided improvement in the quality of paper used in this publication, making it possible to provide much more satisfactory illustrations both in the text and plates.

The subjects discussed in the numbers before us cover a very wide range. We cannot give more than a brief list of the articles.

Dr. George Marx furnishes a catalogue of the spiders of temperate North America; this is the first attempt to prepare a complete catalogue of these sometimes dreaded, but very interesting insects. Mr. George P. Merrill contributes notes on the serpentinous rocks of Essex county, N. Y., from aqueduct shaft No. 6, New York city, and from near Easton, Pa. Mr. F. H. Knowlton publishes a revision of a genus of fossil woods. Mr. Walter Faxon gives notes on American crayfishes, describing two new species, one of them found in Florida and the other in Missouri. Dr. Harrison Allen describes two new species of bats, one of them Brazilian and the other from Jamaica.

Dr. D. S. Jordan furnishes a catalogue of 87 species of fishes collected at St. Lucia, in the West Indies, by the steamer Albatross. One of these is regarded as new. A new darter from Indiana is described by Dr. Jordan and B. W. Evermann, and a figure of the species is given in the text. Dr. Bean has a paper on new fishes from Alaska and vicinity. These fishes were obtained by the Fish Commission steamer Albatross in 1888, and are chiefly from deep water. Seventeen new species and four new genera are described.

Mr. Robert Ridgway furnishes further notes on the genus *Xiphocolaptes*, birds of the family of wood-hewers. Prof. C. H. Gilbert contributes a report on fishes collected by the steamer Albatross in the Pacific, with descriptions of twelve new genera and ninety-two new species; this is one of the most extensive additions to ichthyology made in recent years. The majority of the new forms are from moderate depths; but there are also numerous species from the deep sea. Mr. Frederick A. Lucas publishes a catalogue of skeletons of birds collected by the steamer Albatross on her voyage to the Pacific. Dr. Gill has three papers devoted to the skeletons of several families of eels. Dr. A. K. Fisher notes the occurrence of a young crab-eater (*Elecate canada*), in the lower Hudson Valley, New York. Dr. Fisher obtained the cobia or crab-eater in June, near the village of Sing Sing, the most northern locality recorded for the young of this fish. His specimen is not quite 4in. long, and was caught by a fisherman with a minnow seine in a broad, shallow cove forming the mouth of the Croton River. Mr. F. W. True gives the results of some observations on the life-history of the bottle-nose porpoise. Mr. True's notes relate to the habits and structure of the species, its distribution, the size of individuals, ratio of the sexes, migrations, breeding habits, peculiarities and habits of the young, colors of the recently caught specimens, structure of the eye, deformities and parasites

Game Bag and Gun.

OUR ONLY VICTIM.

Editor Forest and Stream:

That deer hounding in the Adirondacks is not always a sure thing my own experience shows.

If I remember correctly, it was about 3 o'clock one Saturday afternoon in early September of 1885 when we reached Grampus Lake. The day was uncomfortably warm, making our walk over the muddy four-mile carry from Long Lake quite fatiguing. After waiting about twenty minutes the sled arrived bearing our belongings, which were immediately transferred to the boats, and after bidding our teamster good-bye we got in ourselves and shoved off.

Our party consisted of three sportsmen and an equal number of guides, together with three fine, sleek deer-hounds. As each guide had a boat, the party could be divided up very equally, each guide taking one of us, a hound, and his portion of the baggage and provisions. By rowing steadily we reached camp at about half-past 3.

The afternoon was devoted to putting our bark shanty in order, and in making preparation for a hunt on the morrow. After supper it was decided that I should start early next morning and go to Handsome Pond, which is about a mile and a half from camp, with one of our guides, and there watch for and shoot at any deer that might be driven there by the hounds.

By half-past six the next morning breakfast was over and my guide, John Keller, and I started for our post. On arriving at the pond we rowed to a point of land upon which we could command a view of the greater part of the land about the pond. I sat on the bank while John climbed a spruce tree in which a seat had been erected. We had hardly got into position when we heard one of the hounds baying in the distance, and by listening attentively, I found that the baying was becoming more distinct, showing that the hound was running toward us. I now straightened up and scanned the shore in the hopes of seeing something appear, when suddenly John came tumbling down from the tree and said that a deer was swimming across the lake. I jumped into the boat and John shoved off, and we started up the pond as fast as possible, and soon drew up alongside of a deer, which proved to be a beautiful little spotted fawn. We drove the little creature to the opposite side of the pond from which it had appeared, and then went back to our stand. Although the dogs were baying fiercely in our neighborhood, nothing more hove in sight, and according to orders, we started for camp about twelve o'clock. One of the party had gone to Mohegan Pond, which was half a mile from camp, while the third stayed on Grampus. I was the only one who had seen any game, though on Mohegan some animal was heard running through the woods, but kept out of sight. The afternoon was spent in buoy fishing, and at sunset we hooked a few brook trout with the fly.

The following day I was shifted to Mohegan, where I spent an unsuccessful time, as nothing appeared. The third day I was put in command of Grampus Lake. The first part of the morning we spent at the upper end of the lake, later changing to a large rock situated at the extremity of a shoal. Toward noon the guide (Farand Austin) appeared on the shore and hooted to us, whereupon Rowley Keller and I rowed over and took him in. He said if we kept on talking and laughing the way we had been for the last half hour that no deer would come near us, so we decided to be silent.

On reaching the rock again, Rowley climbed up on to it, while Farand and I stayed in the boat. The sun was pretty hot; and as I sat there I began to doze, and just as I was about to go to sleep in good earnest, Rowley said, "There's a deer." I believe Farand was asleep, but those words made him wide awake in an instant. He caught up the oars and started for a little bay to the left of us, while I grabbed the shotgun (my rifle having been borrowed) and shoved a couple of buckshot cartridges into the barrels. The deer on seeing us "pulled for the shore," while we tried to cut it off; but as we had a greater distance to go, the deer reached there first, and climbing up the bank started on a run along the shore as if afraid to enter the woods. When Farand saw that we could not cut the game off, he turned the boat's direction a little, so that I could see the deer over the port side, and told me to blaze away. During the chase I had become quite excited, and when I aimed I could hardly see what it was that I was to shoot, but I pulled the trigger and waited for the smoke to clear away. When it did I saw my deer kicking in the water where it had fallen, with a broken neck. We took the animal to camp, and an *entree* in the shape of venison steak was added to our scanty bill of fare.

During the time we stayed in camp, which was about a week, that was all the game that we could bring in sight, although one of our dogs lost two nails on one of its forefeet and another dislocated its shoulder in the attempts made to show us the deer.

I have been to the Adirondacks three times since then, but have never used hounds to hunt with, as I think the only way to keep the deer in those mountains is to put a stop to hounding them. A good example of what the result of prohibiting the use of hounds in hunting these animals has done is clearly seen in the wood of northern Maine.

F. S.

BROOKLYN, N. Y.

IN THE WILDS OF PIKE.

WE met at the Erie Railroad Depot, in Jersey City, to start out for a few days' shooting up in Pike county, Pa. We took the 9:20 A. M. train, and arrived at Port Jervis at 12:15. From there we took Jake Schorr's Milford stage and drove to Milford, 8 miles south of Port Jervis, arriving there in about an hour. We kept the congenial and jolly Jake busy telling us of his numerous expeditions and adventures in the wilds of Pike county, and the ride was very pleasant. At Milford we were met by Mr. Lou Chattlion, who drove us out to his farm, about five miles back of Milford. He also is a good all-round "settler," and just the man to make it pleasant during one's stay. The road seemed to be all up-hill; and although he told us that it was but five miles from Milford to his place, it seemed like twenty to us. On the way out we started three pheasants that were feeding close by the roadside, and this put us in high spirits, anticipating the good sport to be had back in the woods.

The next day was Sunday. When Monday morning dawned, old Sol found us all ready to start out. Climbing up a steep hill, right back of the house, we came to a small clearing about half-way up, and while crossing this we started a flock of pheasants. We were wholly unprepared to find game so near to civilization, and although we both fired away at them, the partridges kept on their wild flight and did not stop a single shot. We then broke into the woods, and such woods—no man can imagine what it is to break through a mountain of scrub-oak unless he has tried it. Every few yards the birds would rise and fly madly on, but as we were yet "green" and hardly capable of shooting through this maze of bushes, the birds generally flew off unharmed.

At noon we returned to the farm hungry, tired and discouraged, and were met at the door by Lou, who gave us a grand laugh and said he thought it looked pretty bad, when two sportsmen arrayed in the latest hunting suits and armed with nice breechloaders could not hit a "flying barn," as he expressed it. At dinner he told us he would take us back a few miles further and leave us in the tender mercies of his brother-in-law, a noted hunter and fisherman in that locality, named Lou Gavaille.

The next morning we were up early and started out for Gavaille's place, and as we arrived at his clearing we could see evidences of the products of his trusty gun, for there were skins and birds in profusion, on the walls and wherever the eye reached. As we entered his house a very striking picture presented itself to our gaze. Gavaille, whom we dubbed "Soak-'em," in recognition of his unerring aim, was seated at a table, and at his feet were his hounds. The man was tall, gaunt and angular, but at the same time there looked in that frame the strength of a Hercules. He was loading his weapon, a muzzleloader. The left barrel was rifled, and the arm weighed 15lbs.; but when that gun belched forth Soak-'em was always sure to have something to add to his game score. His hounds were tall and skinny, but when they strike a trail they stick to it till the end. They went by the name of Drive and Puppy. It was truly a sight to see this tall backwoodsman, his gun and his dogs grouped together, and with this man as guide, any aspiring sportsman might hope to find the best hunting and fishing in Pike county. We started out, and with the hounds running the cottontails, and Lou's setter Nell standing the partridges, we were kept busy. We made many clean misses, but old Soak-'em never failed to score.

We hunted back till we got to Log Tavern Pond, a beautiful lake in a deep valley, surrounded by immense forests, unbroken for many miles. At this lake there is good wildfowl shooting and fishing; on this particular day we failed to see any ducks, but proposed to pay it another visit at some future time. After eating our lunch we hunted back again and arrived at Soak-'em's clearing pretty well tired out, but with quite a load of game, consisting of 11 rabbits, 18 pheasants and 4 squirrels. We left Soak-'em at his door and proceeded on our way home. We hunted ever day and always secured good bags, but nothing out of the general run was shot until the following week. For our last hunt we rose early, and again started out for Soak-'em's clearing to get the aid of himself and dogs to have one good day before our departure for home. Arriving at his place we were greeted by the joyful barking of the hounds, and Soak-'em being all ready we broke right into the woods and again the music commenced. I will not dwell on the shooting we had, but we got to the lake with all we could carry. We had just reached the lake when friend Fat, who was a little in advance, shouted, "There's a flock of black duck." And true enough, out on the lake we could see them diving and feeding, utterly unconscious of the terrible danger that threatened them. Then we planned a siege. Soak-'em went around the lake in one direction and Lou in the other, while Fat and I jumped into a dug-out, which was moored close by, and started out, and between us we intended to get the whole flock. But the ducks saw right through our little scheme and rose out of the water, and circled up and up, and flew to the south, to be seen no more by us.

We rowed across the lake to a point where we all decided to meet; and when we got there wefound Soak-'em waiting for us, and he said that Drive had struck a trail, which he was following at the time, and he thought it was a fox. He stationed us each at a runway and told us to wait, and if the fox was around he would run down our way. So we waited. After standing there with all nerves at the highest tension, and seeing nothing of the fox, I concluded it would be a good time to eat my lunch, and began to do so, when all of a sudden I heard something coming through the brush. I quickly had my gun in position. On it came, nearer and nearer, and I thought I had the prize surely, when all of a sudden the *it* sprang into view, and instead of being the desired fox proved to be the setter Nell. She came up to me wagging her tail, and stood looking at me demolishing my lunch. Well, to smooth things over I gave her the rest of my lunch, and then Soak-'em appeared and said we had better follow old Drive and see what he was after. We started off and followed the baying of the hounds, and came to a very dense swamp. Soak-'em said he thought that Drive was after big rabbits. He stationed us on the outside, while he and Lou went around the swamp. We waited for a while, and suddenly heard a loud yell from the hound. Fat said, "I think that they have a bear; let's go in and see." So in we started, and kept pushing on through the swamp, which was the worst place we had ever struck. A man could pass within 6ft. of one here and you could not see him; but we knew that there was something in there, so we kept on floundering through the cold water and bog.

As we came near to the hounds we could hear a growling and spitting, as if made by a cat; and we came to the conclusion that it was no bear, but a wildcat. All of a sudden we broke into a little glen, and there sure enough was a big catamount keeping the dogs at bay. When he saw us he grew fiercer still, and leaped right toward us. At the same time he spied us we spied him, and were ready for him and gave him two charges of shot. He was coming with such force that the shot did not stop him, but he struck me right on the stomach and knocked me into the swamp. Fat thought that he was still alive and gave him a rap over the head with his excellent gun and broke the fore end off. The cat then stretched out, and we saw what a big ugly animal he was. He was as tall as the hound and measured 4ft. 2in. from tip of ears to tail. When weighed he tipped the beam at 62lbs.

By the time we got out of the swamp it was growing late, and we concluded we had enough, so we tramped home, lugging the big brute with us. The skin has been converted into a rug by Wallace, the taxidermist of North William street.

Thus ended the very successful and pleasant trip to Pike county; and the next morning we started for home with a new lease of life and tender recollections of Soak-'em, the dogs and our kind host and hostess. DRIVE.

NEW YORK CITY.

BOB WHITE SHOOTING IN VIRGINIA.

TO leave home, about which Bob White is fairly numerous, for the purpose of shooting, seems like "carrying coals to Newcastle," but close application to professional work had tried both mind and body, and rendered a short vacation absolutely necessary. An old friend and whilom companion in the field had just returned from a four-years' residence in Texas, and sent a cordial invitation for me to come to see him. He reported birds plentiful, time was auspicious, the close season passed; what, therefore, so natural as that dog and gun should be my companions, and the trip in search of mind rest should have a two-fold object? So we started, Blaze and I. Early the week before I had shipped a case of ammunition by freight and a Winchester repeating shotgun by express to my friend, which, with the abnormal speed apparently inseparable from the V. M. R. R., had arrived the same day I did, so with valise, gun and dog, the boxes were tucked neatly under the seats of the carriage, and with a small "colored brother" astride of a big horse to carry the lantern, which only made the darkness conspicuous, we drove out over the old familiar road with its wealth of holes and corduroy patches. A half-hour of jolting brought us to St. Stephen's, where before an open fire all discomforts were forgotten, while we talked over the past, enjoyed the present and planned for the future until we sought repose in the small hours of the morning.

Rain pouring upon the shingles greeted our waking sense of hearing, and the wind blowing most uncompromisingly from the east showed little signs of fair weather, and little hopes of sport that day, but toward noon it broke away, and being desirous of trying the new repeater, we took the dogs over into the orchard where, as in years of old, there was a fine covey of birds. Just as we opened the gate leading into the field, startled by something, the entire covey flushed and sailed across the road, dropping in posted ground. They were very tame, and by judicious handling of the dogs we got them back into the orchard and scattered along the old fence with its famous cover of briers and weeds. How the quick whir-r-r! whir-r-r! of a covey of full-grown Bob White thrills one, sending the warm blood rushing through the veins; it is always the same, every year, every day; and for the time everything is forgotten but the mad fury of the chase. Tasso, Carl's dog, pinned the first bird in a tuft of long grass, Blaze backing steadily, and as it darted out the queer-looking gun flew to my friend's shoulder, the report followed, the bird dropping dead; following it out flew another, which I missed with both barrels; rattle-clack-bang! went the repeater, and, as tho' struck by lightning, the bird fell. "Something like a case of wiped eye, Picus," suggested Carl, with a quizzical smile. "So it was, and neatly done, too, old fellow," quoth I, "mind your eye though." By the time we had hunted out nearly every bird, the noisy repeater and the more modest Greener were tied on five birds each.

Leaving the orchard we climbed the fence of a nearby cornfield, in which we found another covey, accounting for five of its number. The tall grass hanging heavy with its weight of water had now saturated our lower extremities, despite high boots, so we returned to the house.

As the next day broke the sun shone over the eastern horizon and mounted up into a sky without a cloud, its early rays kissing the tops of the already gorgeously tinted trees of the forests, clothing the mountains, undulating up, up, until merged into the far away Blue Ridge. A heavy hoar-frost coated the leafy carpet of the grand old park of oaks surrounding the house and the smoke from our pipes hung for a moment in the air before disappearing, as we strode off down the broad gravelled road bed, toward a wood-cutting, where we knew there was a large covey to be found. The dogs raced over the frosted leaves, fairly wild with enthusiasm, and it was no wonder that the hot-headed Blaze raced into a clump of green briers and came out the other side in close pursuit of a long-eared cottontail, which scudded away on nimble legs with the dog yelping at his heels, despite our yells. When he did return he found a strong arm and a fine hickory all ready for his benefit, and when the painful scene was over the dog was in first-class shape for the day's sport.

From Blaze's overcaution Tasso found the birds first, yet in the fence corner where they had roosted. Coolly we took our positions and flushing the birds as coolly delivered our fire, each dropping a pair, as with a roar of wings the startled birds whirred off into the woods near by.

Then followed royal sport. For full two hours we quartered back and forth, the dogs working like machines, and when we left what we could not find, our pockets held thirteen fine large birds. Moving the dogs out into a broad stubble field, they struck the trail of a covey, and roading full 500yds. each froze to a point on separate birds, and both men killed upon the rise. Almost instantly two more rose, only to drop at the reports. Then up went the rest of the covey, Carl getting a bird as they rose; I missed from too much haste in reloading. As I stood with empty gun, watching the birds as they sailed over the stubble with noiseless wings like feathered ghosts, up rose two barred owls, which Carl dropped with the last two shots in the magazine.

"Well, by Jove!" said Carl, "that came pretty near being what our English friends would call a 'hot corner'; we interrupted one of nature's tragedies, Picus. Sorry you weren't loaded, but I would not have missed those owls for ten dollars cash."

"That's all right, old fellow," I replied. "You must have those gentlemen mounted, Carl, for I have never seen a pair in such magnificent plumage."

"Verily, thus shall it be done as a memento of our reunion."

While we were examining the beautiful plumage of the owls, the dogs had retrieved the five dead birds and were patiently awaiting our commands. We decided not to pursue the demoralized remnants of the covey, and made the best of our way toward a locality famous for its woodcock. Neither of our dogs were proficient upon this variety of game bird, and the few we found were wild; so little wonder that of the six birds we killed not one was killed over a simon-pure point. What grand birds they were, too; entirely different from the same birds when found in July; full-plumaged, with well-rounded plump bodies, is it any wonder that we stowed them away most carefully in our game pockets, that with unruffled feathers we might display them in their full beauty on our return?

We now came to our usual noon rendezvous, where we found Ulysses, Carl's colored factotum, thoroughly equipped with material to satisfy the cravings of the inner man. Nothing loth, we spread ourselves comfortably, while the colored adept covered the big flat stone which served as a table with our dinner. How one can eat when the craving for food has been stimulated by an half day of sport, especially when one has been successful. We threw dull care to the winds, took full credit for good shots, found excuses for poor ones, as is the custom of the sportsman, and were truly comfortable. Ulysses repacked the dishes, fed the dogs and carefully tied up our game, which with the big basket was placed in the buggy, then once more we started the dogs out over a broad stretch of meadow, famous snipe ground in the spring, with now and then a small whisp to be found in the early fall. We found none, nor any sign, but on the edge among a grove of dwarf willow trees killed a pair of woodcock, and by a long shot Carl dropped a little hawk which was hovering just within range. Crossing the run we met two men hauling wood, who told us they had just flushed a covey upon the edge of a cornfield, which they pointed out to us, and wished us luck. The cornfield was well furnished with cover, and the birds were scattered and lay well, most every shot being at single birds, so that for a few minutes we had good sport, bagging eleven birds with thirteen shots. The owner, attracted by the firing, rode up to us upon a horse intent on driving us off, but upon recognizing us not only told us to go ahead, but clapped heels to his horse and set off to the house at a gallop to get his gun and join us. Under his piloting we found several other coveys, of which we took no less than forty birds to the three guns, not one of which our host would accept when we reached the fence which marked the boundaries of his extensive farm, and where, as the sun was now fast going down, we decided to take the road home. So we bade our genial host good night, and well satisfied with our day's sport, left the woods and fields for the road, where we were fortunate enough to meet a carriage with an empty seat going our way, the gentleman driving very kindly taking us up, and saved us the long walk home. PICUS.

MALLARDS IN THE TIMBER.

JERSEYVILLE, Ill.—In a former letter I promised to write you something about duck shooting in this part of the West. A few years ago we were favored with an "open winter." It consisted of a little of all kinds of weather, a little cold, some sunshine, considerable rain, much mud, warm days and foggy ones, but principally mud. These winters we have occasionally, and when we do it is an assured fact that we are to have good duck shooting all winter, for the creeks and rivers overflow their banks, and low lands, covered with smart-weed and water oaks, are soon inundated. Mallards feed upon the tiny acorns and the seed of the smart-weed, grow fat and lazy, and are hard to drive away.

Three of us were camped on the banks of a small lake situated in the western part of Jersey county, and one mile from the the Illinois River. We had had fair success, rare fun and ravenous appetites, with a fair prospect for the continuance of the same blessings. One morning I told my companions that I would go back of the lake in the timber on a prospecting tour. Taking my boat, gun, ammunition, and twenty flat-bottomed mallard decoys, I started diagonally across the lake until I reached the timber. Here I turned north, then west, then south, and finally east toward the lake, my object being to find a place where the ducks were bedded, then quietly to rout them out, put out my decoys, and secrete myself in some convenient fallen treetop, or by the side of an old stump, knowing full well that the ducks, if not shot at, would soon return, a few at a time, and afford fine sport for several hours. But I was unable to find such a spot. I could find the ducks singly, in pairs, and in small bunches, but not in such numbers as I wished, although there were plenty of "signs," such as muddy water and feathers where they had been feeding.

As I neared the lake I stopped to view an opening in the timber. Here grew willows, maples, water-oak and smart-weed; and here, too, the ducks had been. It occurred to me that this was about as fine a place both for ducks and shooter as I had ever seen. I was standing up in my boat, as I always do when in shallow water, to propel the boat with a push pole. I had probably stood and gazed on this place for at least ten minutes, without seeing a duck, when some one to the south of me fired; and a wing-tipped mallard struck the water about thirty yards from me. I reached for my gun, that lay in the bottom of the boat, when some one about two hundred yards to the west of me called out, "Shoot that duck," which I did. He started to pick it up. Then overhead came a single one. This I dropped toward where the stranger was. After this one he went. When I asked him if he

shot at it, "No," he said, "but my partner shot at the cripple you killed, and I'll bring you yours," which he did, and went splashing back, no doubt happy to think that he and his "pard" had meat. In less than fifteen minutes I had killed nine mallards, while I stood in the boat. Then I got out, the water being about eighteen inches deep, and began putting out my decoys.

Then the fun began in earnest, for the ducks came, and came to stay. Those I killed I placed on their breasts, heads down, among my decoys, until I soon had quite a respectable flock. The place I had selected proved to be exactly the right spot, for the ducks did not want to light on either side, but just where my decoys were, giving me quite easy shooting. But (ah! there's a "but" in this case too) these two shooters, of whom I have spoken, concluded that they would be a little more sociable and come nearer, one on the south and one on the north of me, both in the flight; and such a racket as they kept up was only surpassed during "the late unpleasantness" by the boys in blue and gray. Well, they had their fun and the ducks, too, I guess; at least I didn't hear any fall. But they about ruined the sport, for the only shots I had after they came were at those they did not see. I did not "want the earth," but I did want that particular spot that day, and for them to stay where they were. My practice has always been, when shooting ducks, to get as far as possible from other shooters, so as not to spoil their sport, nor have mine spoiled. All things have an end; so had my day's shoot. Gathering up my decoys and placing them in the bottom of the boat, I then gathered and counted my ducks, and found I had seventy-nine mallards. KIZER.

CHICAGO AND THE WEST.

CHICAGO, Ill., Sept. 19.—There are few portions of the United States where the pinnated grouse was ever more abundant or more naturally at home than was once the case in the State of Illinois. The prairie chicken was for a long time so numerous on the grass lands of this State that it was fairly held in contempt. Under any kind of decent treatment the bird would still be here in all the plenty any sportsman could ask. It was and is, in its maturity, a glorious game bird, and all the world does not hold a finer one. The shooters of this generation are not yet recovered from the old view of the bird, based on its former plenty. The shooters of the next generation will look upon it differently, and to bag one of these grand grouse will in that time be held a feat to be recounted with pride in after years. Personally having killed so many of these birds in younger days, usually when they were only about two-thirds grown and hardly more difficult of approach than barnyard fowl, I for one had until lately cared little to go out after prairie chickens; but a few fall days after these birds in the corn, when they were full grown, strong and wary, have changed me in this, as I doubt not they would change any other, and I confess that now I stroke and view admiringly each of these big brown fellows, which a few months earlier in the season, or ten years earlier in the race of civilization, would have been thrown carelessly into the game pockets.

Of course the question has been, Where to go after prairie chickens this year. Most of our city men who want big shooting when they go out have tried Kansas, Iowa, Minnesota or Dakota. Many of them are already back disappointed. Since it is impossible for one to be away more than a day or so at a time, and since it has of late been a pleasure to try and discover as much as possible of the game resources of the country lying close about this city, I resolved to make my "opening day" hunt somewhere in Illinois, and to see whether any of the birds, enough to amount to anything, were really left in the country which was once so admirable for them. The journey made was further from the city than last fall's chicken hunt. We went then only eighty miles; this time we went south of the city nearly twice that distance and into the heart of central Illinois. The sequel proves that the ground was well chosen, and if the shooters who came back disappointed from their long Western trips were satisfied with bags of a dozen or so good big birds a day they certainly need never have gone so far as they did. It is within my power to say that there are prairie chickens in Illinois, and not only a few, but a plenty of them—that is, for the locality we visited. If the Sept. 15 law is retained and even half way observed, there will be more chickens yet next year, for in this State the birds now take to the corn very generally by that date, and they are big enough to take care of themselves. They are not "floppers," it is sport to shoot them, and it takes shooting to get them.

My companion on this trip was C. F. S., of Pekin, Ill. We took the Santa Fé to that point, and drove eighteen miles south, stopping at the farm of George Singley. We found the stubbles about all plowed under, and as the country is very closely cultivated, it was necessary to go into the corn after them. The corn had not yet been touched by frost, and stood rank and green, high above our heads in most of the fields. We drove six miles further down from Singley's place, and did not begin to hunt until about 2:30 P. M. We went into numbers of cornfields, and we found chickens in every one, usually in twos and threes. The dog we had was of no earthly use, and Singley told us that with a good dog we should have found a great many more, as the birds often stick pretty close in the green corn. We killed eleven chickens, but lost three of them. We saw in all about 175 birds, most of them in one big pack we struck late in the evening. The early plowing under of the stubbles in this locality, taken with the Sept. 15 date, makes a good enough protection of the chickens here. Shooting before the season opened had been very general all over this region. Singley had been shooting, as he openly confessed, and around Manito, a little station a few miles distant, on the J. & S. E. R. R. No regard whatever had been shown for the law. I heard of a good many quail also that had been killed. The man who shoots out of season is not usually averse to potting a flock of quail.

We left this place and drove to Manito after S.'s dog, which he proclaimed in advance was everything that a dog should be. He turned out to be about as worthless a dog as I ever saw. During this entire hunt I did not see him make one point or pay the least attention to game, and he lost three winged birds for me alone, though taken directly to where they fell. We heard one bird fluttering in the corn, but the dog could not find it. With a good dog we should have had far better sport.

From Manito we drove about 20 miles southwest, toward what is known as the old marsh, a great strip of country which was lately drained off thoroughly. This marsh emptied into the Sangamon River, and geologists say it was once the bottom of the outlet of Lake Michigan into the Mississippi River. Where four years ago were thousands of ducks and geese disporting on the wild marsh, there are now flourishing farms and luxuriant crops of grain. This is the richest land anywhere near and the renters who have settled there are growing rich. The corn grows extravagantly here. There remains also hereabout some of the natural wild grass. We were now upon what we might logically have known to be the natural home of the prairie chickens—grass to breed in, and plenty of food and cover. We were not so very far from the great "Delavan prairie," which was once the hunting ground of Bogardus. The shooters of Elkhart, which is still the rugged old Captain's home, often come down into this country still to hunt. They, and their kindred from other towns, have been so careless and unscrupulous that in the locality we struck many of the farmers had combined and refused to allow any shooting on their land. It is a pity that not all men who handle a gun are gentlemen, and no one can blame a farmer for closing his farm after having endured the visitations of some of these fellows. We stopped by chance and took dinner with Mr. J. H. Harvey, a shooting farmer who had joined the others in this little league. We explained to Mr. Harvey who we were and that we cared for only a few birds. The result was that after some deliberation he told we might put up with him over night and shoot on his farm that afternoon. Mr. and Mrs. Harvey treated us kindly, and we had a most pleasant stay here. It was due only to their kindness that we enjoyed one of the nicest little shoots I have had for a long while, and I wish to thank one good-hearted farmer who befriended one of the craft.

During that afternoon we found chickens about everywhere we went. Mr. Harvey could not stand the popping of the guns, and early in the evening left his plow and came out to join us. He reached us just in time, for we were just having a talk with an irate on whose land we had blundered by mistake. We left the latter gentleman a good deal dazed, for he expected us to "talk back" a little, or raise some objection to his putting us off the farm. When we agreed to everything he said, apologized and started at once for the fence which he said was his line, he looked as though he didn't know what to make of it.

We found birds in every field here, and in large coveys. They seemed to be all over the country. I should think we started 200 or 300 birds that afternoon, great big splendid fellows. The corn was so dense and high that we could not often get a shot as they burst up through the stalks, but when we did knock down one of these old thumpers, we felt pretty proud. Most of the birds were killed at 45yds. A chicken tops the corn as he rises, and if he happens to go straight down in a row the shooter has something of a chance at him. It is hard shooting, but a little practice at it helps, so that a shooter soon comes to enjoy it. It is infinitely more sportsmanlike than kicking the young birds out of the grass or stubble.

The chickens on the country we hunted, stuck to the corn till dark. Then a straggling shot or two near the edge of a field would set a great body of them up off the corn, and with great cackling and a tremendous whirring and beating of their wings they would make off for their roosting grounds on the plowed fields, the mowed ground, or such narrow bits of stubble as remained unturned. After dark we started a number from a stubble right near the house.

In all we bagged thirteen birds here to the two guns in the afternoon. We killed eighteen. It was a very good afternoon's sport, good enough for anybody. We got as many birds as a man ought to want, and we did it in a way by no means easy, and we had the further pleasure of knowing plenty of birds were left for the following season. If the law is observed here, or if the little league of farmers will persist, as I hope they will, in keeping the public out of this strip of country, there will be as good shooting there next year as I should want. So much for the prairie chicken. It is by no means extinct in Illinois. Under any kind of fair treatment it never will be extinct here.

This ended my chicken hunt, and I was very well satisfied with it. I now should have started back for home, but I heard so much about the Spring Lake country, and such stories of bass fishing and duck shooting, that I concluded to go over there and see what there was to it, for I had never heard any one in Chicago say a word about it. The result may be the publishing of another locality where a Chicago shooter can go and have a good time, and I certainly cannot regret the visit made.

We drove now a dozen miles or so to Forest City, on the J. & S. E. R. R. Here we sent off our game to our friends, and then drove about twelve miles more the cross roads known as Radville, on the banks of the lake. The best way to get to Spring Lake is to buy a ticket direct to Manito, on the J. & S. E. R. R., and then get a team to drive over the few miles across.

Spring Lake is about sixteen miles below Pekin. It is a parallel of the Illinois River, with which it is connected by a Government canal. The Government dyke at the end of the lake separates it from Clear Lake. Spring Lake is eight or ten miles long, and hardly more than 100yds. wide for much of its length. It is spring-fed, but along it lie miles of marsh and bog, which make excellent duck and snipe grounds. It is one of the best waters in the State for large-mouthed black bass, and since the illegal nets have been taken out that fish has multiplied wonderfully. Catches of fifty, sixty and seventy-five bass a day had been made right along all the week we were there. The fish ran small, and their taste was so muddy I did not care to fish for them. By fishing a minnow through the green scum of moss and slime which lay about the snags in the shallow water, one could jerk out about as many bass as he wanted; but I couldn't see any fun in that and did not try it. Lawrence Hagny, on whose floating hotel or cabin boat we stopped, caught thirteen bass that way the morning we got there, and another man got eight. The bass had been taking the spoon very freely. In the early summer an angler could go down there and load a boat by frog-casting, I have no doubt. Casting with the free reel was something apparently unheard of there.

We took a skiff from Radville Landing down to Hagny's cabin boat. Life on that cabin boat was an experience one is fortunate to have. Blue-wing teal, jacksnipe, yellowleg plover, black bass and frogs—what a table for an epicure. The frogs were simply immense and immensely good to eat; as white, sweet and delicious as any meat could be. Hagny has a light boat with a headlight, and makes a business of spearing frogs every night. He often runs from twelve to seventeen dozen of these big bullfrogs a night. They go mighty good on the table. The cook on this cabin boat is a good one. The beds are neat and clean. Everything is neat and clean. The boat is open to the public at $1.50 a day, and the man who goes to Spring Lake and does not stop with Lawrence Hagny is missing all the fun. Lawrence himself is a quiet, gentlemanly man, a hard worker, one of these fellows who know all about where to find the birds and the fish. He is a good shot, a good companion, a good guide and a white man generally.

On Sept. 15 over five dozen teal and woodducks had been killed on the marsh known as the "Mowing-Ground Slough." We went up there but found the birds were not working in there. We shot a couple of dozen yellowlegs and snipe, went back to the boat and ate a most outrageous supper. In the morning we knew we ought to go home, but we didn't. We wanted to take some teal with us, and besides we couldn't catch any train to the city. S. and I crossed the dead water lying between the boat and a timbered flat with marshy shores. S. wandered off after woodcock but only saw one, fell to shooting yellowlegs and at length ran out of shells, just as he blundered across a fine bunch of jacksnipe. We went back there, but the jacks lay so close we could not get very many of them up. I killed over sixty yellowlegs and snipe in all.

When we reported on board for dinner we found a startling state of affairs. Lawrence was in with nine ducks. He had been prospecting down below the dyke, and had put out a body of about 3,000 teal and woodduck from a slough where they were feeding, and had soon shot away the few shells he had in his pocket. We all knew what that meant, and as soon as possible we three started down, and by 3 o'clock we were on stands and shooting. We had no decoys, but the birds came in well, and a prettier little duck shoot never was. Lawrence was rather out of luck, and the two strange guns got most of the birds. We laid forty-seven fine bluewings and woodducks out on the deck that night. Fortune favored us from the start on this trip, but this was the best of it all.

We shot till sundown, rowed a mile up to the dyke, portaged over that and rowed another mile to the cabin boat. Here we tried again to kill ourselves eating teal and frogs, and at 9 o'clock began to bethink us of how we were going to get home. We packed our traps into two skiffs, pulled up in the dark a mile to Radville landing, harnessed up our team, and after a starlight drive of two hours were in Pekin, whence by rail we came to Chicago in the morning.

The trip that we took may have been an exceptionally fortunate one. I am inclined to think it was, for we heard at Pekin that nearly everybody else was coming in without much game; but as it was, it certainly leaves a very encouraging feeling about the possibilities of shooting in this State to-day. We shipped all our chickens to friends and left a number of ducks at Pekin, yet when we got off the train we had all the game we could carry, and the trip had certainly been very largely one of travel and experiment. Perhaps not every shooter would have so good a time, but I should not be much afraid to send a friend down to Spring Lake for a few days. There is pretty good mallard shooting there later on, but that depends on the weather and a lot of other things. There are a great many quail in the chicken country we hunted. A week or two ran thus. I should think the jacksnipe shooting at the lake would be prime. The bass fishing will last through October. To repeat, Manito, on the J. & S. E. branch line from Pekin, is the point to make for.

On this trip I noticed a peculiarity of the bluewing teal which never bothered me so much before. If winged, they would dive at once, and in six inches of water I often had to give up birds after the most diligent search. I marked one fellow dive at the edge of a lily pad, and after a while went after him. I put my foot directly upon his body in the water. He popped up, saw me, dived again, and I never did get him. I think they sometimes come up directly beneath the lily pads, and stick out their bills in the bit of air at the center of the leaf. I lost six teal in this shallow water, and where they got to I could not tell. They are pretty smooth birds.

Sept. 25.—The indication that Illinois is one of the best of the chicken States this year, is further supported by the success Dick Turtle has just had on his late hunt near Saybrook, not far from Bloomington, Ill. He was accompanied by A. T. Hatfield, a trainer of that town, and the two guns ran about 50 birds a day for three or four days. They had a magnificent bag of birds. I understand it was stubble shooting, however.

Ed. Howard was low from his palace on Fox Lake today. He reports a few ringbills in, but not much of a northern flight yet. A good many snipe are in, but they are using mostly out on the mud flats and are hard to get at.

"Slick" Sharp got 33 snipe the other day on Mak-saw-ba marsh, and Billy Mussey and Hardy Richardson bagged 20 odd the same day. Jo Card, at the same club, has been dividing his time between shooting and fishing, leaning to the latter. He caught 32 magnificent bass in one day last week, the largest 5¼lbs., and all small-mouths. He has also taken 6 wall-eyes, each averaging over 7lbs. The Kankakee is not only a shooting, but a fishing stream. What with the Chicago & Atlantic, Cedar Lake, the Tippecanoe, the Kankakee, the lower Fox and the Spring Lake country, all of which have received original mention in these columns, it seems fair to believe that the southern country is entitled to at least half the sporting patronage, and far more notice than it has been receiving.

Western sportsmen will note the fact that Mr. F. C. Donald has resigned the position of general passenger agent of the Chicago & Atlantic, the resignation not to take effect until Oct. 1. Chicago shooters will insist on Mr. Donald's staying right in Chicago, a fact which his singularly able work on the C. & A. makes a foregone conclusion.

Mr. C. E. Rollins, president of the Wausaukee Club, is lately back from a visit to the club house. He reports that Mr. Hodson had taken a 2½lbs. trout in the Eagle, near his ranch, and that Miss Nina Baker, little daughter of his ranch foreman, had taken one 20in. long. Mr.

Rollins and a prospector have found a new lake in the forest, about two miles from his ranch, and they took seven big-mouth bass here in about that many minutes. But best of all and most thrilling is the fact that Charles Munger, one of the Wausaukee guides, had a few days ago treed a bear and two cubs, only a short distance from the club house. Munger had no gun, but being on horseback, rode rapidly to the house to get one. On his return the bears were gone. A bear has been eating at the slop barrel of the club house, and the black cook, with native negro horror of "bah," is afraid to stick his head outside the door. He would leave the place, but he is afraid to take the ride through the woods.

The Grand Calumet Heights Club holds its quarterly meeting at the Grand Pacific this evening, and I regret I cannot attend, as matters of general interest in the club management are to be brought up. In his call, the secretary plaintively begs everybody to pay up the club dues, as he has not had a vacation this summer. That is a yarn, for George Marshall went woodcock shooting, to my certain knowledge; but maybe he didn't pay for the trip out of the club dues. E. HOUGH.

WAYS OF THE RUFFED GROUSE.

THERE is probably not in North America a bird that has made a deeper impression on the minds of sportsmen than the ruffed grouse. This is due, in part, to his great beauty, his wisdom, the difficulty of obtaining him and his intrinsic worth, as well likewise as to the wild and attractive scenery of his home. The grouse does not rely for safety entirely upon his phenomenal flight or his flashlike movements on the ground, or the awful roar, the intensity of which he can gauge at pleasure to bewilder his pursuer. These alone would not suffice to accomplish that purpose, and the bird would ere long become exterminated. He has many other ways and devices, some of which exhibit an intelligence equal to that of man in a state of nature, and far excel, by native wit, in the science of woodcraft the highest efforts of the ordinary civilized human being.

Among many other characteristics there are two in his disposition which I have often observed, his curious inquisitiveness and his love of music. These seem to fasten him to a place and rivet his attention.

One day while strolling through the woods a ruffed grouse rose up from the leaves where he had lain among the witch hazels, and running swiftly across my path and down a little hillside, secreted himself behind a tree but a short distance away. I stood motionless. In a little while his head appeared. After looking long and anxiously, he finally walked out, and keeping his eyes fixed on me waltzed off into cover.

On the other occasion I was lunching in the woods in company with a friend. We had been there about an hour, when I discovered a grouse on a large hemlock about 40yds. off. He was standing four or five feet from the body of the tree. We purposely engaged in more talking, laughing and hilarity to observe the effect. It was interesting to see him turn his head to get a better view and to hear more distinctly.

Once I was walking carelessly along in the woods whistling a lively tune; on looking ahead I was surprised to see a grouse on a limb 10ft. from the body of a tree and about 15ft. from the ground, and hardly 20yds. away. I stopped walking, but continued to whistle for several minutes, the bird remaining to hear, when becoming alarmed at the barking of my dog he spread his wings and sailed away.

On another accasion I stopped in a grove of chestnut trees to pick up a few nuts, and afterwards sat down near by, and began to sing to relieve the monotony. I soon found I had an audience, from sundry movements in the dry leaves. After looking sharply for some time I saw a grouse standing among some dead branches, his neck, head and body were stretched up, giving the appearance of a dark-colored stick about a foot and a half in length. I continued singing for some time, the bird continuing to look at me. Finally I moved toward him, when he flew, and others also which I had not seen, to the number of seven or eight.

I think I could have kept that bird there for several hours, had I wished to do so. DORP.

SCHENECTADY, New York.

A NORRISTOWN EXPEDITION.—Norristown, Pa.—The Norristown Hunting Club, organized Jan. 1 and composed of 15 of the representative business men of the town, propose this year to make a two-weeks' hunting tour somewhere within a radius of 300 or 400 miles. They will charter a car and use the same for their accommodation at whatever point or points may be decided on to visit. The idea is to visit several shooting grounds upon a line of railway. Should game be not found in sufficient quantities at one, principally small game, such as quail, pheasant, turkey, etc., combined with pleasure and recreation, new fields will be sought. They would be only too well pleased to hear from any fellow sportsman or friends who could offer points as to the most desirable localities, abundance of game, pleasure, etc., such a trip as proposed would receive in their vicinity. We are not pot-hunters in any sense of the word, but men who handle the gun for pleasure and sport, and would sincerely thank any member of the fraternity who would lend his assistance to our pleasure. They may address H. E. ELSTON.

IOWA GAME.—Elm Lake, Ia., Sept. 22.—I left home (Forest county) last Friday morning on my annual fishing and hunting trip, and dropped in here, thinking I would do a few days' hunting on chicken, snipe, etc., as I wanted to limber up and get used to handling my new hammerless. But my Saturday afternoon hunt resulted in bagging two Wilson longbills, and this in a country where six or seven years ago I have got fifteen good shots on chickens in walking around a five-acre piece of stubble. The prospect for fall shooting here is very poor; no snipe, chicken nor plover; and there is not water enough to entice ducks to linger long on their southern flight. I start from here Tuesday morning for Nebraska, and will try upland shooting for a while, and try the Platte for some wildfowl shooting.—WM. H. STEELE.

NEBRASKA'S ABUNDANT GAME.—South Omaha, Neb., Sept. 24.—Last night, while eating supper, I looked out of the window and saw a covey of quail near my barn at the rear of the store. I got my gun out and gave them a shot just as they were flushed by some boys, who had been chasing them up with slingshots. I never knew quail to be so plentiful as they are this fall. Last Saturday I saw several coveys of from twenty to forty birds. I cannot account for this, for no one pays any attention to the game laws. A month and more ago I met several parties on Sundays with quail and chickens among their bags of upland plover. The birds then were very small and hardly able to fly. Duck shooting has already begun; teal and mallards are here in large numbers. Some good bags were made last week at Honey Creek Lake and Stillwater. I expect to start Saturday on a ducking trip, and may have something to write about when I get back.—C. M. S.

MAINE.—Heron Island, Sept. 21.—Since the storm a few coots and black ducks have come in. Partridges, ruffed grouse, on mainland not too plentiful, and brush and walking both of the worst kind imaginable. I shot two on 2d inst. after half a day's tramp around an old stone quarry near South Bristol, a small town within sight of my cottage door. The heavy rains for the past two weeks have put a quietus on early shooting.—E. H. F.

Sea and River Fishing.

THE GAME FISHES OF IDAHO.

SINCE my last to FOREST AND STREAM I have been continuously in the high ranges of that part of the Rocky Mountains in Idaho which form the natural division between that State and Montana. It has furnished me a pleasant relief from the heat of summer and extended my acquaintance with the different varieties of trout found in this region. The mountains themselves are well worth a visit from their rare beauty. The higher ranges are formed from thousands of cone-shaped hills, mostly with surfaces smooth and free from cliffs and covered with evergreen trees. Huge pines and tall fir trees abound. And now that frost has come in these high altitudes and painted autumn on the herbage of the hillsides, it is useless to attempt a description. Several large rivers have their sources near the summit of the range, and find their way to the sea through the Snake and Columbia. These mountain streams are well stocked with fish. The common mountain trout is abundant. A kind known as whitefish, abundant in the Snake River, is often found in the branches of that river almost up to their beginnings. The salmon force their way up every stream as far as depth of water will permit. About the first of June they have ended their journey about a thousand miles from sea. When first arrived they are considered fit food, and are killed by shooting mostly; but when they first appear in streams high up in the hills many of them show contusions, generally thought to be the result of their long journey and the perils of navigating waters where there are great falls and many sharp rocks to encounter. Two months later they exhibit disease and signs of dissolution. The skin begins to slough and the body and gills are covered with parasites. About this time they are found dead along the bends of the streams or sunk in deep pools of still water. When the salmon appear near the surface of the rivers where the water is shallow bears come down from the hills to catch and eat them. These fishers find a favorable rock in the stream, where they watch for a salmon to pass and snatch him from the water. The white or "bald-face" bear is oftenest found in this employment. And prospectors have told me that in the morning they have seen as many as five of these bears returning to the hills in single file after a night's fishing. There are lakes at the heads of the Boise, Payette and Salmon rivers, and in the lakes of the two last named rivers are found the species of fish known as redfish. The fish give name to the lakes, and the Redfish Lakes are now much frequented by visitors, though they are reached by a score of miles of horseback travel. A full grown redfish is about 20in. in length. The color about the head is of a greenish cast, and the body flesh color and showing the red much stronger when in the water. The shape of the fish is not very different from that of salmon trout of the same weight. The upper jaw and snout of the male fish turns up slightly and protrudes half an inch or more beyond the lower, and is armed with very strong hooked teeth. I am indebted to Philip Thomas, of Rocky Bar, for a pair of this variety of fish, brought fresh from the lakes. The body was covered with a thick slime. The flesh is red, like that of salmon, and in all the year, except at spawning time, the redfish is regarded equal with trout for table use. In July the redfish begins to leave the lakes for the inlets and creeks, where they go to deposit their spawn. At that time the flesh becomes soft, parasites appear, and after they have deposited their eggs they die and go to pieces, never returning to the lake. When they first start on their journey up the inlets of the lake a boy, with a hook fastened on a stick, can secure as many as he wishes, for the stream is overcrowded with redfish. Like the salmon they get as high up the stream as they can, spawn and die. In August the banks of the creeks running into the lake already showed quantities of dead fish. It has been claimed that the redfish run up from the sea. In my judgemnt it is an error. It seems more probable that they mature in the depths of the Redfish Lakes. One of these lakes has been sounded to the depth of 1,500ft. without bottom. Hard in the wake of the salmon as he makes his annual appearance come several species of trout and evidently for the purpose of devouring the salmon spawn. Of these may be mentioned a dark-colored thick-set fish with large head, commonly called bull trout, the brown trout, the silver, and a slim trout, marked like the speckled trout of the East, with bright red spots. The spots on some specimens have an orange colored spot on the sides along with the red. The "bull trout" lies in the deep pools and is caught with bait sunk to near the bottom. The other three varieties, together with the common mountain trout, take the fly freely during the summer months. The common way of fishing here among the boys who are not up to fly-casting is to go to the creek and with a rock kill a salmon. Then taking the roe dry a few hours with some sugar sprinkled over it. The eggs are about the size of No. 1 shot when ready for use. One or more eggs on a hook make the best known bait for these trout. G. H. W

BOISE CITY, Idaho.

ANGLING NOTES.

THE question is often asked, "Will black bass take the fly in the fall?" Now and then we hear of an angler or two who have tried fall fly-fishing for bass, but they are so few and far between that their experience is not sufficient to settle the question. Black bass, like trout, seek deep water in warm weather, but the question is, do they return to shallow waters when the cool nights of September and October reduce the temperature of the surface of the lakes. As we all know, trout spawn in the fall, and perhaps that has much to do with their return to shallow water as soon as it is cool enough. Bass do not spawn until spring; they therefore would not have the same desire or instinct to seek the shallows. We hope that some of our bass fishermen will try the artificial fly thoroughly in October, and we believe they will be well repaid. The trouble is that many of our best fly-fishermen have their attention taken up now by the deer and the grouse and the October cock shooting, so they do not care to devote much time to fishing unless for striped bass.

Last year, while rowing over Raquette Lake early one September morning, we noticed a number of large black bass rolling over like miniature porpoises and it seemed then as if they must take a fly. Unfortunately we were trying to catch the Blue Mountain boat and could not stop to make the experiment.

Mr. Geo. Bird, of this city, killed a fine pound-and-three-quarters hybrid trout in the waters of the Kildare Club recently. It was a cross between a salmon trout and speckled trout. Mr. Bird states that it fought very much like a landlocked salmon, and jumped repeatedly out of the water.

Heavy rains are reported in the Adirodack region for the month of September, raising the lakes and streams so high that fishing was practically stopped. This is very unfortunate for the anglers who looked forward to the last two weeks of the open season for some good fly-fishing; but it will save the lives of many trout, full of ripe spawn, and enable them to reach their beds in safety.

The report comes from Moosehead Lake that a number of deer have been shot in pure wantonness and left to rot where they fell. These undoubtedly have been killed by the cockney sportsmen (?), who seem to think that when in the woods they must shoot every living thing they see. It is a pity that the carrying of guns and rifles during the close season is not forbidden by law. It was only last July, we think, that a young man was killed at or near Moosehead Lake by the discharge of his rifle as he moved it from one corner of the room to another. Now, what business has any one with a rifle at that time of year? To see the way some visitors go about the woods in summer with knives and pistols stuck all over them, and carrying guns or rifles, people would think that the country was full of Indians and bears. All they ever do is to shoot themselves or some of their friends, unless to kill game out of season.

THE GREEK CATFISH OR GLANIS.

THE common catfish of the United States is a representative of an order of fishes generally called *Nematognathi*, which embraces over 800 species scattered through the fresh as well as salt waters of the globe. About twenty species are known from the fresh waters of North America (exclusive of Mexico), but only one species has been generally recognized as an inhabitant of the fresh waters of Europe. A number of species have been observed, so far as the care of the eggs is concerned, in different parts of the world, and it is thought that all assume more or less charge of their young, although in different ways. We have a description by Aristotle, over 2,000 years old, of the care-taking by the European catfish, known to the Grecian naturalists then as the *Glanis*, which is especially interesting and noteworthy, and is reproduced in the following translation, which has already appeared in an article on the "Glanis of Aristotle," published by Prof. Louis Agassiz, in 1856, in the Proceedings of the American Academy of Arts and Sciences (Vol. III., pp. 325–333). It will be observed that this description of Aristotle is quite specific, and that he assigns to the male the office of care-taker of the nest. In this knowledge he preceded all other naturalists, and not only preceded them, but even the knowledge that there was such care taken had disappeared; so that Prof. Agassiz appears to have been constrained to believe that the *Glanis* of Aristotle was a different species, and even of a different generic type from the *Silurus* that he knew in his youth about the lake of Neufchâtel. The verity of the history was also doubted by Cuvier and Valenciennes, who said in their great work, "What Aristotle relates in detail and in two passages, of the care which the male *Silourus* takes of the eggs of the female, borders on the marvelous. According to him, the large *Silouri* deposit them in deep waters; the smaller among the roots of willows and other trees, among the reeds or even the mosses. The female having laid them leaves them, but the male guards and defends them; and as the eggs are long in developing, he continues the care forty or fifty days."

Nevertheless, as we now well know, the care-taking of a siluroid, far from bordering on the marvelous, is strictly in accordance with analogy and the results of observation of the American catfishes. It is remarkable that no details or mention of the paternal care of the young is to be found in the standard works on the fishes of Germany, such as Heckel and Kner's, Benecke's and Siebold's. It was this want of any recorded observations or personal observation on this point that partly influenced Prof. Agassiz to differentiate the *Glanis* as a distinct species from the common Wels or catfish of middle and northern Europe. But Agassiz also thought that there were discrepancies between scattered observations of Aristotle on the *Glanis* and the facts relating to the Wels. He has not, however, specified the contrasts, and we still remain in as absolute ignorance of the difference (if any) between the *Glanis* and the *Silurus* as our forefathers were. In all the ten pages of the paper in the Proceedings of the American Academy on the *Glanis* no specified or contrasted differences are recorded. Yet for over a third of a century specimens have been in the collections of the Museum of Comparative Zoölogy of Cambridge.

It is to be hoped that eventually we may learn what the

long-named but never described *Glanis aristotelis* is. Writers generally have considered the Grecian fish to be identical with the common *Silurus*, notwithstanding Prof. Agassiz's expressed views, but there is grave doubt notwithstanding. Indeed, years before Agassiz (in 1839) the illustrious Johannes Müller had called attention to discrepancies between the notices of Aristotle. It should be added that Aristotle has given no consecutive account of the *Glanis*, but simply noticed some of its characters in comparison with other fishes.

Aristotle in one place (I., 5, 3) compared with its tail that of the *Cordylus;* in another (II., 9, 4) he states that there were two rows of filaments to each of the gills except the last; and in another (II., 11, 7) that the gall bladder is on the liver. A curious observation is made in still another place (VIII., 20, 12). The *Glanis*, "about the time of the dog star, by reason of swimming on the surface, becomes sunstruck, and is stupefied by loud thunder; and many *Glanides* in shallow water perish by the bite of snakes."

The longest notice given by Aristotle relates to the habits of the *Glanis*, and is to be found in the ninth book of his "History of Animals" (VI., chap. 13, § 2 6 and IX., chap. 25, § 6). It will doubtless interest most of the readers of FOREST AND STREAM to see how a naturalist over 2,200 years ago treated of a common fish of his own country:

"The fresh-water fishes spawn in the still waters of rivers and lakes among the reeds, the *Phoxinos* [*Phoxinus*] and the *Perke* [perch]. The *Glanis* and the *Perke* give out their spawn in a continuous string, like the frogs; and indeed the spawn is so wound up that the fishermen reel it off, at least that of the *Perke*, from the reeds in lakes.

"The larger *Glanis* spawns in deep waters, some at the depth of a fathom; the smaller in shallower places, especially among the roots of willows or some other tree, and also among the reeds, or the mosses. * * * All the eggs that are mingled with the sperma become generally on the first day white and larger, and a little later the eyes of the fishes become visible. These at first, in all fishes, as also in all animals, are early conspicuous on account of their size. And those of the eggs that the sperm does not touch, as in the case of the sea-fishes, are useless and sterile. But in these fertile eggs, as the fishes grow larger, a kind of husk separates, and this is the envelope that encloses the egg and the young fish. When the sperm has mingled with the egg, the spawn becomes more viscous among the roots, or wherever it may have been deposited. And where the greatest quantity is deposited, the male guards the eggs, and the female, having spawned, departs. The growth of the *Glanis* from the egg is very slow, wherefore the male keeps watch for forty or fifty days, that the young may not be devoured by the fishes that happen to be in their neighborhood.

"Of the river fishes, the male *Glanis* takes great care of its young. For the female, having brought forth, departs; but the male, where the greatest deposit of eggs has been formed, remains by them watching, rendering no other service except keeping other fishes from destroying the young. He does this for forty or fifty days until the young are sufficiently grown to escape from the other fishes. And he is known to the fishermen, wherever he may chance to be watching his eggs, for he keeps off the fishes by rushing movements, and by making a noise and moaning. And he remains by the eggs with so much of natural affection that the fishermen, when the eggs adhere to deep roots, bring them up to the shallowest place they can; but he does not even then leave his offspring; but if he chances to be a young fish, he is easily taken by the hook, because he snaps at all the fishes that approach him; but if he is already accustomed to this and has swallowed hooks before, he does not even then desert his young, but breaks the hook by a very strong bite."

THEO. GILL.

THE BRANCH ALEWIFE.

WE have received from a correspondent at Eaton, Madison county, N. Y., a specimen of the branch alewife, which is found in a pond near the village, but makes its appearance near the shore only at the spawning season in early spring. The accompanying letter, herewith quoted, will explain the circumstances attending the capture and give some insight into the habits of the fish. Our correspondent writes under date of Sept. 12:

"I send you a peculiar fish, and my object is to learn just what species of fish it is. Near this village of Eaton is a pond called Woodman's Pond. In days gone by it has been used as a feeder for the old Chenango canal. This pond it is that contains this, to us, unknown fish. Never seen except in early spring or frozen in the ice, it has been a difficult task to secure one for your inspection, which I determined to do two or three years ago. Yesterday one of our local fishermen, who was fishing in this pond, observed this fish and secured it for me. It jumped a foot or more from the water and where it is 40ft. deep. You can see from the marks upon its body that it only came to the surface because badly wounded; and in fact it lived but a short time after being found, although kept in the water. This pond contains, besides pickerel, large-mouth black bass, some of them growing to the immense size of 7¼lbs. But few are ever caught on hook and line, and we think it is owing to the abundance of the fish I send you, which are from 2 to 8in. long. Could we only secure this small fish for use as bait we all believe we could catch some of these large bass. Will you kindly drop me a line telling me the kind of fish this is, and also the best way of securing them for bait?—C. L. H."

The branch alewife (*Clupea vernalis*) lives in Lake Ontario, and in many inland lakes of western New York, wherein it is land-locked. This is one of the fishes, like the shad, that ascends rivers early in the spring from the sea for the purpose of spawning. Unless prevented by obstructions, it will push on to the headwaters of streams and into tributaries. Under ordinary circumstances the alewife would return to salt water in the middle of summer or early in the fall accompanied or followed by its young, which have attained to a length of several inches. Many of the fish die after spawning, and this is true of the shad also. When land-locked, instead of returning to the sea, the fish moves toward deeper parts of the lake, and is supposed to undergo a sort of hibernation in winter. In the St. Lawrence this alewife, under the name of gaspereau, has a record of taking artificial flies with avidity, as set forth in FOREST AND STREAM some years ago. The example received from Eaton is 7¼in. long, and a very plump male, with the spermaries far from maturity. The thickness of the body is noticeable, and indicates an abundance of invertebrate life in Woodman's Pond suitable as food for small-mouthed fishes like this little herring. The alewife, on the other hand, is a choice morsel for the big black bass, for which the pond is famous. For a full account of the alewife in lakes of western New York, consult the "Fishery Industries of the United States," Section I.

THE CLUBS OF THE ST. CLAIR FLATS.

VI.—THE PENINSULA CLUB.

AFTER leaving Rushmere Club there is no other club building for some distance up the river. The right hand bank of the river presents the same expanse of rice and reeds, but that on the left—the strip of made land—is pretty well built up with structures large and small, public or private. The first building beyond the cut-off is the tasty twelve-rooms cottage of Mr. Wm. A. Butler and sons, of Detroit, which was planned by Mr. Varney and built before Rushmere club. Then there comes the long water front known as "Keweena Island Dock." There is no building here yet, unless one except the bath houses at the back of the "island." Our yacht lay anchored just back of this spot, and in passing to and fro here in the duckboat we could not help observing what a good bathing beach there was here, the water being shallow for a long way out, and bottom for the most part good.

Beyond "Keweena Island" is another deep cut-off, which serves as the boat canal for the boat houses of the well-known Star Island House, the largest, neatest and most desirable socially of all the public resorts in this portion of the Flats. The Star Island grounds embrace 29 acres, well shaded and with an admirable turf. The house is 158×150, built in cross-shape. Its dining-room is 158ft. long and a fine room. It often sees 200 guests at table. Jim Slocum—or may be, as he seems to be pretty well fixed financially, I ought to call him Mr. James Slocum—bought this property about 9 years ago. The house is 12 years old. Much of the popularity of the place is due to Mr. Slocum's tact and ability as a manager. This is a great stopping place for the pleasure vessels, which pass up and down the channel from all parts of the waters hereabout. Some of the notables and would-be notables drift in here occasionally to eat fish and put on airs. It was our fortune to see here a certain American tenor, with an Italian tenor's stomach, who has lately achieved success by marrying a rich and weighty wife who paid an opera company to let her new husband sing in the cast for a while. One could not soon forget the large and princely air with which this celebrity waved adieu to Star Island from the deck of the receding steamer. After the custom of "resorters," from Horicon west, the populace had gathered to see the boat off. The tenor thought they came to see him off, and smiled graciously as he stood spraddled out at the rail and waved his gloved hands. That made me laugh, which did my dyspepsia good. So it seems that tenors can be of some use after all.

Mr. Slocum sometimes uses 1,300lbs. of fish in one day on his tables and has had 625 guests at one meal. He sometimes uses bass, illegally speared. I know this, because I saw a French fisher boy sell such bass there, during our stay, which was in May. There is much complaint along the Flats that such and such an individual buys speared bass, and so offers a market to the Indian and French law-breakers. It is probable that one complainer is about as deep in it as another and all of them a great deal deeper than they ought to be. Old Joe Bedore isn't the only man along the channel who buys illegal bass and there don't anybody need think so. In an article last spring I described a string of speared bass that I saw sold at the Peninsula Club. At that time the bass were beginning to spawn in the shallows back of the marsh which lies up toward the latter club house and the French fishers were spearing them there, if the lights out at night were any sign. And every market fisher of them knows that he don't have to go an hour's pull to sell every bass he gets, no matter by what means he gets them. The market is there. Later on some statements will be made comparing the bass fishing of to-day with that of a few years ago. It has already been stated that the falling off of the fishing, or the growth of illegal methods, had caused certain gentlemen of the St. Clair and Rushmere clubs to invite John Parker and Frank Wherry, the game wardens, to make this very trip upon which we had now come up. Let these gentlemen make no mistake about how matters appear to an outsider who spent only one day along the Channel.

If the bass of the Flats don't go, it will be because there is a change in affairs up there. No steward of a club ought to be guilty of buying a bass. I wish Mr. Slocum, pleasant as he is, and apparently alive to interests wider than those of to-day, would kindly resolve never again to buy at least an illegal bass, and ceasing to turn his head when the native fishers are unloading their boats, would tell them plainly that he would make them trouble, instead of giving them money, if they brought in any more such bass. The same to the Peninsula Club—to which, by devious paths, we are now progressing, not with any ill nature in our minds, let us hope, but with nothing stronger than regret that this club, even in each small respect, is not as strictly admirable as it might be in all matters of sportsmanship. It has few steps to go until it is thus admirable. Why not take them? Why not join with Mr. Slocum, and cut off that much more of the market for bass speared on the spawning beds? It might be thought more friendly, or more discreet, not to say anything about such things here. For the first part, I do not think so; for the latter, I do not care. A newspaper can be too kind, and too discreet. The main thing is the truth.

But it is a long way yet to the Peninsula Club by way of the water, as any one may find who paddles a duck boat against the rapid flood of the blue St. Clair. After the cut-off next above the Star Island house there is 1000 of vacant land, its water front all nicely piled and planked. Then there comes another cut-off, with a current like the tide at sea. Just across this is the summer cottage of Mr. Hiram Stansell, of Detroit. There is a big horseshoe of water clear about the place. Over the next cut is the cottage of John and Wm. Boydell, of Detroit, said to be the first private house ever built on the Flats. I tied up here a few moments and talked with Mr. Boydell, who, with his two manly young boys, was just fixing up his little steam yacht for a run. He kindly offered to pick me up, further on up the river, and take me over to the Canada Club, whose housetop we could just see from this portion of the bend, but which I was doubtful about reaching that night in the duck boat. This seemed a very clever offer to a perfect stranger, and I gladly accepted it. He overtook me about an hour later, up the channel, saved me a lot of time and gave me a very pleasant ride, too.

Above the Boydell place is a cut, then comes 450 of vacant land, owned by the Boydells, and then another cut, and then what is called the Mayberry cottage, built by Mr. W. C. Mayberry, but now owned by Mr. Mayberry and Mr. J. F. Webber. Then there is another cut for a change. We will get to the Peninsula Club after a while and the man who thinks this is a tough way ought to paddle up there once. Then there is another cut. We are now getting up toward where these cuts run back into a marshier looking sort of country, with channels or runs through it. Then there comes the Sam Craig cottage and the Gies cottage, and then another cut, and then the two small cottages of the Holland brothers, and then a cut. Beyond this is the solid and spacious dock of the "Peninsula Fishing, Shooting and Yachting Club."

Here the reader may pause in the exciting sport of naming cottages and indulge in the dissipation of a few mild statistics.

The "Peninsula Club," so called by the public, was organized in October of 1884 and duly incorporated, the incorporators being Messrs. Geo. W. Larkins, John C. Brandon, Emmet Streeter, Ald. C. Lanyon, Thomas A. Woods, Alfred C. Hempel, Henry Koester, Levi A. Wilcox, Hobart H. Gray, Frank Bowring, Andrew W. Hackett and Alex S. Gray. Stock is held at $50 a share. The membership is limited to 200. There are about 80 members now. The annual dues are $10.

The club house is about 40×60ft., two stories, very comfortable and provided with good boat houses, which harbor about thirty small boats. Mr. W. R. Cole, one of the members, owns a good little steam yacht, the J. I. C. There are about a dozen bedrooms in the house, and these are not enough to hold everybody sometimes, for now we have fallen upon a club of strictly practical hunters and fishers, who come out when the season is on and work hard for results.

There has been a good deal of change since the beginning in the membership of the Peninsula Club, and also in its character. It is said that there used to be a few men in the club who didn't care very much for either game or fish laws. They would net, spear, shoot out of season, or do anything else they felt like doing, at least so say their neighbors. And these same neighbors say that all that is now changed, and that no such carryings-on now occur. The membership of the Peninsula Club is now certainly of a high order, and is drawn mostly from the ranks of solid business men or those in official capacity. Mr. C. P. Collins, the president, is the able Auditor of Wayne county, and a Detroit man of large business interests. He is a sportsman, and has a big heart for sportsmen, as witness the expensive medal he offered the Peoria Club at their tournament last spring. "Jim" Battle is chief of the Fire Department of Detroit, Mr. Jas. Nagle, I understand, is a State Senator of Michigan, and there are a good many others of the members who live in the court house in working hours. All of the gentlemen I met were courteous and helpful to the last degree. A very whole-souled set of hard-working, practical sportsmen, I should take the body of this club to be. Their club house is chiefly for business. The ladies of the club are welcome, but when the flight is on, the decks must be cleared for action. There is considerable summer-day pleasure, sailing, boating, etc., here; but this is no summer resort, but a lodge of fieldsmen. Celestine is absent here, but there is some one in the kitchen who can fry perch to the queen's taste, as I found when the steward, Mr. Hodgson, asked me in to supper as I was coming back down the channel later in the day. Mr. Hodgson has been steward for about a year. The basis here is about the same usual elsewhere—the steward has a salary and charges a rate for board, providing his own materials. Mr. Hodgson is a quiet, pleasant young man, and will make the club popular and pleasant. In a talk with him he expressed a knowledge of the lawless depredations being carried on upon the Flats and of the necessity for a proper game warden for that locality if any respect was to be had for the law.

On the day following my first visit I returned with Messrs. Parker and Wherry, who, as has already been stated, were up purposely to try to find a suitable person to recommend for the position of warden on the Flats. They had a long talk with Mr. Hodgson and I inferred that the latter would be very likely to get the appointment. This would be very well, and I feel sure that if Mr. Hodgson were backed by the clubs of the Flats, as he should be, he could stop a great deal of lawless destruction of fish and game. The previous warden resigned his commission, or stopped work, simply because he could not afford to do the work for nothing. He was a better warden than he is spoken of as being, but he could not work at this unpleasant business for pleasure, nor could any reasonable man expect it. There seems to be a notion that a game warden should be diligent and active, out in all sorts of weather, after all sorts of characters and should live on the glory of supporting the law. There is no good sense displayed in game law matters. The great and wealthy clubs of the St. Clair Flats don't need to get so very proud of themselves. They have not done their part, but have failed just where they should not have failed. They should certainly be ashamed of themselves if they can not now between them raise enough money to keep at least one warden in the opinion that he is not alone in the work. They would better cut a little ginger bread off from their boathouses and put a little ginger into a place where it is sadly needed. For Mr. Hodgson in this capacity there is this to be said, that his work as steward would not interfere with his work as warden, but help it. Let us hope that he will hold this place and begin a work which has been delayed too long.

In the next paper or so some description will be given of a few methods of taking bass in these waters, any one of which may be called an unsportsmanlike device, although extremely deadly in its way. This will be touched upon in the talk about the Delta Club. To the Peninsula Club, with regret that the necessities of space make the mention so scant and dry, we must bid a hurried farewell, for we are not yet up to the Southeast Bend and have still some traveling to do. Following is the membership of Peninsula Club: C. P. Collins (president), Harry Hol-

land (secretary), J. C. Brandon, Jas. Battle, Geo. Bradbeer, Jacob Eastendorf, M. H. Chamberlin, Eugene Diemel, John East, Hobart Gray, A. S. Gray, Geo. Gregory, J. M. Gies, Louis B. Grau, Thos. Jocker, A. C. Hempel, A. G. Holland, Harry Holland, W. H. Holland, A. T. Henderson, J. H. Mason, Jas. T. Brady, S. B. Grummond, Frank R. Reeves, Ferd Kuhn, W. H. Gilman, Chas. Galgier, Peter Ahlberg, Jas. A. Marshall, Chas. F. Zielke, A. C. Melchers, Edward G. Gies, W. P. Radigan, John C. Spindler, Antoine Michenfelder, Jas. Dwyer, Jas. C. Higgins, Peter Rush, F. G. Meimer, Wm. G. Springer, Henry Wunch, Richard Rice, Albert Schaub, Hiram Jackson, H. Koester, Thos. Kennedy, Geo. Mortz, W. J. Mason, Jos. Nagle, Mathew Oliver, D. S. Revell, W. A. Allen, J. S. Schmittdiel, A. Smith, C. Schweikart, A. H. Raynor, Theo. Ruhl, Jos. Ulrich, Peter Uberoth, L. A. Wilcox, Jos. Winters, J. W. Daly, Geo. V. Candler, W. R. Candler, Darvis Cole, John Olfs, Peter J. Becker, Simon C. Karrer, Henry Dunnebach, J. H. Black, A. Wiessenberg, Wm. Look, Geo. Erb, Fred Katus, H. Brossard, Fred Zimmer, W. F. Hodgson (steward of the club). E. HOUGH.

No. 175 MONROE STREET, Chicago.

CONNECTIUTT RIVER POUND NETS.—On June 30 Fish Warden A. C. Collins arrested a number of Saybrook fishermen for maintaining illegal pound nets on Sunday. They were convicted, but appealed. The Hartford *Times* of Sept. 19 reports: The case of The State vs. George W. Denison, D. C. Spencer, John F. Bushnell, Frank M. Chalker and Fred Kirtland, the Saybrook pound fishermen convicted of illegal fishing last May, and which was to have been tried in the Superior Court of Middlesex county, at Haddam, the 25th of this month, has been settled by the defendants with the State's attorney, W. T. Elmer. The defendants paid the fines and costs. It is said the amount was less than $300. The defendants evidently did not care to stand trial in the higher court and be found guily a second time. It would also necessarily have reopened the case in the public mind, while the defendants don't care to have anything more said about it, lest the Legislature might abolish the "pounds" altogether. It would be a benefit to the shad fishery and the public if the Legislature were to do that very thing. The *Times* has so thoroughly exposed the tricks and subterfuges of the "pounds," and their selfish course in destroying the shad without giving them any chance to get to the river, that the public has awakened to the fact that these few "pound" owners have already nearly ruined a once valuable industry, in which the people living along the Connecticut River had an ancient and never-forfeited interest. The public can be deceived no longer, and the next Legislature will probably take steps to save this valuable food fish. It is a monstrous thing that a half dozen men can monopolize and nearly ruin the whole Connecticut River shad fishery, and even defy the explicit law of the State and keep their all-capturing "pounds" fishing all the time, Sundays included.

STRIPED BASS AT HAVRE DE GRACE, MD.—Mr. John G. Watmough, of Philadelphia, took about 600lbs. of striped bass with rod and line in one week in this vicinity. This was one of the very large catches of the season, but agrees with reports from many parts of the coast. On the Rhode Island shores, for example, striped bass are as plentiful as ever known, and are being caught by the ton.

MAINE TROUT.—Springvale, Maine, Sept. 23.—Brad. Wilson, of Acton, sent to Mr. J. B. Stiles, of this place, six brook trout, said to have been captured in Long Pond, three or four miles from here, which weighed 11¼lbs. twelve hours after capture. The largest weighed 3¼lbs. —CHAS. HARTFORD.

Fisheulture.

SALT AND CLAY FOR TROUT DISEASE.

THE diseases of trout for the most part are insidious, obscure and deadly. Losses from unknown maladies frequently discourage trout culturists to the point of giving up the effort to rear the species in preserves. Who can tell the cause of blindness or its remedy? Although not considered contagious, it is widespread, unexplained and, so far, not amenable to treatment. Recently a new disease attacked the rainbow trout at the Wytheville station of the U. S. Fish Commission and, as it was successfully overcome, we give herewith full details, which we owe to the courtesy of the Commissioner, Col. Marshall McDonald:

WYTHEVILLE, Va., Sept. 4, 1890.—Hon. M. McDonald, Commissioner of Fisheries.—Dear Sir: I am sorry to inform you that the yearling trout, reserved here last fall for breeders, are doing so badly. About a week ago they stopped eating and they have not eaten a bite since and are now dying rapidly. They seem to be affected with some contagious disease. The fish turn a pale yellowish green, with dark spots over the body and a dark yellow spot over the brain. We have done everything we can for them. We have tried the clay and salt remedy, but nothing seems to do them any good. Their pond is clean and they have plenty of fresh water and have had all the season, running into the pond from two directions, giving good circulation, etc. We have never had fish to act this way before, and if you can suggest anything for a remedy we shall be more than pleased to hear from you. Very truly yours, Geo. A. SEAGLE, Superintendent, Wytheville Station.

In response to this appeal, the Commissioner was considering the advisability of liberating the trout in Tate's Run and recovering them as far as possible later in the fall. A few days later, however, he was relieved of further anxiety about the matter by the following welcome letter from Mr. Seagle, and this may be of great service to trout culturists in a similar emergency:

WYTHEVILLE, Va., Sept. 9, 1890.—Hon. M. McDonald, Commissioner of Fisheries.—Dear Sir: I wrote you several days ago that our yearling California trout were in bad condition and dying rapidly. I am happy now to inform you that they are about well again. Nothing seemed to do them any good until we drew the water out of their pond, leaving only about 1200 or 1500 gallons on the fish; to this we added one bushel of salt and two bushels of clay, mixed thoroughly with the water in the race way and allowed to flow into the pond. The water was then cut off the pond and the fish left in the muddy, briny water as long as they could live without a change of water. This bath was given them twice (two days in succession). Of course we made some experiments on individuals before trying so much salt on the whole lot. Ten hours after the first application, the fish showed decided improvement, and began to eat—the first food taken in over a week. We had tried salt and clay before, but not near such a large quantity, and without drawing off the water.—Very truly yours, GEO. A. SEAGLE.

TROUT CULTURAL CONTROVERSIES.

Editor Forest and Stream:

I presume that but few of your readers care for or even trouble themselves to read these controversies, and particularly that side which refuses all semblance of argument and whose stock in trade is mainly invective, which an old-time author very truthfully defined as "a predatory course of life, and indeed but a privateering upon reputation." The truthfulness of this saying was never more forcibly illustrated, than in the communications of Wm. N. Byers which taint your columns. His fulminations contain very little but matter which is grossly personal and intentionally false in spirit. He is indeed a beautiful specimen to charge others with Billingsgate and cuttlefish tactics. He reminds one of the disturbed shop-lifter who, as he flees through the streets and alleys shouts at the top of his voice "stop thief." Readers of the FOREST AND STREAM, who take the trouble to wade through his last roily emanation, will look in vain for anything simulating an argument, until they reach his reference to my views concerning shad and whitefish culture, where he asks "how do these utterances sound in view of our present knowledge of the results in these branches of fishcultural effort?" Of course he does not attempt to tell what these results have been, and one reason is that he does not know. If he did know he would fight as shy of the facts as he does of all facts connected with so-called trout culture. The cold facts in connection with shad and whitefish culture are, that up to the present time there has been no perceptible result whatever. As for forty or more years past, there continue to be seasons of plenty and seasons of partial or total failure, precisely the same and no different, as when artificial hatching and planting were unknown here. I refer now to the Atlantic slope. Plants made on the Pacific slope have been a fair success, and I have earnestly hoped that whenever my plans for shad stocking were given a fair trial, there would be some tangible returns. The matter is now being tested and in a year or two we may know how the plan works.

Regarding shad, I think I stated years ago in FOREST AND STREAM, that I was personally familiar with the three principal shad streams of the country, namely: the Connecticut, the Hudson and the Delaware. Every old fish dealer as well as old residents in the vicinity of these streams will agree with me in the assertion, that there has not averaged more than three good shad seasons in every ten, and that the other seven have been partial or total failures, and these results have been in no wise changed since artificial work has been in vogue in connection with these streams.

Our oldest whitefish men here on Lake Erie (the headquarters of the business) testify that there are intervals of plenty and of failure in their business, precisely as in shad business, only these intervals in the case of whitefish are of longer duration, both as to plenteousness and failure; and they further testify that artificial propagation has not made the slightest change in the situation. The more experienced fishermen argue that the artificial operations can do them no possible harm and that there is a chance of some benefit accruing, and they therefore encourage these operations by word of mouth, but no man of experience will either spend time or money in this encouragement. They even refuse to distribute the young whitefish unless paid for it.

The only other points in the blackguard communication requiring the least notice, are the references to my newspaper work and a request for information as to the papers for which I have written, etc., and also the assertion that I have endeavored to impeach the honor and integrity of Prof. Baird and others named. And right here I wish to call the attention of readers to the fact that each of those named have conducted their operations with public funds, which they have expended as honorably, honestly and intelligently as public funds are generally expended in experimental work, such as theirs has largely been. I never did and do not expect to have a more courteous and gentlemanly friend than Prof. Baird always was. An active correspondence commenced between us soon after the establishment of the U. S. Fish Commission and continued as long as his health permitted him to correspond with any one. I have an ordinary spice (shipping) box full of his letters, and have recently found another large package in addition. These letters are personal, official and semi-official, mostly the latter. As poor as I am, it would take "big money" to buy them. After he began to be prostrated from over-work and it became necessary to intrust his office work to others, I had failed to receive certain promised publications and so wrote him, not knowing of his physical disability. Not hearing from the matter I addressed Congressman Ferrell, in whose district I then resided. I received a prompt reply from him saying that he had called upon Prof. Baird, who expressed mortification because the publications had not been sent, as he had directed. They were then promptly forthcoming. The Professor informed Congressman Ferrell that I was an indefatigable worker in the cause of fishculture and that he aimed to aid me in every practicable manner, as I was one of the most reliable and prized correspondents of the Commission. I make this statement in brief, almost verbatim, as imparted to me by Mr. Ferrell, whom I have not been authorized to quote, and should not now, but for persistent attempts of a disreputable ring (with whom Byers appears to be in communication) to make it appear that Prof. Baird did not recognize me as an authority. The ring have evidently found in Byers a tool that they can work, as they have attempted to others, until he like them goes to the wall, the place which he is very near to now.

Another gentleman who was then and still is in public service, often called upon Prof. Baird during the last year of his life particularly, and on one of these occasions the Professor had been reading one of my articles concerning the failure of artificial trout culture. In the conversation which ensued, the Professor spoke of me in the same vein as he did to Congressman Ferrell, and in addition said that I was undoubtedly right in the main, regarding the (then) status of trout culture. I would give this gentleman's name but for the fact that he is in public service.

Byers appears to be very anxious to know something of the papers to which I have contributed. It is of no material interest to the mass of the readers of FOREST AND STREAM, for thousands of them know considerable of the matter already; however, I will give him a partial list to ponder over. Commencing on the East; the *Massachusetts Ploughman*, Boston; the *Union*, the *Homestead*, the *Farm and Home*, Springfield, Mass.; the *Berkshire County Eagle*, Pittsfield, Mass., (I have written for this paper nearly forty-five years); *Tribune*, *Sun*, FOREST AND STREAM, *Turf, Field and Farm*, New York city, and nearly all the leading papers published in Philadelphia, also quite a number of papers published in the smaller cities of Connecticut, New York, New Jersey, Pennsylvania and some other States; also two syndicates of newspapers, embracing nearly one hundred country papers, and of which I was chief editor; also for two of the English Quarterlies. The bulk of my writings for these papers has been on the subject of fishculture. As is well known to readers of the FOREST AND STREAM, the leading papers named make a specialty of answering questions. Several of the papers named still continue to send to me all questions relating to fishculture, and I return the answers, which are duly published by them. It would seem that they think me more of an authority upon the subject than the great fishculturist Byers does. It will be noticed that I have not mentioned the publications issued by the Rural Publishing Company, and which seem to be sufficiently valuable to be kept on file, years after their suspension. I hear from them every week, and (except from Byers) in commendatory terms. They were suspended in consequence of my being stricken with paralysis, resulting from an old army injury. Since November 1887, I have been able to write but a few pages of manuscript, and my little newspaper work and correspondence is only executed by the aid of a type writer. I will send herewith to the editor of FOREST AND STREAM copies of documents sent out to patrons of the publications (which Byers attempts to libel) to show the honorable treatment of them by the publishers. Of course they are only of interest to those to whom they were sent.

Readers will remember perhaps that Byers in his first attack upon me stated in effect that there was a large number of persons now engaged in trout culture in Colorado, particularly in the vicinity of Denver. In past years I have had numerous correspondents in Colorado, some of whom noted the steady decline of trout culture there as elsewhere. After Byers's gauzy statement, I re-opened correspondence with Coloradoans, and chanced to find a reliable party in Denver who was thoroughly posted upon the subject. Up to date, I can only learn of four parties in all Colorado who continue in the business, and they in a small way, and two of the parties run the business as a side attraction to summer resorts, the same as is done by a few parties in the East, but most of the trout served at their tables are from the wild streams which have never been artificially stocked.

While prosecuting investigations concerning fishculture in foreign countries, I naturally expected valuable information from France, where trout culture was first practiced in modern times, and where it was fostered by various scientific societies, and by the Government. I was somewhat surprised to learn that after a few years' experiments conducted with a degree of intelligence and thoroughness unknown outside of France, trout culture has been adjudged a total failure there, and the business had been abandoned, as it practically is in this country except where kept alive by public money. There are hundreds of trout culturists in this county who have tested the matter with more or less thoroughness, and, beyond the "fry" stage have found it a pronounced failure, and have given it up, generally in disgust and often in sorrow. They are old men now, those yet living, and the next generation are upon the stage. Very few of them will repeat the trout-cultural experiments of the previous generation, but they ought to be induced to try the plan explained in my article in your issue of Sept. 4, (page 134) as it is comparatively inexpensive and will certainly aid very materially in perpetuating a supply of this peerless fish, both for the angler and the epicure.

As I am about closing, I glance at the last paragraph of Byers's last effort, particularly the closing threat. It is really fearful to contemplate. He now wishes readers to believe that the "burning question" is whether or not I am an authority on fishculture. I suspect that readers will recall the fact that Wm. N. Byers simply made an attack upon my assertion that artificial trout culture is a failure, and in order to fortify his line of attack made the offer to furnish me a list of from fifty to one hundred streams (presumably in Colorado), which readers were led to believe were barren but had been rendered fruitful by artificial stocking. I very properly asked him to furnish the proffered list, but has any reader seen it? Certainly not, and they never will, because such streams do not exist. The statement, like several others made by him, has no foundation in fact. Tourists are led to believe that some such conditions exist. Railroad and hotel men understand this business to perfection and work it for all it is worth. And I happen to know of parties who will not go to Colorado the second time on a trout-fishing excursion, but have already gone further north where streams have never been artificially stocked. Byers has been prolific in building imaginary structures and asking me to knock them down. If he carries out the awful threat contained in the last clause of his latest effusion, readers will hope to hear something concerning the question at issue. Let him point out some of the places where trout culture has been a success. I do not make it a practice to "dodge the question" in the remotest degree, but I would like to know if Byers has yet found a sucker to lease that wonderful trout stream which in his first article was alluded to in a manner "so child-like and bland?" MILTON P. PEIRCE.

COLUMBUS, Ohio.

The Kennel.

FIXTURES.

DOG SHOWS.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer Superintendent.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 4 to 8.—First Beagle Field Trials of the National Beagle Club, at Hyannis, Mass. F. W. Chapman, Secretary, 364 Washington street, Boston, Mass.

Nov. 7.—Ninth Annual Field Trials of the Robins Island Club. W. L. Wellington, Secretary, Brooklyn, N. Y.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

OTTAWA BENCH SHOW.

THIS pleasant little show, held in the capital city of Canada, opened Sept. 23, continuing till Thursday evening, the 25th. Mr. James Watson was to have judged all classes, but at the last moment before entries closed, he was compelled by other business engagements to forego that pleasure, and H. W. Lacy was engaged in his stead. The building set apart for the dogs by the Fair Association is a poor one, just an oblong inclosed shed with room for about 150 dogs comfortably benched. At Toronto show there was such a rush of entries made with Mr. Geddes that the committee had to put up another row of stalls on top of those already fixed, and this brought the total up to about 230, leading to considerable A B C business in the catalogue. I must say, however, it did not lead to the confusion I had anticipated. The quality of the show on the whole was good, and I am told a vast improvement on last year. There is but little doubt but that Ottawa will fall into line as a regular dog show fixture, for the attendance was very good, especially on the second day, when over 10,000 people were registered

at the turnstile. It is the intention of the Fair Association to enlarge the building, putting in offices and other conveniences for the exhibitors. The members of the dog show committee were untiring in their efforts to make a success, and the following gentlemen were always to be found ready to help the show along: H. B. Bruce, Alfred Geddes, F. H. D. Vieth, W. G. Young, P. G. Keyes, Dr. Wesley Mills, C. E. Living, T. Cameron Bate and F. H. F. Mercer.

Mr. C. C. Rogers, though more of a horseman than a dog man, made a first-class superintendent, though a little too much of the clerical work was left to him, which took up time that might have been devoted to the show itself. The building was kept clean and sweet, and for once in my life I saw a dog show without puppies.

This act of the Ottawa bench show committee has not received the notice it deserves, and if the writers we know of are sincere in their wish that puppy classes should be done away with a little more praise ought to be meted out to the Ottawa people for their pluck, for pluck it was, when we remember that 25 per cent. of the entries last year were puppies under six months old. Now let some big show follow suit and they will not lose by it. Of course this city is the stronghold for spaniels and Clumbers especially, the entries in these classes numbering 73. Fox-terriers, Irish setters, greyhounds, beagles, Yorkshires and poodles were the most noticeable of the other classes. The judging did not proceed as quickly as it might have done, owing to the late arrival of some of the dogs, and the stormy weather interfered considerably on Tuesday afternoon, still all was over by 2:30 on Wednesday.

MASTIFFS.

Only two dogs showed up in this breed, and the judge was not long in giving the ribbon to F. W. Connolly's Wyoming Count, a fairly good dog, a bit small but brimful of quality, Mount Royal Kennels' Lord Caution, described in Toronto report, coming second. This decision of course carried with it the special for best mastiff in the show.

ST. BERNARDS.

There was nothing with the exception of Laidlaw & McBean's Benmore Kent's Bernie that showed much pretension to type. Benmore won in the dog class, not improved in coat at all by his journeyings, the other one present, Saint, may have been a beloved dog to his mistress, and doubtless he was, as she came later on and finding no award over her stall forthwith insisted on removing her dog from the show, and from a feeling of mistaken leniency she was allowed to have her way. This is not fair to the judge, as the visitors to a dog show are only too apt to listen to the plaints of the disappointed exhibitor, but if the dogs are there they can compare them with the type of dogs which won the prizes, and see for themselves why such and such an one was turned out of the ring. In bitches a nice quality bitch in H. E. Kent's Bernie won; she is hardly deep and massive enough in head, but her excellent bone and front and good coat put her before Benmore for the special afterward for best in show. Hill & Almon's Mona, though showing some signs of St. Bernard type, might be considered lucky in getting second, there being nothing to put ahead of her. Mastiff and St. Bernard puppies were classed together, Lord Caution being the only entry, won. He is 13 months old.

There were no Newfoundlands shown.

ENGLISH SETTERS.

With the exception of the Cohannet dogs and Zona, there was little quality to be seen. In open dogs first went to Cohannet Kennels' Royal Kent. To many this decision might appear wrong, but I like his action and hindparts infinitely better than Kent II., who was given second. Kent II. has a little the best in head and depth of body and ribs, but seemed altogether tied behind, not having the free action of his kennel mate. C. H. Corbett's Grouse loses in head, coat and legs; Mrs. L. Smith's Polo is only a moderate one. In bitches J. Lewis's Zona, almost coatless, was shown in bad skin condition; but as it was a case of this bitch first and the rest nowhere, the judge gave her the ribbon, Mount Royal Kennels' Flo II., second, being long and narrow-faced and shelly in body, and the same may be said of their Nellie Dale, third. The special for best in show went to Cohannet Kennels' Royal Kent. Best puppy, B. H. Humphrey's Don.

IRISH SETTERS.

Several well-known dogs were shown. A. W. Pearsall's Jack Malone was a somewhat easy winner, his better head, legs and feet and good color placing him ahead of Glendyne Kennels' O'Donovan Rossa, mentioned at Toronto. C. S. Parrett's St. Lawrence is faulty in head and lacks substance. A. W. Pearsall's Redstone was shown too fat and is faulty in head. In bitches. A. W. Pearsall's Lillie Ban won nicely by her better head and body over Oriole Kennels' Jeanette, faulty in head and ears. A. W. Pearsall's Belle Ida was here placed third, her loaded shoulders and plain head keeping her back. Reserve went to Mount Royal Kennels' Elfreda, a bitch with nice expression, but not enough of the Irish setter type; nice color and a promising puppy. The Glendyne Kennels' Sedan and Molly Glendyne, vhc.; were at Toronto. The special for best in show went to Jack Malone. Best puppy, Mount Royal Kennels' Elfreda.

GORDON SETTERS.

E. S. Skead's Domo is cloddy and curly in coat in places, poor coloring. He was the only entry in the dog class. In bitches Mount Royal Kennels' Hilda was the only entry and deserved her win, she also winning the special. In the puppy class, which was for under 18 months and all breeds of setters together, the prize went to Elfreda, her compactness of build excelling very much the good-headed, but long-waisted, English setter pup Don. Glendyne Kennels' Irish setter pup Lismore showed some breeding and was pleased with a vhc.

POINTERS.

No dogs turned up and inthe ladies' division the prize fell to Mount Royal Kennels' Devon Nell, well known, her stronger head and better ribbed body beating R. H. Maveety's Ada rather easily. The latter is pinched in muzzle and hardly well-ribbed enough. Pretty dogs are not always the prize winners; prettiness and correct form and type are often wide apart. Mount Royal Kennels' Devon Nell won the special for best pointer. No puppies.

GREYHOUNDS.

In challenge class ch. Harmony (Hornell-Harmony Kennels), looking, I think, better than I ever saw her, had things to herself. In open dogs Hornell-Harmony's Hazlehurst had a somewhat easy win over Mount Royal Kennels' Elcho, who, though small, is of good type and make, a bit bitch-headed, with ears too large and carried straight up at times. Hornell-Harmony Kennels' Sir Lancelot was put back for being pig-jawed, he was third at Toronto, and should have been pegged back in that class for that fault. D. B. Gordon's Justina is too coarse and big, though nicely formed in body, bad front. In bitches Hallowe'en, though faulty in feet, excelled the others in body, shoulders, legs and quarters. W. L. Young's Fannie M. is better in front than L. N. Bates's Galatea, who is also long-cast and not ribbed up enough; the Clumber Kennels' Betsy, third, is better class than either, and would have pushed Hallowe'en but for the loss of one eye. Sir Lancelot won in puppies over Galatea, as he is so much better in body and quarters.

FOXHOUNDS.

There were only two dogs in this class that showed any pretension to good form. Hornell-Harmony Kennels' Dan T., though not first-class, was far ahead of the others. He beats the second prize winner, Wm. Pownall's Jack, in head, body and general carriage; his Brandy, A. Stewart's Ranger and his Mingo are all either bad in front or wrong in head, and received their cards simply because they were foxhounds in a poor class. This decision also carried with it the special for best in the show.

DEERHOUNDS.

Only one turned up out of two entries, Hon. J. A. Chapleau winning the red ribbon with his Robin, a good-headed dog, but a bit flat-sided and light in body and out of coat. He won the two specials for best in the show.

BEAGLES.

There was, thanks to the Hornell-Harmony Kennels, a nice show of quality in these classes, with their Royal Krueger and Una W. in the challenge classes, the original class being divided, what could be wished for more? In open dogs their Whisker was alone. He is not a crack and was described at Toronto. In bitches Hornell-Harmony's Elf had an easy win over F. P. Robson's Dot, who is a bit weedy. Best dog or bitch laid between Royal Krueger and Elf, the former winning in muzzle, bone and feet. Hornell Harmony Kennels' Ava W. had a class made for under 12in., in which she won.

SPANIELS.

Irish water spaniels were poor. First went to Sport, none too good in coat, but a fair front, head and topknot. Second was withheld and third given to D. Ponwall's Dick, whose only pretensions to form were that he thought he was a water spaniel.

Clumbers turned out well, and it is not too much to say that such a show of this breed has certainly not been seen in America, and I doubt if England at present shows a larger number. The entries for these alone numbered just 20. In the challenge class the judge was compelled, owing to Bate & Geddes' Bromine being shown very heavy in whelp and poor in flesh, to put her kennel companion, Boss III., over her. It was not a question of merit, but a question of showing bitches so far gone in whelp. In open dogs H. B. D. Bruce's Shell is a nice-headed dog, with excellent legs and feet, and though his body is not quite so "Clumbersome" as some, he looks like a good working dog. Second went to McMahon's Rake, who loses a little in head. F. H. D. Vieth's Top must thank his rough coat for the position, though he is not straight in front, and his muzzle though deep has not the correct cut before the eyes. C. H. Wallace's Mack, reserve, loses in front and head, and his Johnny, Jr., though possessed of a deep, fat body and good skull, is not straight enough in front and is faulty in muzzle. W. G. Young's La Grippe is a very promising pup, and may be in a year will beat the lot for bone, front and head he can hardly be beaten, but of course is not furnished yet. G. V. Smart's Darby loses in muzzle and quarters. In bitches H. B. D. Bruce's Lucy II. won nicely over C. H. Wallace's Joan II., who loses in head, front and body. Bruce's Vic, though deep in body is faulty in face and light in bone. W. G. Young's Belle of Ottawa, faulty in front and full in skull, was vhc. Mr. Mercer's Snow and Maude were absent. In puppies first went to Darby, second to Belle of Ottawa, reserve to La Grippe, and vhc. to Vieth's Rake.

Field spaniels, open dogs, saw A. Laidlaw's Samson the winner; though out of shape he showed more field type than the others. Kelly & Kirby's Prince, second, is cloddy and short-headed. Laidlaw's Napoleon, third, was at Toronto. F. W. Smith's Trot, vhc., is faulty in front and head. In bitches Mr. Laidlaw had it to himself, his Topsy and Fancy getting first and second respectively.

In cockers, challenge class, we were introduced to Wilmerding's Doc and Laidlaw's Rabbi. Never has Doc looked so well, and barring a waviness of coat it was hard to find a better. In head, front and ribs he beats Rabbi. In open black dogs the decision lay between Geo. Bell's King of Obos and P. G. Keyes's Bob Obo; the latter loses in head and body. Laidlaw's Brock, third, is light throughout. In bitches quite a class faced the judge, the six taking some examination before two could be placed satisfactorily—to the judge. Geo. Bell's Idea proved the winner, being better in head, front and body than P. G. Keyes's Rideau Flossie, who, by the way, was not noticed at Toronto, got her deserts here; she pushes the winner considerably. A. Laidlaw's Nina, third, loses in muzzle and front. Corktown Cocker Kennels' Cleo, reserve, is a nice young one, loses in head and front a trifle, good coat. P. G. Keyes's Tiney Obo is a bit long in body, nice head, bit narrow, and Corktown Kennels' Dot Smirle, also vhc., loses in body, head and front. Black puppies, field or cocker, had Geo. Bell's Idea the winner, with Dot Smirle second, Samuel Shorty's Dutchy third, who beats A. Laidlaw's Minnie, reserve, in head and front. P. G. Keyes' Rideau Rollie and Corktown Kennels' Trumps, vhc., both fail in muzzle and front, Rollie being also a bit domy in skull. This was quite a good class.

In cocker dogs other than black, Skead's Ben was overweight. F. J. Leigh's Rufus, a red one, as his name implies, first, has a splendid front, excellent body and fair head; looks like work, but is a trifle on the big side, though under the 28lbs. when shown. E. A. Black's Brush loses in muzzle and legs. H. Burbidge's Jeremy is faulty in head, forelegs and ribs. Laidlaw's Bambo could hardly walk, and a fair look at him made the judge wonder how he could win at Toronto; very bad in front and poor head; he was given c. for body. In bitches Geo. Bell's Blushing Rose, mean in head and horrid disposition, is so much better in body and front than Mount Royal Kennels' Blondie G. that they were placed as named. In field or cocker puppies other than black the winner turned up in W. H. Morgan's Bounce, who leads Blushing Rose in head. Bambo, as a puppy, received vhc. In novice dogs, all breeds, W. G. Young's La Grippe, the Clumber pup, beat C. H. Wallace's Johnny, Jr., in head and front, with Rideau Rollie third. Bitches saw the winner in Geo. Bell's nice little bitch Idea, with Rideau Flossie second, Joan II. third, Blushing Rose and Minnie vhc., and F. H. Cunningham's Rose c. These have all been mentioned in other classes. The specials for these were numerous. For the best four, any variety, Geo. Bell. Best novice spaniel, Geo. Bell's Idea. Best other than black, F. J. Leigh's Rufus. Best Irish water spaniel (two), F. W. Fee's Sport. Best Clumber, Bates & Geddes' Boss III. Best pair in open classes, H. B. D. Bruce's Shell and Lucy II. Best owned outside Ottawa, G. B. Smart's Darby. Best American-bred, H. B. D. Bruce's Shell. Best puppy, G. B. Smart's Darby. Field—Best in show, Audrew Laidlaw's Topsy. Cockers—Best in show, A. C. Wilmerding's champion Doc. Best puppy, Geo. Bell's Idea.

COLLIES.

No challenge entries turned up. In the open class, outside of the winners, there was nothing very commendable. McEwen & Gibson's Carmen, in better coat and slightly better in front than his kennel mate Bute, were placed as named, and W. Rutherford's Mess, third, is thick in head, bit out in front, fair coat. John Duncan's Young Squire, though short-headed, had a nice coat. H. F. Brading's Colonel and Robert Ness's Rip, c., were hardly class enough. There were only three in bitches that deserved mention. The Toronto winner, Manilla, was again placed first, second going to Floss, a niceish bitch with good coat, his Flora, deficient in quality and length of head and hardly right in front, secured third. The others in this class failed to secure even a mention. In puppies, the contest lay between Duncan's Reality and McEwen & Gibson's Norman, the latter being a little out in front and bad in ear, was put behind the former, Duncan's Nellie Bly, only a moderate one, scoring vhc. The special for best dog went to McEwen & Gibson's Carmen. Best bitch (2) their Manilla. Best puppy, John Duncan's Reality.

BULLDOGS.

All the prize money was saved in this class, first and second prizes being withheld. There is evidently a field here for some bulldog stock; it would really be a kindness for some one to either present one to the town or exhibit a team at the next show. Here is a hint for our new bulldog man. Mr. Dole we bow to you. Those that were shown would grace a pit better than the show ring - J. P. Lawler's Nettle had some little resemblance to a bulldog and was given third, *pour encourager les autres*. This also carried with it the special for best in show.

BULL-TERRIERS.

A good many of them should have been with their brothers in the bulldog class, for they were a motley crew. Northfield Kennels' King of Hearts had an easy win over Wm. Cooch's Count Dick, who, besides having a patch on hindquarters, is a bit thick and short in head, but well-fronted. The others were sent back to their stalls and the judge made three more enemies. Northfield Kennels, of course, won the special with King of Hearts.

FOX-TERRIERS.

These classes were well filled, though there were several absentees. A challenge class was made for Blemton Volunteer, and, in the absence of ch. Bacchanal, G. W. Prescott's Punch was an easy winner, though he is a bit coarse: second withheld; and third going to W. G. Hurdman's Brit, thick in head and not quite the thing in front. A. W. Garrett's Stanley and A. Colter's Dan were honored by c. cards. As will be surmised, the quality in this class was conspicuous by its absence. Open bitches had a new one, just over from the other side, at the head of affairs Her quality and varminty look was at once apparent in this rather moderate class. This was G.S. Oldreive's Dudley Slave, by champion The Belgravian. She is a bit weak in face, ears not carried close enough though well shaped, coat good, legs straight but feet might be better, just off the ship she did not show up in very good shape; second went to P. G. Keyes's Clytie, the winner at Kingston, she has a nice head and fair front, but loses in coat; and McPherson's Speck, though short in face, has a wonderfully good set of legs and feet, and a well-made body, but for her head she could have won. Reserve went to Oriole Kennels' Blemton Vice, second at Toronto, a weedy one all round, light in bone, sharp-faced, open feet, and none too straight in legs, she also lacks size. A. T. Stewart's Brooklyn Venom, vhc., is large and a bit coarse throughout, but a good stamp of working terrier; Oriole Kennels' Oriole Belle was also vhc., is light in bone and body, mentioned at Toronto. In puppies first went to H. P. Thompson's Pickle, first at Toronto; and C. A. E. Clendennin's Rose, a nicish bitch, bit faulty in head and front, second; reserve going to H. S. Perley's Buckshot, a bit big all round; and vhc. to G. W. Prescott's Punch and Dot, they are too coarse; his Judy getting hc., ears all wrong. The specials for best in show (3) went to Oriole Kennels' Blemton Volunteer. Best bitch, G. S. Oldreive's Dudley Slave. Best puppy, H. P. Thompson's Pickle.

IRISH, BEDLINGTON AND AIREDALE TERRIERS.

To avoid giving equal firsts, separate classes were made for each breed, with one entry in each. In Irish terriers, North Field Kennels' Breda Bill, showing himself infinitely better in front than he did at Toronto, was the recipient of one first. The Bedlington Kelly & Kirby's Sting is a fairish sort, with nice feel of coat, hardly just right in formation of head, took another. The Clumber Kennels' Airedale Weaver is a nice sort, a little weak in muzzle and stands a trifle out in front at times, still a fair one, also gained his ribbon. These awards also carried with them a special for best of each breed in show.

SCOTCH, SKYE AND DANDIE DINMONT.
